"The laborers employed in the shoe factories of Massachusetts can not compete with labor that receives from one-half to one-tenth of the wage that is paid to the American shoe laborer.

"Now, let me state broadly again that the new policies that will be inaugurated by the enactment of the Underwood bill means more in its consequences to the American people than any law that has been enacted in the United States Congress in a half century. It has been stated by the author of this bill that his law is very much like the Walker tariff law of 1846; he states that it is not the intention of the makers of this law to make it for the protection of any industry in the United States; that the sole purpose in this bill is to raise revenue; and that he had not intended that any one industry should be taxed for the purpose of maintaining any other industry in our country.

"We have had experience under low tariffs, and we have had experience under what your chairman calls a "high protective tariff." I do not know why he uses the word "high"; there is only one kind of a protective tariff, and that is a tariff that protects. As a farmer boy I learned when the neighbors' cattle got into our field that there was only one kind of a fence that would keep them out, and that was a fence that was high enough. And I know of only one kind of a tax upon importations from foreign countries that will protect similar products produced in our own industries, and that is a tax that is high enough to keep our market for the products made by our own labor.

"That may not be the popular thing; it has not been popular for men to stand before American audiences and to defend that policy within recent years, but after four years of experience under a nonprotective tax—a tax that is levied simply for revenue—that the American people throughout the length and breadth of this Republic will be mighty glad to come back to a policy that puts a tax upon the products of foreign industries and foreign labor, which are to be sold in our markets in competition with the products of our own institutions and of our own labor. [Applause.]

"We began with protection in 1789, and had a protective tariff until 1816; that was a period of marvelous growth and development in our country; industries grew up and multiplied; laborers everywhere increased in number; the farmers had a market for everything they had to sell; business men prospered. We had abundant revenues with which to defray the expenses of our Government.

"In 1816 a low tariff law was enacted; a tariff that was not high enough to protect us against competition with the conditions in Europe. The conditions of manufacture there were such as to enable manufacturers to send their commodities into our market and undersell us; and they did so. In many instances they sold here cheaper than they sold at home. The result was that our industries one after the other closed; our laborers, hundreds after hundreds, thousands after thousands, went out of employment; the farmer lost a market for what he had to sell; revenues fell off; the Treasury became bankrupt. The President of the United States at that time, Mr. Monroe, called attention to the deplorable condition of our country, and the fact that our farmers were mortgaging their farms to raise money with which to buy the product of foreign factories. This money went to Europe and remained there. The people appealed to Congress for a return to the policy of protection.

"There was a return in 1824, and the country remained under that policy until 1833. That period marked the revival of industry; closed factories opened, mills, shops, factories opened everywhere and idle labor found remunerative employment. Wages were increased; the farmer had a market for everything he had to sell; revenues were abundant to defray the expenses of the Government; in 1832, in his first annual message, President Jackson congratulated the country on the prosperous condition of industry everywhere and upon the condition of the Treasury, that we were able to pay off the last dollar of the national debt of two wars, and that was done; it was a proud and happy day for the Republic. We had had nine years of 'high protection'—nine years of protection to the laborers of our own country against competition with the lower-paid laborers of other countries, and the nine years of protection to the industries of our own country against the products of the industries of other countries; nine years of protection that made a market to the producers of the products of the soil, of the mines, and of the factories everywhere; nine years of the greatest prosperity that the country had known up to that time.

"In 1833 John C. Calhoun discovered that Massachusetts was prospering far beyond its due, as he supposed, and he announced that the South should not be taxed for the benefit of New England; and he coined the expression that has been used over and over again by Democrats and held Democratic orators ever since, that one man should not be taxed in this country for the benefit of another; that one industry in this country should not be taxed for the maintenance of another industry, and he won.

"In 1833 the tariff law made a gradual reduction downward with a gradual closing of industries. Laborers were going out of employment, farmers were losing markets, the Treasury was losing revenues, until ruin spread all over the country and blighted every industry; there was bankruptcy everywhere until the disaster and depression covered the whole land. Everything was in a state of industrial and financial paralysis; the Treasury was again bankrupt.

"President Tyler called attention to the fact that he could not sell the bonds of the United States at 12 per cent in a time of profound peace. That was under one of your 'low tariffs'—under a nonprotective tariff, when the consumer, whoever he is, had the advantage of buying the product of the laborer of other countries.

"The whole country was pauperized. That condition continued until 1842, when we again returned to the policy of protection. That opened our mills, our shops, our mines and factories, and again our laborers found remunerative employment; again the farmer had a market; again the banks opened, and business revived everywhere. Industries went out of the hands of receivers, and we had another era of prosperity inaugurated.

"But the theory of free trade advocated by John C. Calhoun was too strong. In 1846 we abandoned the policy of protection and went to the policy of nonprotection or free trade—competition with the world.

"Now, it has been said that the tariff of forty-six inaugurated an era of great prosperity, and that whatever may be said about other times in our country's history, that of that period it must be said that the American people prospered under free trade.

"That statement was made yesterday by Mr. UNDERWOOD. He compared his own bill with the Walker tariff; he stated yesterday, on the floor of the House of Representatives in introducing his bill, that the Walker tariff inaugurated and maintained one of the greatest eras of prosperity that the country had ever experienced. If that is true—and it is not—why, his bill may prove beneficial to the American people.

"But let us see. The men who lived in that day ought to know something about the conditions at that time. I do not see anybody here old enough to know, but I have in my possession a statement of the then President of the United States, Mr. Fillmore, made in his annual message of 1852, in which he reviews his former message in which he called the attention of Congress to the deplorable condition of the country, of its manufacturers, of its laborers, and urged again a return to the policy of protection. This is what he says:

"In my first message to Congress I called attention to what seemed to me some defects in the present tariff, and recommended such modifications as in my judgment were best adapted to remedy the evils and promote the prosperity of the country. Nothing has since occurred to change my views on this important question. Without repeating the argument contained in my former message in favor of discriminating protective duties, I deem it my duty to call your attention to one or two other considerations affecting this subject. The first is the effect of large importations of foreign goods on our currency. Most of the gold of California, as fast as it is coined, finds its way directly to Europe in payment of goods purchased. In the second place, as our manufacturing establishments are broken down by competition with foreigners the capital invested in them is lost. Thousands of honest and industrious citizens are thrown out of employment, and the farmer is to that extent deprived of a home market for the sale of his products. In the third place, the destruction of manufactures leaves the foreigner without competition in our markets, and the consequent rise in articles sent here for sale is now seen in the increased cost of iron imported from England.

"That is the statement of Mr. Fillmore, made in his annual message in December, 1852. The conditions of the country were peculiar at that time; we had discovered gold in California and were mining it in large quantities, and it was giving a measure of prosperity to the country. We were also building railroads and the laborers who had gone out of our factories, our shops, and our mills found employment for the time upon the railroads in building them; but the drain upon our resources was so great that we could not stand it—we were sending our money to foreign countries with which to purchase the products of their factories, their mills, and their shops; that continued until we were in a condition of hopeless bankruptcy and industrial ruin.

"The Presidents continued to call attention to the deplorable condition of our industries, and in 1857 President Buchanan, another Democratic President, said that in the midst of natural conditions that ought to promote the welfare and prosperity of the people we were in a condition of industrial depression and disaster that was unparalleled in the history of our country; said that we would have to sell the bonds of our country with which to raise money to defray our expenses, and even that would be better than for the Government to say that it could not pay its expenses. Every time we have had a nonprotective tariff law, or a tariff for revenue, we have had the same conditions. We have had labor out of employment, industries idle, business in bankruptcy, and not enough revenue coming into the Treasury to pay our running expenses.

"A tariff for revenue has never produced enough revenue to defray the expenses of the Government, even in a time of profound peace.

"In 1860 the country readily returned to a policy of protection. The statement of Mr. UNDERWOOD yesterday, that that tariff act was signed by President Lincoln, was not true. The Morrill Tariff Act was signed by President Buchanan, a Democratic President; it was passed, it is true, by Republicans. They returned to a policy of protection before the war; it was not a war tariff, as stated by Mr. UNDERWOOD yesterday; it was a tariff to open the industries of our country to the idle labor of the land, to make markets for the farmers of the country, so that their crops would no longer rot in the field for want of a market. It was to open up avenues of trade for the business of the country, and to revive the condition of prosperity in the country, and to provide revenue with which to defray its running expenses in a time of peace. And the industries did open. Under that tariff we went through a four-years' war that devastated and reduced to ashes the Southland. It took four years of the life of the Nation, four years of the time and the best blood of the Nation, and cost billions of treasure; and yet for a period of 30 years after the passage of that law we experienced 30 years of the greatest revival of industry, the greatest growth and prosperity that our country has ever known in any 30 years of its history up to that time. The South was rebuilt, and the West that you have been told of by free traders and near free traders [laughter] did not have shoe factories, nor the woolen mills, nor cotton mills, nor the watch factories, nor any other factory; all they had was prairies and plows, but they voted for protection to the industries of Massachusetts and New England. And what in 1860 was a part of the American desert—raw prairie land that was not worth a dollar and a quarter an acre—became at the end of that period an imperial empire, inhabited by a prosperous and happy and contented people, living on splendidly developed farms and homes. They had a market for the products of the farms; they prospered by selling their corn, their wheat, and their oats, and their pork and their beef; and the laborers employed in the shoe factories and the woolen and cotton mills of Massachusetts prospered by selling their shoes to us. We prospered together.

"The chairman may find in Japan and India and other countries that will be competing with him in the manufacture of shoes a better market than the farmers of Kansas for the product of his factory, but I doubt it. We have been pretty good customers for the industries of this country out our way. And you have been pretty good customers of ours, and we have been content to work along with you for the prosperity of the whole country. We are willing in four years from now to renew that contract with you. [Applause.]

"And I will tell you what we will probably require of you, however; we shall probably require of you that you will not demand the right to sell us your products and at the same time buy products of the Canadian farmer. [Applause.]

"But I am not going to be led away. After 30 years of prosperity the country again tired of protection; that is, those who denounced protection as the robbery of the poor for the benefit of the rich. They told the farmers in Kansas they had been robbed for 30 years in the interests of the shoe manufacturers of Massachusetts. And the farmer said, 'That is so.' Peffer and Simpson denounced Ingalls and the others who had been supporting the policy of protection. And the country went just like Maine went one year—for free trade; it was the first experience that we had had of it for thirty-odd years. That tariff inaugurated another era in which our industries closed, our laborers went out of employment, and everywhere mills, shops, and factories were idle; the laborers were wandering all over the highways of the country in search of work they could not find. The farmer had no market for what he had to sell; everything was cheap—cheap as you could buy it in Europe. Shoes were cheaper than they are now; they were cheap because nobody had the money with which to buy them. [Applause.] People were going barefoot or wearing their old shoes—and they only had one pair. What was true of shoes was true of everything everywhere—everything at that time was cheap. Bread and meat were cheap, but people went hungry; clothing was cheap, but the people were poorly clad. Farms became cheap, horses were cheap, shoe machinery was cheap, men were cheap, labor was cheap, but nothing was going on, and the Treasury again was bankrupt; and again, in a time of profound peace under a tariff for revenue we had to sell the bonds of the Government to raise money with which to defray the expenses of the Government. We sold $260,000,000 of the bonds of the United States to raise a little money to pay the salaries of the officers and to defray the expenses that are incident to the operation of a great Government like this. No war; no extraordinary expenses; but we were under a tariff for revenue, and free trade.

"The people did not have the money with which to encourage the importer to bring into the country the cheap products of the labor of the world, and they could not buy the cheap products of either Europe or Asia, or of any other country. So we were without revenue. It would be difficult to exaggerate the conditions, the hardships prevailing throughout the country during that period, and I will not take your time doing it. I shall only say that in 1897 we again returned to the policy of protection. High protection, if you please to call it, but protection which means a tax upon importations coming into the country when these importations compete with like products produced in our own country, and under that law, taxing these products, we competed with ourselves in like products. Our mills, shops, factories were open everywhere, and laborers in the country who had been idle for years again went into the active industries of the country at a remunerative wage that has been increasing ever since.

"The era of prosperity, beginning with the tariff of 1897, has continued for 15 years, and we have had an era of the greatest growth, the greatest prosperity, that the country has ever known or that has ever been experienced in any country in the world. Even the chairman, I take it, has prospered. [Laughter and applause.]

"Under the law that he stigmatizes as 'a high protective tariff' his industry and the industries of hundreds of thousands of citizens of our country and the products of our labor were again protected in the markets of our country; and because of that the American labor continued in employment and made a market for the American farmer—made a market for the products of other industries than those in which he labored. Together they all prospered, buying the products of each other's labor, giving prosperity to the transportation companies of the country and the business men of the country, the banker, the merchant, the wholesale and retail merchants, everyone everywhere has prospered.

"The chairman stated that under free trade we would enjoy the markets of the world. Do you, any of you, think that the world outside is a better market than we have at home? We have here nearly 100,000,000 of prosperous people, all employed at remunerative employment, either as wage earners or producers, as farmers or factory or mill employees, or upon our great transportation companies of the country. Are they not better consumers than the laborers employed in the other countries of the world? Why, one American laborer is worth two in the best country in the world outside of the United States, and worth 12 of many countries outside. We are the greatest consumers, per capita, in the world, and the best, of all manner of products.

"Why, the chairman knows that in these 15 years we have been swinging the balance of trade in our favor in the inward and outward commerce that we have had with the rest of the world; in these 15 years the balance of the trade with the world has been in favor of the United States. We have sold more to the world outside than we have purchased from the world outside.

"I do not know whether you have experienced it or not; I known by experience that when you buy less in a trade than you sell you have the advantage. I used to go to town with butter and eggs when the balance of trade was with the grocer; I had to raise money by selling corn at 13 cents a bushel to pay the balance to the grocer; when the balance of trade was in my favor I said, 'Just give me credit for that until the next time I come to town.'

"For 15 years the balance of trade has been with Uncle Sam in his transactions with the world. In those 15 years we have fought a foreign war; we have constructed the greatest engineering enterprise ever undertaken by any nation; we have increased our expenses enormously by multiplying the operations of the Government in every way; we shall have a balance in the Treasury on the 1st day of July next without resorting to the selling of bonds for the ordinary expenses of the Government and without efforts to reach every man, woman, and child in the United States with some process of direct taxation.

"We have paid our expenses as we have done during those years, in addition to the fact that we have had all our laborers employed in our business of every character prosperous.

"Now, gentleman, why is all this true? When can this 16-year-old boy that Congressman HEFLIN, of Alabama, told you about, following his mother with a stone in his hand, be weaned? I did not read that story; I have not had an opportunity to read the speech of my genial friend, Mr. HEFLIN of Alabama, but I got the story. Now, I will tell you when he can be weaned. In other words, we can abandon that policy of protection by leveling our standard of living—mark you now—leveling our scale of wages to the level of the wages of those who compete with us with their products in our market. That is one alternative or one condition under which we can abandon the policy of protection.

"I am not in favor of reducing the wages of the American laborer nor his methods of living to the wages and methods of those with whom he will have to compete under free trade, whether they be employed in England, Germany, France, Italy, Japan, or India; but I will consent, as I am sure you will, as patriots, to free trade, to the Underwood tariff bill, if you please, when the other countries of the world level their standard of living and wages up to ours, but not until then. [Applause.]

"Then their labor cost of production will be equal to ours; then we can compete with them in the 'markets of the world,' and not until then. The industries will control the American market—the best in the world—that can produce at the cheapest labor cost.

"I said a while ago that two things were essential to our prosperity—steady employment for labor at good wages, and good prices for products of the farm—and I repeat it here. Does it pay, though? Has this policy that we have pursued here for half a century, with the hiatus of four years, been a mistake? I have been told that it was. In an interesting interview that I had a short time ago with Sir Wilfrid Laurier, Premier of Canada, one of the most brilliant free traders with whom I have ever talked, he said that the Americans had made a great mistake in the adoption of their policy of protection. He said: 'You have built a wall about yourselves; you keep out and in; you prevent free and untrammeled trade with the world; it is a great economic mistake"; and he proceeded to dilate upon it to me, and made it look more plausible than anything I have seen in any of the books written by presidents of colleges. [Laughter.]

"After he was through I said to him respectfully that the area of Canada is just a little larger than ours; that it boasts of as fertile a soil as ours, of rivers as deep, of forests as rich in wood products, of hills and mountains as rich in minerals—the natural resources of the countries are equal. Canada began about 20 years before we did; we have worked along side by side; we have had an equal chance in the world. We put a fence around our premises, and have kept that fence up a good deal of the time since 1789. We have acquired a population of nearly 100,000,000 people—the richest, most prosperous people on earth—there are seven cities along our northern borders that make a mighty attractive market for Canada. In the same time we have been acquiring that population of one hundred and odd million people Canada has acquired a population of 7,250,000—not as many as we have in seven cities along our northern border, upon which Canada looks as such a desirable market for the products of her farms.

"And there you are. Until recently they have had the policy of free trade. But labor does not have the chance to get the remunerative wage and the steady employment that it has in the United States. The farmer does not have as good markets for his product as he does in the United States; they did not build up there because there was not the inducement that there was in the United States. And the same is true down in Mexico, below us; they can produce everything there—rich soil, abundant resources, and poverty everywhere—and free trade.

"Cheap? Why, yes; everything is cheap, and nobody prospering. Everything cheap; few people with anything with which to buy. There is a cheap man with a cheap wife and children living in a cheap house in a cheap way behind every cheap product of labor. [Applause.] Whether you find him in the United States, in Mexico, in Japan, or in India, you will find a cheap man behind every cheap product of labor. Now, do you want that to come? Do you want free trade anywhere in this country? Well, if the Senate does not change this bill you are going to get four years of it, whether you want it or not. In these four years the price of shoes will come down. You did not reduce the price when you got hides on the free list, but when Mr. UNDERWOOD's bill goes into effect and everything else goes upon the free list, and the laborer goes out of employment, and the price of shoes will come down, as also will the sale and the quantity of shoes manufactured come down. And that is true of textile products and of every other product produced in the United States. It is the easiest thing in the world to reduce the cost of things—just reduce the ability of the people to buy them and you will reduce the cost. Just as soon as our laborers begin to go out of employment, perhaps not in the shoe industry first, but the chairman probably knows that there are other industries besides the shoe industry in the United States.

"When the men who make needles and pins, hooks, eyes, and buttons, and shoe pegs, and shoe strings, and all that sort of thing get out of employment there will be a whole lot of people out of work. The little industries of the country will be closing, and that closing will have a very appreciable effect on the country, and then the big industries will be hit. Probably the small shoe factories will close before the chairman's. He will have the advantage for a while in supplying the trade that these little fellows have now, but he can not hold on in competition with the shoe manufacturers of Japan. He may, by reason of his larger operations, be able to hold trade for a while, but he will finally succumb to the competition that he will have with the cheaper labor that is employed in other industries producing the same kind of shoes upon the same kind of machines that he uses. And I repeat, what is true of shoes is true of every other product of manufacture.

"Gentlemen, I beg your pardon for having taken so much of your time—— [Cries of 'Go on! Go on!' and applause.]

"A VOICE. Tell us about wheat.

"Mr. CAMPBELL. Wheat? All right, I will tell you about wheat. We raise wheat out in Kansas. You raise very little in Massachusetts. We sell to you. We have been buying your products in exchange, and we do not want to put wheat on the free list, because they can produce wheat cheaper in Canada than we can in the United States, and we think it is fair to us who have been buying your products for 50 years that you should be content to buy our wheat, rather than going to Canada to get it. We have helped to make you a good market for your commodities, and we have a right to have the same kind of protection for our products that you have for yours.

"There is a difference of from 9 to 13 cents a bushel just across the road between Canada and North Dakota in the price of wheat. That is in favor of the American wheat grower, and is caused by the tariff. One of the reasons North Dakota came up the way it did in the last campaign was because of reciprocity with Canada, which put wheat on the free list.

"You see, gentlemen, this is a very great country, and the laborers out on the prairies of North Dakota and Kansas are just as much entitled to protection for the products of their labor as are the industries of New England and Massachusetts.

"Let me say this, and then I must close: This era of high cost of living through which we have gone in the last 15 years has marked an era of the best living that we have ever had. The price of things is a little high, but you have been able to buy the wheat and the meat of Kansas, and at the same time lay aside about $4,500,000,000 in the last 15 years—put it into the savings banks of the United States, after you have paid this high cost of living.

"You, under free trade for your products and ours, will spend that money that you have laid away in the savings banks buying free wheat in Canada, and the money will go there, and they will buy the product of Canadian shoe factories, and the product of Canadian woolen mills, and the product of Canadian shops and factories engaged in the production of other things. Every dollar sent to Canada for wheat will be spent in Canada for the product of other industries and labor. Every dollar you send to Kansas, if you maintain the policy of protection for wheat, will be spent in the United States for the products of American industries, if you maintain a policy of a discriminating tariff." [Applause.]

The Tariff Bill and Life Insurance.

EXTENSION OF REMARKS
OF
HON. HENRY T. RAINEY,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. RAINEY. Mr. Speaker, at the present time the managers of the great life insurance companies of the country are engaged in the business of misrepresenting the income-tax provisions of this bill. Thousands of policyholders throughout the land are being advised by circular letters that their insurance policies are in danger, that the income-tax features of this bill impose burdens upon the beneficiaries; that at the death of the policyholder the amount due to his beneficiary on the policy will be considered as a part of the income of the beneficiary and will be taxed. Policyholders and their relatives and friends are being advised that the burden of these income-tax features will be placed upon purely mutual companies in such a way as to affect policyholders; that endowment policies are also taxed, and thousands of men, women, and children throughout the country are being advised that while ordinarily an income of $4,000 is exempt, yet whenever one of them pays $1 to an insurance company he is taxed on that dollar.

These statements sent out by the managers and officers of the so-called mutual life insurance companies of the country are misleading in the extreme, and many of these circulars are apparently intentionally misleading.

PRESENT BILL DOES NOT MATERIALLY CHANGE EXISTING LAW.

The present bill, so far as it applies to life insurance companies, does not change in any particular the corporation-tax law which has been in force for four years, except that the amount of income exempt in this bill is $4,000. In the corporation-tax bill it was $5,000. This change, however, does not affect any life insurance company. From 1909 to the present time insurance companies have paid this tax without a murmur. This bill, however, reaches incomes generally in no uncertain way. The demands of the people of this country for a tax on incomes have reached this body, and we have kept our promises and incorporated in this bill these income-tax features.

PROTESTS OF LIFE INSURANCE COMPANIES SIGNIFICANT.

It is significant that these protests come from these insurance companies just at a time when we propose to reach the great incomes of the country. Men whose incomes are from $50,000 to $1,000,000 per year have not the courage to protest themselves against the features of this bill which impose this tax upon them; but following their custom, they reach out through the life insurance companies of the land and attempt to prejudice thousands of policyholders throughout the country by persuading them that this bill imposes burdens upon them. All these misleading circulars call upon policyholders and their friends to write to Members of Congress, protesting against the burdens they have been advised have been placed upon them and asking Members of Congress to exempt these great insurance companies. At the present time, Members of Congress are being flooded with protests from policyholders throughout

the land. It would be impossible for any Member of Congress, especially a Democratic member of the Ways and Means Committee, to answer all these letters. The only answer that can be made to letters of this kind is to advise policyholders that the statements made to them by the managers of these great insurance companies are absolutely false in every particular.

The income-tax features of this bill exempt from its operation "fraternal beneficiary societies, orders, or associations operating under the lodge system, and providing for the payment of life, sick, accident, and other benefits to the members of such societies, orders, or associations and dependents of such members." The bill also provides:

That the proceeds of life insurance policies paid upon the death of the person insured or payments made by or credited to the insured, on life insurance, endowment, or annuity contracts, upon the return thereof to the insured at the maturity of the term mentioned in the contract, shall not be included as income.

The falsity of the statements made by the managers of these insurance companies will therefore appear from a reading of the bill.

WHAT WE ARE TRYING TO REACH.

The object of this bill is to reach the great accumulations of insurance companies which belong not to policyholders but to the stockholders and which are manipulated by the officials of these great companies for their own personal advantage.

The Mutual Life Insurance Co. of New York admits that its assets amount to over $587,000,000. The New York Life Insurance Co. admits that its assets amount to nearly $685,000,000. The Equitable Life Insurance Co. of New York admits that its assets amount to nearly $504,000,000. The Penn Mutual Life Insurance Co. of Philadelphia admits that its assets amount to over $126,000,000. What we are trying to reach with this tax on incomes is these great accumulations. No policyholder, if he is treated fairly and honestly by these companies, will be affected in the least by this tax. Policyholders, however, have not always been treated fairly and honestly by the great insurance companies of the land. We reach by this bill only those companies which issue stock, and our attempt is to reach only the stockholders and to compel them to pay upon their profits. Of course, if an investor receives each year profits from his investment in an insurance company he will be expected to have those profits in mind when he makes up his return, and if his entire income is over $4,000 per year, including the profits on investments in insurance companies, he will be expected to pay on the excess above $4,000.

A share of stock in the Ætna Co. of the par value of $100 is now worth more than $10,000; a share of stock in the Metropolitan Life having a par value of $100 is now worth $15,000; $100 shares in the Prudential are worth now $17,000. These values do not affect policyholders. What we are trying to reach are these great accumulations in the hands of insurance companies which never under any circumstances will go to policyholders. The accumulations which make $100 shares of stock worth from $10,000 to $17,000 each arise from savings in the expenses of conducting insurance companies; they arise from "lapses," from "surrenders," and from "excess interest earnings." The whole business of life insurance is conducted in such a bewildering manner as to make it possible to easily deceive holders of policies. I refer, of course, to the so-called mutual companies operated upon the stock plan. Five or six years ago a New York capitalist bought 51 of the $100 shares in one of these old-line companies for something like $2,500,000, and paid cash for them. These shares were all of a par value of $100 each, and the entire capital stock of the company amounted to only $100,000. This immense value had been added to the shares on account of payments made by policyholders, and the policyholders did not have, nor can they ever have, any interest in the accumulations and the tremendous profits belonging to the shareholders.

And now when a Democratic Congress tries to reach these great accumulations the managers of the large life insurance companies throughout the country organized on this plan send out these misleading statements intended to discredit this bill and make it unpopular.

RECENT HISTORY OF SOME OF THESE COMPANIES.

It might be advisable before giving any weight to the statements of the managers of some of these companies to examine into the history of these same life insurance companies in the recent past. Other companies organized on the same plan might have been subjected to the same investigation as the New York companies if they had been organized under the laws of the State of New York. The results of the recent investigation conducted by the Armstrong committee in New York are fresh in the minds of most of us. These investigations affected principally the New York Life, the Mutual Life, and the Equitable; other and smaller companies were, however, also involved.

It was disclosed in the investigations six years ago that Richard A. McCurdy, president of the Mutual Life of New York, was 76 years old, that he rarely visited his office, and that he received for his services $150,000 per year. It was also disclosed that his son, Robert H. McCurdy, received from the same company an income amounting to $100,000 per year. From 1890 to 1905 it was shown that these two McCurdys received from this company for their services $2,113,253. The investigation of the McCurdys and their friends also showed that comparatively a few years prior to the investigation over $1,000,000 had been paid out for the purpose of "advertising," although no vouchers were ever produced and it was impossible to explain these large items for advertising. The books of this company also showed the payment of many checks, amounting to from $10,000 to $25,000, which could never be explained. L. A. Thebauld, another member of this family at the time of the investigation, was shown to be in receipt of an income of $147,000 per year.

The disclosures with reference to the New York Life were similar. John A. McCall, the president, and 21 members of his family, in 15 years received as a compensation for alleged services rendered, $1,416,000. John A. Hamilton, the legislative agent of this company and other companies charged with the business of corrupting legislatures, influencing legislation, and bribing politicians, was shown to have received, together with John A. McCall, $219,000, which was never accounted for. In a few years John A. Hamilton, familiarly known as "Andy Hamilton" and sometimes called Judge Hamilton, received from three or four of these great companies $700,000, paid to him by the legislative bureaus of the several companies to be used by him in influencing legislatures and for other questionable purposes.

George W. Perkins admitted that on behalf of the New York Life he contributed to the Republican Party in the last three campaigns prior to the investigation $150,000. It was proven also that the Equitable Life Insurance Co. contributed a like amount to the national Republican committee in the same campaign.

It was also proven that seven members of the Alexander family took out of the Equitable in 15 years $1,314,731, and James Hazen Hyde and his mother obtained in the same period of time from the same company $676,270. It was established that four families in 15 years received from the three companies I have just mentioned almost $10,000,000 in cash. Therefore some of the life insurance companies now challenging the income-tax features of this bill and stirring up policyholders throughout the country are somewhat discredited by the investigation recently had in the State of New York. Their solicitude for policyholders has evidently not extended over a considerable period of time.

THESE COMPANIES ALWAYS UPHOLDING REPUBLICAN PARTY.

These companies have been found always upholding the Republican Party and contributing to its campaign funds, and they can now, of course, be relied upon to align themselves with the same party and to endeavor to influence their thousands of policyholders throughout the country to fight the battles of plutocracy and to oppose this measure. Immense sums of money morally stolen by the families and the men to whom I have called attention were stolen from the policyholders of the country, the same policyholders they are now endeavoring to stir up against this bill.

It was established in these investigations that wage earners, holding the smaller policies, out of every dollar they pay into these insurance companies, contribute 40 cents to the officers of the company, its stockholders, its agents, and for the payment of the ordinary running expenses. It was proven in the investigations by the Armstrong committee that in one year, to wit, the year 1904—and no investigations of value have been made since the Armstrong investigations—three companies, the Equitable, the Mutual Life, and the New York Life, collected in premiums and income from investments the sum of $254,870,441.37, and out of this amount they paid to stockholders only $111,161,965.25, or 43.63 per cent. The balance, except $7,000, was used by them either for expenses or accumulated for the future. Under such circumstances as these, is it any wonder that the Democratic Party tries to reach these great accumulations? Resorting to characteristic tactics the managers of these companies send out to their policyholders false and misleading statements.

HOW THESE COMPANIES DECEIVED OTHER COUNTRIES AND STATES.

It has not been long since George W. Perkins, a member of the firm of J. P. Morgan & Co., and also vice president of the New York Life Insurance Co., testified as to the concealment of stocks owned by this company. At the time of the concealment of the ownership of these stocks the company was trying to get into Prussia, and the design of this elaborate system of frauds was not alone to deceive the Prussian Government but

to deceive the New York insurance commissioners and its policyholders. At that time this company held $4,000,000 in bonds of the International Mercantile Marine. It was a poor investment and the stocks had depreciated in value. Investigations showed that $800,000 worth of these bonds were turned over at par to the firm of J. P. Morgan & Co. on December 31, 1903. Three days later the bonds were transferred back to the New York Life Co. This was done in order that the officers of the company might under oath present to the insurance departments of the several States and of the countries in which they operated an official statement which would show that the company at the close of the year 1903 did not hold these bonds. Mr. Perkins also in his examination confessed that about that time a large block of these bonds were sold to two employees of the company, one of them being a colored messenger who received a salary of $600 per year. These two employees gave their notes for $3,357,000 with this stock as collateral, and the notes were then listed as a part of the assets, and up to the time of the examination of Mr. Perkins the New York Life Co. declared in its advertising that it had no stocks at all.

I am calling attention to these things merely for the purpose of showing how much credibility is to be given to the statements spread broadcast by these life insurance companies and by other companies organized on this plan as to the income features of this bill.

CAN THE COMPANIES PASS THIS TAX ON TO THEIR POLICYHOLDERS?

These great insurance companies are unable to do the things now, in the light of the publicity they have recently received, that they were able to do a few years ago. I do not think they will dare to pass this tax on to policyholders. The company which does it will find itself considerably discredited, and will find its business falling off.

The investigation of the Armstrong committee showed that they had prepared themselves for possible emergencies and the policyholders do not have much to say about their methods of accounting. The following paragraphs were, at the time of the Armstrong investigation, incorporated in the applications of policyholders for insurance and the following waivers were made a part of the contract for insurance:

MUTUAL LIFE OF NEW YORK.

I further agree that in any distribution of surplus the principles and methods of which may be adopted by the company for such distribution, and the determination of the amount equitably belonging to such policy shall be, and are hereby, ratified and accepted by and for every person who shall have or claim any interest under the contract now proposed.

EQUITABLE OF NEW YORK.

That the distribution of surplus which may be adopted and approved by the society is hereby accepted by me in my own behalf and for every person who shall have any interest in the policy now applied for.

NEW YORK LIFE.

(See policy, General Provisions 4.)

In any apportionment or distribution of profits the principle and methods which may be adopted by the company for such apportionment or distribution and its determination of the amount equitably belonging to this policy shall be conclusive upon the insured and upon all parties having or claiming any interest under this policy.

Other so-called mutual companies issuing stock probably compel the policyholders to enter into similar contracts. If there is an attempt to enforce such contracts as these, I predict that there will be another "policyholders' committee," just as there was six or seven years ago, to prevent these varieties of fraud.

I herewith incorporate in the RECORD an Associated Press dispatch, published six years ago in the newspapers throughout the country, reviewing the disclosures made by the Armstrong committee up to that time, and I also publish herewith an article which appeared in the Washington Post on the 21st day of March, 1906, containing an exact reproduction of the receipt given by C. N. Bliss, treasurer of the Republican national committee, in October, 1896, for $75,000, the same being a part of the contributions of life insurance companies to the Republican national campaign fund of that year through "Andy" Hamilton. I might go at still greater length into the disclosures of a few years ago affecting these companies, but I think I have called attention to enough to completely discredit them in the efforts they are now making.

EIGHT MILLION FOUR HUNDRED AND SIXTY THOUSAND NINE HUNDRED AND SEVEN DOLLARS OF LIFE FUNDS IS SQUANDERED ON FOUR FAMILIES—NEW YORK LIFE, MUTUAL LIFE, AND EQUITABLE PROFLIGATE WITH POLICYHOLDERS' MONEY WHEN RELATIVES ARE ON PAY ROLL—MUTUAL CO. THE LEADER IN NEPOTISM—RICHARD A. M'CURDY, PRESIDENT, RECEIVES $150,000 A YEAR, TREBLE AMOUNT PAID PRESIDENT OF THE UNITED STATES—SEVENTY-SIX YEARS OLD; RARELY VISITS OFFICE—ROBERT H. M'CURDY, PRESIDENT'S SON AND GENERAL MANAGER OF THE CONCERN, GETS INCOME OF MORE THAN $100,000—INCOMPLETE AS THE FIGURES ARE, IT IS KNOWN THAT THE ENORMOUS SUM OF $8,460,907 HAS BEEN SQUANDERED SINCE 1900 BY THE NEW YORK LIFE, MUTUAL LIFE, AND EQUITABLE INSURANCE COS., ON FOUR FAMILIES, THE M'CALLS, M'CURDYS, HYDES, AND ALEXANDERS.

NEW YORK, *October 6.*

Millions of dollars leaking away through scores of business crevices and family favoritism showed the Mutual Life Insurance Co. to be by far the most loosely managed of the three great life insurance companies of New York when to-day's session of the legislative investigating committee was ended.

Incidentally, the amount of money so far paid to Judge Hamilton by the New York Life Insurance Co. was shown to be $711,000 since 1900. The additional amount went to his credit through some mysterious channel booked as "tax rebate."

The Mutual was the company which received the attention of Charles E. Hughes, counsel for the committee, and the condition of that institution was shown to be so honeycombed with nepotism and extravagance as to make its "loading" charge something to astonish even the most sensational of life insurance company promoters.

M'CURDY GETS $150,000 A YEAR.

The salary of the president, Richard A. McCurdy, was also brought to light after Robert H. McCurdy, son of the president and general manager of the company, had declared he was unable even to hazard a conjecture as to what his father received.

When the list of salaries of the company was handed to Mr. Hughes, however, it was shown that Richard A. McCurdy receives the princely sum of $150,000 a year. The average yearly income of Robert H. McCurdy, his son, is more than $100,000.

This triplicate of the salary paid the President of the United States for managing the affairs of a great nation is paid to a man 76 years old, who rarely visits the office he is supposed to manage and whose chief characteristic of executive ability has been exhibited in placing his relatives upon the salary roll of the Mutual.

ALL RELATIVES CARED FOR.

Delving deeper and deeper into development of nepotism in the Mutual, Mr. Hughes revealed the fact that nearly every person who can be shown in any way to have any connection with the McCurdy family is cared for at the Mutual crib. The relatives of C. H. Raymond, whose office is a pasture for members of the McCurdy family, are also well cared for by the company, as are the friends and relatives of Vice President Grannis. This bit of testimony, taken to-day, gives some slight insight into the manner in which the funds of the policyholders of the Mutual are distributed among the highly favored relatives of the executive officers.

But few facts were developed concerning the salaries, fees, or commissions paid to these favored ones, but it was shown that Mr. Gillette had a contract with the Mutual which gives him the whole territory of the State of Texas and an overriding commission of 5 per cent. This advantage of 5 per cent over the other agents of the Mutual means an enormous income yearly.

ANOTHER "YELLOW DOG" FOUND.

In addition to these facts regarding the nepotism existing in the Mutual, Mr. Hughes brought forth another "yellow dog." The item of "advertising, printing, stationery, and postage" was shown to have cost the company last year $1,134,833.

Charles A. Preller, the auditor of the Mutual, was on the stand an hour and a half, but Mr. Hughes could get from him no admission as to the nature of the advertising, printing, stationery, and postage which had cost the Mutual nearly a million and a quarter dollars.

In the books of the company were also detected several payments of amounts ranging from $10,000 to $25,000, of which the auditor knew nothing whatever. He was told that he would have to come before the committee next week with all his books and accompanied by such official documents as might be able to assist him in remembering the details of the transactions noted in the ledger by Mr. Hughes.

WITNESSES ARE CONVICTED.

It was easily seen to-day that the members of the committee were deeply impressed by the nature of the testimony of the officials of the Mutual, and on a number of occasions questions were asked by members of the committee which called for no statement of detailed information, but for opinions as to the good faith of the officers of the company in the course they had pursued. These questions invariably convicted the witnesses and the company as effectively as though they had been direct statements by the committee.

When the committee ended its session and adjourned until Tuesday its records were loaded with facts which have stripped away from the "big three" life insurance companies for all time that aspect of respectability and conservatism under which they have heretofore been cloaked.

EIGHT MILLION FOUR HUNDRED AND SIXTY THOUSAND NINE HUNDRED AND SEVEN DOLLARS TO FOUR FAMILIES.

Incomplete as the figures are, it is known that the enormous sum of $8,460,907 has been squandered since 1900 by these three companies in payments to the members of four families, in caring for the "yellow-dog" fund devoted to the bribery and corruption of legislatures, and to the presidential campaign funds.

This amount is considerably understated, for while it is certain that the Equitable and the New York Life contributed $50,000 to the Republican Party in each of the three last presidential campaigns the contribution of the New York Life is the only one so far admitted in evidence.

Jacob H. Schiff has placed James Hazen Hyde on record as having paid a large sum to Cornelius N Bliss last year, and this, of course, came from the funds of the Equitable. Sooner or later it will be trailed down by Chief Inquisitor Hughes, as will be the contribution of the Mutual. As the figures stand they do not represent the payments.

MUTUAL LEADS IN NEPOTISM.

In the matter of nepotism the Mutual easily leads, for it has been shown that the two McCurdys and L. A. Thebaud have taken $2,113,253 from the Mutual since 1900. This takes into account the salaries of Richard A. McCurdy and Robert H. McCurdy to the end of next December as well as the commissions of Robert H. McCurdy and omitting this year's account of the "takings" of L. A. Thebaud. The amount will be considerably above this when Thebaud's interest is added, for having made $147,000 out of the Mutual last year it is certain he will be credited with an equally large amount by the end of this year.

The shares of General Agent Gillette, of Texas, and the many other connections by marriage and otherwise are not added to this general sum, as the exact amounts received by them have not yet been made public. At least half a million for the five years can be added for these, and no stock be given to conservatism by this estimate.

CLAN M'CALL FAR BEHIND.

Far behind the McCurdy clan in point of millions comes the clan McCall, credited with $1,416,000 drawn from the New York Life since 1900. This estimate takes no account of the millions of profits in syndicate participations, for these 5 per cent shares in profits went always to some outside broker and were not taken directly by the officers of the company, as was the custom in the Equitable. There were 21 members of the McCall clan to share the $1,416,000, which is

but a faint comparison with the division of a much greater sum among three of the clan McCurdy.

For this reason the clan Alexander is shown to have drawn a much greater amount per capita in the period since 1900 than the McCalls. The testimony of Superintendent Hendricks shows that seven of the Alexander family took a sum approximating $1,314,731 out of the Equitable.

Trailing far behind this magnificent procession James Hazen Hyde and his mother are shown to have taken only $676,270 out of the Equitable.

OTHER SUMS MUST BE ADDED.

To these sums must be added the $711,000 turned over to Judge Hamilton by the New York Life, taking no account of the sums paid to him by the other companies; the Jordan and Alexander note for $685,000; the missing checks of the Equitable, aggregating $235,000; the New York Life campaign contributions of $150,000, and the "advertising, printing, stationery, and postage" bills of the Mutual.

Owing to the fact that Mr. Hughes has not nearly completed his investigation of the real estate methods of the New York Life, the sum of the losses of the policyholders through bad investments can not be correctly given at this time, but when the reduction of appraisements and actual losses are counted up the total runs well into the millions.

This enormous aggregate of nearly ten millions expended in the most extravagant manner and without adequate return to the policyholder is the blackest record ever developed in an investigation of this kind. The revelations of the last week have shown that the Equitable scandal is but a slight affair compared to those that have been developed in the New York Life and the Mutual.

[From the Washington Post, Wednesday, Mar. 21, 1906.]

THE VOUCHER IN THE REPUBLICAN CAMPAIGN FUND DISPUTE.

Republican National Committee,
MADISON SQUARE.

New York, Oct. 1st / 20th, *1896*

Received from Andrew Hamilton, Esq.

Ten thousand no/100 *Dollars*

and sixty-five thousand dollars—Total seventy-five thousand.

$ 75,000 C. N. BLISS,
TREASURER.

(Receipt which Andrew Hamilton says was given to him by C. N. Bliss.)

[From the New York Herald.]

SHOWS BLISS VOUCHER—AGENT OF NEW YORK LIFE EXHIBITS RECEIPT FOR $75,000—PAYMENT TO CAMPAIGN FUND—ANDREW HAMILTON EXPLAINS HOW TRANSACTION WAS MADE SO AS NOT TO APPEAR ON BOOKS—TREASURER OF NATIONAL COMMITTEE SAYS "IT'S A LIE," REFUSING TO LOOK AT PAPER—HILL'S ADVICE IGNORED.

"I see that Cornelius N. Bliss, treasurer of the Republican national committee, denies that he received from me for the New York Life the sum of $75,000 for campaign purposes in 1896," said former Judge Andrew Hamilton yesterday, commenting upon Mr. Bliss's assertion that he never met the judge.

"Maybe this might stimulate his memory a bit," he added.

Judge Hamilton reached inside the breast pocket of his coat and produced a sheaf of vouchers, some of which bore the signatures of the foremost men in finance to-day, and stripped off a white receipt form such as the Republican national committee uses. He smoothed out the bit of paper, gazed at it with an amused smile, and spread it flat upon the table in his apartment.

"Looks as if it was up to Mr. Bliss to think some more, does it not?" continued Mr. Hamilton.

MADE IN TWO PAYMENTS.

The receipt is a voucher for $75,000, signed by Mr. Bliss and dated October 1 and 20, 1896. It is explained that the amount was paid over in two payments, the first one of $10,000 on October 1 and the balance of $65,000 on October 20, the figures at the left-hand lower corner of the voucher being raised from $10,000 to $75,000.

When it was first brought to the attention of the Herald on Sunday that Andrew Hamilton said he held a voucher showing that he had paid $75,000 to Mr. Bliss, in addition to the $50,000 admitted by Mr. McCall to have been paid to the campaign fund of the Republican Party in 1896, Mr. Bliss was asked concerning the matter, and he denied all knowledge of such payment. His exact language was:

"Such a statement is utterly false. I, as treasurer of the Republican national committee, did not receive any money, nor was any voucher therefor issued by me. I do not know Andrew Hamilton, would not know him if I should see him, and never heard of him until recently."

In his home, 180 Madison Avenue, yesterday, the matter was again called to the attention of Mr. Bliss.

"Since applying to you for information about the alleged payment of an additional $75,000 into the Republican national committee's fund in 1896 by Andrew Hamilton new evidence has come to hand, Mr. Bliss. Can you recall the incident to-day?" was asked.

"LIE," SAYS MR. BLISS.

"I have said all I care to say about the matter," returned Mr. Bliss. "No such sum was paid over by Mr. Hamilton or the New York Life. My word ought to be accepted as final."

"But it is now known that a voucher exists."

"That is untrue. No such receipt exists. If anyone says so, he lies. Have you seen such a voucher?"

"Yes, Mr. Bliss, and I have a photograph of that voucher. Will you let me show it to you in order that you may pass upon the genuineness of the signature?"

"No, sir; I won't look at it. I decline to say another word about the matter."

Judge Hamilton explains the existence of the check and takes a peculiar delight in recalling the careful manner in which the payment was kept off the books of the New York Life.

"Bliss wanted more money," he said, "I don't know anything about the $50,000 which Mr. McCall acknowledged was paid to the Republican campaign fund in 1896. That was another matter. But I knew I was instructed to pay this money to Mr. Bliss, and that I borrowed $75,000 upon my notes and passed it over to Mr. Bliss. I first passed over $10,000 and got Mr. Bliss's receipt for it, and when I raised the balance I paid that over, and in order to simplify the transaction caused the additional $65,000 to be receipted for upon the same voucher, preserving the two dates of payment, 20 days apart.

NOT ON THE BOOKS.

"I borrowed this money, and when I was reimbursed I took up the notes and settled the indebtedness. I know this transaction does not appear in the regular way upon the books of the New York Life.

"But you do not suppose, do you, that Andrew Hamilton was paying $75,000 of his own money to the Republican campaign fund? As a matter of fact, the entire transaction can and will be proved to the satisfaction of everybody in due time. Do they want any more vouchers of this sort?

"I notice that several men on the executive committee have intimated that they think they ought to make good to the McCall estate the amount of $148,000 which Mr. McCall paid over to the Republican fund. That is all right, but I am in a position to tell them they will have to pay over much more than $148,000 to square the actual money contributed to the campaign funds by the New York Life during the last 13 years. This $75,000 is one addition. Let them get busy and find more.

"I promised a second edition of my remarks before the legislature. At that time I took occasion to mention the manner in which certain trustees shrank from standing up and admitting their share of responsibility for Mr. McCall's predicament before the Armstrong committee. Among these is William B. Hornblower, one of the counsel of the company, as well as trustee. I attribute most of Mr. McCall's later troubles to this man. His unreasoning jealousy of me and his unwillingness to acknowledge that he could be mistaken have been responsible for much of the innuendo and misunderstanding which have been projected at my head.

HORNBLOWER IS DEFEATED.

"It was first because I differed with Mr. Hornblower upon the matter of the former president, Mr. Beers, that his enmity was enkindled. When it became necessary to retire Mr. Beers it was found he was so strongly intrenched behind proxies that he could not be budged. It was then that Mr. Hornblower was paid $5,000. I think, to draw up a cast-iron agreement conferring a life pension of $35,000 a year. After Mr. McCall came in he got hundreds of letters from agents all over the country protesting against the newspaper notoriety which this pension had stirred up and begging that the pension be recalled.

"Mr. McCall asked Mr. Hornblower what could be done to abrogate the pension contract, and was informed it could not be broken. He then submitted the contract to Joseph H. Choate and Frederick R. Coudert, each of whom sustained Mr. Hornblower. He asked my opinion and I told him I did not consider it worth the paper on which it was written, as it was beyond the province of the trustees to confer such a pension. There was no service to be rendered for the pension, hence I held it was void.

HORNBLOWER MUCH MORTIFIED.

"In spite of the violent opposition of Mr. Horablower, I advised that a suit be brought, and I won. The contract was declared faulty, and Mr. Hornblower was mortified to see his contract destroyed.

"Then the Prussian Government ordered the New York Life out of Prussia unless it changed the form of its investments. I counseled getting a retaliatory measure passed, but Mr. Hornblower opposed this, saying it would ruin the insurance business. I prevailed. The retaliatory legislation was passed, and the ban was taken off the New York Life by the Prussian Government.

"Along in Mr. Cleveland's second term Mr. Hornblower concluded that the judicial ermine would suit him, and got Mr. McCall to interest himself for him. The result was that Mr. Cleveland sent Mr. Hornblower's name to the Senate to fill a vacancy upon the bench of the Supreme Court of the United States. But it did not meet with that overwhelming enthusiasm which Mr. Hornblower assumed his nomination ought to awaken in the hearts of his countrymen, and the nomination was hung up. It was apparent that the hostility of Senator David B. Hill would defeat Mr. Hornblower's ambition, unless something could be done to induce the Senator to change his course.

HILL'S ADVICE IGNORED.

"Mr. McCall called me into his office and said he was anxious that Mr. Hornblower be confirmed, and asked me if I would not go to Senator Hill, who was a warm friend of mine, as well as of Mr. McCall, and plead with him to withdraw his opposition. I consented, and that night saw the Senator in his home in Washington.

"Mr. Hill said he did not approve of Mr. Hornblower, and drew an accurate pen picture of the man. I told him Mr. McCall was pledged to Mr. Hornblower and that we were both anxious that the nomination be confirmed. At length Senator Hill said:

"'Well, I don't like Hornblower, the party don't like him, but he will be confirmed if he will keep his tongue still. He has been bitter in invective against our friends. If he agrees not to open his mouth again until the confirmation takes place he will be seated.'

"I returned home, and in Mr. McCall's private office, in the presence of Mr. Hornblower, told them what Senator Hill had said. I assured Mr. Hornblower that he would be confirmed by the Senate if he would bridle his vitriolic tongue and cease to criticise the man who had undertaken to obtain his confirmation. Immediately Mr. Hornblower conceived the idea that he had inspired fear in the breast of Senator Hill, and said he was sure to be confirmed, in spite of Hill. He left our presence and launched right out into more abuse of Senator Hill, and lost his seat upon the Supreme Court bench. He subsequently intimated that he did not believe we had sincerely worked for him, and the mortification of his rejection by the Senate is rankling to-day in his mind. It rankled when John A. McCall, heartbroken, but ruggedly honest, tendered his resignation from the presidency of the company which he had done more to build up than any other man. And it was William B. Hornblower who stood in the meeting of the board of trustees which accepted the resignation and prevented the adoption of a resolution of sympathy, respect, and confidence in the retiring president.

RECOVERED THE TAXES.

"William B. Hornblower opposed a fair exposition of the affairs of the company where they relate to myself. Even in the matter of the rebates upon taxes of the New York Life he had his hand in my denunciation. When Gov. Odell caused the franchise tax to become a law upon our statute books, I informed Mr. McCall that it was unconstitutional, save so far as it taxed the first year's premiums. Mr. Hornblower, as ever, took the other side, laughed at my contention, said it was farcical, and declared the law was perfectly constitutional and that we would have to pay the tax.

"I offered to bear the expense of recovering the taxes and having the tax law declared unconstitutional. The New York Life, Equitable, Metropolitan, and Mutual entered into agreements with me whereby I was to receive one-third of all the taxes I recovered. In order that the public might not raise an outcry because the big insurance companies were trying to dodge their taxes, I had some one suggest to Mr. Scott, president of the Provident Life, that it would be a good thing to employ me to collect these back taxes.

"I accepted and fought the law in the name of the Provident Life. I purposely let the matter run on for three years, while the taxes were paid, for I knew if I exposed the weakness of the law at once the legislature would amend it. Finally, I won in the court of appeals, and got back for the New York Life, Mutual, Equitable, and Metropolitan $1,033,000. Of this I was entitled to one-third—that is, $344,333. The share of back taxes I recovered for the New York Life was about $200,000. I have not yet collected all that is due to me from the New York Life, and the Equitable has not paid me, for the reason that Mr. Hyde and Mr. Alexander continually put me off. The Mutual has paid me, and the Metropolitan is all right.

"Then I undertook to recover the tax in other States where the retaliatory tax was imposed. I got some of the foreign corporations to give me an agreement similar to that which the big companies had given me, and to-day I have suits pending in Western States for the recovery of these taxes. Several days ago I received notice that $33,000 of taxes had been refunded by Illinois to the New York Life. Of that amount $11,000 belongs to me. Now, I want it understood that no other lawyer ever recovered a penny of this illegally collected franchise tax, and that I collected for the big four more than $1,000,000.

HAMILTON UTTERS DEFIANCE.

"Let the members of the Fowler committee deny, if they dare, that the contract with me for the collection of the extorted taxes was not spread upon the minutes, and let them assert now, if they dare, that I have been paid all that is coming to me. I can easily prove the facts. It must be understood that the State never refunds money paid over in the shape of taxes, but issues certificates of indebtedness, which may be used in the payment of future taxes. I sold my share, so far as I was able, of these taxes to other concerns, and in this way derived a cash benefit from my work.

"I want to call your attention to something which seems to have escaped the notice of the reading public. During the time the Armstrong committee was sifting evidence the insurance examiners of five great States were examining the books of the New York Life. They gave the books a more searching examination than Mr. Hughes did, and they were veteran insurance accountants. They went to work for the special purpose of discovering what had become of the money which was paid over to me for purposes of defense. They called for the vouchers and got down under the surface. Their power was greater than that of the Armstrong committee, for a refusal would mean that the company would have to give over business in the States affected.

"These shrewd and unbiased men, sent here for the purpose of finding irregularities in my accounts, found not one voucher missing, not one thing on which they could place their fingers and say a dishonest transaction lay hidden here and there. They have their notes with them still. I ask that they be called upon to speak if they found one dollar wrongfully expended by Andrew Hamilton.

"Again, I wish to call your attention to the very small proportion of the money which was expended every year which came into my hands. Do you realize that the annual expense item of the New York Life foots to $18,000,000? Do you consider $61,000 a very large proportion of $18,000,000 to be expended in 40 States to obtain benign legislation and defeat obnoxious measures?"

The Tariff.

EXTENSION OF REMARKS
OF
HON. WILLIAM B. FRANCIS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. FRANCIS. Mr. Speaker, the bill now before the House is so voluminous, covering 14 schedules of the tariff, together with a free list and an income-tax measure which, taken as a whole, has so many features to which we can subscribe that I am in the outset constrained to say that when the bill is put to a vote I intend to support it.

I shall address myself simply to a part or some of the schedules which, to my mind, are detrimental to the legitimate industries of the country, and in this I include the laborer, the producer, and the manufacturer.

The great test of the vitality of the Democratic Party at the present is not so much what it has done in the past, but that it is now intrusted with all the reins of Government to be administered in the future and, above all things else, as to whether it will keep its express pledges and implied promises to the people as enunciated in the campaign speeches and in our platform.

On this tariff question the Republican Party has been evasive, and has gotten itself in a contradictory light. It promised the people in 1908 an honest revision of the tariff, which everybody understood was to be a revision downward. But in violation of its platform, which was an express contract with the people, it revised it upward instead of downward. It violated its sacred promise, and the people in no uncertain terms during the last campaign and election repudiated that party so thoroughly that it received only eight electoral votes in the electoral college.

We promised to revise the tariff downward, and in speaking of the perfidy of the Republican tariff we said in our platform that—

It raises the cost of the necessaries of life to them—the people—but does not protect their product or wages. The farmer sells largely in free-trade markets and buys almost entirely in the protected markets.

Again, we said:

We recognize that our system of tariff taxation is intimately connected with the business of the country, and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industries.

We went to the people on this platform, our leaders quoted it, and the people came to rely upon it and returned us to power. But now we find that no sooner have we taken up the reins of Government than we propose a tariff bill which in many of its provisions, it seems to me, duties are so far reduced below what we promised that we are violating the platform on which we were elected. I for one wish to stimulate as far as possible the industries of my district and every other district by fostering the man at the plow, the farmer with his herds, the laborer at the furnace, the miner and manufacturer, that the operations of our mills should have such a fair competition that stagnation in legitimate business would be made impossible.

In all the explanations and reasons for drastic cuts in our tariff legislation I want to say that I agree with the Ways and Means Committee that in many instances drastic cuts should be made, and I defer to their judgment as far as I can consistently do so, because of their great experience and study on these problems, yet it seems to me that they have overlooked the hundreds of millions of dollars' worth of property on the shelves of the wholesaler and retailer. The very purpose of this bill is to reduce the high cost of living and to reduce the burdens of taxes which have been levied upon the people. To enact this legislation, having in view that purpose which can only be brought about through the reduction in the price of articles which the people would buy, has a direct consequence to reduce the capital of the merchant who has the goods on his shelf from 10 to 20 per cent. These people are the business men of the country, ranging from those operating a business in matches and pins to those operating business involving millions of dollars; and herein lies the crucial test of the wisdom of our tariff legislation, and for their benefit schedules should be arranged not to destroy them at one fell swoop, for they are engaged in legitimate industries which we promised not to injure. It is admitted as to the sugar schedule that the tariff on sugar should not be removed entirely at once, but that it should be graded for three years and at the end of that time should be placed upon the free list. If that is an argument for sugar, why would not a gradual reduction be an argument that should be applied to those engaged in raising wool and in manufacturing of glass, pottery, and tin, and to the hundreds of thousands of merchants who are sure to be greatly harmed by the severe cut in this tariff legislation.

What has been the history of the business public as to purchasing in this country? It is a rule founded in experience and in human nature that merchants and consumers each refuses to buy on a falling market; they wait to see the bottom. Now, from the very argument in support of this bill it will cause a reduction in prices; a falling market must inevitably happen. The consumers, which consist of the producers, the farmers, and laborers of this country, very properly will hesitate to buy supplies until they reach the cheapest point. The merchant in his store will refuse to stock up his counters when his capital has been already greatly reduced by falling prices until he sees the bottom. The wholesaler will stand in the same relation to the business world, and I fear that in some instances the factory will fail to receive the orders it formerly did and that smoke may cease to come out of their chimneys and the wheels of industry cease their hum. Back of the gates of these great industrial institutions stand the laborers ever ready and willing to work for fair wages when orders are received; but trust relations have so far reduced their opportunities in so many ways that in many employments protection does not protect, but it has been used as a decoy for the workman's vote.

Now, I do not want any of my Democratic free-trade friends to jump up and say to me that I am a protectionist, for I am not; but I simply want the competitive tariff that has been so often spoken of here and in caucus to be enacted in reason and justice and which will be practicable. We all agree that it

is necessary to raise by tariff duties the revenues necessary to run this Government, and to raise that by competitive tariff and with such discretion as will, in the language of our platform, "not destroy any legitimate industry." And if the very object is attained which the ultra free traders claim in this bill, the result will be just what I have described, and I can not, for the life of me, see why any fair-minded Democrat will not heed his better judgment and go a little slow on this question of paring down the tariff.

The object of this bill is to raise revenue with which to pay the expenses of the Government, as I have indicated, to benefit the producer, the consumer, and, above all, the laborer, and to keep our party pledges inviolate to the American people. Now, if we should fail by this bill to carry out any one of these three or all of them, we have to that extent failed in the purpose for which we were invested with power. The raising of revenue by a tariff was an American idea born and fostered by such Democrats as Thomas Jefferson, the father of our party, and under a system of gathering taxes with which to pay the expenses of government, in this manner we have built up the greatest and most powerful Government on earth. When we consider that it requires over $5,000,000 to be gathered in this system of taxation and in internal revenue and from corporation taxes from each congressional district in the United States to run our Government for a single Congress, we can see that there is no other means known to man that can be employed whereby the Government expenses can be procured except in this way. The old scheme in the East, as in England, was to levy direct taxes for the purpose of running the Government, which taxed every doorstep, their windows, and the things necessary for their very existence. Not only in that country was such taxation odious, but it resulted in many a war and revolution. But in this country we have built up the strongest Nation under our system of tariff for revenue, and the only real complaint we have had is its abuses by special privileges and by trusts and monopolies; and I might here add, that the trouble to-day is not so much with the tariff but with the trusts, which should be dealt with first before we can expect to reduce the high cost of living to our people through changes in tariff schedules.

We believe that some of the cuts in this bill have been too drastic to permit a fair wage to be paid and a fair profit to such legitimate industries as the manufacture of clay, pottery, and other pottery-producing plants, the manufacture of tin, and the manufacture of glass. We believe there is no way to explain to the agriculturists of this country, the stock raiser, and the woolgrower our attitude in placing their many products on the free list when he is compelled to buy supplies in a protected market which we are pleased to call a tariff affecting competitive markets.

I care to refer for a short time only to Schedule K, and that part of it which provides for placing the farmers' wool on the free list. It is argued, with some force, that wool in this country and in England is about the same price, that the usual trend of the market in England is a little lower than the American market; but it should be remembered that the wool of no two countries is exactly the same in quality, and there is no just standard of comparison between Ohio wool and Australian wool. It should be remembered also that the wool produced in no two given sections of the United States is of equal quality, and therefore this matter of comparison is erroneous. But the fact is that to-day there is the highest tariff on woolen manufactured goods that has ever been known in the country, while on wool the ostensible tariff of 11 and 12 cents a pound is so far modified by a subtle clause placed in the tariff bill that the fact is we have a tariff of only 3½ to 4 cents a pound as a competitive duty on raw wool. There was written into the Payne-Aldrich tariff bill a clause providing that skirted wool should come in as prior to 1891 at 12 cents per pound, washed, or 11 cents in the grease. This seemingly harmless clause so little understood has been the means of driving the merino sheep from the hills and forcing the woolgrower in many instances to raise a mutton sheep instead, and the farmer has been deceived and has known very little about how this trouble was brought about when he is shown that there is an ostensible tariff on wool of 11 and 12 cents. If you will take 100 pounds of foreign wool skirted, and this skirted wool simply means taking off the legs, buttocks, abdomen, head, and neck, leaving the back and sides, being the best prime wool. This is admitted into our ports at 12 cents a pound, washed; and by consulting the statistics as to the importation of our foreign wools we find about $40,000,000 worth out of a total of about forty-seven million comes into this country skirted, and that which does not comes in for carpets and rugs and is such wool as does not compete with our home production, while a like hundred pounds of our domestic wool having all the inferior parts to it and all the heavy parts is worth much less when analyzed as to its shrinkage and value, and the ratio between the two values when reduced will show that the potent effect of this tariff in its final analysis only amounts to the competitive duty of 3½ to 4 cents a pound on wool, and this is one of the reasons of the decline in prices of wool after the enactment of the infamous Payne-Aldrich bill, for the duty had in this subtle way been removed.

To illustrate: Let us take this 100 pounds skirted, washed, imported wool and 100 pounds of our domestic wool unwashed; the 100 pounds of imported wool loses 20 per cent, or 20 pounds, in scouring, resulting in a product of 80 pounds of clean, scoured wool. Our domestic wool, having all the heavy and inferior parts, loses in scouring 60 per cent, or 60 pounds, which, deducted from the 100 pounds, we get therefrom but 40 pounds ready for the mill. This places the ratio of the foreign product in comparison with the American just double, or 2 to 1.

But we are not through with the illustration. This foreign wool, being the best wool on the sheep, is worth 90 cents a pound; hence 80 pounds at 90 cents equal $72. Our domestic wool, having the inferior parts in it, is worth but 60 cents per scoured pound, hence 40 pounds at 60 cents make a value of $24; by which it is demonstrated that when reduced in quantity and value the foreign wool, on a competitive basis, amounts to exactly, in an advantage to the foreign producer, of 3 to 1 to ours. Now, if you will take your 12 cents tariff per pound and divide it by 3, taking the one-third of it, it leaves you 4 cents a pound duty on wool; and herein lies the cause of the difference between American and foreign wool, to a great extent. This is the "nigger in the woodpile," and this is why there is so little difference between the price of wool in the American markets and in the London markets.

But there is one thing more, and that is the trust conditions that exist in the woolen manufacture of this country, which has the entire purchasing of it under their power and that they go to the American people and pay them just such prices as they choose to give; and by these two means the American woolgrower has been robbed of his product for the last 30 years.

Now, I want to ask if any fair-minded man would say that we should hand over to the great American Woolen Trust, composed, as it is, of 150 mills and 34 separate organizations, the wool of the American farmer free of any competitive duty so that this gigantic trust might, with its products, sell back to the farmers and producers and laborers of the country their product and thereby rob the American people? If you will take the markets on manufactured woolens immediately after the enactment of the Payne-Aldrich bill, you will find that this American Woolen Co. increased its price to the consumer on an average of 36 per cent, and yet this very bill proposes to give into the hands of this trust more than it really desires for the purpose of continuing its robbery and exploitation. It is admitted that a tariff on wool of 20 to 30 per cent ad valorem will not enhance the price of goods to the consumer. It is also admitted that by taking the duty off wool we lose about $16,000,000 of revenue. Now, if it does not burden the consumer by putting it on and it benefits the sheep raiser, which must be admitted, and by making it free we lose $16,000,000 revenue, then why, in the name of common sense, will we not leave a reasonable duty on, when the very purpose of the bill is to raise revenue?

Since our caucus was dominated by the free-trade idea of handing to this woolen company free raw wool on a platter, and by so doing affect the great woolen products of the 26 wool-producing States in the Union, representing a number of sheep almost equal to the entire population of the United States, affecting over 4,000,000 sheep in the State of Ohio, which is certain to bring down the price of the sheep to such low ebb that they will be driven from the hills to the slaughterhouses, thereby destroying one-third of the meat product of our people, enhancing the price of meats to the laborer, all of which is so apparent to me that I can see in it political and commercial suicide, and I must register my protest against such legislation.

And in taking this stand I am neither at variance with my party platform nor with the Ways and Means Committee nor with the bill which they reported to the House, but I am standing squarely on our party's policy. In the Sixty-second Congress the Ways and Means Committee reported a bill carrying 20 per cent duty on wool, which, after it went to the Senate and came back to conference, a duty of 29 per cent was agreed upon; and in the second session of the same Congress they again reported a bill for 20 per cent, which went to the Senate and was returned, and in conference we agreed on 29 per cent ad valorem; and when the Ways and Means Committee reported this bill, after repeated hearings and after their most mature judgment, we find that this committee determined to place a duty on wool of 15 per cent ad valorem. So that it will be seen from reading our platform, taking the proceedings of our Democratic Congress and their pledges to the people, that their best judgment is that some duty should have been left on wool. Throughout the last campaign no one advocated free trade in wool, and our constituents confidently believed we meant no such legislation.

We read a great deal about the term "raw material" and "raw wool," but, Mr. Speaker, I want to say to this House that there is no raw material except such material as has not yet been touched by the hand of man. You are pleased to call wool ready for the market raw material. This requires the care that has been bestowed on the flocks in breeding—the lamb from its birth, to take care of the sheep for 365 days in the year, prepare its food for it and feed it daily during this time, cutting off and preparing its fleece for the market and selling it; and then, when it is sold to some trust organization, which makes it into cloth in four or five days, so far as the farmer is concerned it is called raw material, but, so far as the trust is concerned, it is called the manufactured product, and that it should have a protection on its goods of 35 per cent ad valorem, which is contained in this bill, and the farmer who buys back this trust-controlled product should give this wool, which you are pleased to call "raw material," free of any competitive duty, and buy it back in his suit of clothes burdened with 35 per cent duty, hence paying $7 extra on this $20 suit of clothes. Would any fair-minded man say that this is a square deal? And the farmer will not be unmindful that you are treating his wheat, his oats, his rye, and other products of the farm in the same way.

I think I understand the desire of the electorate in the last campaign. They do not want any longer a high protection prohibitive tariff, neither do they want free trade. They believed the Democratic Party meant to administer this Government by passing between these two extremes; they deduced this fact from our action in the Sixty-second Congress; they read it in the Baltimore platform; they heard it in our campaign oratory and read it in our campaign literature, and if we go beyond our promises to the free-trade theory, to which our party was never committed in any platform, they will not excuse us, neither will they longer follow our lead.

It has become a popular Democratic saying that our party stands for a tariff for revenue only. What does this statement standing alone mean? It simply means that in order to raise revenue sufficient to run the Government, economically administered, that it proposes to raise the money by a tariff, and the qualifying word "only" means that it goes no further than to collect sufficient revenue for this purpose, admitting some articles burdened with a tariff duty and some free of such duty, and that it will not use this means of raising revenue as a matter of protection to any particular industry; but when we come to levying this tariff it must be done with caution and discretion, and in levying it upon the many diversified imports care must be exercised, and we are obliged to go to the brink of protection and ascertain the competitive basis at which our industries can exist and our agricultural prosperity be maintained when brought in competition with foreign imports, into which so largely enters the element of labor.

So, call it a competitive tariff if you will, yet it is a fact that we have adopted this system, and it is the policy of the Democratic Party in enacting the present tariff bill. Where I differ from some of my colleagues is in the degree to which we should go in framing these schedules rather than in the means by which the end should be attained.

I advocated, supported, and voted for an amendment in the Democratic caucus providing that all boys' and men's ready-made woolen suits of a value of $10 or less should be admitted free of duty. This would have given the farmer free clothing and would have been in a great measure a compensation for the free wool that you exact from him. It would have given the laborer in the mines, mills, and factories free clothing in which to work, so that he would have had the benefit of this glorious free-trade proposition that some of our Democratic brethren are pleased to advocate; but, to my surprise, some of those who advocated these principles were the first to vote against free clothing, and these same parties were ready to vote for a duty on this woolen clothing, which the poor man and laborer most usually buy, of 35 per cent ad valorem, thereby charging the dear people an extra $3.50 for each and every $10 suit of clothes that a man purchases for himself or the members of his family. This would have been a good opportunity to compensate the farmer for the loss sustained by free wool and have benefited the laboring classes of our country. But this Underwood bill has reduced the tariff on manufactured woolens from an average of 90.10 per cent to 35 per cent, which will certainly be of great benefit to the consumer, but how it will affect the wool raiser remains to be seen.

If this part of the woolen schedule as to free wool was the only matter on which we were obliged to vote, I should cast my vote, as I did in caucus, against it; but as we must approve or reject this entire bill and are obliged to vote on these 14 schedules and on the free list and on the income-tax, which levies a tax upon the well-to-do and the rich and relieves the working classes from taxation to the extent of about $70,000,000, and owing to the fact that the infamous Payne-Aldrich bill will be repealed and this Underwood bill enacted in its stead, having for the greater part regard for competition between our products at home and abroad, whereby the burdens of taxation will be reduced to the consuming masses of over $500,000,000, I am constrained, owing to the fact that this bill will ultimately result in the greatest good to the greatest number, to cast my vote in its favor.

The Tariff.

SPEECH
OF
HON. HENDERSON M. JACOWAY,
OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. JACOWAY. Mr. Speaker, when one comes to discuss the tariff, which, after all, is but a system of taxes that must be borne at last by the people, he undertakes a stupendous task. To use the language of one of the greatest orators America has produced, it may be likened to an endeavor "to grasp a globe so large that the hand obtains no hold." The tariff has been defined as a system of taxes levied upon goods brought into a country from abroad. Again, it may be treated as a device for forcing a people to buy domestic goods instead of foreign goods. Be it also said that the tariff is in no sense a product of modern thought. We are told that to raise revenue the Athenians levied a tax upon all foreign merchandise; it was used by the Romans; and was in vogue in Venice in the Middle Ages.

It is the opinion of many that were it possible to secure the necessary revenue to pay the expenses of our Government otherwise they would be free traders. However, it is contended that there may be great merit in the language of him who said that free trade with the nations of the world is in this day and time an iridescent dream.

POSITION OF THE TWO GREAT PARTIES.

The Republican Party takes this position: That the maintaining of a high tariff insures stable markets for American products, raises the wages of American laborers, elevates them to a more dignified status, and places a barrier insurmountable between them and the pauper labor of other lands. The Democratic Party, in its policies, platforms, and other utterances, boldly traverses these contentions, and more than demonstrates the fallacies of Republican argument. The Democratic Party says that when our country was in its inception and this young Nation stood upon the threshold of a national political policy, and when the fathers, imbued, as it were, with a sixth sense, realizing the great possibilities of this embryonic but lusty Republic of ours, saw that in order for these infant industries to be placed upon their feet and protected from the competition with the old and established nations of the world, that a certain modicum of protection at that time was not only necessary but mandatory. But that was multiplied years ago. Since then the days have dragged their weary and tortuous lengths into decades, and the decades have woven themselves into a century and a quarter. The thirteen original States that were a nucleus for the greatest Government that was ever formed or planned in the mind of man, then scattered desultorily along the Atlantic seaboard, in numbers have been multiplied by more than three; and in all, by the genius, thrift, foresight, and indomitable energy of that character known as the American citizen, 48 sovereign States have been carved from a vast domain, and the history we have since written has been the marvel of the world. A network of railways connects the most eastern point with that of the farthest west, while the north, by this system of annihilating distance, has been brought into quick and direct contact with the south. The telegraph and telephone have made New York next door neighbor to San Francisco. Innumerable smokestacks dot the earth in all directions; our forests have been felled, and by the energy and deft hand of the farmer there have been opened to cultivation millions of acres upon which to produce one of our great essen-

tials—food; our rivers have been improved, and in this respect a national liability has been turned into a national asset in the form of cheap transportation for carrying the products of the farm to the congested centers, and the products of the factories back to the farm. Proud streams and great arteries of commerce are they upon which white sails bear their burdens to the sea. In short, in all the national virtues we are the wonder of the nations of the earth—a great, beneficent world power, risen from a few handfuls of people to a population of 90,000,000, and boasting of a national wealth of $150,000,000,000, as compared with the wealth of the United Kingdom from whence we came a century and a quarter ago, estimated at $80,000,000,000; France, $65,000,000,000; and Germany, $60,000,000,000. Our flag is respected and revered in every land and on every sea. In the commercial world, the industrial world, the agricultural world, and all the various callings, vocations, and avocations of life we are accredited with an invincible potency that challenges admiration and commands respect from all quarters of the globe. I mention this splendid array of facts and figures, not boastfully, but, I hope, with pardonable pride, as an argument that as a rule general the manufacturing establishments and the products of American industry no longer need a high protection or an artificial impetus. We have established beyond cavil that they may live and successfully compete in the markets of the world, and that in the contest they will not emerge second best.

In other words, Mr. Speaker, the infant has become a man. He has arrived at a mature age and discarded with disgust his swaddling clothes. Covering that period of time, from his tender age, 124 years ago, up to the present, he has, like the little busy bee, improved each shining hour. Aided by the Republican Party year in and year ont, the infant industry has been the pleased and pleasing beneficiary of a bounty in the form of taxes unjustly wrung from the citizens of this country and gratuitously placed in his coffers. He has been the willing receiver o stolen goods, the product of tariff burglary. To inspire a hate for the system gratuitously fastened upon an unwilling public only a few facts out of many that could be cited are necessary to be submitted.

THE WORKING OF OUR TARIFF SYSTEM.

If the high-protection policy of the Republican Party were to the effect that the necessities of life were to be taxed least and the luxuries most, thus placing the burden of taxation where it rightly belongs, its position would be more tenable. But is this done?

Under the Payne-Aldrich bill the person who imports $1,000 worth of diamonds pays a tax of but $100, or 10 per cent. If he were to import a thousand shirts worth a dollar each, he would have to leave at the customhouse, and add t his selling price, $600, or 60 per cent. If he should bring in $1,000 worth of champagne—one of the few instances where this is a large increase—the tax levied under the tariff would be $500, but if blankets to the amount of $1,000 should be imported into the United States, before these could come through the customhouse, a tariff of $1,645.42 must be paid, and this also is added to the selling price to the consumer. On an importation of $1,000 worth of paintings and statuary the custom tax would be only $200; on sugar it would be $788.70. On $1,000 worth of jewelry the importer would have to pay $600; but if instead of jewelry he imported woolen goods, the tax would be $1,050.90. If he imported an automobile worth $5,000, his tax would be $2,250; but if it were $5,000 worth of furs, the tariff tax would be $6,000; if $5,000 worth of clothing it would be $4,330. If some multimillionaire desired a $100,000 ocean yacht the tariff on his importation would be $35,000, while, were the importation stockings instead, the tax would be $76,950.

Another illustration submitted shows that on every pound of beef shipped into this country a tax of 3 cents is placed, and that the principal beneficiary is the Beef Trust is undeniable. That this protection against competition with foreign beef is unnecessary, reference only need be made to the trade journals in which the fact is demonstrated that American beef, after paying the freight on our transcontinental lines for hundreds of miles and then being transferred to ocean freighters and the freight again paid for a distance of 3,000 miles, can be sold in free-trade England, after being brought into competition with the beef of the world, for less than it is sold to the American consumer. What is true of beef can be said of numerous other articles. As we proceed let us put the interrogatory and ask, Should there be any form of law that permits of a condition like this? There is but one answer, in my judgment.

Without burdening this argument with undue detail, we find, also, that the American manufacturers, sheltered by a high protective tariff, sold tools to the American laborer at a rate 30 per cent higher than to the foreign laborer. Multiplied and varied are the facts that could be presented showing that under the high protective system, upheld and nurtured by the Republican Party, the burden and taxes of government are unequal, and that righteous is the indignation of the people when they come to know how far our Government has drifted from the course intended by the fathers when they declared that all men are created free and equal; that taxes should be uniform and the burdens of government equally distributed. As stated by Mr. Gladstone, there should be no law that would permit one Englishman to steal from another Englishman. Making it absolutely applicable to us, the American Congress should make no law that would permit one American, under the guise of statutory right, to steal from another American.

Injustice has ever been the parent of disorder and strife. It is a breeder of anarchy, a sure destroyer of the love for liberty, and a threat and a menace to good government. When each man can know that his burdens and his blessings and the restraints laid upon his actions are commensurate with the burdens and blessings and restraints of his fellow man, then are the murmurings of discontent hushed and the mutterings of rebellious discord stilled. When the tiller of the soil, the weaver at the shuttle, the man behind the desk or in the countinghouse, in the field or at the forge, can feel that the mantle of the law covers and protects him no less than the moneyed king and plutocrat; when he can know that unjust discrimination for the benefit of a class or classes has ceased and that each is equally burdened in working out a just and a humane system of government, then will the evidences of unrest disappear, one of the greatest secrets of a nation's success will be solved, and universal peace will spread its wings abroad. Not that peace which succeeds annihilation; not the enforced silence of the convict, nor the timorous murmurings of the ignorant and helpless, whose powers of resistance have been crushed out by the taxgatherer, but that broad, gentle, and beneficent peace that takes captive the citadel of the heart, melts the soul in sympathy, gives to humanity the highest attainable degree of happiness, and holds all men equal before the law.

Is it any source of wonder that the people have risen in vigorous protest, when we are brought to realize that under the law as written on the statute books by the Republican Party they are discriminated against at almost every angle?

Two of the greatest documents ever promulgated, the Declaration of Independence and the Federal Constitution—safe guides, too, as the years will testify—many of the expressions of which are worn and tattered by constant use and have been stammered by a thousand schoolboys from a thousand rostrums—but which, none the less, contain provisions sublimely true—hold that under our theory of government all men are equal; not in power, wealth, or native ability, for in these an unequal distribution has always existed and always will, but before the law. There, neither in penalties nor protection, should there be discrimination. From its very birth the Democratic Party has stood for that equality, and the present tariff bill stands out with solid front against the policies of the Republican Party, which, it seems, has lifted certain industries above and made them paramount to the law; which has accorded great concessions to special privileges, whose potency seems to be greater than that of the law. No saying was ever truer than that the tariff is the mother of the trusts.

Is it any wonder that the patriot sees with genuine alarm the present trend of our Government, when the golden streams of our national wealth are flowing, unobstructed, into the coffers of the tariff-protected trusts? Is one to be rebuked for asking why it is that out of every $5 levied under the tariff $4 finds its way into the pockets of the specially privileged? It takes no great gift of prophecy to say that not until this unequal distribution of taxation is abolished, and equality before the law established, and freedom in its broader sense secured for all the people will the cry for justice be stilled.

THE GROWTH OF THE WATERED STOCKS DUE TO THE TARIFF.

Is it any wonder that the taxpayer makes an outcry and registers his war of millions of ballots when he reads in the political history of that Government which is his that when one Republican President entered the White House the trusts and combinations had a capitalization, in round numbers, of $3,784,000,000, and that on the day, seven years later, when he turned the administration over to his Republican successor this capitalization was $31,672,000,000, and that more than 70 per cent of the total capitalization was watered stock, showing an increase of $27,000,000,000, or twenty times the assessed valuation of the States of Arkansas and Alabama, or more than forty times the tax-book valuation of the property of the entire State of Arkansas? Is he to be called an anarchist, a disturbing factor, an enemy to good government if he asks that these injustices be rebuked? When it is taken into consideration that during these seven years, while the trusts unceasingly formed into unholy coalitions of capital to contest the prices of every necessity from the swaddling clothes that wrapped the tiny form of the newborn infant to the headstone that marked the last resting place of the old man, the Federal Government had in its service 171 district attorneys and assistant district attorneys, at a cost of $735,612.06 in salaries and other expenses, in addition to appropriations for the maintenance of the Department of Justice amounting to $250,965.58, can the taxpayer regardless of party be blamed for overturning a great Republican majority in Congress and placing the reins of government in the hands of the Democratic Party? To have done differently would be for him to have acknowledged a mentality on the plane of the animal and a sycophantic truculency classing him a vassal and a serf instead of an American freeman. Shall he have the vials of the wrath of the Republican Party poured out upon him when he calls attention to a condition that points with unerring accuracy to the lamentable fact that under Republican rule for a long period of years corporate wealth has been pyramiding in colossal form and individual wealth diminishing to the end that its sad commentary that it charged that fewer people comparatively own their own homes now than at any other period of our Government's existence? To all who stand for justice and fair play can any other than a negative answer be given?

A PLEA FOR JUSTICE.

A love for equality and freedom was one of the propelling causes for the establishment of the American Government. If the citizen did not contend for what was justly his, he would not be an American citizen. Love for liberty and equal-handed justice are two of the greatest foundation stones upon which our Government is established, and to these qualities are attributable the dizzy heights to which we have climbed in governmental preeminence. These are the sentiments that are incorporated into the first official document that issued from our Nation; these are prominent in our racial characteristics. They are guaranteed to us by our Federal Constitution and have been written into every constitution of every State born into the Union. It is but carrying this principle of government into effect that the 90,000,000 people upon whom the burdens of government rest demand at the hands of that Government, which professes to stand as the boldest exponent of the principles of equal taxation, a redemption of its pledges. None can be heard to say that these demands are not just; and if just they are, and still ungranted, then the Government has been derelict in framing its laws somewhere or somehow, or in the proper enforcement of them. The burden bearers of this Government ask only fair play. This has grown to a demand, and to the end of securing it the Democratic Party is pledged. If it is not secured, the enforcement of our laws is a failure.

HAS THE REPUBLICAN PARTY KEPT FAITH?

As has been said, in the early history of our Government a certain amount of protection was deemed necessary that in the course of time American institutions could stand upon their own merits and compete with the other nations. For years the Democratic Party has contended that this contingency has long since passed and that the tariff should be revised quickly and downward. The Republican Party has been in power for nearly 50 years; yet for it the time has never been opportune to make good its promise to the people. In each succeeding tariff act that the party has written the rates have risen to a most alarming degree. The table I insert below demonstrates this fact in terms more forcible and eloquent than any I could employ. It is a comparison between the first tariff act of 1789 and the Payne-Aldrich Act of 1909.

Comparison between the tariff act of 1789 and the Payne-Aldrich Act of 1909.

Item.	Tariff of 1789.	Tariff of 1909.	Increase.
Jamaica distilled spirits, per gallon.	10 cents	$2.60	2,500 per cent.
All other distilled spirits, per gallon.	8 cents	$2.60	3,150 per cent.
Molasses, per gallon	2½ cents	20 per cent to 6 cents.	140 per cent.
Madeira wine, per gallon	18 cents	45 per cent to 60 cents.	150 to 233 per cent.
All other wines, per gallon	10 cents	do	350 to 500 per cent.
Beer, ale, or porter:			
In casks, per gallon	5 cents	23 cents	360 per cent.
In bottles, per dozen	20 cents per gallon.	45 cents	125 per cent.
Malt, per bushel	10 cents	do	350 per cent.
Brown sugars, per pound	1 cent	1.685 cents	68 per cent.
Loaf sugar, per pound	3 cents	1.9 cents	36 per cent.[1]
All other, per pound	1½ cents	do	26 per cent.
Coffee per pound	2½ cents	Free	Inf.[1]
Cocoa, per pound	1 cent	2½ to 5 cents	150 to 400 per cent.

[1] Decrease.

Comparison between the tariff act of 1789 and the Payne-Aldrich Act of 1909—Continued.

Item.	Tariff of 1789.	Tariff of 1909.	Increase.
Candles:			
Tallow, per pound	2 cents	20 per cent	
Wax, per pound	6 cents	25 per cent	
Cheese, per pound	4 cents	6 cents	50 per cent.
Soap, per pound	2 cents	1½ to 20 cents	600 per cent.[2]
Boots, per pair	50 cents	10 to 15 per cent	
Shoes:			
Leather, per pair	7 cents	do	50 to 90 per cent.
Silk, etc., per pair	10 cents	50 per cent	400 per cent.

Dyeing woods	do	17 to 23 per cent	Do.
Dyeing drugs	do	do	Do.
Hides	do	Free	
Beaver	do	do	
Furs	do	Free to 20 per cent	
Deer skins	do	15 per cent	Do.
On all other merchandise from China or India imported in foreign owned vessels:			
Goods, wares, and merchandise.	12½ per cent	20 to 300 per cent	60 per cent up.
Looking glasses	10 per cent	45 per cent	350 per cent.
Glass, window	do	10 to 128 per cent	60 to 1,180 per cent.
China, stone and earthenware.	do	20 to 60 per cent	100 to 500 per cent.
Gunpowder	do	10.23 per cent	
Shoe and knee buckles	do	30 to 60 per cent	200 to 500 per cent.
Gold and silver lace	do	60 per cent	500 per cent.
Gold and silver leaf	do	25 to 40 per cent	150 to 300 per cent.

[1] Decrease. [2] Average.

Beyond doubt these figures tell their own story. I can draw no other conclusion but that the promises of the Republican Party to revise the tariff downward have not been kept, either in the letter or in the spirit of the law. As a result the people, disgusted and rebellious, have voted the Republican Party out of power. In 1910 the Democratic Party secured a majority in the House, and in 1912 we became Democratic in both branches of Congress and elected a Democratic President, due, I believe, in a great degree to the high cost of living, the high protective tariff, which supports the high cost of living, and the Republican exploitation of the many for the enrichment of the few.

THE PRESENT TARIFF BILL.

For a long period of years the Democratic Party has held an outstanding promise to the people that if clothed in plenary powers it would redeem its pledges. Have we made good? Let the record speak. The Underwood bill is for tariff for revenue only. But the feature that stands preeminent is that it is an equitable tax to secure sufficient means to meet the expenses of Government economically administered, and that in fixing the rates the luxuries are taxed highest and the necessities lowest, or free.

In verification I give a comparison of the rates in the Underwood bill as reported to this House and the Payne-Aldrich bill:

PAYNE-ALDRICH BILL.	UNDERWOOD BILL.
Cotton cloth, 50 per cent.	Cotton cloth, 30 per cent.
Flannels, 93 per cent.	Flannels, 25 and 30 per cent.
Women's and children's dress goods, 100 per cent.	Women's and children's dress goods, 35 per cent.
Shoes, 10 per cent.	Shoes, free.

Woolen dress goods, from 99.70 to 35 per cent.
Ready-made woolen clothing, from 79.50 to 35 per cent.
Flannels for underwear, from 93.29 to 25 and 35 per cent.
Woolen blankets, from 72.69 to 25 per cent.
Cotton underwear, from 60.27 to 25 per cent.
Stockings, hose, and half hose, from 75.38 to 50 per cent.
Shirts, collars, and cuffs, from 64.03 to 25 per cent.
Ready-made wearing apparel, from 50 to 30 per cent.
Handkerchiefs and mufflers, from 59.27 to 30 per cent.
Cotton thread, from 31.54 to 19.29 per cent.
Gloves, from 44.15 to 31.77 per cent.
Anvils of iron and steel, from 32.11 to 15 per cent.
Bolts, from 20.59 to 15 per cent.
Chains of all kinds, from 46.59 to 20 per cent.
Pocketknives, from 77.68 to 40 per cent.
Scissors and shears, from 53.77 to 30 per cent.
Table and butcher knives, forks, etc., from 41.98 to 27 per cent.
Files, etc., from 60.47 to 25 per cent.
Tinware, from 45 to 25 per cent.
House or cabinet furniture of wood, from 35 to 15 per cent.
Sugar, from 48.54 to 36.25 per cent.
Red lead, from 60.35 to 25 per cent.
White lead, from 38.01 to 25 per cent.
Castile soap, from 16.20 to 10 per cent.
All bricks, from 30.23 to 10.28 per cent.
China, crockery ware, from 55 per cent to 35 or 50 per cent.
Wire rope and strand, from 49.84 to 30 per cent.
Common window glass, from 46.38 to 28.20 per cent.

THE FREE LIST.

As far as it can be done, consistent with sound governmental policies, the necessary articles of food eaten by the American citizen to sustain life, the clothing that he wears to protect his body from the suns of summer and the blasts of winter, and the shelter that covers him, should be given to him at the lowest possible cost. As I view it, this is one of the most mandatory functions of all governments, for all must eat, all must wear clothes, and all must have shelter. Reference to the present tariff bill discloses that these beneficent and humane demands are recognized, and we find among the great number of articles on the free list the following:

Agricultural implements, bagging and ties, beef, lard, buckwheat flour, coffee, drugs, ice, milk and cream, horseshoes, needles, oils, newspapers, printing paper, rye and rye flour, sheep, barbed wire, turpentine, hubs for wheels, animals for breeding, bacon, lamb, pork, wheat flour, corn meal, fresh-water fish, hides, lemons, nails, wire staples, bolts, kerosene, lubricating oils, quinine, potatoes, trace chains, sulphur, shotguns, wool, and innumerable other useful and necessary articles.

The figures above cited speak for themselves, and need no comment. Their force and eloquence carry conviction and demonstrate, in tones not dubious but distinct and clear, which go ringing around and across the continent, that the Democratic Party has arisen to the demands of the hour; that it has heeded the commands of those clothing them with power and redeemed the preelection promises to the people. Once again, Mr. Speaker, has the bow of promise appeared in the heavens, and those governmental tendencies to make this a Nation of serfs and vassals to a political, commercial, or industrial organization is checked, and the task has fully begun of restoring to the people the Government, to end in complete fulfillment.

THE BIRTH OF A NEW FREEDOM.

Many have been the tests of the strength and solidity of our Government. All of them she has survived, and though hampered, hobbled, and trammeled for a long stretch of years in a manner to stunt the most healthy and normal development, yet from each contest she has emerged stronger. Ten years ago I heard a national character say in a speech that we had outgrown the Declaration of Independence and the Federal Constitution; that these were antiquated governmental forms that live only in history. With this argument I take the opposite of the issue. I am one who believes in the Federal Constitution and the Declaration of Independence. With our Government firmly planted upon the principles incorporated into each of them, recognizing them as the all-sufficient fountains of our faith, far we can not stray. The truth remains that as we look about us and note the great achievements of the American people in all the walks and avenues of life we are amazed at its perfection and feel that the acme of human endeavor is being reached at rapid rate. But this high standard of governmental attainment is not the result of a growth that is ephemeral. It is the product of the combined work, energy, and genius of ages past. Generations have labored, planned, and hoped to reach this high plane of perfection, only to pass from the scene of their endeavors, not, however, to have their efforts lost or dissipated but to be taken up and further prosecuted by succeeding generations, who each in turn have left behind them, as a heritage to the generations that were to follow, a pyramidal monument of a higher perfection than that which they found. Hence this laudable evolution has steadily developed until, as we view the product of all these forces and energies, we look upon the consummation of an approaching preeminence pleasing to contemplate and commanding our unstinted admiration. That this end may be reached, that these conditions shall grow broader and deeper, more beneficent, and humane with the lapse of years, is the prayer of every patriot, so that in truth and in fact all can feel and know that this is—

A land of settled government;
A land of old and just renown,
Where freedom slowly broadens down
From precedent to precedent.

The Tariff.

EXTENSION OF REMARKS
OF
HON. JAMES MANAHAN,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. MANAHAN. Mr. Speaker, the admission of flour free under the terms of this bill may result in a small saving to flour consumers, and if it does so result, well and good. The amount of this saving to the great wheat-producing State of Minnesota will be very small compared with the loss it will occasion in that State by the depressed prices of wheat. Minnesota produces, as everyone knows, many times as much wheat as it consumes. Whatever may be said about the price of wheat in Liverpool being fixed by the law of universal supply and demand, this is not true of this country and the Northwest, particularly the State of Minnesota. The price paid for wheat in these great terminal markets is subject to the influence of the tariff and also to the local market conditions. The tariff is, of course, under the control of Congress; local market conditions in the great terminals of Minnesota are under the control of State government. I take the opportunity in this connection, granted by the unanimous consent of this House, to extend my remarks in the RECORD, for the purpose of showing the facts regarding the prices of wheat that have prevailed for years under the present tariff on wheat and flour, and in the same connection showing the difference in these Minnesota prices and the Winnipeg and Liverpool prices during the same period. In addition to these tables of comparison in prices between Minnesota terminal markets and foreign markets under present conditions I will also extend in the RECORD the findings of a special committee of the House of the State of Minnesota at the last session of its legislature, showing the conditions of these terminal markets, the manner in which the grain of the Northwest is handled, and the way in which wheat has been inspected, graded, and sold.

The committee of the Minnesota Legislature, who made the report submitted herewith, did so after a thorough and painstaking investigation, and the report shows conclusively that the higher prices obtained in the terminal markets of Minnesota for wheat must be credited to the protection of the tariff which compels the Canadian farmers to sell their surplus on export basis based on Liverpool prices.

The following table shows for the years 1910, 1911, and 1912 on the first trading day of each month the prices that were paid for No. 1 northern wheat at Minneapolis, Duluth, and Liverpool, with the approximate cost to take wheat in store Duluth and deliver in store Liverpool at the time indicated:

Comparative prices of wheat.

First trading day.	Minneapolis, No. 1 northern, delivered.	Duluth, No. 1 northern, track.	Liverpool. Future.	Liverpool. England, current prices.	Liverpool. United States equivalent.	Approximate cost to take wheat in store Duluth, and deliver in store at Liverpool.

The following table shows the Minneapolis market enjoyed a better price for wheat than Winnipeg from 1905 to 1910, inclusive. It is taken from Senate Document 849 of the Sixty-first Congress, and is based on a report of the Tariff Board relative to various commodities named in the Canadian reciprocity measure. The table follows:

Minneapolis and Winnipeg prices and the advance of Minneapolis over Winnipeg prices, page 97 of Senate Document 849, Sixty-first Congress, third session, being message from the President of the United States transmitting, in response to Senate resolution of Feb. 23, 1911, a report from the Tariff Board relative to various commodities named in the proposed Canadian reciprocity measure.

	Minneapolis prices.	Winnipeg prices.	Difference.
1905.			Cents.
January	$1.13⅞	$1.00	13⅞

Mr. Speaker, I desire also under the unanimous consent of the House to extend in the RECORD the report in full of the special house grain investigating committee of the State of Minnesota, which held protracted hearings and thoroughly investigated the terminal grain markets of Minnesota during the last session of its legislature. I do this so as to show the care taken and efforts made by the State of Minnesota to secure fair market conditions for its most important product and also to show that the higher prices enjoyed by the grain producers of the Northwest over the Liverpool and Winnipeg markets were not the result of any sort of artificial inflation temporarily by bidders in the pit a Chicago or Minneapolis, nor to any partiality in the matter of grade or inspection, but the result solely of the protection of the tariff, which the free-flour provisions of this bill will destroy.

The report in full, as made to the house on April 17, 1913, is as follows:

REPORT OF THE SPECIAL HOUSE GRAIN INVESTIGATING COMMITTEE.

To the Speaker and the House of Representatives of the State of Minnesota:

Your committee, appointed under resolution of January 21, 1913, to investigate the organization, management, control, and methods of doing business of any and all corporations or copartnerships and of every person in any manner engaged in the business of buying and selling or handling of grain or live-stock products in the State of Minnesota, and into the details in every respect whatsoever referring to the State board of grain inspection and its methods of procedure and of doing business, authorized by such resolution to employ counsel to assist the committee in the examination of witnesses and of books and papers and other instruments of evidence in the matter of this investigation and to assist in the preparation of its report on the conclusion of such investigation; this committee, consisting of C. M. Bindexon (chairman), A. F. Telgen, Martin Schwartz, D. P. O'Neill, and Frank Hopkins, respectfully make the following report:

JAMES MANAHAN was employed as counsel for the committee and public hearings were held in the capitol at St. Paul, as well as at Minneapolis and Duluth, at which representatives of all parties interested appeared in person and by attorney.

The rules, by-laws, and reports of the Minneapolis Chamber of Commerce and of the Duluth Board of Trade, together with many letters from shippers, statements and tabulations prepared by commission merchants and elevator companies, and the rules, reports, and statistical tables prepared by the railway and warehouse commission regard-

ing the inspection and moving of grain, were received in evidence and considered in connection with the testimony of a large number of witnesses, who testified as shown by the transcript of such testimony submitted herewith in connection with the exhibits offered in evidence as a part of this report.

Your committee thoroughly investigated the manner in which grain received at the terminal markets of Minneapolis and Duluth is sampled, inspected, and marketed, taking the testimony of samplers, inspectors, and officers of the railway and warehouse commission and of the State board of appeals, officers of the Chamber of Commerce of Minneapolis and Duluth Board of Trade, managers of terminal elevator companies and commission merchants, pit traders and independent dealers, as well as a large number of country elevator men, managers of farmers' cooperative concerns, representatives of the American Society of Equity, and farmers.

We find that the grain markets of Minneapolis and Duluth handle the bulk of the grain produced in the Northwest. The business of buying and selling grain at each of these terminals is well organized, and the commission men generally have adopted a method of promptly and accurately reporting all trades made by them. There seems to be no opportunity or inclination for individual traders on these markets to engage in any practice detrimental or unfair to either the shipper or receiver of grain, but in certain respects conditions have prevailed which your committee considers unsatisfactory and tending to burden the producers and to some extent the general public, and regarding these conditions we find and recommend as follows:

COMMITTEE'S RECOMMENDATIONS.

First. The Chamber of Commerce of Minneapolis and the Board of Trade of Duluth are voluntary associations organized under the general laws and consisting of a limited number of members elected by the board of directors of these associations under rules which at the same time confer upon such board of directors substantially absolute control over the admission of new members.

The number of members is limited, but any member may own an unlimited number of memberships. Notwithstanding the tremendous increase in the grain business of the Northwest, the number of members of the chamber of commerce has not been enlarged for more than 10 years past.

Your committee therefore recommends that the State should assert and have sufficient control over the internal management of these associations to insure at all times freedom of the market from any possibility of control by any combination (should such combination be attempted) and recommends that the by-laws and rules of such associations should be so made and enforced that the general officers and directors and membership committees should be elected by the full membership by secret ballot, and that all nominations for such offices should be made by a suitable primary system.

Your committee also recommends that suitable rules and by-laws be adopted to enable an applicant for admission to membership to such associations to appeal from an adverse decision by the board of directors to the vote of the membership at large, and your committee further recommends that such legislation be enacted as will enable such applicant to appeal to a court of competent jurisdiction in any case where he is arbitrarily denied admission to such associations.

RULES CRITICIZED.

Second. The following rules of these associations your committee believes are arbitrary and objectionable:

(a) Upon violation of any rule, regulation, or custom of the association any member may be punished by a fine, suspension, or expulsion from the association by vote of the board of directors only.

(b) Another rule provides that members can not bid against each other for carload lots on track at country points. This rule makes such bids absolutely noncompetitive, which your committee believes is against the best interests of producers and shippers.

Your committee believes and recommends that all secrecy as to the doings and rules of the Chamber of Commerce of Minneapolis and the Duluth Board of Trade should be eliminated so far as that may be done without unduly disclosing what may be termed private business relations of the members of these associations. Publicity is the greatest possible corrective of all public evils, and your committee believes that publicity in this would result in a wholesome improvement in matters referred to as well as strengthening of public confidence in the doings and practices of said Minneapolis Chamber of Commerce and Duluth Board of Trade.

3. Your committee also finds that for a number of years a private price list bureau has been operated with offices in the Chamber of Commerce, Minneapolis, and with access to the floor and in close relation with the quotation committee of said chamber. The business of this private price list bureau is to furnish subscribers at country points a daily card showing what purports to be the price on grain at the local station where such card is sent and as a guide to buyers at such station, which price card is based upon the closing prices of that date at the terminal markets, with freight charges and what is supposed to be a reasonable margin of profit deducted. Under this practice this card is sent to subscribers at the various stations upon the theory that the prices quoted may be changed at any station whenever any subscriber at that station desires to pay more for the grain than is quoted by the card itself. The prices quoted on this card are generally followed at country points by the buyer, and on account of the recognition of the right of the buyer at any station to raise the price as given on these cards sent to that station it has often been used to crush out competition. We believe that this grain bulletin should be substituted by a public agency, and that the railroad and warehouse commission should be authorized and directed to adopt suitable rules and take the necessary steps to send daily price cards to all subscribers willing to pay therefor, showing on a uniform basis the prices that are being paid at the terminals and that may be paid at the country stations after allowing for freight and a uniform and reasonable margin of profit.

SWITCHING CHARGES.

For years the members of the Chamber of Commerce of Minneapolis have imposed an arbitrary charge of $1.50 switching charge upon every car of grain handled at Minneapolis. This charge has been imposed under authority of the association and was made to appear to be justified on the ground that it was an "average" of the charges actually imposed by the railroads for switching services. As a matter of fact, the statistics of the railroad and warehouse commission show the charge to be in excess of the average imposed by the railroads.

Moreover, according to the testimony adduced before this committee, Minneapolis is the only grain terminal in the United States where a switching charge is charged against the shipper; and, as was admitted by witnesses before your committee, this arbitrary charge of $1.50 a car has been assessed annually upon thousands of cars which actually paid no switching charge whatsoever. Consequently, this excessive and unjust switching charge has been an unfair burden inflicted upon the grain growers of the State, and your committee therefore recommends:

Fourth. Legislation that will abolish these unfair switching charges against grain marketed at Minneapolis and that the railroad and warehouse commission make, and enforce such regulations as will secure to shippers and consigners of grain at terminal market at Minneapolis a free switching service to any industry located in said city.

Fifth. Under the law of Minnesota corporations are permitted to transact business with subsidiary corporations when the dealings are fair, and, as a result, the buying and selling of grain by commission merchants at terminal markets to their own subsidiary companies has been practiced to a considerable extent, generally with the knowledge and consent of the customer, in some instances where no such consent has been obtained. We think this is an unwise practice and one which, if continued, would afford opportunity for abuse; and we therefore recommend legislation to prevent the sale of any sort of product or grain by any broker or commission merchant to any company, with or without the consent of its consignor, in which such broker or commission merchant has any interest, either direct or indirect.

SELLING TO SUBSIDIARIES.

That this custom of selling grain to subsidiary companies is recognized by the chamber of commerce to be an unwise custom, likely to be abused, is shown by the fact that the board of directors of said chamber of commerce during this investigation has made and adopted a rule forbidding any member to sell or buy consigned grain to or of a subsidiary company, whether the consent of the consignor has been obtained or not.

Sixth. A large part of the business at the terminal market is closely connected with what is known as future trading. The operations in the "pit," so called, and the prices listed from similar future markets at other terminal points, like Chicago, to a very large extent fix the prices paid for a car of wheat on the arrival at Minneapolis, as the same is offered for sale by and inspected on the floor of the trading room in the Chamber of Commerce of Minneapolis and the Duluth Board of Trade. It is claimed that this so-called future market serves a useful purpose by permitting what is known as "hedging" and what may be termed investment by those who wish to speculate and are competent to assume and carry the commercial risk of a change in prices between the gathering and distribution of the crops. It also appears evident from the testimony adduced before your committee that there are some small investors and poorly informed speculators who are not financially able to incur such risk and who do not know enough about the business to justify their dealings in futures, and they should be protected against this inclination toward gambling so far as such protection is possible. We therefore recommend:

(a) Such rules and legislation as will confine dealing in futures to the "hedging" of grain and grain products actually bought and sold to investors who are ready, willing, and able to carry the burden of the purchase or sale as a straight investment on a reasonable margin.

(b) That brokers' offices for future dealings in grain should be confined to cities of the first class and to the principal place of business of such brokers, who should be prohibited from operating branch offices in the same city where the principal office is located.

(c) That the initial margin required of investors in futures be not less than 10 cents per bushel on lots of less than 5,000 bushels.

Apparently recognizing the evils of this indiscriminate speculating in futures, the chamber of commerce directors during the closing days of March, 1913, passed a resolution instructing the officials of the chamber of commerce to enter into correspondence with the officials of other grain exchanges throughout the country and arrange if possible so as to require the purchasers of futures to comply with the conditions recommended above. It was admitted by the officials of the chamber of commerce before this committee that if these rules were generally adopted by grain exchanges of the country it would go far to eliminate the gambling element in future transactions and would at the same time practically prevent the small, inexperienced, and financially unfit speculators from undertaking to carry the burden of speculative risk involved in future transactions. At the same time, we wish to affirm that we believe any transaction in futures is legitimate and commendable, where the parties engaged have an actual purchase or sale to hedge or protect, and where by reason of experience, business sagacity, and ample means they are fitted to engage in such business.

Seventh. It is the opinion of your committee that the State board of appeals is, under the present law, too intimately connected with the railroad and warehouse commission and too restricted in its operations to enable it to fully and satisfactorily perform the duties imposed on it by law. Your committee would therefore recommend that legislation be enacted that would make the State board of appeals an independent body in fact as well as in name and confer upon it such authority as will enable it to provide for the necessary help and facilities for carrying on its work in the most thorough and efficient manner possible.

INSPECTION COMMENDED.

Eighth. The railroad and warehouse commission has perfected a system of sampling and inspecting grain well designed to protect producer and consumer and conducive to uniformity and stability of grades. Under the rules and practices that have prevailed in the grading and inspecting department of the board of appeals and the railroad and warehouse commission, the reliability of the grades shipped in Minnesota are recognized by markets of the world generally. Producers everywhere know that the grain they buy on Minnesota inspection will not fall below the grade designated. But your committee believes that the desire of the boards and departments to maintain this reputation for its grading has unconsciously led them to an unnecessary severity in grading grain on its arrival at the terminal markets from country points, and that the terminal elevators and mills at the terminal markets have, by taking advantage of the right to mix and blend wheat, secured large quantities of newer, inferior, and no-grade wheat at prices that were lower than the producers should receive; and it is the belief of your committee that an absolute separation of the board of appeals from the regular grain-inspection department will result in a more efficient check on the first inspection and thus secure more exact justice to the producer without in any degree lowering what is known the world over as "Minnesota grades." In connection herewith, it should be borne in mind that what is known as "Minnesota grades" is established on the grading of the wheat out of the terminal elevators, and not on the wheat arriving at these terminals from the country elevators. Consequently the price received by the producer is not based on the severe grading of wheat on its arrival from the country, but is based on the more lenient grading out of the terminals; and to the extent that these two grades differ, to that extent the producers are deprived of what is justly due them.

The testimony adduced before your committee proved that what is known as no-grade wheat is lowered from the higher grades principally because it is presumed to contain a percentage of moisture exceeding the limit for safe storage, but testimony adduced would tend to prove that under the present method of inspection it is a mere matter of guess as to whether wheat, being somewhat damaged, should be placed in the no-grade class or in the class of the higher grades. As the difference in price between No. 1 northern and no-grade wheat is considerable, ranging all the way from 5 to 15 cents per bushel, your committee believes that the board of appeals and the railroad and warehouse commission should provide facilities for ascertaining what per cent of moisture wheat may contain and still be safely stored, as only by this method can a fair and just grading be established on this class of wheat. In connection herewith your committee feels it is its duty to state that the testimony before this committee proved that the board of appeals had at various times requested the railroad and warehouse commission to furnish it with such facilities, but as yet this request has not been granted.

Ninth. We recommend that more attention be given to determining the commercial value by laboratory and baking tests, particularly of the newer grades of grain, and in establishing grades, and that the benefit of the doubt be given the wheat in determining the grade.

Tenth. We recommend further that the rules of inspection and the practice of the inspection department be so revised and changed as to secure on the inspection of grain shipped into the terminal markets a more liberal and fair grade. That the grading of so-called "plugged" cars should be changed so as to protect innocent shippers from being penalized to the profit of the purchaser in cases where poor or inferior wheat may be shipped in the same car; and suitable legislation should be enacted that will severely punish a shipper who deliberately plugs a car, but the penalty should not work to the benefit of the purchaser of that car, but rather to the State.

Eleventh. We find that the variety of wheat known as velvet chaff has been unjustly discriminated against, both as to its milling and its true commercial value, as certified to by millers and exporters testifying before this committee, causing great loss to the producers of the State. The fact is shown in the testimony that as an export wheat this variety will command a premium over No. 1 northern. On account of its merits, particularly as to weight, it has been used for mixing purposes to lift millions of bushels of no grades into No. 1 and No. 2 northern. Therefore we further find that its classification as No. 1 northern was justified by the authorized board.

PRICE CARDS SENT OUT.

But this established grade has been absolutely disregarded by the buyers who have, as above referred to, arbitrarily discriminated against this variety of wheat, and this private price-list bureau previously referred to has absolutely disregarded the established grade on this wheat and on the price cards sent out to country points has put this wheat in a different class and at a lower price than was warranted by the grade established by such authorities. This your committee deems unfair.

(12) In view of that fact the testimony adduced before your committee proved that millions of bushels of low-grade wheat had been raised to higher grades by drying, blending, and cleaning, which has resulted in large profits to those engaged in the business without corresponding benefit to the producers; and in view of the further fact that this question of blending, cleaning, and drying wheat, judging from past experience and attempts along this line, is too large for farmers' cooperative associations to solve, your committee would therefore recommend that suitable legislation be enacted that would enable the State to provide facilities for this purpose and that such facilities be operated by the State at least until such time as farmers' cooperative associations have developed to such an extent that they will be strong enough to undertake this business.

AS TO EQUITY EXCHANGE.

(13) Some time after the appointment of this committee by the speaker of the house the senate appointed a similar committee, ostensibly for the same purpose. This senate committee devoted nearly all its time and effort to inquiring into the business methods of what is generally known as the "Equity Exchange of Minneapolis." In view of the fact that this senate committee went into this matter so thoroughly, your committee considered that it would be a duplication of effort and a waste of time and money to devote any great amount of time to this subject, as the senate committee will undoubtedly in due time make its report to the legislature. The only witnesses in regard to these matters that appeared before this committee were Messrs. Holt, Bundy, and Schmitt, who appeared in behalf of the Voltaire Farmers' Elevator Co., of North Dakota. Messrs. Bundy and Schmitt made charges of irregular practices on the part of the equity exchange. Mr. Holt testified that the business relations between the Voltaire Farmers' Elevator Co. and the Equity Exchange had been entirely satisfactory to his company and repudiated many of the statements made by Bundy and Schmitt, pointing out the inconsistencies in their claims.

Your committee feels that it would not be doing its full duty if it should refrain from stating that certain undesirable features of future trading do not prevail in the Duluth Board of Trade to any considerable extent. Your committee also found that all switching charges were eliminated at Duluth and consequently to that extent the expense against grain arriving at that market is lessened. Your committee also believes that the market bulletin published and circulated by the various members of the Duluth Board of Trade comes nearer to reflecting and quoting the exact market conditions than does the Minneapolis so-called price-list bureau card.

Respectfully submitted.

C. M. BENDIXEN, *Chairman.*
MARTIN SCHWARTZ.
A. F. TEIGEN.

We concur in the findings of the majority report of the committee except in the following respect:

We do not believe that the grain board of appeals has been limited in any respect in doing its duty under the present law and therefore dissent from section 7 of the report.

FRANK HOPKINS.
D. P. O'NEILL.

The Democratic Tariff Bill.

EXTENSION OF REMARKS
OF
HON. CHARLES L. BARTLETT,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BARTLETT. Mr. Chairman, this bill complies with the demands of the Democratic platform made in Baltimore in 1912, and in my judgment will meet the expectations of the people. This is the first tariff bill constructed according to the Democratic theory and along Democratic lines since the act of 1846, known as the Walker tariff law, and we have every reason to believe that it will be as beneficent in its results to the masses of the people as that famous act was; that it will furnish ample revenues to the Government, reduce the burdens upon the people, and maintain prosperity throughout the land.

I do not believe that a tariff should be collected except for revenue. I do not believe that the Government should exercise its power to tax the property of the citizen and thereby bestow favors upon particular individuals and aid private enterprises and build up private fortunes. As I understand it, the Democratic idea in levying tariff duties is and should be based upon the following principles:

First. That no more money should be collected than is necessary for the wants of the Government, economically administered.

Second. That no duty be imposed on any article above the lowest rate which will yield the largest amount of revenue.

Third. That below such rate discrimination may be made, descending in the scale of duties, or, for imperative reasons, the article may be placed in the list of those free from all duty.

Fourth. That the maximum revenue duty should be imposed on luxuries.

Fifth. That all minimums and all specific duties should be abolished and ad valorem duties substituted in their place, care being taken to guard against fraudulent invoices and undervaluation, and to assess the duty upon the actual market value.

Sixth. That the duty should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

To quote from the report of Secretary of the Treasury Walker made in 1846, whose suggestions and judgment were followed in making the tariff law of that year:

"In arranging the details of the tariff, it is believed that the maximum revenue duties should be imposed upon luxuries. It is deemed just that taxation, whether direct or indirect, should be as nearly as practicable in proportion to property. If the whole revenue were raised by a tax upon property, the poor, and especially those who live by the wages of labor, would pay but a very small portion of such tax; whereas by the tariff, the poor, by the consumption of various imports or domestic articles enhanced in price by the duties, pay a much larger share of the taxes than if they were collected by an assessment in proportion to property. To counteract as far as possible this effect of the tariff—to equalize its operation and make it approximate as nearly as may be to a system of taxes in proportion to property—the duties upon luxuries, used almost exclusively by the rich, should be fixed at the highest revenue standard. This would not be discriminating in favor of the poor, however just that might be within the revenue limit; but it would mitigate, as far as practicable, that discrimination against the poor which results from every tariff by compelling them to pay a larger amount of taxes than if assessed and collected on all property in proportion to its value. In accordance with these principles, it is believed that the largest practicable portion of the aggregate revenue should be raised by maximum revenue duties upon luxuries, whether grown, produced, or manufactured at home or abroad.

"An appeal has been made to the poor by the friends of protection on the ground that it augments the wages of labor. In reply it is contended that the wages of labor have not augmented since the tariff of 1842, and that in some cases they have diminished.

"When the number of manufactories is not great, the power of the system to regulate the wages of labor is inconsiderable; but as the profit of capital invested in manufactures is

augmented by the protective tariff there is a corresponding increase of power, until the control of such capital over the wages of labor becomes irresistible. As this power is exercised from time to time, we find it resisted by combinations among the working classes, by turning out for higher wages or for shorter time, by trades-unions, and in some countries, unfortunately, by violence and bloodshed. But the Government, by protective duties, arrays itself on the side of the manufacturing system, and by thus augmenting its wealth and power soon terminates in its favor the struggle between man and money—between capital and labor. When the tariff of 1842 was enacted the maximum duty was 20 per cent. By that act the average of duties on the protected articles was more than double. But the wages of labor did not increase in a corresponding ratio or in any ratio whatever. On the contrary, whilst wages in some cases have diminished, the prices of many articles used by the working classes have greatly appreciated.

"A protective tariff is a question regarding the enhancement of the profits of capital. That is its object, and not to augment the wages of labor, which would reduce those profits. It is a question of percentage and is to decide whether money vested in our manufactures shall, by special legislation, yield a profit of 10, 20, or 30 per cent, or whether it shall remain satisfied with a dividend equal to that accruing from the same capital invested in agriculture, commerce, or navigation.

"The present tariff is unjust and unequal, as well in its details as in the principles upon which it is founded. On some articles the duties are entirely prohibitory and on others there is a partial prohibition. It discriminates in favor of manufactures and against agriculture by imposing many higher duties upon the manufactured fabric than upon the agricultural product out of which it is made. It discriminates in favor of the manufacturer and against the mechanic by many higher duties upon the manufacture than upon the article made out of it by the mechanic. It discriminates in favor of the manufacturer and against the merchant by injurious restrictions upon trade and commerce, and against the shipbuilding and navigating interest by heavy duties on almost every article used in building or navigating vessels. It discriminates in favor of manufactures and against exports, which are as truly the product of American industry as manufactures. It discriminates in favor of the rich and against the poor by high duties upon nearly all the necessaries of life and by minimums and specific duties, rendering the tax upon the real value much higher on the cheaper than upon the finer article."

I desire to call attention to some history of tariff legislation in this country.

NEW ENGLAND'S FIRST VIEWS ON THE TARIFF.

Up to 1846 England was and had been for centuries the most earnest, vigorous, and determined champion of protection the world ever saw, and enforced the extremest doctrines by all the powers of war and all the arts of diplomacy. To use the language of a distinguished Republican Senator from Maine in 1882:

"She destroyed the growing commerce of Ireland by one blow of her navigation laws; repressed her cattle raising, her woolgrowing, her manufactories, and made her the waste of to-day. She attempted the same rôle in America; forbade the exportation of her products to any other country than her own; forced all the carrying trade into English bottoms; repressed all manufactories of fabrics, and provided by law that none of the American colonies should manufacture iron of any kind; that no smith should make a bolt, spike, or nail of bar or wrought iron; that no mill or other engine for rolling iron or furnace for making steel should be permitted; and finally drove us to the Revolution and lost the brightest jewel from her diadem."

The resistance to this oppression by taxation and restriction of trade showed itself in Massachusetts Bay, when the citizens of Boston, painted as savages, boarded the tariff-ridden ships and dumped the tea of tyranny into the waters of the harbor. The crack of the rifles of the patriots at Bunker Hill and Lexington in defense of the right to resist this oppression was heard around the world.

It may be well to recall something that Massachusetts has said and done in opposition to the protective policy, since Massachusetts and the East are to be benefited, probably, more by the present protective policy than any other section of the country, and have grown rich and powerful by the maintenance and continuance of the protective system. The merchants of Boston in 1820 met at a town meeting and appointed a general committee, consisting of 20 men, amongst them some of the most honored of the State and most distinguished of the country. Mr. Daniel Webster was appointed chairman of a committee of seven to consider the scheme of a protective tariff. They issued an address, in which they invited the manufacturers, merchants, and farmers of the State to confer with them, and these delegates from all parts of the State formulated their views into a series of resolutions.

Certain things are stated in the resolutions and in the report made by Mr. Webster which may sound strange now, but it may be well to recall them. Amongst other things they alleged:

"That the avowed object of protection was to direct and control the occupations of men by granting special privileges to those engaged in particular pursuits."

They said further:

"This can be done (waiving any question whether it can be done at all without violating the spirit of the Constitution) only at the expense of the community, for it is a fact that legislation does not create wealth, but simply transfers it from hand to hand, and can enrich one class only by impoverishing others. It would surely be surprising that a system of restrictions so unequal and so repugnant to all sound theories should be adopted by a free and enlightened people at a time when the greatest nations of Europe, after a long trial of it, have openly acknowledged its incorrectness, and whole nations suffering and lamenting the consequences of its adoption, and when our own unexampled success, under a more liberal policy, has given the sanction of experience to the deduction of reason."

THE DEMOCRATIC DOCTRINE.

The substance of the Democratic theory can be found in the declarations of its platforms enunciated in 1832, 1836, and 1840, and since then in this proposition:

"That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of any other or to cherish the interests of one portion to the injury of another portion of the common country. We hold that the citizen of every section of the country has a right to demand and insist upon equality of rights and privileges."

HENRY CLAY'S VIEW.

The Republican doctrine of to-day, which claims to be founded upon the theory of the American system advocated by Mr. Clay, who was the chief exponent of the system in the early days of the Republic, has gone far beyond anything ever conceived or intended by Mr. Clay, and to-day the Republican doctrine stands for protection not to the infant industries but protection to certain favored manufacturing industries at the sacrifice of the rights and interests of all the other thousands and millions of people in the United States. The American policy advocated by Mr. Clay never looked to the closing of our markets against foreign products; all that he ever claimed was such an adjustment of duties for revenue as would afford incidental protection to home industries. In 1815, in a debate on the tariff, he proposed to raise money to pay off the war debt and urged a duty on imports of only 25 per cent instead of 20 per cent. He said:

"In three years we can judge of the ability of our establishments to furnish these articles as cheaply as they were obtained from abroad, and can then legislate with the lights of experience."

He believed that three years would be sufficient time to place our industries on this desirable footing. Yet nearly 100 years have passed since Mr. Clay announced this doctrine, and it is claimed now that we should levy tariff taxes not only to raise revenue but to encourage industries that were infants at that time. A century of protection has hardly been able to satisfy these infant industries, and we have now a tariff tax of 45 per cent ad valorem; and when the Treasury has been full and a surplus accumulated that surplus has been dissipated by extravagant and wasteful expenditures, and there has not been any effort made to reduce taxes to something like a revenue standard, and every effort to do so is denounced by protectionists as ruinous to American industry. Mr. Clay can not be charged with having any such ideas as are now entertained by the Republican majority.

In 1842, in the Senate, while discussing the tariff act of 1832, in which all the duties were pared to the uniform rate of 20 per cent, Mr. Clay said:

"If the compromise act had not been adopted, the whole system of protection would have been swept by the boards by the preponderating influence of the illustrious man at the head of the Government (President Jackson) at the very next session after its enactment."

And that so far as he could go he would; and that was not to lay duties for protection alone, but in laying duties for revenue to supply the Government with means, to so lay them as to afford incidental protection. He would, therefore, say to the friends of protection, "Lay aside all attempts beyond this standard and look to what is attainable and practicable."

Surely, if the spirit of Henry Clay could revisit these Halls, he would be shocked and horrified to be told that he was the

father or founder of any such system which would produce such a law for the country as we now have.

DANIEL WEBSTER'S VIEW.

Daniel Webster, in his debate in the House in 1824, in reply to Mr. Clay, who advocated what he called "the American policy of protection," said:

"Sir, that is the true American policy which shall most fully employ American capital and labor and best sustain the whole population. With me it is a fundamental axiom; it is interwoven with my opinions; the greatest interests of the country are united and inseparable; agriculture, commerce, and manufacturing will prosper together or languish together; and that all legislation is dangerous which proposes to benefit one of these without looking to consequences which may fall on the others."

THE DEMOCRATIC TARIFF OF 1846.

Various tariff battles were waged and laws enacted until 1846, when what is known as the "Walker Tariff Act" was passed.

This was a Democratic tariff, which imposed the highest duties upon luxuries and the lowest upon necessaries. No duty, even upon luxuries, was higher than 40 per cent ad valorem, except in the case of brandy and whisky distilled from corn, and other spirituous liquors or beverages of a similar character, which were taxed 100 per cent. No better illustration of the assertion that this Walker Tariff Act was the best tariff law we have ever had could be found than in the statement of Senator Allison, a Republican, of Iowa, in 1870, then a prominent Member of the House, and later, and until he died, one of the most distinguished Senators of the United States, as follows:

"The tariff of 1846, although confessedly and professedly a tariff for revenue, was, so far as regards all the great interests of the country, as perfect a tariff as any we have ever had. If any interest was depressed under the tariff of 1846, it was the iron interest. I do not believe that this interest, as compared with other interests, had sufficient advantage under that tariff; yet when we compare the growth of the country from 1840 to 1850 with the growth of the country from 1850 to 1860—the latter decade being entirely under the tariff of 1846, or the amended and greatly reduced tariff of 1857—we find that the increase in our wealth between 1850 and 1860 was equivalent to 126 per cent, while it was only 64 per cent between 1840 and 1850, four years of which decade were under the tariff of 1842, known as a "high protective tariff," but the average rate of which was about 70 per cent below the existing rate, or 27 per cent under the tariff of 1842 as against 44 per cent upon all importations under the present tariff. Our industries were generally prosperous in 1860, with the exception, possibly, of the iron interest. This was the statement of Mr. Morrill, of Vermont, on this floor during the discussion of the tariff of 1864. With regard to the condition of the steel industry in 1860, the steel manufacturers in 1866, memorializing Congress for increase of duties on steel, stated that—

"'It was reserved for Pittsburgh to bring about the first substantial and enduring success in the year of 1860, and, encouraged by our example, numerous establishments have sprung into existence, as already indicated in this paper. This shows that under the revenue tariff of 1857, which imposed only an ad valorem duty of 12 per cent on steel, a substantial success was achieved in the steel manufacture in 1860.' I have read the language of the memorial."

This act of 1846 remained in force until 1857, when the duties on imports were reduced, and this remained true until 1861, at the beginning of the Civil War, when a tariff act was passed providing for the raising of revenue for the Government at that time, and this was from time to time amended, increasing the rates and imposing an internal-revenue tax and a direct tax; and the captions of these bills show that they were intended to temporarily increase the duties on imports. These laws continued in force until 1870, when a tariff bill was framed reducing the internal-revenue taxes, but not reducing the tariff taxes. In 1872 a pretense was made to reduce duties, but the high protective duties still continued. Again in 1883 the internal-revenue tax was decreased, but the tariff taxes were kept up. An effort was made in 1888 by a Democratic House to reduce tariff taxation in what was known as the "Mills bill." While this bill passed the House it failed in the Senate, the Senate being Republican. This brings us to the McKinley bill of 1890, the title of which act was to reduce revenue, which had accumulated under the tariff act of 1883, and under this act the protective duties were higher than during the war. Then came the Wilson bill of 1894, to provide revenue for the Government, but which failed of its purpose by reason of the decision of the Supreme Court of the United States declaring the income tax unconstitutional. Then we had the Dingley bill of 1897, which had for its purpose to provide revenue and encourage the industries of the United States; and now we have the Payne law, which had for its alleged purposes to provide revenue, equalize duties, and encourage industries.

The American people, chafing under the injustice and wrong of these schedules which have existed since 1897, made demands upon the Republican Party in power that they should be reduced. The pledge of the Republican Party, as construed by Mr. Taft while a candidate for the Presidency, is that we shall have tariff revision downward. Yet in the Payne law the same special interests were taken care of, duties are not equalized, and the same discrimination and injustice is practiced against the American people. The same power to tax is exercised and used and the burdens of the people are not at all diminished, and the property of the citizen is again to be confiscated by the Government for the benefit of the few. If it were left to me, I would eliminate every trace of what I conceive to be the plunder of the public for the benefit of the few from this system of taxation; I would prevent a few men from making their living in the sweat of other men's brows. It is not, in my judgment, a proper exercise of the taxing power; when the Government thus taxes the property of the citizen it amounts, in many instances, to confiscation, even though the proceeds be devoted to governmental purposes. By the exercise of the power conferred by this bill, under the guise of protection to the industries of the country, the Government places in the hands of individuals and corporations the power to confiscate the property of their neighbors for private gain. Taxation for governmental purposes is a burden, but to confer upon individuals the power to confiscate property is robbery.

This system of protection has grown so strong and has been fostered to such an extent that those who live upon it think it is sacred as a statute contained in the Ark of the Covenant, and that it should be preserved unchangeable, like the laws of the Medes and Persians. They assume that it is right and proper at any time to put burdens upon the people, but that the people who bear these burdens have no right, whether in times of prosperity or in the time of adversity, to have them mitigated; that no Democrat shall dare touch it, and that it can only be handled by its friends. They flatly declare that we should bear the burdens of the system, sell our products wherever we can, but that we must buy what we need where they please for us to buy.

The Democratic Party, commissioned by the people to reduce tariff taxation, present this bill, which we believe will meet their demands and receive their approval.

REDUCTIONS UNDER THE PENDING BILL.

A study of the pending bill will show that many changes are made in the existing law. It will reduce the duty on articles of clothing, food, and the general household, and, if it is enacted into law, it is believed and expected, and I have no doubt that it will, aid in relieving the people from the burdens under which they are now suffering, due to the extremely high cost of living. It will be interesting to compare the present law with the pending bill. The following are some articles of general consumption:

	Present law.	Pending bill.
	Per cent.	*Per cent.*
Cattle	27	10
Swine, per head	(1)	(2)
Sheep, do	14	8
Other live animals	20	10
Barley, per bushel	30	15
Buckwheat, do	15	8
Corn, do	15	(2)
Macaroni, etc., per pound	1½	1
Oatmeal, etc., do	1	(2)
Rice, cleaned, do	2	1
Rye flour, do	¼	(2)
Wheat flour	25	(2)
Biscuits, etc	20	(2)
Butter, etc	6	3
Cheese	31	20
Milk, per gallon	2	(2)
Beans, per bushel	45	25
Beets	25	10
Sugar beets	10	5
Beans and peas (in tins and jars)	2½	1
Pickles and sauces	40	25
Cider, per gallon	5	2
Eggs, per dozen	5	2
Honey, per gallon	20	10
Onions, per bushel	40	20
Peas, green, do	25	15
Peas, dried, do	25	15
Fish (packed in jars or tins)	20–42	15–20
Caviar	30	30

[1] $1.50. [2] Free.

	Present law.	Pending bill.
	Per cent.	*Per cent.*
Fresh-water fish.....per pound	½	(1)
Mackerel.....do	1	(1)
Halibut and salmon.....do	1	(1)
Apples, peaches, quinces, cherries, plums, peas, green or ripe, per bushel	25	10
Cranberries	25	10
Jellies	35	20
Prunes.....per pound	2	1
Raisins and dried grapes.....do	2½	2
Currants.....do	2	2
Olives.....per gallon	15–25	15
Grapes	25	25
Lemons.....per pound	1½	1½
Oranges, limes, and grapefruit.....do	1	½
Pineapples	8	6
Bacon and hams.....per pound	4	(1)
Beef, fresh.....do	1½	(1)
Veal, fresh.....do	1½	(1)
Mutton, fresh.....do	1½	(1)
Lamb, fresh.....do	1½	(1)
Pork, fresh.....do	1½	(1)
Venison, fresh.....do	1½	(1)
Poultry, live.....do	3	1
Poultry, dead.....do	3	2

[1] Free.

The following table shows the changes that the bill will make in the tariff upon clothing:

	Present law.	Pending bill.
	Per cent.	*Per cent.*
Boots and shoes	12	(1)
Leather working gloves	50	(1)
Cotton clothing	50	30
Ready-made clothing	79.56	35
Women's and children's dress goods (nearly)	100	35
Hosiery	75	50
Knit shirts and underwear	60	25
Collars and cuffs	50	30
Cotton cloth	40	25.09
Men's cotton work gloves	99	35

[1] Free.

Among the articles of common household use upon which the tariff will be reduced are the following, with the present rates and those that the bill will prescribe:

	Present law.	Pending bill.
	Per cent.	*Per cent.*
Blankets	75	25
Flannel	93	25–30
Spool thread	40	26.89
Sewing silk	25	15
Brooms and matches	12	(1)
Knives, forks, razors, scissors	7	(1)
Furniture	35	15
China (not decorated)	55	35
Common soap	20	5

[1] Free.

TAXES UNDER THE PAYNE LAW.

During the last Congress, in the discussion of the steel schedule before the House, I called attention to the taxes that the Payne bill imposed upon the people, and the following table shows the burdens placed upon them by that bill:

	Per cent.
Taxes on the parlor.	
Carpets, if made of druggets	66
Carpets of flax or cotton	50
Wooden furniture	35
Wall paper	35
Looking-glass (common)	45
Carpets of tapestry	64
Ingrain carpets	64
Plush furniture	96
Window curtains (common)	50
Knickknacks	35
Taxes on the bedroom.	
Common wooden bed	35
Commonest blankets	93
Feather beds	60
Wooden chairs	35
Cast-iron bed	35
Sheets	42
Mattresses	20
Common chinaware	55
Taxes on the wardrobe.	
Commonest handkerchiefs	51
Flannel underwear	91
Ready-made clothing	65
Hats of wool	85
Knitted goods	95
Cotton underwear	60
Corduroy suits	66
Waterproof coats	49
Cloaks	65
Shawls	96
Jackets	65
Corsets	60
Stockings	67
Suspenders	87
Cotton gloves	40
Cotton laces	60
Taxes on the kitchen.	
Plain yellow crockery	25
Cheapest glassware	60
Bone-handled knives and forks	50
Hollow ware	40
Commonest oilcloth	45
Cotton tablecloths	50
Common wood ware	35
Brass ware	45
Tallow candles	20
Brooms	40
Toothpicks	35
Bacon	20
Mutton	34
Butter	28
Salt	104
Sugar	63
Cabbage	51
Potatoes	28
Vinegar	29
Flour	25
Lemons	79
Almonds	54
Commonest chinaware	55
Looking-glasses	45
Average cutlery	65
Commonest stoves	45
Cotton window shades	50
Commonest tinware	45
Common yellow ware	45
Common clock	40
Scrub brushes	40
Matches	33
Starch	57
Beef	23
Poultry	29
Cheese	35
Rice	65
Candy	55
Onions	53
Pickles	40
Bread	20
Eggs	35
Apples	25
Walnuts	43
Taxes on sundries.	
Carriages	45
Brick	20
Explosives	45
Window glass	80
Hay	50
Buckles	48
Cutlery	76
Files	68
Furnaces	45
Typewriters	45
Nippers	60
Jewelry	73
Harness	35
Leather goods	40
Wagons	45
Tiles	67
Hemp carpets	71
Spectacles	119
India-rubber goods	35
Cast-iron pipe	28
Razors	89
Shotguns	51
Shot	75
Nails	16
Saws	30
Lead pipe	45
Building stone	50
Gloves	50
Copper wire	45
Blasting caps	61
Linen fabrics	60
Glue	32
Wire rope	40
Iron chain	183
Scissors	50
Fishhooks	45
Machinery	45
Needles	44
Three-quarter-inch screws	128
Thread	42
Structural iron	31
Boots and shoes	15

It will be interesting to note the changes made by the pending bill in the duties imposed upon articles of domestic use. To do this I have compared the rates fixed by this bill upon such articles with the Dingley rates and the Payne rates, and this is shown by the following table:

Comparison of rates in Dingley, Payne, and Underwood tariffs on articles of domestic use.

	Dingley.	Payne.	Underwood.
TAXES ON THE PARLOR.			
Carpets made of druggets	74.20	66.28	20.00
Carpets made of flax or cotton	50.00	50.00	20.00
Wooden furniture		35.00	15.00
Wall paper		50.04	35.00
Looking glass (common)		20.80	7.14
Carpets of tapestry	61.00	64.41	20.00
Carpets of ingrain	68.41	64.34	20.00
Plush furniture		35.00	15.00
Window curtains (common)	50.00	52.98	44.00
TAXES ON THE BEDROOM.			
Common wooden bed		35.00	15.00
Common blankets	88.12	73.42	25.00
Feather beds	50.00	52.13	40.00
Iron bed	45.00	45.00	25.00
Wooden chairs		35.00	15.00
Sheets	45.00	45.00	30.00
Mattresses	Free.	20.00	5.00
Common chinaware	55.00	55.00	30.00
			50.00
TAXES ON THE WARDROBE.			
Cotton handkerchiefs	58.22	59.05	30.00
Linen handkerchiefs	50.00	50.00	35.00
Flannels for underwear	107.06	103.87	25.00
			35.00
Ready-made clothing	82.20	81.31	35.00
Hats of wool	82.20	81.31	35.00
Knitted goods	82.20	81.31	35.00
Cotton underwear	61.41	59.00	25.00
Corduroy suits	62.95	63.28	40.00

Boots and shoes	36.09	30.81	12.00
	25.00	15.00	Free.

From this analysis it will be observed that if this bill shall become a law the masses of the people will receive the relief which they have so long demanded and be freed from the burdens which they have long borne, not for the benefit of the Government but for the benefit of a few special interests and particular manufacturers. As was to be expected, the special interests which have so long enjoyed the benefits and privileges of the tariff vigorously and violently have assailed the efforts on the part of the Democrats of Congress to reduce the burdens of taxation upon the masses of the people.

Our experience is but a repetition of history. The people of England had a long struggle with special privilege before they were able to repeal the corn laws. So, too, the American people have had a long struggle before they have been able to secure a downward revision of the iniquitous tariff that has during so many years been upon our statute books. Then, as now, those who had so long enjoyed the privilege of taxing the food and necessities of the English people resisted bitterly and strenuously every effort to relieve the people of the high tax on food. It will be recalled that on the very night that Sir Robert Peel saw his bill to repeal the corn laws carried to a successful passage his enemies in Parliament defeated him upon another important matter involving his administration and forced him to resign his office. In resigning he said:

"I shall leave a name execrated by every monopolist who, from less honorable motives, maintains protection for his own individual benefit; but it may be that I shall leave a name sometimes remembered with expressions of good will in those places which are the abode of men whose lot it is to labor and

to earn their daily bread by the sweat of their brow—a name remembered with expressions of good will, when they shall recreate their exhausted strength with abundant and untaxed food, the sweeter because it is no longer leavened by a sense of injustice."

Though he was defeated and resigned, the people of England secured cheaper food, and years afterwards thousands of English workingmen, each bringing his small contribution, erected a monument to his memory and placed upon it this inscription:

"He gave cheap bread to the poor of England."

The protectionists who have opposed this measure have predicted political defeat for those who now advocate it. I do not believe that their predictions will be realized. While it is true that it will be denounced by every monopolist who maintains protection for his own individual benefit, still it will be applauded and supported by those whose lot it is to labor and to earn their daily bread by the sweat of their brow; and when they shall recreate their exhausted strength with abundant and untaxed food the authors and advocates of this measure, should it become a law, will be entitled to and will receive the well-earned approval and plaudits of the masses of the people, because it gives to the poor of the United States cheaper food and cheaper clothing.

The policy so long followed of enacting high protective tariffs in the interests of the manufacturer has caused the population of our rural sections to gather in the centers of the large cities and larger towns. This has grown to such an extent as to alarm many patriotic and philanthropic people, and many suggestions have been made that something should be done to have our rural population remain on the farm or return to the farm and engage in agricultural pursuits which are acknowledged to be the mainstay and backbone of the prosperity of our country. Instead of building up special interests by an exercise of the taxing power of the Government, we could do no more patriotic and beneficial thing for the entire country than to do that which would build up the agricultural interests and invite our people to remain in the agricultural districts, upon the farm, or to return there and live contented and happy lives.

"The country always hath its splendid glories, but if the tide of lost ones ebbed back along our roads, if every idle pair of arms were offered for the harvests, how many a blithe bridal would there be, and merry christening.

"May each deserter halt and wend his way toward the farm and where his parents died. May truants call to mind the trade they have unlearned. 'Tis country labor that will make us strong."

The Tariff.

EXTENSION OF REMARKS
OF
HON. SERENO E. PAYNE,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 13, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. PAYNE. Mr. Speaker, I take advantage of the general leave to print on H. R. 3321 by printing a letter of Mr. William C. Hunneman, of Boston, Mass., directed to me under date of May 7, 1913, and my reply thereto, as follows:

BOSTON, MASS., *May 7, 1913.*

Hon. SERENO E. PAYNE, *Washington, D. C.*

DEAR SIR: I have read with much interest the substitute for Schedule K which you introduced last Saturday in the House, and have also read your remarks on that occasion. I am writing now to ask you how you justify the specific duty on scoured wool in the face of the following facts:

1. Such a duty is impracticable. This is proved in the analysis of the Tariff Board report on Schedule K, by S. S. Dale, a copy of which I inclose, and call your attention to the part beginning with "the defects of the scoured basis for tariff rates." This demonstration, it seems to me, is clear enough to convince anyone, but in addition we now have the Dale conclusions confirmed by the telegram to Congressman GARDNER from F. W. Hobbs, president of the Arlington Mills, and which you will find on page 1001 of the CONGRESSIONAL RECORD of May 3. The Arlington Mills consumes approximately 14,000,000 pounds of wool a year, and the statement of the president of such a large manufacturing establishment should be conclusive on this point.

2. A uniform duty of 18 cents a pound on scoured wool, such as you propose, would create inequalities in the ad valorem equivalents even greater than in the ad valorem equivalents on grease wool under the present law. This is evident from the fact that in many cases the shrinkage on wool tends to equalize the ad valorem equivalents of the specific rate on the grease weight, whereas the ad valorem equivalents of the specific duties on the scoured weight vary far more, because there is no factor in shrinkage to equalize them. You will find an illustration of this in the inclosed pamphlet on page 17, in which specific duties on the grease weight of a number of lots of wool are compared with the specific duties on the scoured weight of the same wool.

3. Lastly, the most serious objection to the duty on scoured wool which you propose is that it bears so heavily on low-priced materials as to exclude them from the country in the same way that, as the Tariff Board reported, the present specific duty on grease wool tends to exclude low-priced heavy shrinking wool from the United States. This, as you must recognize, is the principal reason for the virulent and overwhelming condemnation that has been visited on Schedule K, not particularly in the bill that bears your name but in every tariff bill that has been passed since 1867. And this remark applies not only to the specific duties on raw materials but to the specific duties on all materials that have a wide range of values.

Furthermore, I want to call your attention to the flimsiness of the objection to ad valorem duties that is constantly dinned into our ears—that is, the danger of undervaluation. Admitting that there is a danger, it would be very slight under the drastic administrative features of the Underwood bill, and such undervaluation would be a mere bagatelle compared to the wide variation under specific duties on raw wool. I need go no further than your 18-cent duty on scoured wood to illustrate this point. Scoured wool as sold at London varies from 8 to 60 cents a pound. On 8-cent wool your duty is 225 per cent; on 60-cent wool it is 30 per cent. Here is a variation more than sevenfold. Can you imagine anything one-tenth as great under a straight ad valorem tariff?

I would be glad if you would answer my inquiry by letter and also elucidate it in your next public comment on the tariff question. In conclusion, I want to express the candid opinion that the course of the Republican Party the last four years in regard to Schedule K is just the course that is calculated to wreck that party, to bolster up the Progressive movement, and to keep the Democratic Party in power. Moreover, it undoubtedly has a tendency to make extremists of many of those who are intrusted with the duty which the Republican Party has refused to perform, namely, the revision of these indefensible schedules.

Yours, very truly,

WM. C. HUNNEMAN.

P. S.—Referring to the impracticability of the scoured weight duty, will you not take the trouble to look up the letter from the National Association of Wool Manufacturers to Senator Aldrich on this matter? It was published in the bulletin of that association in June, 1909.

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 13, 1913.

Mr. WILLIAM C. HUNNEMAN,
60 Congress Street, Boston, Mass.

DEAR SIR: Yours of the 7th instant was received on the closing day of the tariff debate in the House, and I am taking the first leisure I have had to look into the matter since receiving your letter and the accompanying documents.

I had received four or five telegrams from men in the woolen and worsted business when my substitute came up before the Republican caucus. Each of these was brief, stating that the substitute was worse than the Underwood bill and should be beaten. I promptly wrote them—I meant to write all of them—sending them a copy of the substitute and inviting them to point out the defects in it which they alleged and the facts on which they founded their belief. I have had no reply to these letters, unless your letter is prompted by some one to whom I wrote.

You state that such a duty as suggested in my substitute is impracticable, and found it on an analysis by Mr. S. S. Dale, an editor who writes for a textile newspaper, and for that reason he is supposed to be an expert. On page 17 of his analysis he quotes parts of certain tables which appeared in the report of the Tariff Board on page 387, and following especially a few items in reference to crossbreds. He then proceeds to give the equivalent ad valorems on these wools at 11 cents a pound in the grease and 20 cents the scoured pound. Evidently Mr. Dale had not seen the substitute which I offered before his criticism was written or he would not have said that the proposed duty on scoured wool was 20 cents. The duty proposed on scoured wool is 19 cents per pound when the same has actually been through the scouring process; but when levied on the cleaned content (which is the equivalent of the scoured wool content) of wool in the grease, whether washed or unwashed, the duty is only 18 cents a pound, just 10 per cent less than the basis of Mr. Dale's figures. Deduct the 10 per cent and you will find an ad valorem equivalent less under my substitute than under the 11 cents per grease-pound duty on all of the wools mentioned except the crossbreds; and you will find also that these ad valorems are pretty uniform on all the merino wools under the 18-cent duty. If you are to reject this specific duty because of the slight differences on these different samples of wool, you will be obliged to reject all specific duties in tariff bills.

On the crossbreds Mr. Dale omits two or three pages from the Tariff Board report on crossbreds, which will be found on pages 389–391 of the report. He selects, however, the importations of South American crossbreds on nine samples given on page 391 in order to get his high ad valorems on the false basis of 20 cents duty per pound instead of 18 cents. If you will examine the other importations and figure out the results you will find that the equivalent ad valorem on all except these nine samples, both of merinos and crossbreds, averages about 35 per cent on the 18-cent rate in the substitute. The Tariff Board figures show that the clean pound duty is entirely practicable and lowers actually the present rate.

Of course there are exceptions, and some wools might be excluded that could be profitably imported under a lower rate, but the proportion seems to be quite small. If it should be found on further examination that these wools bearing the higher rates are essential and profitable to import for the manufacturing industry, they could easily be taken care of by a maximum ad valorem rate, which would have but little effect on the specific rate provided in the substitute law.

Of course there is a difference in qualities of wool and some low grades would come in at a higher ad valorem.

Mr. Dale's article does not seem to have added much to the sum of human knowledge in opposition to what is stated fairly in the report of the Tariff Board.

I can not agree with you that the telegram of Mr. Hobbs is conclusive on this point. His opinion simply says that the duty is impracticable on this basis.

Of course, from what I have said above, it appears that on an ad valorem equivalent the scoured-rate basis of 18 cents is considerably lower than the present rate of 11 cents a pound on grease wool.

Mr. Dale makes an argument against the practicability and accuracy of the test. I commenced an investigation of that subject four years ago, when it occurred to me that the duty on the clean content of the wool would be the best test, running through from wool in the grease to the finished product. I got evidence from the Bureau of Standards, from Mr. Graham Clark, who had spent a couple of months investigating wool industries and sales in England only recently, and I became convinced that without difficulty the amount of clean content could be ascertained within 1 per cent of the actual amount. Some manufacturers disputed this and wanted me to call Mr. Fred Swindell, of Rockville, Conn., which I did very promptly, and his evidence appears in the fifth volume of the Tariff Hearings of 1909, at page 5588. From his testimony it appeared that this clean content could be shown in wool in the grease within 1 or 2 per cent of the exact amount and not exceeding 2 per cent. He was a gentleman who had had actual experience. This was on the 10th of February, 1909. At page 5659 of the same volume he states that all wool should have approximately the same duty for the clean content. It was also stated, and I believe is generally admitted, that the wool prices are based on the amount of clean wool, and that this is one of the main objects effected by the conditioning houses in London and other markets.

When the Tariff Board met I requested them to examine thoroughly into this matter, both as to the practicability and the accuracy of a duty based on the clean content. The report of the board shows facts that are conclusive on this matter, and their opinion is that if there is a duty on wool this is the correct basis.

The main difficulty with Schedule K has been its inequalities, more than with the rates on wool. The theory was to put a compensatory duty on the wool content in every manufactured article. The result was that these compensatory duties were in all cases too high for merely compensation for the wool duty, and had generally an enormous protective feature to them clearly beyond the requirements of the manufacturer. The duty on tops in the Dingley law and the somewhat lower duty in the present law are absurd in the discrimination that is made and in the concealed protection in the compensatory duty. The duty on goods made with cotton backing, or where cotton makes anywhere from 40 to 75 per cent of the weight of the cloth, is perhaps the most glaring instance of the injustice of these concealed duties.

It is these things, coupled with the statements on the stump of the opponents of protection showing from official figures the equivalent ad valorems growing out of these enormous compensatory duties, that have caused so much just criticism of Schedule K.

I am firmly of the conviction that there is no other way to adjust properly the compensatory duty on manufactured goods of wool than that which gives the duty on the weight of the clean content of the wool in every article. The Tariff Board went fully into this question, showing the weight of wool necessary to be used in each process of manufacture, making due allowance for waste and the value of the waste, so that when the duty on the clean content was adjusted at 18 cents the duty necessary on manufactured articles could be accurately fixed. This is the whole basic scheme of Schedule K in my substitute. Although the members of the Tariff Board differed as to whether wool should be dutiable or not, they all agreed that if it were dutiable the rates in my bill and the method of their assessment were better than any other scheme offered.

I can not agree with you that the most serious objection to the present specific duty is that it tends to exclude low grades and high-shrinkage wools from the United States. That may be the case from the manufacturers' standpoint, but it is not the case in the popular mind. But it is a fact that manufacturers have uniformly, since it was first adopted, objected to any change in the schedule of the duties on wool in any State, and fought it from the beginning. Of all the manufacturers who appeared in 1909 I got no sympathy from any of them in my efforts to reduce the duties on wool, although I appealed to some of them personally to take the matter up and give me the benefit of their experience on the subject. If they were so dissatisfied why did they fight any change?

I think you will have to agree with me, after reading what I have said before in reference to Mr. Dale's editorial, that it is not true that the 18-cents-a-pound rate would exclude from this country all the low-priced materials, as in the case of the present law. But if that were the case, it could be easily remedied in the manner I have suggested to you.

You express a hope and confidence in the drastic administrative features of the Underwood bill. The drastic features are not very much changed from the administrative features of the present law. I made an effort four years ago to recast section 11 of the administrative portion of the bill to meet the gravest fraud on the revenue by importers who consigned goods, selling none of them abroad and all of them here, and leaving as a result no market value abroad except that which was fixed by the conscience of the importer. This was to take the selling price here and work backward, deducting the duty, expenses of selling, etc. While this provision has had some effect in frightening importers, the only instance in which it was specially invoked produced no results. After the importers had proved that there was no market abroad, and the attorneys for the Government had shown the market prices here, the importers obtained an adjournment of the case, their people went abroad, and with some fake sales came back with the evidence of the market value there, and so defeated this drastic provision of the law. Mr. UNDERWOOD has adopted my section 11, extending its provisions not only to consigned goods but to goods actually bought. As the difficulty has been with consigned goods mainly, it is difficult to see how he has strengthened the law greatly in this respect.

That the framers of the Underwood bill now see the strength in the "flimsiness" of the argument against ad valorem duties is evidenced by the fact that since the bill passed the House they have made a general proposition that the Secretary of the Treasury shall have power to fix the value of imported goods; but this last proposition is impracticable. The value must be fixed, not by the Secretary himself, but by some employee, and the difficulty has been that the employees have fixed the value heretofore, aided by the statements of the importer, as they must now under this proposed innovation.

With the knowledge that all the commercial countries of the world have adopted the specific rate and discarded the ad valorem, and that every Secretary of the Treasury, from the beginning until now, except Mr. Walker, has protested against the ad valorem rate and made arguments in favor of specific duties, it is difficult for me to understand how you can speak of the "flimsiness of the objection to ad valorem duties that is constantly dinned into our ears; that is, the danger of undervaluation."

The duties to meet the difference in conversion cost are fixed in the bill after careful study of the Tariff Board report. The principal criticism I have heard of these duties, if not the only one, has been that on tops. Some one I think perhaps Mr. Dale, argues that the Tariff Board report is useless, because they show the conversion cost in one case on tops where the mill is running full time and in another where the mills are running only part of the year. You can hardly argue that we should fix the duty to protect mills running only a few months in the year with the overhead charges going on all the time. To me such an argument would find deaf ears. But the duty in my proposed amendment covers fully the difference in conversion cost, where each manufacturer, here and abroad, is awake and alert to business.

In conclusion, you impliedly blame me for the mistakes of the Republican party during the last four years in regard to Schedule K. You do not seem to be aware that four years ago I devoted more time to Schedule K and a thorough revision of it than to any other matter in the tariff bill. And it is not my fault that the duties in Schedule K were not revised on a more just and equitable basis all the way through. I should have liked to have heard your voice then in my aid or that of any other intelligent manufacturer of woolen goods.

Yours, very truly,

SERENO E. PAYNE.

The Tariff.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 26, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BRYAN. Mr. Speaker, under the privilege of extending and printing in the RECORD, I desire to insert as supplemental to my remarks made on April 26 the following article relating to the proposed reorganization of the Republican Party, issued from the Progressive Party headquarters, Mr. O. K. Davis, national committeeman in charge, at Washington, D. C. The article is as follows:

Considerable newspaper attention has been given during the last few days to a meeting of so-called Republican leaders in Chicago, the advertised purpose of which was to bring about, if possible, a union of the Progressive Party with the Republican Party.

Who are these new "Republican leaders"? They are Senators ALBERT B. CUMMINS and W. S. KENYON, of Iowa; WILLIAM E. BORAH, of Idaho; and A. J. GRONNA, of North Dakota, and former Gov. Hadley, of Missouri. This is the first appearance of all these men in the role of "national leaders" of the Republican Party. Each of them has attained prominence in Republican leadership in his own State, but none has heretofore professed to play an important part in "national Republican leadership."

What evidence is there that the Republican Party is ready in any respect to give heed to the leadership of any of these men? On the old rule of judging the future by the past, the evidence is that the Republican Party has no interest in the doings of these new "leaders" and will pay no attention to their "leadership."

All five of them were either personally in attendance in Chicago last June or were represented there. Mr. Hadley was the floor leader of the Roosevelt forces in that convention and Mr. BORAH was an advocate of the nomination of Mr. Roosevelt. Mr. KENYON was there in the interests of the nomination of Mr. CUMMINS and Mr. GRONNA was there as a supporter of Senator LA FOLLETTE. All of them were then opposed to the "national leadership" of the Republican Party represented in Chicago by Bill Barnes and ELIHU ROOT, of New York; PENROSE, of Pennsylvania; Crane, of Massachusetts; Dave Mulvane, of Kansas; Tom Devine and Archie Stevenson, of Colorado; Ralph Williams, of Oregon; and the rest of that unsavory group.

The national leadership of the Republican Party has not changed in personnel or in character since that convention. Nothing has occurred to enhance the standing, the influence, or the authority of these new "leaders in the Republican Party." For reasons of their own they have chosen to remain in a party whose leadership and whose actions they have opposed and denounced. One of them, Mr. Hadley, has explained that he chose to remain regular "for reasons of expediency which might not apply outside of Missouri."

Why are these men suddenly called "Republican leaders"? It was only year before last that the real leaders of the Republican Party were going up and down through the line breathing fire and slaughter and reading them everlastingly out of the party. And it was only last year that the Republican Party officially and publicly rebuffed and discredited them. Nothing save their own claim now gives title to these gentlemen to assert Republican leadership. There is no pretense of other authority in their proposition. It has and it pleads but one justification—that of their own dire necessity. Their personal situation, because of their refusal to take the open, honest course has become desperate, and they urgently need relief. They could have got relief last year, and they can still get it, but there is only one way to get it, and that is by joining the Progressive Party, and not, as they propose, by having the Progressives join the Republican Party and surrender the incalculable advance that has been won by a year's effort.

The reforms these gentlemen now propose for adoption by the Republican Party are not new. They themselves have proposed the same reforms before, and the Republican leaders to whom the proposition was submitted scornfully rejected them. What evidence or hope is there now that the Republican leaders of to-day, who are the identical individuals who before rebuffed these gentlemen, will now admit their error and reform?

When these gentlemen were rebuffed previously, men who believed with them turned to the leadership that has since crystallized into the Progressive Party. Under that leadership every one of the reforms

that they then proposed has been adopted and is now part of the Progressive Party law. But these men who had the opportunity to strike a telling, effectual blow in behalf of the reforms in which they professed to believe hung back, hindering rather than helping the work, and now they have the iron effrontery to ask the Progressive Party to abandon the reforms actually accomplished and turn backward and help them in a renewed effort to enforce these same reforms upon the unwilling Republican leaders who have already refused them. They ask the Progressives to give up achieved success, in order to undertake a movement which experience has already proved to be hopeless. What nonsense can exceed that?

These gentlemen met in Chicago on their own invitation, by their own authority, and they represent themselves and nobody else. Their invitation to the Progressives to come backward into the party which they denounced last year and which in turn denounced them is not supported by the public word or act of any recognized Republican leader. So far as the real Republican leaders have commented upon the proposition, they have decried and disavowed it. It is obvious that the Republican Party is not in sympathy with and does not indorse the conference of these self-appointed "leaders" or its action.

So far as the Progressives are concerned, there has never for a moment been any possibility of a favorable response to such an invitation. The Progressive Party was formed last year upon a definite declaration of concrete principles to which the Republican Party is unalterably opposed. The Progressives have never had and have not now the slightest intention of abandoning those principles. The Republican leadership, permanently reactionary, has not the slightest intention of subscribing to them. The union of the two parties is an idle dream. It is a waste of time and energy to give it consideration.

The Tariff.

EXTENSION OF REMARKS
OF

HON. HOWARD SUTHERLAND,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. SUTHERLAND. Mr. Speaker, it will be impossible for me to discuss at length the many articles affected by the bill under discussion in which the people of my State of West Virginia are interested. I shall therefore only touch upon a few of them as illustrative of the attitude, as I believe, of the majority of the people of West Virginia with reference to the proposed excessive reduction of the tariff on these articles.

West Virginia abounds in natural resources, which, in fact, have scarcely yet been touched. A great part of her area is underlaid with coal of the very finest quality to be found in the United States, and perhaps in the world. These seams of coal lie one above the other in her hills and beneath the surface of many of her valleys, in some instances as high as five or six different seams being mined above water drainage in the same hill, and being discharged into railroad cars over the same tipple. The greatest part of this vast area of almost inexhaustible richness has hardly been touched by the miner's pick, and it is safe to say that West Virginia could produce enough coal for the wants of the entire country, if this were found necessary, and for an indefinite length of time. By far the greater part of the tonnage of coal produced in the State is shipped out of the State for steam-producing purposes in other States and on the navigable waters adjacent to our seacoast. Because this product is shipped in what is termed a raw state, it is by many people ignorant of the subject regarded as an absolutely raw material; and many well-meaning people, who have reached the conclusion that the tariff should be reduced on raw materials, are willing, and even anxious, to reduce the tariff on coal, while at the same time they insist upon having tariff duties kept up upon the articles produced in their several localities.

The fact of the matter is that almost the entire cost of a ton of coal, either at the pit mouth or on cars at the mines, is the cost of labor. In fact, from 3 to 10 cents per ton will cover the cost of the coal itself, when mined on a royalty basis, in the greater part of the State, whereas in many instances a very much smaller amount would cover the actual value per ton of the coal itself. It will thus be seen that when a ton of coal is delivered at the eastern seaboard for steam purposes, or to be transported to other points on our coast, practically its entire value is represented by labor charges in the production of the coal and by transportation charges to the seaboard, the latter of which is also largely made up of labor charges. It will be seen from this that while, to the unthinking person, what is West Virginia's greatest natural product is in the shape of a raw material, yet it is a manufactured commodity, almost entirely produced by the labor of the thousands of honest and intelligent miners of the State of West Virginia, whose labor deserves protection at the hands of Congress, and, in making up this tariff, the difference in the cost of production in the State of West Virginia and in the other bituminous-coal-producing States of the Union, under the conditions that prevail in the United States, and the cost of production in the mines of Nova Scotia should be taken fully into account.

It has been charged upon this floor by the gentleman from Illinois [Mr. BUCHANAN] that the conditions among the miners of West Virginia were wholly discreditable to the people of that State, and while we admit that a regrettable labor disturbance exists there, yet it should be said in behalf of the vast majority of our miners that they are a happy, prosperous, and contented people who, under the beneficent conditions of a Republican tariff, have been enabled to find steady employment at good wages throughout the year; in fact, at higher wages, on an average, than are paid in any other State for similar work; and it should be borne in mind, further, that the area and the number of miners affected by the present strike disturbances are comparatively small when the vast coal acreage of the State and the number of persons employed in that industry in the State of West Virginia are taken into consideration.

In order that the Members of this body may understand fully the actual conditions that have obtained for some time in that region I will submit at the conclusion of my remarks, and as a part thereof, the report of the West Virginia mining investigation commission appointed by Gov. Glasscock on the 28th day of August, 1912. The distinguished character, the high intelligence, and the unimpeachable integrity of the men who composed this commission is a guaranty to the people of West Virginia, to the people of the United States generally, and to the Members of this Congress that their report is a fair and impartial one.

Mr. Speaker, I have come to think with a great many of those who strongly believe in and advocate the policy of protection to the wage earners of the United States that it is but fair and right that there should be a downward revision of the tariff in some of its schedules, and if some of the features of this bill were submitted to me separately for my vote I should unhesitatingly cast my vote for them; but as we are compelled to accept all the provisions of the bill or none, I shall be compelled by a sense of duty to my constituents to vote against the bill, if for no other reason, because it is plainly ruinous to the farming interests of West Virginia. A great many of our honest farmers were led by one cause or another last year to vote the Democratic ticket. It was largely on the promise of the Democratic candidate for President and some of the other leaders of his party that no legitimate industry would be injured by any tariff bill the Democrats would pass, if given the opportunity. One short year ago, Mr. Speaker, wool was being bought from our farmers at from 27 to 30 cents per pound. My advices at this moment are that 15 cents per pound is the ruling price in West Virginia for this year's clip. Is not the woolgrowing industry a legitimate industry? Is it fair to our farmers to cut their revenues from this product one-half? This will mean not only a direct and irreparable loss financially to an important element of our population, but it means loss of opportunity to many of our country boys and girls, West Virginia's and the country's best asset.

West Virginia contains about a million sheep, of a value of about $3,500,000, while the United States, as a whole, contains over 50,000,000 sheep, of value in 1910 of $233,000,000. Is it right to strike down this great industry and allow the wool of the world to come into our country free of duty in competition with the wool produced here under American high standards of living, and without imposing a reasonable protective duty which would represent the difference in the cost of production here and abroad? Was not a solemn pledge given by the Democratic candidate for President that no legitimate industry would be made to suffer? Has not that pledge been broken when you, my Democratic friends, put the wool of the farmer on the free list? It will be difficult for any Democrat to go before the farmers of my State and prove to them that the wool industry is not a legitimate one and ask their votes for Democratic candidates, after the actual experience with free-trade wool prices they are having this year of 1913.

And, Mr. Speaker, while our farmers are apparently doomed by the passage of the Underwood bill to a direct loss on some of their principal products, they are threatened also with an indirect loss by the injury that will be done to some of our manufacturing industries, and may the good Lord be merciful to the workers in those industries as long as the Democrats have the power to write their unbusinesslike and ruinous free-trade views into law. I should like to discuss fully before this body the impending danger to our pottery workers, our steel and

iron workers, our glassworkers, our lumber workers, our pulp and paper workers, our tanners, and others of that large and prosperous element of our people, who by their industry, thrift, and intelligence have built substantial cities and towns with their earnings under the policy of protection as fostered by the Republican Party through all these years. I can not take your time further, and will only submit a memorial with reference to the glass industry sent me by some of the glassworkers of Salem, W. Va., through the president and secretary of the local union of National Window-Glass Workers:

MODERN LOCAL,
Salem, W. Va., April 15, 1913.

HON. HOWARD SUTHERLAND,
House of Representatives, Washington, D. C.

DEAR SIR: We are in receipt of information from Washington which informs us that there has been a very radical reduction in the tariff rates on window glass, and as we are all practical window-glass workers working in the Modern Window Glass Co. of this city and depend on said work for our bread and butter, we think it is going to hurt our trade very much, and we at a special meeting of the National Window Glass Workers of the Modern Local at Salem, W. Va., have decided to protest vigorously against the reductions taken in said tariff on window glass up to the 24 by 30 inch bracket, for the reason that foreign manufacturers and workmen are given an advantage that greatly handicaps American workmen and manufacturers, so we hope that you will do all you can to retain the old tariff or as low a reduction as possible.

We only work eight months in the year at an average of $100 a month, so that means on an average of $15 weekly the year around, which is only a minimum living wage, and by reducing said tariff we will be obliged to meet the foreign competition and obliged to take a reduction in wages and working months, as eight months' work in all the glass factories of this country is enough to supply same for one year; and if foreign glass comes in it will be that much less for us to make, meaning the ruination of our trade and homes.

So please study this matter very carefully before you act, and think of how many families depend on the manufacture of window glass to earn their bread and butter, and then vote for the benefit of the people if you think we are asking for a fair and just demand.

Thanking you in advance, I remain,

Yours, truly,

JOS. MONDRON, *Local President.*
VICTOR BRANEUR, *Secretary.*

Also, a letter from the secretary of the Modern Window Glass Co., of Salem, W. Va.:

MODERN WINDOW GLASS CO.,
Salem, W. Va., March 31, 1913.

Hon. HOWARD SUTHERLAND,
House of Representatives, Washington, D. C.

DEAR SIR: Your acknowledgment of our recent letter received, and as you ask us for additional data are very glad to offer you the following, as we see it:

West Virginia is one of the largest producers of window glass in the country, and no doubt you have or can readily verify the fact that even under the Payne and Aldrich protective tariff the manufacturing of this commodity has been very bad from a financial standpoint, due to competition among the various factories. Even at the present time at least 20 modern plants are standing idle, and those at present in the business can only operate not over eight months per year. These few statements being true, it occurs to us, What would happen if we are left without adequate protection?

A removal of the tariff would close down the balance of the plants, and it is a question if they could adjust their affairs to ever resume, because we, being originally Belgium workmen, though now American citizens and owners of our factory here in Salem, know that the differences in wages between the two countries (Belgium and the United States), as well as the other factory costs, would not allow us to compete.

We have no export in window glass to our knowledge, and have never heard of any of our competitors quoting or shipping to any foreign country, Canada included, notwithstanding the brief filed by Semon Bache & Co. before the Ways and Means Committee, in which they stated our product is being offered in Canada at figures below our cost of manufacture. The writer has been in business the past 13 years.

Some of our fellow workmen are under the impression that Semon Bache & Co. were interested in Belgium, owing to the authority shown by their representatives in some of the jobbing houses over there. If this is true, it will explain their interests in this question, they being practically the only jobber in this country who are taking views opposite to the manufacturers of window glass.

The Belgians only consume in their own country 5 per cent of their production, the balance of 95 per cent being sold in different countries at different discounts, some high there and some low here, just to meet any competition.

The manufacture of window glass in this country is a small thing compared to other lines, only being around $13,000,000. If we are not protected, what would prevent the Belgium Mutual Syndicate—this being the name of the trust in Belgium, which is favored and sanctioned by the Belgian Government—to dump glass in this country at discounts that would put us out of commission and make up what they lose here in some other country until such time as they control the market here.

The manufacturers of window glass have an interesting arrangement with their men for their wage scales, which permits their workmen to take advantage of any rise in the selling discounts.

The workmen in the window-glass business know that their interests are tied up with those of their employer and are with him in resisting the contemplated radical reductions in the window-glass schedules.

We thank you for giving this matter your careful attention and study, as we know you will, as this affects 10,000 workmen and their dependents as well as the various window-glass companies.

Yours, very truly,

MODERN WINDOW GLASS CO.,
LOUIS MATTIS, *Secretary.*

These letters show that owners and employees are alike apprehensive of the effect the rates proposed by the pending bill will have upon this great industry.

I also read a letter relating to one of the great thriving industries of our eastern Panhandle, the Interwoven Mills Co., of Martinsburg, W. Va., which is managed by one of the captains of industry in my State, Mr. C. W. Kilbourne.

OFFICE OF COMMISSIONER OF LABOR,
Wheeling, W. Va., April 18, 1913.

Hon. HOWARD SUTHERLAND, M. C.,
Washington, D. C.

DEAR MR. SUTHERLAND: My attention has been called to a proposed tariff reduction that will affect the Interwoven Mills Co., of Martinsburg. You know the importance of this industry. It is a hosiery establishment, the largest of its kind in the United States, employing about 1,500 men and women. It is one of West Virginia's greatest industries. The proposed tariff reduction will affect that establishment so much that it will put it out of business. I am familiar with the growth of this industry, it having been located in West Virginia within the 16 years of my administration as labor commissioner, and I can not refrain from writing you that you may use your knowledge and influence in prohibiting any reduction of tariff along this line. It is true it is the only one in our State, but it is important in the eastern Panhandle, feeding more than 4,000 mouths. It is one of those industries that is continuously at work; it does not lose any time, but works 313 days in the year.

It is interesting for you to know the importance of this industry, nationally considered. With an invested capital of $133,329,413, employing 129,644 employees, with an annual wage of $39,420,030, and an annual value of product of $170,697,673. This industry is confined to 10 States only.

The proprietors of this desirable industry are among the best people of our State, having greatly added to West Virginia's prosperity.

I have it from the president, Mr. Kilbourne, that any change lessening the tariff on their product would be disastrous, necessitating the abandonment of their plant

With best wishes, I am, yours, very truly,

I. V. BARTON.

In conclusion, Mr. Speaker, I will say that the absurdities and inconsistencies of the pending measure are as many and varied as its dangers. But you and your associates, led by the urbane and resourceful leader of the majority, Mr. UNDERWOOD, are determined it shall pass; and pass no doubt it will by the aid of the party lash and party patronage, for you have, by the chance of a division in the Republican Party, which division did not cover the tariff, a majority large enough to ride over any protests of the minority. But the day of reckoning will come, when you gentlemen on that side must meet your constituents and explain how you construed a split in the Republican Party to be a mandate of the people to injure or ruin some of our most thriving industries, and particularly the farming industry.

Let me make a prediction before I close, and that is this: The time will come, and soon, when the principle of protection will be universally recognized and admitted as being fundamentally sound with reference to this Nation, and with that as a basis it will then be possible to remove the tariff schedules from the domain of partisan politics. An absolutely nonpartisan tariff commission or bureau will then obtain with scientific accuracy the data necessary for Congress to make tariff changes from time to time, always making due allowance for the difference between the cost of production here and abroad and fixing the tariff duties in such a manner as will protect and encourage American workingmen, while discouraging the formation of trusts and conspiracies in restraint of trade. This is the condition of affairs toward which all patriotic citizens should work, and to this I shall devote my efforts. I thank you.

REPORT OF WEST VIRGINIA MINING INVESTIGATION COMMISSION, 1912, APPOINTED BY GOV. GLASSCOCK ON THE 28TH DAY OF AUGUST, 1912.

To His Excellency WILLIAM E. GLASSCOCK,
Governor of West Virginia.

SIR: We the undersigned, appointed by your excellency on the 28th day of August, A. D. 1912, to make investigation into the strike prevailing in the mines along Paint Creek and Cabin Creek in Kanawha County and parts of adjacent counties, in the State of West Virginia, and also to examine into general mining conditions throughout said State along lines laid down by your excellency, beg leave to report as follows:

From the 3rd day of September, A. D. 1912, to the 10th day of November, 1912, we have been engaged, with sundry unavoidable interruptions, in the inspection of the physical condition of the various mining plants throughout the Commonwealth, and also in taking testimony, under oath, of miners, operators, officials, mine experts, physicians, private citizens, and of all others whose knowledge, experience, and skill might throw light on the industrial questions in issue. A transcript of the testimony heard and considered by us is herewith returned as part hereof. At the outset we feel it our duty, as well as a great pleasure, to make public acknowledgment of the desire of the parties to the controversy to aid us in our labors and of the uniform courtesy with which we were treated by all.

For the sake of clearness of presentation it has been deemed best to report on the strike region in and about Paint Creek and Cabin Creek, respectively, and to treat separately the remaining mining regions of the State.

GUARD SYSTEM.

Your excellency requests that the commission investigate the guard system in operation in the strike region. The testimony on this head has been voluminous and somewhat conflicting. Before the industrial trouble commenced, that is to say, before May, 1912, the number of guards on the two creeks was exceedingly small—about six on Cabin Creek and on Paint Creek and vicinity about four or five. They were men who had become friends and neighbors of the operators and miners, some having actually intermarried in the families of the lat-

ter and settled down as permanent residents. Most of them were of reasonably good character and habits and exercised their authority with discretion. But when the situation became tense and the strike commenced, and life as well as property were placed in jeopardy, many scores of guards were hastily assigned to duty. Of these latter some were not of as high a grade as those originally engaged. There is much evidence tending to show that some were not even residents of the State, and this evidence was strengthened by the findings of the military commission organized in connection with the proclamation of martial law on September 3, 1912. From the cloud of witnesses and the mass of testimony figuring in the hearings had by us there emerges clearly and unmistakably the fact that these guards, while personally brave men, openly, recklessly, and flagrantly violated, in respect to the miners on Paint Creek and Cabin Creek, respectively, the rights guaranteed by natural justice and the Constitution to every citizen, howsoever lowly his condition and estate. Some allowance should be made for them in view of the intense excitement and the physical and mental strain under which they bore themselves. Many crimes and outrages laid to their charge were found upon careful sifting to have had no foundation in fact; but the denial of the right of peaceable assembly and freedom of speech, many and grievous assaults on unarmed miners, show that their main purpose was to overawe the miners and their adherents, and if necessary beat and cudgel them into submission. We find that the system employed was vicious, strife promoting, and un-American. No man worthy of the name likes to be guarded by others armed with blackjacks, revolvers, and Winchesters whilst he is endeavoring to earn his daily bread.

It is repugnant to the spirit of the laboring man, and, we believe, to the opinion of the American people, that the same class of men who, with great personal daring indeed and with untiring persistence, tracked through the mountain fastnesses of Virginia the desperadoes who assassinated the judge and other officers in open court in Hillsville should be placed over the miner endeavoring by hard toil to obtain an honest living for himself and wife and little ones. We are, therefore, unanimously of the opinion that the guard system as at present constituted should be abolished forthwith. If such action has not already been taken. Assuming, as we do, that this mine-guard system should not and can not be continued, the question arises what régime should be established in its place? Various opinions have been expressed. The owners of mining properties have a right to protection and security. A scanty police force, with one or more justices of the peace and a like number of constables on each creek, is obviously inadequate. We are of opinion that watchmen in sufficient numbers should be employed, subject to the supervision and control of the State authorities. These guardians of order, property, and life should be men of known good repute, and citizens of the State. They should be required to take the oath prescribed for other peace officers and to give bond conditioned for the faithful discharge of their duties. They should be held to strict liability for any injury resulting from their illegal acts, and there should be vested in the governor the power of their appointment and summary removal upon notice. It appears to be quite certain that no lasting peace will be established between the operators and miners as long as the present system of guards is maintained.

THE CONDITION OF THE MINERS.

We now approach the question of *the condition of the miners* in the present strike region and closely adjacent territory, reserving some observations as to their status in the remaining coal fields of the State. To this inquiry we have devoted special attention within the limits of the time and opportunity at our disposal, and, after careful personal investigation, supplemented by a great body of formal sworn testimony, sifted and tested by severe and exhaustive cross-examination, this commission has arrived at the unanimous conclusion that the general surroundings of the miners on Paint Creek and Cabin Creek, respectively, are very good, when compared with those of the miners of the few unionized plants on the right bank of the Kanawha and with those of the miners throughout the State and the Nation. We have gone into their houses and carefully examined them. They are above the average of miners' homes in most places. At a fair estimate, most of the lots on which they stand are 40 by 200 feet, and the dwellings are as comfortable as those of the average farm hands or of those who live by other manual labor. The rent, while perhaps slightly excessive, is not exorbitant, and a thrifty householder, in his hours of leisure, can raise a good crop of vegetables for his own use. The sanitation, in view of the location and other surroundings, is as good as can be expected. The coal companies, through their physicians and others in authority, urge the employees and their families to keep their premises in good condition, and lime for such purpose is furnished gratis in any reasonable quantity required. The physicians along the creeks appear to be competent and conscientious gentlemen, and ready always to respond in case of grave accident or serious illness. The uniform rules appear to be that single men contribute 50 cents a month for attendance, medicines, and surgical requisites of all kinds; families give $1 a month for like service, while 15 cents a month is paid for hospital expenses, such as board, medical attendance, medicines, and surgical appliances. The Sheltering Arms, at Hansford, situated on the main line of the Chesapeake & Ohio Railway, and in close proximity to the mines, receives the miners or their families in case of accident or sickness. It is a first-class hospital, thoroughly up to date, and supported partly by endowment, partly by voluntary contributions, and also by the amounts received from pay patients. In view of the liability to grave accidents and the known carelessness of many miners in guarding against disease, we consider the amounts they pay, whether sick or well, as not high. In moderation. Careful questioning failed to elicit any information as to any serious epidemics on Paint Creek or Cabin Creek within the past 10 or 15 years.

WAGES.

Next in the order of investigation comes the important question of *wages* in the localities under examination. It was more or less inevitable that there should be much conflicting testimony on this head. There are, too, many varying factors in the solution of this question. A careful consideration of the evidence adduced leads us to the following conclusions:

(1) The average annual wage of miners in West Virginia for the years 1905–1911, inclusive, is $554.26.

(2) The average annual wage of miners on Paint Creek and Cabin Creek is from $600 to $700.

(3) The average wage on Paint Creek and Cabin Creek (nonunion) is fully equal to if not greater than that of the miners in the very limited number of unionized plants in the State on the opposite bank of the Kanawha River.

These figures may appear small and inadequate, but, slender as they are, they exceed the average wage obtained in Illinois, a unionized State, which is but $510.86 a year. We have been unable to secure any official figures as to the average annual wage in the unionized States of Indiana, western Pennsylvania, and Ohio; but we are informed by experts and we believe that the average wage in the two States first mentioned probably falls a little below that prevailing in Illinois, while the annual wage in Ohio, owing to local mining conditions, falls a little below those of western Pennsylvania. This classification, in the order of the rewards of labor, puts West Virginia at the head of the list. If we inquire into these figures more closely, we find they are very substantially affected by several causes, among which comes, first, the unwillingness of a large number of miners to work more than four days a week at the most. A minute examination of the pay rolls discloses the fact that 16 or 17 days in the month constitute a high average, and that many engaged in the mines decline to labor more than 12 or 14 days. This is particularly true of some of the native-born miners and many colored men, and results in the necessity of keeping 20 or 30 per cent more miners in a given operation than would be required if steady application to work were the rule. At several of the mines in the district under investigation were found men wholly illiterate and without any special knowledge or skill other than that acquired by their daily experience earning four to five and in some cases even six dollars a day of eight or nine hours; men with savings-bank accounts of one or two thousand dollars and others who had purchased out of their savings small farms or other properties adjacent to the mines. The schools in the district are as good as the average in the State, and, moving up and down along either creek, one is impressed with the robustness of the children and the general prosperity reflected in good, substantial clothing and household equipment.

THE OVERCHARGES OF THE COMPANY STORE.

The above statements embody the bright and cheering aspects of the miner's life and condition. We turn now to the darker side—the shaded lines. Undoubtedly the evidence shows that he has his hardships and grievances. If his sense of self-respect has been outraged by the guard system, to him most odious and galling, he has, furthermore, earnestly and vigorously claimed that positive injustice has been visited upon him in other respects. He protests that after he has wearily labored in the depths of the mine the purchasing power of his wages has been ruthlessly decreased by *the overcharges of the company store*. On the other hand, the operators contend that such stores are kept for the convenience of their employees and they make but a modest profit of, say, 10 per cent when the expense of buildings, clerk hire, and especially freight are taken into account. Much testimony was taken and scores of exhibits were filed in support of these respective contentions. Several of the miners and their wives, as also women who conducted company boarding houses, testified that they paid these necessaries of life, such as flour, meat, vegetables, and clothing, 40 or 50, and, in a few instances, 60 per cent more than the same article could be bought for in the ordinary independent stores, and that even the necessary implements of their work, such as powder, axes, and picks, were sold at exorbitant rates. As to overcharge, the truth, as usual, seems to lie between the two extremes. Weighing the mass of evidence carefully, we are unanimously of opinion that the company stores in the districts under examination have charged more than a fair average figure in open market for any given article. In view of the heights to which prices in independent stores throughout the country have soared during the last decade, we feel that we can not be too emphatic in our condemnation of such practices. It has borne hard on weak and delicate and naturally indolent men, and even on industrious men with large and helpless families. We are loath to believe that the stockholders or even the principal officers of such mines, many of whom are men of high character, can be fully cognizant of such injustice. It may result from the desire of subordinates "to get results." But whether they are or are not, the fact remains. What is the remedy for such abuse? It is, on the part of the operators, to rouse their consciences to a keener sense of justice to their fellow man and to helpless wives and children; and, on the part of the miners, to guard their rights by close examination of prices and the preservation of lists, bills, and other documentary evidence.

One of the most pathetic features of the whole investigation was the lack of astuteness among the miners in making out a clear-cut case. All that was needed was to buy at the company store on a given date the same or like articles of a well-organized brand or make, and known as such to all housekeepers, carefully noting the price, and on the same day to purchase exactly similar articles in the open market and compare the prices. Not all of the companies, however, have been at fault in the same degree. We believe that a number of them—the exact proportion it would be difficult to determine—have been fair and considerate toward their men. So, too, as in other corporations, the light of ample publicity would shine effectively for all concerned. On the other hand, the laboring man would see if he were obtaining strict justice, and, on the other hand, the employers would be forced by public opinion into just and humane dealings.

SYSTEM OF DOCKING.

Other hardships of which the miner complains are the *system of docking* for the slate and other impurities in the coal and the non-compliance with the State law requiring a check weighman. We believe from the evidence that some injustice to the miner has been done, though it is most difficult to estimate its amount. It has, however, been conclusively shown that the operators must in self-defense be strict on this head. Much correspondence from firms throughout the country was submitted showing that clean coal must be furnished at the imminent risk of losing business.

BLACKLISTING.

One more alleged grievance remains. Letters were laid before the commission purporting to emanate from the officials of mining plants and also from detective agencies warning other companies against receiving into their employ certain miners designated by name. Their physical appearance was in some instances minutely described. The reasons alleged for their rejection were one or more of the following:

(a) They were favorably inclined to the union; or
(b) They were trying to organize a branch of the union; or
(c) They disobeyed orders made for the general safety.
(d) They demanded a check weighman.

In several cases there were lists of illiterate foreigners—Hungarians, Poles, Slavs, and the like—utterly ignorant of the English language. Now, while these documents were not presented in such a way as to constitute admissible evidence, yet this commission, not feeling itself bound by the strict rules of court procedure, desires to record its belief that such a system of blacklisting has to some extent prevailed, not indeed in the present strike region but in some of the other districts. The array of foreign names in the lists furnish some presumption, not conclusive, but tending somewhat to establish the fact. We are loath to believe that in any region resort has been had to such reprehensible tactics. It is repugnant to the genius of our institutions and to the ordinary instincts of manhood to deprive permanently a poor and often wholly illiterate fellow man of the opportunity of earning his daily bread for himself, his wife, and his helpless children because he insists on his plain rights and the observance of laws such, for example, as that providing for a check weighman.

The above are some of the contributing causes of the strike which has for months paralyzed the coal industry along Paint Creek and Cabin Creek. It may be useful to set forth *the main cause*.

THE MAIN CAUSE.

This arises, in our judgment, from the efforts of the United Mine Workers to organize the union in the whole chain of plants along said creeks. Their desire is to make the present strike region the piece for the insertion of the thin edge of the wedge of unionism with the ultimate aim of organizing the whole State. The frank declaration on oath of Mr. Thomas Cairns, local president of district No. 17, would appear to put this intention beyond the region of doubt. The United Mine Workers' Association contends that this is essential to the well-being of the 76,000 or more miners of West Virginia. That by this means, and this alone, can their lot be improved, their rights safeguarded, and the standard of living so raised as to bring it up to a level befitting a citizen, howsoever lowly, of this Republic. All classes of people, recognizing the force of the adage "In union there is strength," do so organize. Even the operators themselves form associations. "Why," say the toilers, "should we also not unite in lawful combination?" The operators can not and do not resist this right as a general proposition, but their claim is that the peculiar industrial conditions in West Virginia render it ruinous and therefore impossible for them to recognize the union.

The geographical position of this State is such, together with the small consumption within her own borders, that of her total coal output of over 60,000,000 tons she markets barely 10 per cent within her own borders, while 90 per cent or more must be hauled to the market through the competing territories of Pennsylvania, Ohio, Indiana, and Illinois, known as the four competitive States; that the operators of said States have always on the floors of joint miners and mine-owners' conventions shown fierce and undisguised hostility to this State, endeavoring in every way to crowd her out of the market, and going the length of stating by the mouth of one of Pennsylvania's leading operators that the opening of mines here at all was an "economic blunder." Resort has even been had to the Interstate Commerce Commission, resulting in reduction of rates, to the material advantage of the competitors of West Virginia operators in freight differentials. It has been claimed, too, and with some appearance of probability, that the operators of the said four competitive States are hand and glove with the United Mine Workers in their attempts to unionize West Virginia, so that the representatives of the coal interests of the State must go with their relative small representation into conventions to regulate conditions and prices, and would come home having rates imposed upon them which, taking into consideration the heavy differentials in railroad hauls, would practically put them out of business and close every mine in the State. They decline, they say, to be wiped out in such fashion; they claim the right to settle their own affairs within the borders of their own State. Even if they come to terms with the district authorities of the United Mine Workers here in West Virginia these terms may not be approved at the headquarters at Indianapolis, and all the labored attempts at amicable adjustment may fall through. Further, they claim that the few unionized mines in West Virginia do not and can not obtain anything like an adequate return on the capital invested. And so, to probe this deplorable situation down to the bedrock of facts, the geographical position of West Virginia is largely responsible for all this industrial strife. Our retarded manufacturing development is also a contributing cause. The consumption of coal within our borders, as elsewhere noted herein, particularly by manufacturers, is almost negligible. No State in the Nation has more inviting natural resources nor offers greater inducements to manufacturing enterprises than West Virginia—great areas of superior coal for steam and coking, splendid timber of many species, almost inexhaustible supply of natural gas, and unlimited water power awaiting to be utilized in the arts of industry. It is impossible not to recognize the merit of and to sympathize with many of the contentions on both sides of this unhappy quarrel. Most assuredly each party believes unanswerably in the justice of its claims. It is in the attempted enforcement of them that each has passed the limits of justice, to say nothing of Christian charity and broad humanity. Two facts loom big over the smaller ones developed in this bulk of testimony—the desperate efforts and often unwarranted and unlawful acts of the United Miners to force the union into the disturbed districts and the equally desperate, unwarranted, and unlawful acts of the operators and their agents to keep the union out. Thus for months before the actual break union agitators, many of them strangers, attempted to invade Paint Creek and Cabin Creek to persuade the miners to join the union. They called a meeting of the workers and described to them the hardships and injustice of their lot and the oppression under which they suffered. The wildest theories concerning the rights of property and the means of production were propounded and advocated, and doctrines closely verging upon anarchy were upheld with such effect that men, who before were living peaceably and in comparative prosperity, purchased Winchesters, revolvers, blackjacks, and other murderous weapons to shoot down the coal "barons" and their myrmidons. Mild-eyed men, 75 per cent of them with usually cool Anglo-Saxon blood in their veins and with instincts leading to law and order, inherited down through the centuries, gradually saw red, and with minds bent on havoc and slaughter marched from union districts across the river, like Hughes ton, Cannelton, and Boomer, patrolled the woods overhanging the creek bed and the mining plants, finally massing on the ridges at the headwaters and arranging a march to sweep down Cabin Creek and destroy everything before them to the junction. Meanwhile the operators hurried in over a hundred guards heavily armed, purchased several deadly machine guns, and many thousands of rounds of ammunition. Several murders were perpetrated, and all who could got away; men, women, and children fled in terror, and many hid in cellars and caves.

If ever there was a case for some strong measure like martial law, the conditions prevailing on Monday, September 2, 1912, the eve of the proclamation, presented it. In fact, in the opinion of expert witnesses on the scene, martial law and martial law alone was the only measure to meet the desperate situation. We believe, partly on the evidence adduced and in part from the personal knowledge of two members of the commission who were on the ground, one in active military service, that but for such proclamation taking effect on Tuesday, September 3, at daylight, there would have been great destruction of property and loss of life in the strike zone. The enormous quantities of Winchesters, revolvers, and other weapons up to machine guns captured from both sides and brought to camp at Paint Creek Junction also bore mute but eloquent witness of the height to which the passions of the opposing forces had mounted.

Now, these propositions, trite and fundamental as they are, will assist us to apportion the blame for the strike and the subsequent disorders on Paint Creek and Cabin Creek and the close neighborhood:

First. Every man has a right to quit his employment and seek other work for any grievance he has or wrong or injustice which he may conceive to have been done to him; but

Second. He has absolutely no right to obstruct, molest, threaten, or otherwise prevent another man from taking the position he has of his own accord abandoned. Organized society and natural law can never yield one jot or tittle on that head. To do so would be to acquiesce in the régime of brute force—a veritable reign of terror.

Third. Labor has the right to organize for its benefit, protection, increase of wages, and better living conditions, and to have recognition of such organization; but

Fourth. Its organization has no right to coerce by threats or violence anyone to become affiliated with it when he does not desire to do so, nor to assault or put in bodily fear one who desires to labor without belonging to it, nor to destroy property of the employer who does not desire to contract with it, nor to violate its contract with its employer without cause.

There is abundant evidence before us that a reign of terror was attempted to be organized in the strike district and outside of it. It is true that the officers of the United Mine Workers professed to counsel moderation and a strict observance of law and order on various occasions, but there is testimony tending strongly to show that harangues delivered in public, and of which stenographic reports have been submitted as exhibits, incited the miners to violence and in some cases to murder. These harangues were in some instances delivered in the presence of officers of the United Mine Workers' Association and from platforms upon which they stood and from which they, too, spoke; but the murderous and anarchistic utterances referred to were never disclaimed or disapproved by them either at the time or subsequent to their delivery. Furthermore, there is some evidence tending to show that officers stood by, without interfering or protesting, while nonunion men were brutally beaten. Again, the warning to other miners from outside not to come into the strike region, published for many weeks in their local organ and also filed as an exhibit and amounting, in effect, to a grave threat, throws a strong light on the actual situation. We fear that the net result of the action and utterances of those acting and speaking under the apparent sanction and approval of the officers of the United Mine Workers was to foment bitter feeling and to incite to serious breaches of the peace. In all this, even granting that they were not acting against any express law set down in the statute books, yet they were acting against the fundamental principles of right and justice. We are of opinion, in view of the recent deplorable happenings in this State, that some statute should be enacted making more comprehensive and more drastic the law against acts and declarations tending to incite riot, tumult, breach of the peace, injury to person, and destruction of property, with suitable provisions for speedy enforcement thereof.

The foregoing are some of the instances in which the United Mine Workers' Association and those led by them have been blameworthy in bringing about the present conflict and disorder.

We can not refrain, in this connection, from recording our judgment, based on the whole trend of the evidence, that the local peace officers of the disturbed regions have, during the strike and many months before, exhibited a woeful lack of resolution and energy in the enforcing law and order. This dereliction of duty crops out repeatedly in the course of our investigations; in fact, all those upon whom locally rested the duty of maintaining the peace and enforcing law and order have utterly failed to do so. Had these in the beginning taken a determined stand, with public opinion at their back, much of the disorder and bloodshed might, in our opinion, have been avoided. But men were assaulted in open day in the presence of dozens of witnesses, profanity filled the air, arms were carried at will, mobs organized, houses riddled with shots, and but the feeblest efforts put forth by the local officers to quell the rising tide of turbulence and lawbreaking. Few arrests were made and fewer warrants issued; justice, swift and sure, overtook hardly any offenders, until at length cowardly thugs, waxing bold by this quasi connivance, went up and down the districts, gathering others about them to the number of a thousand, as on the eve of the proclamation of martial law, and spreading terror through the countryside.

This is not the last strike of the many that has disturbed and will doubtless disturb the peace of the State. Unless some remedial measures are provided, indications would seem to point to their more frequent recurrence in the future than in the past. The vast majority of our citizenship have no direct interest in these quarrels. Not more than approximately fifteen thousand out of fourteen hundred thousand in the State are directly in this fight. But many hundreds of men in the State militia have been debarred for months, some with great pecuniary loss, from pursuing their usual peaceful avocations, and must besides contribute their share of the hundreds of thousands of dollars which the State has expended in preserving law and order. We are accordingly strongly of opinion that there should, by proper enactment, be vested in the governor of the State the power, made as plenary as our constitutional safeguards will permit, of removing or, at least, suspending all officers charged with the duty of preserving peace and enforcing law and order who refuse or neglect to perform such duty through apathy or fear or favor or other considerations whatsoever, to exercise the powers with which they are clothed and take a stern and uncompromising stand for the enforcement of the law.

In the present state of our laws the governor can not act until the sheriff or other officers designated in the statute shall make and file with him a request setting forth that law and order can not be maintained by the civil authorities; and, in that event, his power is exhausted by calling out the State national guard or by declaring martial law if he deems that a condition of warfare or great peril to life and property exists. The following is the exact language of the statute:

"In case of any breach of the peace, tumult, riot, unlawful assemblage, or resistance of law, or imminent danger thereof which can not be speedily suppressed or effectually prevented by the ordinary posse comitatus and peace officers, it shall be the duty of the judge of any court of record, sheriff of any county, or mayor of any city, town, or village to call upon the governor for aid, and in cases where the emergency is such as not to admit of this delay, upon the commander of any brigade, regiment, battalion, company, or battery, and it shall be the duty of the commanding officer of the brigade, regiment, battalion, company, or battery, upon whom such call is made, to order out in aid of the civil authorities the military force or any part thereof under his

command. Such call for aid shall be by means of a summons issued by such judge, sheriff, or mayor directed to the commander of any such brigade, regiment, battalion, company, or battery, directing him to order his command or such part thereof as in the judgment of such commanding officer may be necessary, to appear at a time and place therein specified, to aid the civil authority in supporting the laws."—Code of West Virginia, chapter 18, section 55 (serial section 624).

In our judgment the time has come for the enlargement of the functions of the governor in this direction. There must be some strong central authority to compel officers to discharge their duties faithfully in times of stress and danger. While the governor is chief executive in times of stress and danger. While the governor is chief executive and is charged with the duty of seeing that the laws are enforced, he is helpless when subordinate officers decline or refuse to fulfill their obligations. In these latter days there is manifested an inclination to call for new enactments to meet each new phase of our experience, instead of looking to statutes already provided. Our law makes (a) the sheriff the high peace officer of his county, armed with plenary power, both by common and statute law, to preserve peace and enforce order; (b) it designates the prosecuting attorney the agent, upon information of the violation of any penal law, to "forthwith institute and prosecute all necessary and proper proceedings in such case"; (c) it makes it the resident judge's—as well as justice's—duty to suppress and disperse riots, routs, and unlawful assemblies, and to go among, or near as may be with safety, persons riotously, tumultuously, and unlawfully assembled, and command dispersement, and upon failure to obey such command the power of the county, including, if necessary, every citizen thereof, shall be employed in the enforcement thereof. Under the provisions of sections 1 to 5, chapter 148, code, a resident judge has far-reaching duties, power, and protection when riots, tumults, and disturbances exist in his county.

Have the operators been wholly free from animadversion? The whole situation, as well as the formal evidence, constrain us to answer in the negative. It may be observed in general that, in the effort to safeguard what they conceive to be their rights they have undervalued the power of kindness and of some degree of identification of themselves with the aims and aspirations of their men. By their very situation, wedged between hills or mountains, the toilers on these creeks are cut off from the great stream of life with its amusements, its distractions, its joys, and its sorrows. The opportunity for cultivating a cordial feeling with the men, some of that friendliness that existed in olden times before the rise of corporations, was an exceptional one, but we fear such opportunity was not in most instances embraced.

It may be objected that such an attitude is, in these modern days, well-nigh an impossibility, but this claim is brilliantly and most effectively refuted by the example of Mr. Charles A. Cabell, of Decota, who provided for his men a swimming pool fed by mountain springs with water crystal clear, a library and reading rooms, a bowling alley, and even a miniature theater; in fact, all the equipment usually found in high-class clubs for men. Mr. Cabell joined in the games when the day's work was done. He was most solicitous also for the spiritual welfare of his employees, and the commission takes genuine pleasure in thus commending him for his humanitarian efforts and in citing his example as one that could with advantage be followed by the operators in other mines.

After temporarily suspending investigations in the strike regions the commission proceeded to the Fairmont district and later to the chain of mines strung along the Norfolk & Western Railway from Bluefield to Eckman. In the former locality we made a careful inspection of the plant of the Consolidation Coal Co. at Monongah, about 6 miles from Fairmont, and on a subsequent day at Owings, and on a later day still of the works of the Jamison Coal & Coke Co. near Barracksville, a suburb of Fairmont. This inspection we followed up by taking testimony at Monongah and at the Jamison plant and by painstaking scrutiny of the pay rolls and other books of the respective companies. The results were most gratifying. The wages of the men, both miners and day men, were found to be good. We think it was clearly made out that any man of average ability and industry could make from $2.50 to $3 a day. Some made as high as $4 and even $5 per day. The houses were comfortable, with electric lights, good sanitation, and water supply. Shower baths were provided at some of the mines, and every appliance of the most advanced modern mining science was used for the safety of the employees without apparent regard to expense. The equipment of the engineer's office at Fairmont and that of kindred departments in the magnificent building recently erected is one of the finest in the country. We interrogated men on oath, who testified that they had been with the company for periods ranging over 10, 15, and 20 years. During that time they had saved considerable money, which they had invested in homes or in small farms. Several former miners were proprietors of prosperous stores in the neighborhood. A most careful inquiry into the management of the company store developed the following facts: The prices were as fair, quality considered, as any independent store in Fairmont, Monongah, or Clarksburg, or at intermediate points, lists of such prices being posted conspicuously in every department. We could discover no traces of any pressure, direct or indirect, put upon the miners to deal there. On the contrary—and this seemed most convincing—large numbers of farmers and others near by, in no way connected with or dependent upon the company, deal at their stores for the reason, as they allege, that they can get better value for their money there than at other stores in Fairmont, Clarksburg, or elsewhere. The company has presented ample sites for churches, schools, and rectories free. As to the structures themselves, it has advanced the money, to be paid back without interest at the convenience of the congregation, and this commission knows of its own knowledge that that convenience has extended over 6 or 8 or 10 years. A careful investigation among the banks in the neighborhood further shows that out of the earnings of the miners the sum of $7,500 per month, or $90,000 per annum, is sent to the relatives and dependents of the men, mostly in Italy and Poland. One bank declined to furnish the figures, and the commission did not deem it proper to attempt to obtain statistics from the post-office money-order departments in Fairmont and Monongah. Making, however, a rough estimate of these latter, it would probably be within the truth to say that the sum of one hundred and twenty-five thousand to one hundred and fifty thousand dollars is sent to various parts of Europe annually by the miners in the close neighborhood of Fairmont and Monongah. An idea can thus be formed of the immense sums sent from the 44 operations of this company within the limits of the State. Here we found no guards furnished to the corporation by a detective or other agency. Some of their own men act rather as private watchmen than armed guards. The company's generous policy and the cordial relations between officials and workers seem to constitute the best guard and the most ample protection.

Of course, the general average of the pay roll is, as elsewhere, lowered by the occasional car shortage, the indisposition of some to work more than three or four days a week, and by the fact that the miners of foreign extraction insist on observing the holidays of this country and their own country as well. It would probably be safe to say that these holidays, doubled up as they are, with their aftermath, lessens the production of coal in this State by some 10 15 per cent.

The investigation into the mines in the Norfolk & Western Railway district was next taken up, but, owing to the lack of time, was not of such a thorough nature as the commission could have desired. The Empire Coal Co., of Landgraf, was selected as a test of the local mines generally. Here the commission found matters in a prosperous condition, the great scarcity of labor being the only drawback.

The men were easily making three or four or sometimes five dollars on such days as their own good will or supply of cars allowed them to work. A model miners' boarding house of about 40 rooms, with shower baths, private lockers, and every modern convenience was part of the equipment. The most cordial relations seemed to exist between officials and men from the general manager, Mr. William D. Ord, down to the youngest clerk. The houses for families were the neatest and cleanest the commission had seen, which arose probably from the fact that prizes were offered annually for the best-kept gardens and premises. The whole locality was a most pleasant and surprising intermingling of an Arcadia and a coal-mining village.

Somewhat similar condition prevailed at the mines east and west of Landgraf. Careful, though informal, questioning of miners by members of the commission without revealing their identity or the motive of said questions brought out the information that affairs were moving prosperously; that many of the workers had remained with the same company for 15 or 20 years and were saving money, and, in short, they were well satisfied with their surroundings. In the course of our investigations, which included a number of conferences with officials of the Department of Commerce and Labor at Washington, the commission unexpectedly came upon a little information which throws a strong and yet impartial light on conditions obtaining in the extensive mines of the United States Coal & Coke Co. in and around Gary, McDowell County. An official of the Department of Commerce and Labor—to be more definite, a contract railway inspector—was sent to Gary in September, 1911, to investigate some alleged violation of the foreign-labor contract law. While on the ground he also looked into general surroundings. The following is an extract from his report rendered to the department: "It was found that the men employed in the mines at Gary were satisfied with the conditions and loyal to the company. There are no company boards employed, and it is optional with the men where they deal. While the company has a large store, they also allow an independent store to do business throughout their territory." The portion of the annual report of the Department of Mines for the year 1911 which bears upon the Gary district is also inspiring reading. The circular letter, No. 265, of the general superintendent to the superintendents and foremen, as well as other subsequent letters, insists most emphatically and strenuously that the safety of the men employed is to be "the first consideration" and offers substantial premiums to mine bosses and others who shall most distinguish themselves by avoiding fatalities or even accidents in the mines.

To sum up, we find that the operators in this State are within their rights in declining to recognize a union which would place them in a helpless minority when joined to those of the four competitive States; and by the operation of the freight differential of 19 cents per ton to the Lakes and other points would, all other conditions being equal, render them absolutely unable to find a profitable market for the 90 per cent of their total output. This finding is modified, however, as follows:

The miners have the right to organize for the mutual benefit, protection, and general welfare of themselves and those dependent upon them. We make the following suggestions, which we trust will be accepted in the same kindly spirit which prompts them:

That the economy of their organization be so modified that they, through their officers and representatives in their local district (No. 17), may meet in convention with the operators of their district and agree upon a wage scale, conditions of employment, and other matters affecting their respective interest, wholly independent of dictation from, or interference by, operators of competitive States or other outside influences.

That the organization enforce compliance with the terms of any contract made by it with the operators; in other words, that a contract made and entered into by the operators and the organization shall be in fact a contract to be kept and performed, and that the party violating it shall be responsible to the other for damages.

That the organization make some fixed standard for membership in its organization and put forth every effort to raise the efficiency of its members, thereby tending to create, so to speak, a skilled class, and thus gradually bring about a recognition of if not demand on the part of the operators for men belonging to the organization.

That when recognized it has no right by threats and violence to coerce men to become members of the organization or interfere with those who are not members thereof and who desire to work, realizing that if it can show merit to the employer and benefits to its members the former will be glad to contract with it and the latter will be glad to be identified with it.

Third. There has been in some plants, though not in all by any means, an overcharge ranging from 10 to 25 per cent at the company stores, which, in view of the high prices of the necessaries of life obtaining throughout the country, has made the lot of the miner, especially with a family, hard in the extreme.

We have hereinbefore indicated that vigilance on the part of those who suffer and full publicity may secure the needed relief.

Fourth. There has been much evidence concerning the docking system and of a very conflicting nature; also as to nonfulfillment of State law in respect of a check weighman. We are of opinion that the charges against the operators have not been fully made out, although there may have been some instances in which injustice was done. It would be most desirable if not only a check weighman but some disinterested individual could decide on questions of docking as they arise. There should be recourse somewhere against possible arbitrary docks on account of impurities.

Fifth. The miners are clearly in the wrong in resorting to threats and violence in the endeavor to keep others from working on the terms they reject.

Sixth. They are also culpable in seeking wantonly and maliciously to destroy the property of the companies.

Seventh. We condemn with all the emphasis in our power the effort to inflame the public mind with wild speeches predicated upon charges having no foundation in fact. To cite one instance: A great throng of miners and their wives and children marched through the streets of the State capital on the evening of September 21, 1912. One of the banners in this procession bore this legend: "Death to the human hyena, the Baldwin thug, who cut a woman's breast off at Kayford."

This banner and others like it elicited an outburst of indignation and profound sympathy from all. An account of it was telegraphed to several newspapers; thus sending a thrill of horror through the country. The commission took pains to ascertain at Kayford and elsewhere what justification there might be for such an atrocious charge. They invited counsel and officials of the miners' union to bring the witnesses forward. Not a scintilla of evidence was even offered. The commission was forced to the conclusion that it was a fabrication, pure and simple. The same is true of many more of the alleged facts cited by the speech makers in the various gatherings.

Eighth. It is imperatively necessary, as we set forth above, that the hands of a chief executive of the State be strengthened so that he may compel the local peace officers in disturbed districts to perform their duty under the law.

Ninth. We consider the guard system as recently maintained on the two creeks as vicious and bad, not so much by reason of the personality of its members, but because, as a system, it is contrary to the spirit and genius of our free institutions. We adopt the language used in the able and interesting report of the commission which investigated the famous Pennsylvania anthracite coal strike in 1903: "They (the guards) are really the employees of the coal companies, and thus do not secure the respect and obedience to which officers of the law are entitled. Their presence is an irritant, and many of the disturbances in the coal regions during the late strike grew out of their presence. Should this matter be regulated by legislation, so that the laws could be enforced, and peace preserved by a regularly constituted constabulary, appointed and paid by the county or State, the commission believes that much of the disorder which accompanies strikes would be avoided." (Bulletin of the Department of Labor, No. 46, May, 1903, p. 510.)

We beg to submit herewith, as "Draft A," a tentative bill outlining the provisions for a system of officers, to be appointed by the governor, and removable by him, to hold the balance even between interest and interest, class and class. But after all, the best guards and noblest forms of protection are realized in strict justice between man and man.

Tenth. We recommend consideration by the legislature of a workman's compensation act, and submit herewith as "Draft B" a tentative outline of such a bill drawn by Dr. I. B. Reynolds, of the State university. Sixteen States of the Union have enacted a similar law, and among other advantages to the public, to say nothing of the advantage to the individuals (both employer and employee), are:

(1) The establishment of better relations between employer and employee.

(2) The tendency by the better class of labor to seek the State where such laws are enforced.

(3) Less expense to the public—for in the last analysis the people pay the enormous cost incident to accidents in the fields of labor, either in caring for the injured and those dependent upon him, or in maintaining the judicial machinery necessary to try the claims arising from injuries sustained.

(4) A diminished number of casualties and accidents in the field of labor. The fact that the employer and employee both contribute to the fund from which the injured must be paid naturally brings about a greater degree of watchfulness upon the part of both; in other words, each is mutually interested in the protection of the right of the other.

Eleventh. In these days much is said and written about conservation of our natural resources. All will agree that the safeguarding of life and health is the first duty of the State. We recommend that legislation be enacted making the laws relating to this subject more comprehensive and giving to the State board of health additional powers to prescribe and enforce needful rules of sanitation in municipalities, mining, manufacturing in rural communities, and tenement districts by suitable enactments and with sufficient appropriations. The man who toils in mine or factory or follows other employment, and lives in a tenement house is entitled to reasonable safeguards to life and health in the home, as well as in the mine, factory, or other places of employment.

Twelfth. We recommend some form of legislation embodying as closely analogous to the Canadian industrial-disputes act of 1907 as our form of government will permit. One feature of that act should commend itself to every just and thinking man. While the arbitration is pending work should continue in the industry affected to await the result of the arbitration. It should never be forgotten that the whole body of our citizenship suffers in its peace of mind and in its estate while the parties to the quarrel lapse for the time being into barbarism, by use of violence and brute force. The State has a right to quasi domain over them, compelling them to submit their cause to an impartial tribunal chosen in the main by themselves.

The public, while not a direct party to the quarrel between employer and employee, is often, if not always, more or less the greater sufferer, in many instances subjected to the greatest inconveniences, to pay the expenses of the strife, to respond for damages done by violence, and even to freeze and to starve, yet, all the time, helpless to find in all the clamor and uproar the real cause of trouble. This third party, the public, is usually right, and if it only knew the cause its sentiment—public sentiment—would in many instances, if not all, bring the quarrel to a righteous end.

The measure we recommend does not deny the right to strike or lockout, but requires, before a strike or lockout is declared, that notice of the demands of the complaining party be given to the other, hearings had thereon, and the public fully informed of the differences; and then, if either party can not submit to the decision of the arbitrators who have heard the evidence and made an award, he may strike or lock out. It has been objected by some who might be affected by the provisions of this act, first, that it has been a failure in its operation, and, secondly, that it has a generally "chloroforming" effect. The former contention is not, we believe, borne out by the facts. Nothing human is perfect, but, while the measure has not met with uniform success, the fact remains that it has, in a large number of instances, been instrumental in putting an end to disastrous strife and great industrial loss. As to the "chloroforming" effect we seriously doubt whether the objection is well taken. When there is riot and disorder in our own bodies and one of the vital functions goes on strike the cool-headed surgeon administers chloroform or other anesthetic and while we sleep he, with steady hand and consummate skill, probes into the cause of the trouble and applies the needed remedy. We believe, for instance, that the temporary application of some form of moral anesthetic to the operators, miners, and their respective sympathizers on Paint Creek and Cabin Creek would have worked great good to all concerned, as it most certainly would have redounded to the good name and financial benefit of the State.

This is an age of education and progress. It is a time when right should prevail more and more over might and mere force should yield to the majesty of the law. The poet sang of old that amid the clash of arms law was silent. But we would fain express the hope that, by moderation on both sides, by mutual concessions and an honest desire to submit to disinterested tribunal differences which, in the nature of things, no participant can be a competent and disinterested judge, the day of disastrous strikes, with their cruelties, their bitterness, their injury to life and property is rapidly becoming a thing of the past.

And now, before closing this report, we venture to offer a few remarks and suggestions as to the relations of this State and the Federal authorities in Washington in the matter of immigration. During the course of our inquiries there was developed the fact of some antagonism to and discrimination against this State. We do not call the integrity or good faith of any men in question. Indeed, some degree of honest prejudice might have been anticipated from the fact that a number of officers in Washington and New York, charged with the administration of the laws bearing upon immigration, were formerly high in the councils of the various federations of labor. Mr. John Nugent, of this State—without compensation from the State—holds a commission from West Virginia to foster immigration of miners here, but all his efforts to induce immigration to come have so far practically been in vain. In a letter to Mr. William D. Ord, of Landgraff, W. Va., bearing date December 11, 1912, Mr. Nugent states that he was blocked in all of his efforts at Washington and New York; that out of 42,000 immigrants arriving at the latter port during the last week of March, 1912, 3 children and 2 women only were booked for West Virginia, and that "while we received into our country from Europe something like 40,000 practical miners from the mines of Europe, less than one-half of 1 per cent of these come to West Virginia."

Now, here is a condition of affairs well deserving the serious attention of all who may be directly or indirectly interested in the upbuilding and development of the State, for we are convinced, as a result of our investigation and from our previous personal experience, that no part of this vast Republic offers a better field for the industrious and thrifty miner. Our climate is all that can be desired; our streams, from the majestic Ohio and the beautiful Kanawha down to the innumerable small rivers and creeks that feed them, make us one of the best watered of the States. The great coal fields in other parts of the country, or some of them, have reached the zenith of production. Others are distinctly on the decline. West Virginia has barely touched the numerous veins of coal in her mountains, a fact which the increase in production from 7,394,654 gross tons in 1890 to 59,581,774 gross tons in the year ending June 30, 1912, abundantly proves. Moreover, only one-twelfth of our total coal area has yet been developed. In the last decade there has been a vast improvement—we compute revolution—in mining conditions. The fatal accidents, a large per cent of which, by the way, result from the miner's own recklessness or carelessness, are being reduced to a minimum by scientific methods, by diligent inspections, and especially by rigid examinations conducted by the department of mines for the position of the mine foreman and mine boss. That the native population will be unable to supply labor for this vastly increased and vastly increasing development is obvious. We must fall back, therefore, upon other labor; but we can not effectively rely upon it unless we disabuse the public mind, especially the immigrant's mind, of the impression that West Virginia is an undesirable place to cast his lot and make his home. This effort is worthy of any man's ambition. He can readily show to any impartial inquirer that among all the States none is more favorable to the miner or other man seeking a home. Here in a few years, with our illimitable expanses of good virgin land, the industrious, thrifty home seeker can readily pass from condition of miner to that of farmer. The tremendous impetus given to agriculture in the last decade promises great things for West Virginia, even undreamed of a short quarter of a century ago, and it is most gratifying to observe that considerable numbers of those who have come into our State, after some years' work in the mines or forests, have purchased with their savings small farms and have gone back to the honorable occupation which for centuries was that of their ancestors.

Let the employers be just and even liberal and helpful. Their reward will be the loyalty and willing service of their employees.

All of which is respectfully submitted.

P. J. DONAHUE,
S. L. WALKER,
FRED O. BLUE,
Commissioners.

CHARLESTON, W. VA., *November 27, 1912.*

The Tariff Bill.

I hope to live to see the day when as much money is appropriated by this Government for highways as is appropriated for rivers and harbors. * * *

I want the American laborer to live like an American.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ASHBROOK,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. ASHBROOK. Mr. Speaker, I feel that I am justified in burdening the RECORD sufficient to make my position on this tariff bill clear, not only to my friends here, but to those who sent me here. I was one of the insurgent Democrats in the caucus, but did support the bill. I therefore desire to give a reason for my opposition as well as for my submission.

I have the honor to represent an agricultural district, although there is extensive manufacturing in several cities in the seventeenth Ohio district. I am not prejudiced, therefore, against the manufacturer or in favor of the farmer. My contention has been, and is now, that all interests should be treated fairly and

alike. Because I did not believe the Underwood bill in some respects was so framed I registered my protest. I know the same criticism might well be made of every other tariff bill. I cast no reflection on the chairman of this great committee or upon the other members of that committee. I believe there never was a more able or a more conscientious chairman of the Ways and Means Committee than the gentleman from Alabama [Mr. UNDERWOOD]. The bill as a whole is a good one and is what the country demanded—tariff revision downward. It certainly is downward this time, and on some of the items is a jump from a reasonably high eminence to the bottom of the sea.

I have been criticized by some of my good friends back home, who believe things will never be just right until we have free trade, because I joined with my colleagues Messrs. SHARP, BATHRICK, POST, FRANCIS, WHITE, WHITACRE, and CLAYPOOL in a vain attempt to keep a duty on raw wool. I believe I have been consistent, if not regular, in the minds of some. I know I have acted in good faith, and while I regret that my action here does not meet with the approval of all, my conscience consoles me. I am not a protectionist, neither am I a free trader. From an argumentative position I would take the affirmative side of the latter, but when practically applied it will not wash well under existing conditions. This country has lived too long under a protective system to make a single jump to free trade. The only safe policy, in my opinion, is to reduce tariff duties gradually that business may not be seriously disturbed. This, I believe, is in accordance with the Democratic platform and Democratic declarations during the last campaign.

Let us go back a bit and see whether or not I have been regular and acted in good faith. The Sixty-second Congress passed several schedule tariff bills. Take Schedule K. The Ways and Means Committee of the House reported the bill placing a duty of 20 per cent ad valorem on raw wool. The House passed the bill. The Senate increased the duty to 29 per cent. The House concurred in the bill as amended by the Senate, but President Taft vetoed it. The House in the Sixty-second Congress was Democratic and the Senate was Republican. The Democrats, therefore, then clearly favored a duty of 20 per cent on raw wool. The record of the Sixty-second Congress was indorsed by the Democratic convention at Baltimore, and our candidate for President, who now occupies the White House, likewise indorsed it in his speeches to the country. The country also indorsed that record, and largely upon the record made by the Sixty-second Congress and the confidence by it engendered the Democrats were successful in electing a President, secured control of the Senate, and elected 291 Members of the House, giving it the phenomenal majority of 143. Did anyone anywhere during the last campaign advocate free wool or a reduction in any schedule so radical as to disturb business? Did anyone from the stump talk free trade? I think not. Believing that the Sixty-third Congress would not depart far from the record made by the Sixty-second Congress and having this assurance from the chairman of the Ways and Means Committee and other members of that committee, I assured my constituents that they need have no fear of a Democratic Congress. Was I warranted in making such assurances? I think I was. What followed? The Ways and Means Committee of this Congress prepared an omnibus bill, abandoning the schedule-by-schedule scheme of the last Congress, and fixed a duty of 15 per cent on raw wool, with corresponding reductions on manufactured woolen goods. This bill was submitted to the White House. President Wilson insisted that wool be placed on the free list, and the committee yielded, although more than one member of that committee has stated to me that it was a mistake to do it. In the Sixty-second Congress we favored a duty on wool and free sugar. Now we have turned our coats inside out. I hope no one will believe that I am disposed in the slightest degree to criticize the President. I am simply stating plain facts. I have the greatest admiration for President Wilson. I believe he will go down in history as one of the most intellectual, high-purposed, honorable, and purest American citizens who ever attained the high honor of becoming the Chief Executive of the greatest Nation known to civilization. He may make mistakes—all men do—but the honesty of his purpose will never be questioned by unbiased men.

This bill was therefore changed to conform to the suggestions of the President, and the poor old sheep was consigned to the scrap heap. Some of my good friends, who have taken active part in the debate on this schedule, evidently think that sheep feed on a scrap heap, with an occasional blackberry brier thrown in for relish. I doubt if they could tell a sheep from a goat if they would see one. This is a brief recital of the facts, correctly stated, and which warranted me with my colleagues as mentioned, and also Members from Indiana, West Virginia, Pennsylvania, Arizona, California, and other States, making the best fight in the caucus that was in us to keep wool off the free list.

I represent a sheep-raising district, of course. Had the manufacturer of woolen goods been treated the same as the farmer, while doubting the wisdom of such legislation, my protest would have been milder. Does anyone deceive himself in the belief that a few cents per pound duty on wool will make cheaper clothing? With a duty of 20 per cent ad valorem, it would not amount to $1 on the kind of a suit of clothes I am accustomed to wear. And who will get the few cents reduction? Will the consumer get his clothes or his blankets 32 cents or 76 cents less than heretofore? No; the manufacturer, the clothier, and the tailor will divide the pennies, and the dear people, in my opinion, will pay the same old price. But how about the farmer? Those few pennies, I fear, mean the destruction of the sheep industry in this country. But old Rube must stand it. He has no big influences behind him; he is unorganized and defenseless. He has grown accustomed to the short end, and perhaps his back will bear it.

Let me say a word here to those who like to take a slam at the farmer and charge him with being responsible for the high cost of living. There is no doubt but what many of the products of the farm are high. But who is responsible? Surely not the farmer. He never had but little benefit from a protective tariff, and if this bill becomes a law he will be stripped as bare as a buzzard in molting season. He sells his products in the open market; he is in no combine. Supply and demand make his prices. And yet he must pay a duty on about everything he buys. If the farmer boys would remain on the farm and not rush to the towns and the cities; if greater interest and encouragement were given to agricultural pursuits prices might be lowered by increased production. And let me say the best way to keep the boys on the farm is to legislate in the interest of the farm. Give them the same beneficial legislation—but no more—the manufacturers and the employees in the factories receive. Federal aid for national highways would be the greatest boon this Government could give to agriculture, and would be far more likely to reduce the cost of living than to put wool on the free list or give world-wide competition on barley, buckwheat, and potatoes. I hope to live to see the day when as much money is appropriated by this great Government for highways as is appropriated for rivers and harbors. Do not kick the farmer. He is entitled to no more than any other class, and certainly is entitled to no less.

This bill and debate thereon has developed one fact that ought to open the eyes of the farmer who has had, may I say, the wool over his eyes all these years. He has been misled in the belief that his interests and the interests of the down-east gentry who have fixed the price on wool were mutual and dependent upon each other. Hand in hand they must go, have they told my farmer friends. The farmer has pulled the chestnuts out of the fire for his New England and New York friends for the past 50 years.

The duty on wool, whether it was high or low, has been shared far from equitably. The farmer got a bite and the Woolen Trust a stomach full. The farmer has made the mistake of demanding a high tariff on wool and woolen goods as well. Had he rowed his own boat he would not now likely to have been made to seriously suffer. The farmer pays his help good wages, but how about the woolen mills? An investigation made a short time ago developed that the woolen mills of New England largely employed women, children, and foreign-born unnaturalized help at prices far below the average factory wage. The high tariff on woolen goods has therefore not helped the American laborer or woolgrower, but the Woolen Trust has been the big beneficiary. Not a Member of this body from the districts wherein are located the woolen mills lifted his voice in protest against free raw wool or voted in caucus with those who demanded a duty on wool. Why? They heard their master's voice, and the Woolen Trust was willing to let—yes, anxious to let—the woolgrower drown if he could but save himself. Wool is on the free list, while woolen goods get 40 per cent or more protection. If we are to have free wool let us have free woolen goods—not hit the farmer square in the face and pat the manufacturer on the cheek.

There are other items in this bill that do not quite look good to me. Why should meat come in free when cattle on the hoof are taxed? Will that cheapen meat? Will it help the farmer, or will it help the Beef Trust? The scales are supposed to always be fairly balanced, but it has oftentimes seemed to me that the Goddess of Justice in whose hands hang the scales was not totally blind but could see just a bit out of the nigh eye.

The pottery manufacturers complain bitterly against this schedule. A manufacturer in my district, who is at the head of the Pope-Gosser China Co., says:

If the proposed tariff bill becomes a law its effect on the pottery industry of the United States will be so serious that no one can foretell the outcome, but that lower wages are sure to follow.

I am not familiar with these duties, but have confidence in the gentleman who made this statement. If the bill becomes a law in its present form and the result is as predicted, it is not necessary to assume the rôle of a prophet. I strongly favor the recommendation made by the Secretary of Commerce, Mr. Redfield, a few days ago, that an appropriation be made to investigate the closing down of factories or the lowering of wages following the final passage of this bill. If manufacturers attempt to do either for political or selfish purposes, those facts should be known. If on the other hand an investigation develops that such action is warranted by the manufacturers, Congress and the country will have information that can not be disputed. My understanding is that representatives of the pottery interests appeared before the Ways and Means Committee last winter and made a satisfactory showing that the existing tariff rates were not excessive, and left with assurances that they would not be disturbed. If this be true, I can not account for a reduction of these duties. The glass manufacturers also complain and state boldly lower wages must follow. I am not here to defend everybody whose toes have been pinched. I believe that every article manufactured in this country that is sold in other countries at a lower price than it is sold here should be on the free list. But I do want the American laborer to live like an American, and if in order that he may so live it is necessary to have protection, if you wish to call it such, I am in favor of it, providing all classes and all interests fare alike. I am in favor of tariff revision downward, but since there must be a duty on certain commodities to raise the revenue to run this Government, why not reduce it gradually and fairly? Cut it 30 or 40 or 50 per cent, if need be, on the raw product and a like per cent on the manufactured article. We will lose $15,000,000 by putting wool upon the free list without bringing, in my opinion, much relief to the people. Why?

These are some of the reasons why I have opposed this bill. They may not be good, and if such is the case, my judgment is bad, and those who criticize me are right. I do not pretend to know much about the tariff, but I want to say here that a tariff commission honestly appointed and honestly administered, in my judgment, could better solve this most delicate question, too likely to be influenced by political policy, than by the great majority, which includes myself, who are honored by a seat here.

Now, why do I vote for this bill? Because in the main I believe it is a fulfillment of party pledges. It is what the country demanded. The Republican Party went on the rocks because it failed to keep faith and passed the unpopular Payne-Aldrich tariff bill, which was a revision upward and not downward. No one will call this a Winona speech. But I do believe with due allowance for all criticism herein made that the Underwood bill is a better bill than the Payne-Aldrich bill. If I could vote against certain items in this bill I would do so, and no party lash could whip me into line. The papers of my State say that certain Ohio Members sitting here, including myself, were gerrymandered out of their old districts because we have been obstreperous, but I do not believe that. Rather was it the work of ambitious statesmen in the legislature who have their eyes turned toward Washington. As concrete cause for my conclusion five members of the legislature, which attempted to fix my clock, are announced as my rivals. But we shall see what the people have to say on this question. The press has also warned the warring members, I am sure without warrant, that the administration would personally oppose all who dared deny their support of this bill and even take away patronage by rights their due. Such reports did not influence me one iota to support this bill. I know full well that the President is an honest and honorable man and not a boss. But if all these reports were true my position would be the same, for I know a right good place back in Ohio where I can go and be my own master.

This is an omnibus bill and it must be voted for or against entire. I am willing to surrender my convictions on all other items rather than vote against the income tax. I hope the day is not far distant when all revenue will be raised by direct taxation. An income tax and an inheritance tax would go far toward supporting this billion-dollar country. This bill includes the income tax. My position always has been that those who are fortune favored should bear the burdens of their less fortunate brothers. Why tax the man who works 10 long hours for $1.50 to $2 per day the same as the man whose income is counted by the thousands. It is unjust and it is unfair. The poor man now pays about as much to support the Government as those who ride in automobiles and wear diamonds taxed 10 per cent. The income tax, in my opinion, brings greater relief to the poor man than the lowering of the duties on a thousand items in this bill. Now, give us an inheritance tax that the great estates, created under laws that have made them possible, may give back to the Government an equitable accounting. We will then have two of the greatest and most meritorious revenue raisers that can be devised.

In conclusion, I want to say that should I not be considered quite orthodox in the estimation of some good people the Almighty is to blame, for I see things as He permits me to see them. I am a Democrat, however, and believe that with all its faults the Underwood bill is better tariff legislation than the country has ever secured under Republican rule.

The Farmer and the Tariff.

EXTENSION OF REMARKS
OF

HON. FRANK B. WILLIS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. WILLIS. Mr. Speaker, as has been repeatedly pointed out in this debate by those of us who are opposed to the pending bill, and as has been frankly admitted by the sponsors for the measure, this bill is drawn without reference to the effect it will have on American laborers and producers.

Whether the standard of living and rates of wages in this country, which are now the highest in the world, shall be maintained seems to have given the framers of this tariff bill little or no concern. Under its provisions our workingmen are to be brought into direct competition with the half-clad, underfed laborers of Java, Japan, South Africa, and India, earning only a few cents per day. In many lines of production our workingmen earn as much in a day as their oriental competitors earn in a month.

It is insisted that we can produce as cheaply here as elsewhere; perhaps this might be true if we were content to bring our standard of living and wages down to that of the oriental, for, after all, cheapness of production is very largely a question of wages. That is why workingmen and farmers protested and are now protesting against the passage of this bill.

The farmer is especially discriminated against. The defenders of this bill complain bitterly because his products have increased in value since 1897, and one of the avowed objects of this legislation is to reduce the price of what the farmer has to sell. By this bill the products of his honest toil are put on the free list or the rates greatly reduced.

The farmer must sell his horses, cattle, hogs, sheep, wool, wheat and other grains, poultry, hay, onions and other vegetables, and, in fact, everything he has to sell at greatly reduced prices if the promoters of this legislation are to have their way. How the farmers will look on this attempt to compel them to sell their products at such prices as reigned under the Wilson law of 1894 is indicated by the following brief editorial from the Belle Center (Ohio) Herald:

FARMERS BLAME DEMOCRATS.

Wool buyers in Belle Center have finally made a price to be paid to the producers. They offer 16 cents per pound, 4 cents under the price paid last year before the tariff was removed. Farmers are howling to beat the band, and the Democrat who would come up for office now would get but few farmer votes in this part of the country.

Even the rates provided in this bill are deceptive. For example, in paragraph 190 of the bill sheep are made dutiable at 10 per cent ad valorem, yet in subsequent paragraphs wool, mutton, lamb, sheep hides, horns, tallow, and even the bones of the sheep are put on the free list.

Of what advantage is a duty on sheep when everything that can possibly be made from the sheep is put on the free list? The only purpose of this 10 per cent duty is to deceive the farmers and sheepmen. Their viewpoint of the tariff is cogently set forth in the following extracts from an address delivered at Cheyenne, Wyo., on January 9, 1913, by S. W. McClure, which,

under the general leave to print, I submit for publication in the RECORD:

HISTORY OF WOOL TARIFF.

At about this date (1867) South America, Australia, and Africa were the great wool-producing nations. The wool produced in Australia was very like ours both in quality and character, and little of it had as yet been imported. The Australian wool then shrank from 60 to 70 per cent, according to best available data. The situation in South America was somewhat different. The merino and the native sheep of that country had been crossed, yielding a cheap, heavy wool, which shrank from 60 to 70 per cent, the same as our own wool. However, in addition to this merino wool, South America produced a considerable quantity of what was known as native carpet wool. These native wools shrank at that time around 50 per cent, but they were coarse, poor in character, and so filled with burrs that they were considered very inferior wools and not looked upon as a competitor to be guarded against. It was the heavy merino wool that was to be excluded. After considering these facts the conference between grower and manufacturer resulted in the conclusion that the average shrinkage of all desirable wools of the merino type, both in this and in foreign countries, averaged 66⅔ per cent, and upon this basis the entire law was predicated. It has been asserted that the Syracuse convention intended to place the duty upon the grease basis. This assertion, however, is not in accord with the facts, for the entire line of reasoning pursued by these conferees recognized scoured wool as the important material to be taxed, and they clearly provided that wool imported in the grease should pay the same relative duty upon its scoured content as it would pay had it been imported scoured. However, as a matter of convenience in the collection of the duty, the tax was placed upon the grease pound along with its equivalent upon the washed and scoured pound. Therefore, in accord with the recommendations of this conference, Congress, in 1867, levied a duty upon all merino wools imported in the grease of 10 cents per pound plus 11 per cent ad valorem. If washed, double the grease duty; and if scoured, treble the grease duty. Thus we see that the intent was to place the duty on the scoured wool obtained, and not upon the grease and dirt. If further proof be desired as to the shrinkage of wool in 1865 or to the actual protection which the law presumed the woolgrower would get, it will be found in the fact that in levying a compensatory duty, which that law gave to the manufacturer to compensate him for what he paid because of the tariff upon wool, this compensatory was levied on the basis of 4 to 1; that is, the compensatory duty assumed that 4 pounds of grease wool were required to make 1 pound of cloth. This ratio was correct only when wool shrank 66⅔ per cent or more, and it would have been dishonest to give this much compensatory duty if imported wool then shrank less than this amount.

As we have before stated, our protection must be measured not by the duty on the grease pound, but by the duty paid to obtain sufficient wool to make a pound of scoured wool. Since in 1867 domestic and foreign wool of class 1 was of the same shrinkage, our growers had the full protection of the law regardless of whether the wool was imported in the grease or in the washed or scoured condition. Under the stimulus of this law our wool production rose from 160,000,000 pounds in 1867 to 337,500,000 pounds in 1884, at which time our protection was considerably reduced. Of course, in 1872 the wool duty was reduced 10 per cent, but this was restored in 1875. The wool tariff, however, became the subject of general revision in 1883, when an important reduction in the duty was made. The law of 1867 had placed the duty at 10 cents per pound plus 11 per cent ad valorem. In 1883, the average value of Port Phillip fine wool was 24½ cents per pound. Our protection against this, then, was 12⅞ cents per pound. The average price of Australian crossbred wool was then 18 cents per pound and our protection against it 12 cents per pound. The law of 1883 reduced the tariff to 10 cents per pound, which in effect reduced our protection from 2 cents to 3 cents per grease pound. Under this reduction our wool clip fell until in 1880 we produced but 293,500,000 pounds. In 1890 the tariff was again revised and the duty on wool raised 1 cent per grease pound. In accordance with this increase in duty wool production likewise increased, so that by 1893 we produced 348,500,000 pounds, or the greatest amount in the history of the industry. Then came an election and wool was placed upon the free list. In response to this our production fell from 348,500,000 pounds in 1893 to 259,000,000 pounds in 1897, a reduction of 89,500,000 pounds in four years. Then the wool tariff was again revised and a duty of 11 cents per pound given to grease wool. Production again increased from 259,000,000 pounds in 1897 to 318,500,000 pounds in 1911. I anticipate that the 1912 clip will be less than the 1911 clip, but this reduction is largely attributable to the tariff, for be it remembered that in 1911 we had a special session of Congress from which a very low wool bill was sent to the President for his veto. This coming at a time when all our wool was on the market enabled the buyers to purchase our clip at free-trade prices, which forced many growers to give up the sheep business. There was no good excuse for the low prices of 1911.

All of the foregoing makes it evident that there exists an intimate relation between woolgrowing in this country and the tariff. And it must further be apparent that in the absence of less actual protection than we now have a large decline in wool production must inevitably follow. This, of course, brings up the question of our actual protection at the present time. Two important events have occurred since 1867 to influence the actual protection which American woolgrowers have received under the law. The law placed the duty on grease wool. The importer at once saw that the only way he could reduce the duty was by reducing the shrinkage of the wool he imported. No other avenue was open, for if he imported washed or scoured wool the duty was relatively just as high as if he imported it in the grease. Therefore the importer, early in the seventies, set about the purchase of light shrinking wool. He began to pay a premium on light wools. The foreigner began to pack his light wools separately in response to this premium. However, it must be evident that to change the shrinkage of a nation's wool is a slow process, and this was a slow process. How slow it was is not a matter of record, but the best available data seem to show that up to 1880 imported wools shrank about as much as our domestic wool, so that for many years after 1867 we had practically the full protection of the law. About 1880 an event occurred that was destined to materially reduce our protection. This was the permanent establishment of the frozen-meat trade. The first attempt at the exportation of frozen mutton from Australia to Europe was in 1861, but it was a failure. Repeated efforts met with no better success, and it was not until 1879 that the exportation of frozen mutton was successfully established. Then began a change in the wool production of South America and Australia. The heavy-shearing merino had reigned supreme throughout the world except in parts of Europe. Now the road had been paved for the sale of mutton, and consequently a change in the type of sheep was demanded. Therefore in South America and New Zealand the merino began to give way to the crossbred and the production of light crossbred wool necessarily followed. In our own country the worsted industry that demanded crossbred wool was growing apace. The carded industry that used our heavy merino wool was failing, just as it was doing abroad. This left our short clothing wool in less demand. Thus, by 1883, even before the tariff was reduced, our actual protection had been reduced by reason of the increased clean yield of imported wool. Add to this the tariff reduction of 1883 and we have the cause of the decline in the wool production that followed until 1890. Along in the eighties the skirting of foreign fleeces had become general, and our importations were largely skirted wools even before this iniquitous feature was added to the McKinley bill. It had previously been permitted by the customhouse. As we approach the present date the causes which I have here given as operating to reduce our protection have become more and more intense, so that where we had the full protection of the law from 1867 to about 1883, these influences have now reduced our actual protection to but little more than one-half of what it originally was, and what the law and the country supposes it is to-day. In other words, the wool tariff has automatically reduced itself to about one-half its former proportions. That this gradually decreasing protection has been the active factor in retarding wool production in this country seems to me evident, for when we had the full protection—from 1867 to 1883—our wool production increased at the rate of 1,000,000 pounds per year. But from 1897 to 1911, under the decreasing protection of the present law, our average increase has been but 4,500,000 pounds per year.

PROTECTION RECEIVED BY THE FARMER.

Now, as to the protection which we actually receive. A scoured pound of class 1 wool is to-day imported at from 15 cents to 22 cents in duty, being the lowest for the quarter-bred wool and advancing with the fineness of the fiber. Class 2 wools are obtained at from 14 cents to 16 cents in duty. Of course, where a product like wool rests in the hands of a great number of producers, there is great competition to sell, so that regardless of the rate in the law you do not and can not have the price of your product advanced to the full extent of that rate. This would be as true under the proposed Democratic bill as it is true under the Payne-Aldrich law. It will always be true as long as the grower sells his wool for less than it is actually worth. In order to determine your actual protection I have taken fleeces of wool, divided them down the back, sent one half to Boston and the other half to London, and obtained the scoured price at each point. On a fleece of Oregon fine wool the London price was quoted as 42½ cents, the Boston price at 50 cents, a difference in favor of Boston of 16½ cents per scoured pound. This difference, however, may not all be due to the tariff, for the Boston price of this wool included the entire cost of getting the wool to Boston, and before a foreign wool could get to Boston in competition with ours similar charges would have to be added to it. The probable cost of buying and laying this class of wool down in Boston from London is 2½ cents per scoured pound. Therefore this must be added to the London price in order to have the Boston price of the same wool, which would make it 45 cents. Therefore your protection on a scoured pound of this wool as a result of the tariff is the difference between 45 cents and 59 cents, or 14 cents. However, the actual tariff that is paid to import a pound of this class of wool is 18½ cents, yet your price was only advanced 14 cents. You failed to obtain 22 per cent of the actual protection in the law.

I treated a fleece of extra fine Ohio wool in the same manner, sending half to London and half to Boston. The London price scoured was 50½ cents, the Boston price 70 cents. Adding 3 cents to the London price as the importing cost, this wool would then be worth 53½ cents in Boston in the absence of a tariff. Therefore your protection represents the difference between 53½ cents and 70 cents, or 16½ cents per scoured pound. The actual tariff paid to import a pound of this class of wool is 24½ cents. Again, we find that our wool failed to equal the foreign cost, plus the tariff, by 5 cents per scoured pound, which is equal to 23 per cent of the actual duty paid. A fleece of low-quarter blood, Idaho wool, sold in London at 30 cents, in Boston at 44½ cents. Adding 2 cents to the London prices, we find the tariff benefits us 12½ cents per scoured pound, or 64 cents per grease pound. An examination of prices here and abroad seems to show that on our wool ranging from three-eighths blood down to braid our protection has more nearly equaled the actual duty paid to import a similar wool than it has in the case of wools classed higher than three-eighths blood. This is undoubtedly due to the fact that our supply of fine medium and half-blood wools is about equal to the domestic demand. Our western braid and low quarter-blood wool sold this year on the basis of 42 to 45 cents, clean, at Boston. At that time similar wools were selling in London on a clean basis of 28 cents to 32 cents. This indicates that on this class of wool the tariff was benefiting us to the extent of 12 cents to 14 cents per scoured pound, which, on the grease basis, meant 5 to 7 cents per pound.

IMPORTANCE OF THE SHEEP INDUSTRY.

Germany once had 30,000,000 sheep, and at that time placed wool upon the free list. Consequently, woolgrowing has declined until to-day the German flocks number scarcely 7,000,000 sheep. The German Government now recognizes its error in destroying wool production, for it has resulted in giving Germany the highest-priced meat of any nation in the world, and, more important still, it has placed the German people in absolute dependence upon the colonies of Great Britain for their supply of wool. However, Germany is now trying to make amends for its shortsightedness and at an enormous expense, is endeavoring to establish woolgrowing on her own soil in German East Africa.

Our sheep industry is one of the most important pursuits of the Nation, measured from any angle. Our sheep at the last census were worth $231,000,000. The land and equipment needed to maintain these flocks represent an investment of $350,000,000. Thus our sheep industry represents a total investment of $581,000,000, or more than is invested in all forms of wool manufacturing. The last census shows sheep on 610,000 farms. These farms are situated in every county in the land. Our woolgrowers annually pay to labor to care for their flocks $47,580,000, and this labor is decidedly better paid than any similar labor anywhere on earth. They pay to the farmers of this country for forage each year $23,400,000, and this item is yearly increasing. The taxes on our sheep alone are $2,600,000 per annum. The freight on our wool is annually $4,000,000. The actual cost of maintaining the 52,000,000 sheep in this country amounts to $137,000,000 per year. Surely such an enormous sum as this can not be disturbed without disturbing the general welfare of the Nation. Our immense supply of sheep has furnished the markets with 800,000,000 pounds of mutton per year, a supply so great that mutton is the cheapest of all American meats, and in the absence of this enormous supply other meat would advance to prohibitive prices. The sheep have settled and developed nearly all of the Western States and are to-day using lands which are practically worthless for other purposes. They have been our great soil fertilizers, and have contributed immensely to our annual supply of grain crops. In addition, they are to-day the most effective fire fighters in the Nation and preserve range and forest from this destructive force. These facts place our sheep industry among the most important industries in the land and entities it to protection if any industry is to receive it.

WHAT THE FARMER ASKS.

All the protection our woolgrowers ask is the difference in cost of production between this country and Australia, the nation that makes the world's wool prices; but he asks that this difference be given in such form that he can get it. In other words, he asks a competitive tariff. The Tariff Board has determined that this difference in cost is 9½ cents per pound of grease wool, and no one has as yet successfully disputed the findings of that board. This difference is largely made up of labor cost, a cost which all political parties presume to protect. The labor cost here per sheep is 82 cents, against 7 cents in Australia. The average forage cost here is 45 cents, against 8 cents in Australia. The average western interest charge is 9 per cent, against 5 per cent in Australia. However, after all the differences in costs have been taken into consideration, except cost of transportation and interest charges, there remains a charge of 9½ cents more against a pound of our wool than against Australian wool. If the purpose, therefore, be to place our woolgrower on the same footing as the Australian, this 9½ cents must represent our tariff, but in order for our grower to obtain it it must be levied on the scoured basis.

Would it pay the Nation to reduce its supply of sheep? Not, we think, if it considers the future. A tax upon wool is the most equitable of all taxes. If it benefits the producer, that benefit is spread broadcast into every county in the land. If it increases the cost of clothing, that increase is borne by all the people, but more particularly by the rich. A reduction in our supply of wool means an advance in the price of the world's wool; not, however, until our grower has hopelessly given up the business. Do not forget that the world's greatest crop of clothing wool was back in 1895. More important to the Nation at large than the increase in the price of wool will be the advance in the price of all meat foods. Any important reduction in our wool tariff means a reduction of 50 per cent in our supply of sheep. This means an annual loss of 400,000,000 pounds of dressed lamb and mutton, and this loss must be reflected by a decided advance in the price of other meats. If our sheep stock ever becomes depleted, it can not be rebuilt in a generation, for there will be no sheep from which additional stock may be obtained. Do not lose sight of this fact.

CONSUMER NOT AFFECTED BY TARIFF ON WOOL.

Is the tariff on wool a burden to the multitude of the people? This must be answered in the negative, for it is probable that a tariff upon wool is the least burdensome of all tariffs. For illustration, take the khaki-colored suit worn by the officers of our Army. These suits are of medium weight and made, under Government supervision, of the best half-blood wool. No cotton, shoddy, or wool waste enter them. Three and one-fourth pounds of scoured wool is all that is required to make the 3¾ yards of cloth needed for the average man's suit. The grower receives for this wool about 53 cents per pound, or for all the wool in the suit about $1.72. The tariff upon wool has advanced the cost of wool in this suit about 48 cents. However, if you purchase the suit from your tailor, it costs from $30 to $40. The storekeeper retails it from $25 to $30, yet the woolgrower, with all his tariff, gets but $1.72 out of it. Would your storekeeper or tailor have sold this suit to you for 48 cents less if the wool had been on the free list? Such has not been his custom in the past. The man who made this cloth was not responsible for the high price at which the suit sold. The manufacturer sells such cloth at around $1.30 per yard. Three and one-half yards to the suit brings him $4.55 for all the cloth in the suit. Out of this he paid $1.72 to the woolgrower for the wool and about 35 cents more to the railroad and commission firms that handling the wool. This left him $2.48 on the suit, out of which must come the entire cost of converting the wool into finished cloth. Thus we find that the woolgrower and manufacturer combined get $4.55 out of a suit that sells at $25 to $40. The balance went to the tailor and middlemen. Let the American people, then, clearly understand that any important reduction in the duties upon wool, while injuring the woolgrower, will bring no reduction in the price of clothing.

INSTABILITY OF WOOLGROWING.

Those who oppose the tariff on wool find satisfaction in the assertion that wool has been protected for many years and we still fail to produce an adequate supply for our domestic needs. The fact is we are producing over 70 per cent of the clothing wool consumed in this country, and not a wool-consuming nation in the world produces 40 per cent as much as we produce, and in some kinds of wool we are producing more than can be consumed in this country. The reasons we do not produce more are because wool has been continually attacked by one of our great political parties, which attacks have made the success of the industry so uncertain that thousands of men have given up woolgrowing permanently. No fair man can examine our wool tariffs from 1816 to the present time without understanding that under them our woolgrower could have but a part of the protection the law presumed to give him, the only exception to this being the tariff from 1867 to 1883, and under it woolgrowing prospered immensely. Another cause is the fact that the wool manufacturer in late years has absorbed about 50 per cent of the tariff intended for the woolgrower.

SPECIFIC RATHER THAN AD VALOREM DUTIES.

If, then, it be granted that the woolgrower is entitled to protection, in what form should he have it? Our experience with the tariff upon the grease pound has not been satisfactory. Such a tariff makes the compensatory duty impossible of ascertainment and discriminates against the importer of heavy wool. It leads the country to believe that the woolgrower's protection is about double what it actually is, and therefore makes him the continual subject of political forces which seriously disturb his business. Therefore, such a tariff is unscientific.

It has been suggested that the tariff should be ad valorem. Such a tariff leads to undervaluation of imports, deprives the grower of his protection and the Government of its revenue, and tends to drive the honest importer out of business. Such a tariff gives the greatest protection when the least is needed, and the least protection when most is needed. It encourages the importation of inferior wools, thereby reducing the standard of American garments. Ad valorem has been abandoned by most other progressive countries and should not be taken up by this one. It is neither a protective tariff nor a revenue producer. Under it all is uncertainty.

We have left, then, but one form of duty, and that is a specific duty on the scoured content of imported wool. Such a duty is fair to all woolgrowers. It gives one manufacturer his wool at the same duty as another. It encourages the importation of the best grade of wool. It determines accurately what the compensatory duty should be on imported cloth, and it is this compensatory duty that needs revising most at this time. It assures the Government of a stable revenue, and the woolgrower and wool manufacturer of honest and fair protection. Such a duty imposes no administrative difficulties, reduces the liability of fraud, and places the revenues of the Government upon the same sound business basis upon which rests the business of the wool manufacturer. It is therefore the only sound and equitable basis for wool duties and should have been enacted into law in 1909.

FREE WOOL—WHY NOT FREE CLOTH AND FREE CLOTHES?

To the manufacturer who seeks free wool let us say that there should be no free wool in this country unless it carries with it free cloth. One industry is just as important as the other. If the American woolgrower, representing 610,000 individuals, must go abroad to find a market for his wool, he will demand the privilege of going abroad to buy his clothing. The great prosperity of wool manufacturing in this country has been due not to the protection that the law gave to manufacturers of wool, for the Wilson bill gave almost as much as the present law, but to the additional protection that these manufacturers have been able to take from the woolgrower, largely in the form of a compensatory duty. However, let us hope that the manufacturing industry is fair enough and broad enough to see the justice and necessity of a tariff upon wool, even after that tariff has been placed upon a basis that does not afford them concealed protection. The woolgrower feels that the manufacturer is entitled to protection, and hopes that it will be given to him. The report of the Tariff Board shows the degree of protection needed, and that should be the guide of the grower so far as the manufacturer is concerned.

President Elect Wilson has said that no legitimate industry in the United States need fear the forthcoming tariff revision. Surely, in the judgment of the President, the sheep industry must fall within this class. And if this promise is to be carried out then we shall hope to see the Democratic majority pass at the special session of Congress a bill similar to the Payne bill, carrying a duty of 11 cents per pound on scoured content of imported wool. The present duty on scoured wool is 33 cents, and therefore if a duty of 18 cents was granted on scoured wool it would be a reduction of 45 per cent in the wool duty. The consumer is interested in this particular duty of 33 cents on scoured wool, because this is what he pays in the form of a compensatory duty on the cloth. This compensatory duty under the present law is 33 cents on a pound of scoured wool. Therefore, if the wool duty was reduced from 33 cents per pound to 18 cents per pound, the compensatory duty could likewise be reduced to 18 cents per pound of scoured wool. The woolgrower should not be asked to stand any greater reduction than this, and if it is the purpose of the new administration not to disturb business the only way this purpose can be carried out is by granting the woolgrower a tariff on the scoured content of imported wool of approximately 18 cents per pound. The new Congress should remember that the woolgrower has passed on to labor its full share of the tariff and that among the growers there exists no trusts or combinations for the control of prices. The growing of wool rests in the hands of an enormous number of farmers, with keen competition existing between them individually, and also with foreign countries. This is an ideal condition from the viewpoint of the party now charged with revising the tariff.

The Tariff.

EXTENSION OF REMARKS
OF

HON. WILLIAM A. CULLOP,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. CULLOP. Mr. Speaker, the passage of this tariff measure marks the dawning of a new era in the tariff legislation of this country. It is drawn on the basis of revenue and not, as tariff bills have been heretofore drawn by the Republicans, as protective measures. That party has tolerated the beneficiaries to dictate their tariff legislation. This bill has been drawn in the interests of that larger class, the ultimate consumers of this country. This clearly defines the difference between Republican and Democratic ideas of tariff bills. The Democrats recognize in their legislation the welfare of the people who pay the tariff as well as those who receive it—the Republicans, the beneficiaries alone. During the course of this debate the Republicans on this floor have bitterly opposed the measure and have attacked it from every conceivable standpoint, and have prophesied all imaginable kinds of disaster as the result of its enactment. But we can not disobey the plain mandate of the people and be guided by the mandate of men whose views have been repudiated by the public, as theirs have been. It is amusing to hear the calamity predictions, the awful disasters, and the universal stagnation we are told will follow the adoption of this measure.

Now, I have come to the conclusion, forced upon me by their insatiable desire to have the Democratic Party defeated, that

if they believed one half they say about it they would do all in their power to hasten its passage, in order to secure early control of the Government. Instead of contesting every schedule, as they have been doing, and delaying its early passage they would, on the contrary, facilitate it. The trouble with them, in my judgment, is they fear it will prove popular legislation and give their pet policy of protection its Waterloo. They fear and know that the adoption of this measure will furnish convincing proof to the people of this country that prosperity is not made by taxing the people, by multiplying their burdens, but that it can be secured the better by relieving them of taxation and permitting them to enjoy the profits of their labors and the rewards of their frugality.

We are taught by Holy Writ that "a house divided against itself can not stand." This doctrine of such authority may be applied with much force against the Republican Party in reference to this measure. The gentleman from Pennsylvania [Mr. MOORE] and the gentleman from Wyoming [Mr. MONDELL] tell us this is a free-trade measure, and denounce all who support it as free traders, that it will close factories, destroy business, and injure labor; but another gentleman from Pennsylvania [Mr. HULING], a Republican, has just told the House that it is a revision of the tariff upward, and for that reason he can not support it; and the gentleman from Washington [Mr. BRYAN], a Progressive, tells the House it is not a free-trade measure, that nobody in this House is for free trade, as everyone knows, and that he will vote for the measure, as it is an improvement over existing law. "Verily, verily, a house divided against itself can not stand." The Republican Party passed the Payne law, and then, because of its arbitrary exercise of power in steam rolling it over the tariff reformers in that party, division was made and the breach has been growing wider from that day to this, until now that once strong and militant party is hopelessly divided into factions warring against each other, without hope of being reunited.

The gentleman from Michigan [Mr. FORDNEY] and other radical protectionists on this floor have declared the passage of this measure will close up the manufacturing business in this country and give our markets to foreign producers and have been, as they say, opposing every paragraph in it for that reason. Mr. Chairman, no one believes its passage will be attended by any such radical and disastrous consequences, and we do not think they believe it. If they did so believe they would not delay its enactment as they have been doing, but, on the contrary, would hasten its passage, because, if attended by any such disastrous results as they prophesy, it would be the means of turning the Democratic Party out of power. This, above all things, they desire, and they would make herculean efforts to bring about such a result. Nothing would please them more. But, Mr. Chairman, the gentlemen who have been predicting such results for this measure, inveighing so strongly and earnestly against it, using all the parliamentary tactics known to parliamentary bodies, fear its passage will be the dawn of a better, a more prosperous, era in this country, will expose the fallacy of the protective theory, and destroy the protective doctrine, which it will do as soon as in full and complete operation. It will sound the death knell of special privilege and show to the world that prosperity can flourish with equal opportunities to all and without special privileges to any. For this reason they are contesting every proposition and delaying its progress to final passage. This is their purpose, and this inspires their efforts. This measure places the Holy Bible and religious books on the free list, but in their desperate efforts to save protection our Republican friends have opposed this provision and attempted to have them restored to the dutiable list. So much wedded are they to the protective principle that they are unwilling to have religion free. We are not surprised, for doubtless some of the great trust magnates and tariff barons care to hear but little about future punishment as taught in these great works and prefer that the people should hear less about them. They shudder when they think of the judgment day, when they shall have to answer for the wrongs perpetrated in the name of protection on the starved laborers, hungry children, and poorly clad women who have suffered at their hands and because of their special privilege.

Mr. Speaker, this measure contains the income-tax law, one of the most beneficent enactments ever spread on the statute books of this country. Heretofore this country has been practically supported by taxing consumption and letting the wealth escape taxation. The poor have paid more tax than the rich, but here is a change in our taxation system. A new policy is adopted—one that will require the rich to bear a fair proportion of governmental burdens. It is the dawn of a new era in our Government, and one that will shift the burden of supporting the Government from the backs of the poor, in part, to those of the rich. It has been opposed by those who desire the retention of the protective system. They well know what it means. It is the beginning of the end of protection in this country. It is opposed also by others unwilling to pay their fair share of the burdens of government. They want its protection to property, life, and limb, but do not want to pay—for this requires them to do so. Every "tax dodger" in the country opposes it also, on account of its drastic provisions for listing incomes and collecting the tax on them. I do not say every person opposing it is a "tax dodger," but I do say every "tax dodger" is opposed to it, and well he should be. But every patriot will hail its enactment with delight and indorse it as one of the fairest and best measures ever enacted. It does justice to all and injury to none. It embraces a cardinal policy in the tenets of our Democratic faith and keeps the pledges which we made to the people.

Mr. Speaker, the radical protectionists, during this debate, have declared that, if this measure is enacted into law, the great manufacturers will retaliate by causing a panic. Let me say to them that this is a dangerous threat and forebodes injury to them. Presiding over the destinies of this great country to-day is Woodrow Wilson, a fearless Executive, a wise man, one who believes in fairness and justice. Special privilege has no manacles on his limbs and predatory wealth has no claim on his administration. He loves his fellow man and fears his God. He will do his plain duty to all his countrymen and strive to have the door of opportunity equally open to all. If these great aggregations of wealth, in a spirit of retaliation, attempt to punish, harass, or unnecessarily burden the people, he can and will set in motion the law now in force through the Department of Commerce for the purpose of investigating all such conduct and make public to the world whether cause existed for such action, and hold them up to the derision and scorn of their countrymen, and they will receive the punishment such conduct merits.

The day is past in this great Republic—and it is high time it was—when a few men engaged in any calling can dictate the policies of 95,000,000 people, demand legislation granting them special privileges by which they can exploit the public, and mercilessly plunder the helpless consumer. Our legislation of the last two years has not been in vain, and will constitute an impenetrable barrier between the innocent public and these buccaneers of public patronage. Let them beware of any such an attempt lest an avenging Nemesis visits them with the punishment they deserve.

The Tariff.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. BRYAN. Mr. Speaker, I desire to print in the RECORD as an extension of my tariff utterances the following excerpt from the Post-Intelligencer, a leading standpat newspaper, published in my home city, Seattle, Wash.:

BRYAN RIDICULED.

Representative BRYAN, Progressive, of Seattle, also talked a good deal, but most of his remarks were so extreme as merely to keep the House, which is always looking for fun in these long, tiresome tariff sessions, in a hilarious mood.

I am intending to communicate to the voters of my district practically all that I said during my brief participation in the tariff debates, and it occurs to me that this newspaper article, although entirely false, may nevertheless be used for a good purpose. In order to use it for that purpose the law requires me to get it into the RECORD. I intend to print it on the outside of the Government envelope which will convey my remarks on the tariff to my constituents. When so published I believe the article will help stimulate the readers to wade through my utterances, which the newspaper says are so voluminous. The reader can have a threefold purpose to read:

(1) Are they funny? If so, I will enjoy the fun.

(2) If BRYAN was justly ridiculed, we want to know it.

(3) If not, why did the Post-Intelligencer attempt to mislead the public about him; why did the newspaper dislike his remarks?

I shall propound this query to everyone who reads the outside of the envelope containing my speeches: "Was BRYAN ridiculed or is 'Seattlepostintelligencer' a short, ugly word?"

Trade Agreements (Cartels) in Germany.

EXTENSION OF REMARKS
OF
HON. HERMAN A. METZ,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. METZ. Mr. Speaker, cartels are associations formed voluntarily by individuals or corporations for the purpose of preventing competition and controlling trade conditions through mutual action. They exist in very many different forms, growing out of the degree in which the various branches of industry adapt themselves to their formation.

These organizations are known by various names, such as associations, cartels, syndicates, combinations, rings, and so forth. The nomenclature is often chosen more or less arbitrarily.

Three different forms of trade agreements may be distinguished, based on the strength of the organizations:

1. Those controlling conditions.
2. Those controlling prices.
3. Those controlling sales. (Syndicates.)

THE CARTEL CONTROLLING CONDITIONS.

1. The cartel controlling conditions is the loosest form, and is found principally in the textile industry. It is limited to the enforcement of certain regulations as to terms of payment, sales, or samples. It has been developed almost entirely in Germany and Austria (Comp. Tschierschky, "Cartel and Trust," Leipsig, 1911), and is found principally in those industries where it is impossible to fix prices on account of the difference in the fabrics of the various manufacturers. Its main purpose is to eliminate certain drawbacks in credits. Such trade agreements as this have been founded in the German and Austrian silk industries, the umbrella-cloth industry, the worsted industry, and in several branches of the cotton and woolen goods industry.

THE CARTEL CONTROLLING PRICES.

2. The cartel controlling prices is the most ordinary form. Its purpose is to establish uniform price lists and terms of sale and credit. Such trade agreements as this differ widely in detail, according to the degree of independence enjoyed by the individual components of the combination.

THE CARTEL CONTROLLING SALES.

3. The cartel controlling sales is the most highly developed form. It is seen in the syndicates, or those associations which have established sales agencies. The other two forms of cartel enter merely into certain agreements and maintain their individuality in other respects, but the syndicates or trusts become new bodies. They are established mostly as sales or distributing agencies and often as limited stock companies. (Juristische Personen.)

SYNDICATES OR TRUSTS.

The following description relates only to the syndicates or trusts, as their influence upon economic conditions is more widely felt than that of either of the other forms, and, furthermore, they are the only ones whose business methods can be judged to any extent by the public.

During the period from 1902 to 1905 an investigation of the trusts was instituted by the Imperial Government, and the results of it form the basis of the Government's present attitude toward such combinations. This investigation could not go so far as to include all existing forms of trade agreements, and especially the "loose" conventions of the textile industry and of commerce. The Government's report mentions 366 industrial trade agreements, 200 of which are denominated as syndicates with sales departments. In addition to these, there are about 115 brick cartels. The following list shows the proportion of sales agencies in the combinations named:

Coal industry, 9 out of 13.
Iron industry, 20 out of 53.
Metal industry, 7 out of 16.
Chemical industry, 17 out of 46.
Wood industry, 2 out of 5.
Paper industry, 2 out of 6.
Glass industry, 4 out of 10.
Cement industry, 5 out of 7.
Lime and gypsum, 10 out of 19.
Porcelain and pottery, 2 out of 4.
Foodstuffs, 4 out of 17.
Others (asbestus, linseed oil, etc.), 3 out of 9.
Textiles, leather, and rubber, none out of 35.

The cartels of the highest importance to the economic conditions of Germany are those of the "great industries." The largest of these are the Rhenish-Westphalian Coal Syndicate, the German Steel Corporation, the Potash Syndicate.

THE RHENISH-WESTPHALIAN COAL SYNDICATE.

In 1878 several "Foerderkonventionen" (production cartels) were formed among the Rhenish-Westphalian owners and, since 1887, price agreements established. The following five sales agencies were organized as stock corporations: The Westphalian Coke Syndicate and the Dortmund, Bochum, Essen, and Steele-Muelheim Coal Sales Cos. At the beginning of 1893 the last four united under the name of the Rhenish-Westphalian Coal Syndicate (Inc.), with headquarters at first at Bochum and later at Essen. In 1903 it absorbed the Westphalian Coke Syndicate, of Bochum, and the Briquette Sales Co., of Dortmund.

The syndicate was constituted thus:

	1893	1900	1905	1910
Number of members	68	88	87	70
Participation factor (in million tons):				
Coal	35.5	54.5	75.7	78
Coke			11.3	14.5
Briquet			2.5	3.7

The coal production of the syndicate amounts to over 50 per cent of the entire German output and 95 per cent of the amount produced in the Ruhr district. The actual production and consumption vary in comparison with the "participation" according to market conditions. In April, 1910, the restriction of the output as compared with the participation amounted to 15 per cent for coal, 27½ per cent for coke, and 17½ per cent for briquets. The factor of participation is determined by a commission composed of eight members, who are elected annually at the first meeting of mine owners.

THE GOVERNING POWER.

The meeting of mine owners, which is called by the directorate, is the governing "power" of this syndicate. Each mine has one vote for every 1,000-ton participation factor. It is the duty of the mine owners, according to paragraph 1 of the agreement, to sell their entire output of coal, coke, and briquets to the syndicate, which assumes the sale in proportion to the participation factor. But the following amounts are exempt from sale to the syndicate:

(a) Consumption at the mines themselves and at the smelting establishments that controlled the mines at the time of closing the agreement.
(b) The coal, coke, and briquets necessary to run the plants operated by mine owners, such as gas works, coke works, brickyards, etc.
(c) The amount of coal taken out charged against the land value.
(d) Coal, coke, and briquets consumed in the households of officials and workmen employed at the mines and given away for charitable purposes.
(e) Gas coke produced in the gas works of mine owners.

Aside from this body is the advisory council. Every mine owner or combination of owners has the right to appoint to this council one member and one alternate for every 1,000,000-ton participation. It is the highest court, as it were, in the decision of participation factors, and, above all, it must determine the "limit prices"—that is, the general standard of prices to which the directorate of the syndicate must adhere as rigidly as possible.

PRICES AND PROFITS.

With these "limits" as a basis, they figure the "accounting prices" of each quality and kind for each mine. This price represents what the syndicate pays each mine for its output. It is usually fixed twice a year—for the summer and the winter. The difference between this price and the selling price obtained in territory where there is no competition goes to the owner delivering the coal. The profits made in competitive territory, however, remain with the syndicate. The selling prices of the syndicate for noncompetitive territory remain the same throughout the year, and contracts with regular customers are also made for one year, dating from April 1 to March 31.

The prices for competitive territory are fixed from time to time according to market conditions. The "accounting prices" are generally so set that they represent the average selling price. The syndicate has never made a net profit, and it covers its running expenses by levying an assessment.

THE OUTPUT AND THE DEMAND.

The relation between the output and the demand is established as follows: The convention of mine owners, after hearing the report of the directorate on the state of the market, determines what percentage of the output must be fixed as the full capacity. This curtailment is apportioned equally to each member. In like manner this process is reversed when conditions indicate that the output should exceed the total participation.

Each mine owner is responsible to the coal syndicate for the quality and prompt delivery of the coal sold to it. Various penalties are provided for violation of the rules.

For the disposal of the output the syndicate is divided into five departments, each covering a separate territory. All orders are received at these stations, assorted according to the grade, price, and time of delivery, and sent to one of the four forwarding agents who control the shipment of the various grades of coal. These agents in turn distribute the orders to the several mines for shipment.

COAL DEALERS' ASSOCIATIONS.

In 1890, when a number of abuses occurred in the coal trade, the increases in price by the syndicate were interfered with by the dealers. Therefore an endeavor was made by the syndicate to organize the dealers. As a result, coal dealers' associations were formed in Germany and the Netherlands, for the most part in connection with existing associations of wholesale dealers. These associations are monopolies to a greater or less extent, according to the conditions of competition, and their standing with the syndicate is dependent upon whether or not they are required to purchase coal exclusively from it. The most important of them is the Rhenish Coal Trade & Shipping Co. (Ltd.), in Muelheim am Ruhr. It was founded in 1903 by the syndicate and the four large shipping firms of Mathias Stinnes, Haniel, Hugo Stinnes, and Kannengiesser for the purpose of shipping and dealing in coal on the Rhine. Soon afterwards 40 wholesale dealers joined this combination. The various coal dealers' associations do not sell directly to all retail dealers. The latter are organized in many different ways, a number of them in competitive territory having been founded independently of the syndicate.

THE MINES AND THE WORKS.

Since the end of the nineties the coal syndicate has been differentiating more and more between straight collieries and coal mines with smelting and steel works allied with them. The fact that the latter were independent of the syndicate for their coal supplies led other manufacturers to form similar alliances. They became no longer interested in the syndicate, and it was only with difficulty that the agreement with them was renewed in 1903. This was done through making great concessions to them in regard to participation factors, exempting their own coal requirements from sale to the syndicate, and binding them only to sell it their surplus. However, in 1909 an agreement was made limiting the amount of coal set aside for smelting or refining purposes.

The limit was placed so high (on the basis of the 1907 sales) that this arrangement will hardly be productive of great practical results. The combinations between the mines and the steel and iron works have by no means ceased to exist, and it is very doubtful if the coal syndicate, which terminates in 1915, will be renewed in its present form. In 1910 a commission met to consider a renewal of the agreement.

THE GERMAN STEEL-WORKS SYNDICATE.

Since the end of the eighties syndicates representing the pig-iron, rail, structural-steel, pipe, and wire industries have been developed from a number of loose trade agreements in the iron industry, some of which dated back as far as 1870. In 1904 the billets and the structural-steel syndicates, the German Tie Community, and the German Community united to form the German Steel-Works Syndicate. The general scheme of organization is about the same as that of the coal syndicate. It is incorporated, and has its headquarters at Dusseldorf. It is a sort of general sales company for the various products which are divided into these two groups:

(a) Billets (raw steel; blooms, bar iron), railway-construction material (sleepers, rails, etc.), structural steel (girders, angles, channels, etc.). For each of these three grades there is a special sales department, with a domestic and an export division.

(b) This group includes all other products of the rolling mill—bar iron, rolled wire, sheet iron, pipe, and so forth.

While the products under group (a) are bought by the syndicate from its members and sold in its own name, those under group (b) are limited to a fixed quota of output.

THE POTASH SYNDICATE.

This syndicate was formed in 1876 by factories using potash as a raw material for the manufacture of other products. In 1879 a syndicate was formed of the four existing potash mines. It remained in operation, barring a brief interruption in 1883, until 1909. The new potash mines all joined the syndicate, membership increasing between 1879 and 1909 from 4 to 52. In 1900 negotiations for renewing the agreement were interrupted by the Solistedt, Aschersleben, and Einigkeit mines, which were owned by the American southern trust (Virginia and Carolina).

For a short time all mines engaged in a vigorous competition which lasted until the contending forces united against the three outsiders. Several German States were mine owners, and interested, therefore, in the restoration of the potash industry. In 1910 the potash law went into effect. It provided for a forced apportionment of the output, but left the creation of a sales organization in the hands of the industry. A new syndicate, founded on this law, was formed comprising all the mines. The more essential provisions of the law are as follows:

THE DISTRIBUTION TO MINES.

The total output of potash salts for each calendar year, with the distribution to the several mines, is fixed by a distributing commission composed of seven members. The chairman and two members of this board are chosen by the imperial chancellor, and the other four members by the mine owners. During the first two years after the law went into effect the apportionment for the mines of the coal output remained the same as before. The participation factors were then recalculated, based on the composition of the potash deposits and the efficiency of the plants. Potash mines, put into operation after the enactment of the law, are given permanent participation factors only at the end of two years and not until the conditions of production can be definitely determined. These factors, however, are cut 50 per cent in the third year, 20 per cent in the fourth year, and 10 per cent in the fifth year. Government mines are exempt from these conditions. The transfer and exchange of such factors between members is permissible. Maximum prices for all the potash products are fixed every five years by the Bundesrath, after hearing the representatives of the potash mine owners and the consumers. Higher prices are subject to confirmation by the Reichstag.

THE INTEREST OF THE WORKMEN.

Several other conditions imposed by the law are important, namely, those drawn in the interest of the workmen. Before this law became operative a number of mine owners had announced their intention to cut wages. Paragraph 13 of the law provides that if the pay of the workmen employed at the mines is reduced below the average wage in effect during the years 1907–1909, there must be a proportionate cut, or a minimum of 10 per cent, in the participation figures of the mine. The provision, according to paragraph 16, does not affect those owners who have made definite wage and labor agreements with the workmen, if these agreements were approved by a majority of the workmen in a secret ballot. In such cases the right of workmen to form unions must not be interfered with or prevented.

TRUSTS.

Although a tendency exists in Germany to bring about the fusion of a number of enterprises in certain industries, yet the merging of a whole industry is very rare. The prevailing type of monopoly is, almost without exception, the trade agreement (cartel).

THE GOVERNMENT AND THE TRADE AGREEMENT.

The founding of large syndicates was the cause of considerable opposition. The fear that danger existed in their further development was manifested in a demand for regulating them. There are, however, no special laws in Germany governing such organizations, and therefore they are subject only to the general civic and trade laws.

There have been repeated but unsuccessful endeavors in the German Reichstag to create a syndicate commission which should supervise all cartels. The Government, on its own initiative, investigated the matter and found that many complaints of consumers in regard to price regulation by the syndicates had been exaggerated or were unfounded. It further decided that the business methods of the various syndicates did not warrant any interference on its part.

THE GENERAL VIEW.

The people, too, are gradually adopting the opinion that these trade agreements are founded on a sound basis, and that an adjustment of the production to the demand is necessary. This point of view had been impressed frequently upon the legislative bodies by representatives of the Government when the question arose.

The fear that the syndicates of the German coal and iron industries might develop along lines similar to those of the American trusts does not seem well founded, as the Government, through its own railways, could counteract easily any pernicious expansion.

Generally speaking, the German Government has been encouraging the formation of trade agreements. For instance, the potash law was the means of the creation of a syndicate. In like manner, the liquor duty is responsible for the formation of a distillers' syndicate. The Prussian Government, furthermore, as a coal-mine owner, stands in close relationship with the coal syndicate, since its total output is sold to the syndicate.

The Tariff.

EXTENSION OF REMARKS
OF
HON. JOHN M. MORIN,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 8, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. MORIN. Mr. Speaker, having been elected to this, the Sixty-third Congress, as a Representative at Large from the State of Pennsylvania, and representing, as I do, in the neighborhood of 8,000,000 people in that great Commonwealth, who by a majority of 325,112 voted against the Democratic theory of tariff revision, I feel I would be derelict in my duty to my constituents if I did not at this time go on record in accordance with the wishes expressed by the voters of my State at the last presidential election. However, fully realizing that the remarks I am about to make with the limited time at my disposal will probably have little effect upon the majority side of the House, yet before this great blow is dealt the country through the changes provided for in the tariff bill now under consideration I must raise my voice in protest.

I have received, and am still receiving, scores of communications from my State, and also from citizens throughout the United States, urging me to oppose the passage of the tariff bill in its present form.

It is no light matter to the business interests of the great State of Pennsylvania to have the protection their business and their employees have had suddenly taken away and the doors thrown open to competition with the cheap foreign labor of the world.

Of the millions and millions of dollars invested in business enterprises in Pennsylvania, in the Pittsburgh district in which I reside there is alone invested in mills, mines, factories, and other industrial plants the enormous sum of $642,527,046. This proposed change in the tariff schedules will flood the United States with the products of cheap foreign labor and so handicap our industries and their employees that I am firmly convinced it will cause a life-and-death struggle for existence.

In order that you may fully realize the effect that the proposed tariff changes will have upon the manufacturing and other industries of Pennsylvania, and especially on those in the Pittsburgh district, which is known as the workshop of the world, I will furnish a few figures to demonstrate the immensity of this hive of industry you are about to bring to the verge of ruin:

Number of plants, 2,369; capital invested, $642,527,046; salaried employees, 20,692; wage earners, 139,285; total paid out in salaries, $24,934,082; total paid out in wages, $90,115,842; a grand total paid out annually in salaries and wages of $115,049,924.

The value of the products manufactured in 1909 was $578,815,493, according to the United States census report.

Since these figures were compiled the country has been enjoying unprecedented prosperity under the Republican system of a protective tariff, and the figures for 1912 will prove to be even greater than for 1909.

While these figures are staggering to those not familiar with Pittsburgh as a manufacturing center, it must be remembered that the figures here presented relate only to manufactories. Pay rolls, value of product, and so forth, relating to wholesalers, jobbers, public-service corporations, railroads, and all other business activities other than manufacturers are not included.

Pittsburgh's tonnage, which has quadrupled in the past 13 years and which has doubled in the past 6 years, is more than double the combined tonnage of the greatest maritime ports of the world's four great maritime nations, these ports being New York, London, Hamburg, and Marseille, which have a combined tonnage of 83,377,338 against Pittsburgh's 167,733,268 tons. Pittsburgh's tonnage for 1910, compared with the tonnage of the world's great ports for the same year, the figures being the latest obtainable, is as follows:

Port of Liverpool, 14,341,088; port of Marseille, 15,172,000; port of London, 19,665,134; port of Hamburg, 22,955,533; port of New York, 25,584,721. The Suez Canal is 23,633,283. I might also state here that the total tonnage of the Great Lakes—more than half of which is contributed by Pittsburgh—is 159,727,372.

The industrial and business supremacy of the metropolitan district of Pittsburgh is better understood when it is stated that this district covers a radius of approximately 10 miles, within which there are 63 distinct communities having their own municipal governments outside the city of Pittsburgh. Many other self-governed communities which are important in population and manufacturing fringe this 10-mile radius and are part and parcel of the Pittsburgh metropolitan district, but are outside this 10-mile radius.

As a national distributing center Pittsburgh is second to none, and to thousands outside of Pittsburgh the fact is not appreciated that from Pittsburgh one can reach more important cities and consumers in a one-night ride than can be reached from any other center in the United States.

More than 42,000,000 people—nearly one-half the Nation—live within a 450-mile radius of Pittsburgh. No other community in the United States presents such distributing facilities. When Pittsburghers ship to New York and Chicago, they cover no more ground than New York shippers do in shipping to Chicago, and vice versa.

Pittsburgh, according to the 1910 census, supplies 42,597,198 people residing in a 450-mile radius; New York in the same radius can only reach 31,571,295; Detroit, 31,193,706; Chicago, 29,934,350; and Boston, 24,998,254.

Pittsburgh's supremacy as a manufacturing center is emphasized by comparing the value of manufactured products of the metropolitan district with that of entire States. The value of products manufactured in the Pittsburgh metropolitan district in 1909, according to the United States census, was $578,815,493. The value of products manufactured in the following States, according to the World's Almanac of 1912, were as follows:

Missouri, $439,548,957; Michigan, $429,120,060; Wisconsin, $411,139,681; Indiana, $393,954,405; Connecticut, $369,082,091; California, $367,218,494; Minnesota, $307,258,073; Maryland, $243,375,996; Rhode Island, $202,109,583; Kansas, $198,244,992; Louisiana, $186,379,592; Iowa, $160,572,313; Kentucky, $159,753,968; Alabama, $109,169,922, and so forth.

Although Pittsburgh is regarded by the uninitiated solely as a manufacturing center for iron and steel and allied products, an analysis of the manufacturing census for 1909 as published in the United States Census of 1910 shows that by subtracting from the sum total of manufactured products all relating to car and shop construction for railways, electrical manufacturing in all branches, glass, foundry products, blast furnaces, rolling mills, forgings, tubes, metal work, pipe and all branches of iron, steel, and tinplate manufacture, the diversified industries of the Pittsburgh metropolitan district still represents an annual product valued at $117,156,317.

These small diversified manufacturing products of this district compared with the entire production of States is as follows:

Alabama, $109,169,922; Colorado, $100,143,999; West Virginia, $99,040,676; South Carolina, $79,373,363; Montana, $66,415,452; Vermont, $63,083,611, and so forth.

In eastern Pennsylvania are located the great textile industries of the State, and in the same section are also found the great tobacco-producing districts, while the middle of the State, outside of the coal, coke, iron, and steel produced there and other natural resources with which this great State is blessed, is given over largely to the farming and fruit industries.

In this tariff bill you have either placed on the free list or cut down the duty to such an extent on all these products either manufactured or handled by Pittsburgh and Pennsylvania manufacturers and dealers that it will be exceedingly difficult, if not impossible, for the manufacturers and producers of this State to exist, let alone compete with manufacturers from abroad.

By revising the tariff in the manner you have, in my opinion you will lay the heavy hand of disaster upon a prosperous community which has nearly one-half of the people of the Nation at its door. With the many products now made in Pittsburgh unprotected under this tariff bill and allowed to come in free of duty from foreign manufacturing plants, many of the plants in Pennsylvania will have to shut down, the skilled and unskilled workmen, being without employment, will have to seek work elsewhere of whatever kind they are able to secure. They will have to enter other lines in order to make a living for their families and themselves. The result will be disorganization and disorder, and men who have devoted their lives to becoming skilled in positions which for years past under the Republican protective tariff system have been paying wages that allowed them and their families to live in better conditions and give their children the advantages of the higher educational facilities than wage earners doing similar work in foreign countries. The American workman, skilled and unskilled, will be reduced to the necessity of living on a lower scale, and in many instances their children will be compelled to seek employment to help support the family.

Without having the protection that these industries have had, which extended its protecting wing over the employees in these plants, the products of which will have to go on the open market in competition with the foreign-made products which can be put out at a cheaper value, because it costs less to manufacture them, and the American manufactnrer to meet these new conditions must of necessity cut wages in accordance with the prices received for their finished products, and thereby the wage earners are permanently injured.

In conclusion I would remind the framers and supporters of the Underwood tariff bill that their plans for revising the tariff strikes a death blow at a capital investment of $642,527,046, endangers the livelihood of 159,977 skilled workers in the Pittsburgh district alone and thousands of other employees whose occupations depend largely upon the prosperity of the big industrial and other plants in the district, more than $115,000,000 annually paid out in wages, and the production in the Pittsburgh district alone of more than $579,000,000 worth of finished commodities.

The dire effect on the shipping business whereby Pittsburgh supplies go to almost one-half of the American Nation by the adoption of this tariff bill should be sufficient to make the advocates of the Democratic tariff theory hesitate before they vote to put its provisions into effect.

As a representative of about 5,000,000 people of Pennsylvania I can not see these sweeping changes as proposed in the Underwood tariff bill become a law without recording my objections. I will vote against the adoption of this measure by this House.

EXTENSION OF REMARKS
OF

HON. JAMES R. MANN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 15, 1913.

Mr. MANN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I insert herewith an article by Hon. Joseph G. Cannon, former Speaker of the House of Representatives, which appeared in the Saturday Evening Post May 3, 1913:

FOLLOWERS AFTER STRANGE GODS.

Crusades for political regeneration come periodically, like other epidemics. They are as different as are the measles, the whooping cough, and chicken pox. The crusaders are neither constant nor consistent. Each agitation is for a new idea, with new discoveries of shortcomings in the Government and new remedies.

I speak of these things with the utmost respect, because I have been a victim; and in my youth I sometimes despaired of the Republic and questioned the wisdom of the men who projected it. We had, back in the early fifties, the American or Know-Nothing movement, so called because none of those engaged in it professed to know anything about it. They were franker than many of their successors in the reform movements we have had since that time, for these gentlemen professed to know all about everything.

The Civil War absorbed the attention of the citizenship; but even then we had men and newspapers in the North who thought that Lincoln was "too slow and unprogressive" or "too rash and impulsive"; and so much did they think alike on the central idea of opposition to Lincoln that they easily compromised their differences on principles to unite in their prejudices in an effort to defeat the reelection of the Great Emancipator before the war was ended.

Then we had the Liberal movement in 1872, with opponents of nationalism and protection supporting Greeley, the arch-opponent of State rights and free trade, with the assurance that they were the only men in this country governed by principle rather than by prejudice. Next came the Greenbackers, reenforced by the fiat money advocates, who insisted that the Federal Government could coin paper as well as gold and silver and create wealth by the fiat of law. With them came the Prohibitionists, who believed that they could regulate man's appetite by statute, and the Labor Party, which demanded special legislation for a class with the watchword of no class legislation.

THE JONAHS OF POLITICS.

A few years later we had the Grange and the Farmers' Alliance, which went a step further than the Greenbackers and insisted that Government deposits should be guaranteed by nonperishable agricultural products, which must have meant fertilizer, as that is the only nonperishable product of agriculture and the one into which all other agricultural products sooner or later resolve themselves.

Then came the Populist Party—to reform everything; and a little later the Free Silver Party, which was to the Democratic Party as the whale was to Jonah until the Lord released him. Now, we have the Progressive Party, which seems to have almost played the whale to a Republican Jonah for the time being. These reform movements have all been earnest, and perhaps honest, though misguided, in demanding legislative reforms that could not be realized, and after each effort the people behind them found a place in one or another of the old parties.

The last impulsive movement of this kind is more ambitious and, in my judgment, more misguided than all the others, because it does not stop at legislative reform, but goes directly to fundamental principles and seeks to rewrite or destroy the primary law of the country as laid down in the Constitution. In all other efforts the people have been handicapped by tradition or sentiment, veneration or patriotism, or something that made them hesitate to lay violent hands on the Ark of the Covenant. But no tradition or veneration or sentiment has stayed the hands of the latest crusaders of reform, for they would unhesitatingly rewrite the Constitution or do away with it entirely as the fundamental law and convert this Government into a pure democracy, to be swayed like an old-time camp meeting by the fervor of the exhorter rather than by the logic of the ordained minister.

I have had some patience with all former reform campaigns, for in my younger days I had some of the same impulses; and, moreover, had any one of these campaigns succeeded the experiment could have been undone as quickly and as easily as it was done, when the experiment proved that it was not the panacea for all our political ills. I have little patience with these latter-day reformers who would upset all the developments of more than a century of government by law and return to the old rule of the mob, led by men endowed with superior ability—or, rather, plausibility. Had the Progressive movement of last year succeeded in carrying with it a majority of the people, and had it been lasting enough to have abrogated the Constitution, this country would have been committed to revolution as completely as was France to that which placed that country under the rule of an unrestrained majority and a reign of terror. It would have required years of sanity to undo that work of the wreckers and patiently build up again a foundation of fundamental law.

To a man who has passed half a century in public life in the most strenuous and progressive period of civilization, and who has for nearly 40 years had a part in the clash of opposing ideas, sentiment, and prejudice in the House of Representatives, which is the clearing house of American policies, there has never been a more dangerous movement in American politics or one more reactionary than this which has caught the eye of many people with the alluring label of the Progressive Party.

THE CHANGES OF A GENERATION.

I have, as a boy, watched the old weather vane on the barn box the compass in an hour on a gusty April day, and wished I could be as free in my movements and not controlled by the hand of necessity in driving a straight furrow to the end of the field. But after some years of experience I have no desire to see a Government of 91,000,000 people modeled after the weather vane, and swing to all points of the compass in response to the zephyrs of impulse and the gusts of sentiment or the whirlwind of passion; to lynch a man in an hour and build a monument to him in the next hour as a hero and a martyr to rumor and prejudice.

No; the Constitution may have been the work of ordinary and even mediocre men, rather than of the great geniuses they are pictured by tradition, but that work is the foundation upon which has been built the greatest superstructure of legislative enactment, executive administration, and judicial decision that has ever been known in civilization. I am not willing to see without protest government by dynamite, either by mistaken labor leaders or by other mistaken enthusiasts, who would apply the dynamite theory and blow up the foundation of a government by the people. I object to such methods, even though the wreckers may be as wise as Solomon, as devoted to the people as Brutus professed to be, or as virtuous as pictured in their own prospectuses.

I have seen this country develop under that Constitution so as to make the United States the marvel of the world and the model of free government everywhere, even in the Orient. I am old enough to have seen the railroads cross the Allegheny Mountains and spread like a spider web over the whole continent—to carry the products of the West to the seaboard more economically for the people than they could be exchanged in New England before this area of steam.

I have seen the reaper and mower, the gang plow, and the whole revolution in agriculture by labor-saving machinery. I have seen the telegraph and the telephone when they were looked upon as experiments; the electric railroad and the electric power-plant development; and I was ridiculed as a reckless spendthrift legislator when I helped make considerable appropriations to aid Prof. Langley in his experiments with the flying machine.

I have seen great discoveries in science and medicine that benefited the whole people in the years since I left North Carolina with my parents and heard my mother cry out, "Good-by, civilization," because we were emigrating to the West. And I have seen greater development, not only of enterprise, but also of education, charity, and benevolence, by the people, as a whole, through the agency of the State and also by the efforts of the individual, than had developed before in all the years from Moses to the time when I was born.

I may be a little old-fashioned, a little wedded to the past, but I like to ride in an automobile; and when I engage a chauffeur I look to his familiarity with the machine and how it is made, rather than to his ability to toot a horn and turn on all the power to surprise and scatter the crowd with his nerve and speed. And in government I prefer a chauffeur who can turn a corner without skidding against the curb and wrecking the machine. The auto is a progressive machine and a promoter of business or funerals—it depends on the chauffeur.

In a government of the people and by the people there must of necessity be political parties to express the will of the people touching national policies. It has been so from the beginning and will be so to the end. There have been two great parties, under varying names, since the Government was founded, and for more than 60 years these parties have been under the names Republican and Democratic. The Democratic Party is now in full power and has full responsibility for legislation. That party represents the will of the people by a constitutional majority, and the change has come without any manifestation of passion or revolutionary protest. We all accept President Wilson as our President and the Democratic Congress as our Congress to make the laws and administer them. No better evidence could be presented that the American people are capable of self-government.

No one wishes the present administration success more than I do, for the success of the Government represents the success of the people. That is what we are all striving for; and we shall all wait with patience to see whether the Democratic Party, in carrying out its policies, can give greater prosperity more diversified among the people, greater peace and happiness, than followed the enactment of Republican policies. If they can succeed in doing this they will have long life and deserve it. There is, however, wise caution in King Ahab's advice to the King of Syria: "Let not him that girdeth on his harness boast himself as he that putteth it off."

There have been two great questions on which the American people have divided, and these two questions naturally created two great political parties. These questions were the extension of slavery into the national territory and the revenue policy. Both were fundamental. Other questions were secondary.

One of these questions has been settled—at great cost, it is true, but in a way that no one now would have changed. The whole country has developed and prospered under the new freedom of men that could not have been under the old system of slavery. No one has more happily expressed the advantages of this change than did President Harrison in his inaugural address, when he said: "Mill fires were lighted at the funeral pile of slavery. The emancipation proclamation was heard in the depths of the earth as well as in the sky; men were made free and material things became our better servants."

AN ERA OF SWIFT EXPANSION.

My honored friend, the leader of the majority in the House, Mr. UNDERWOOD, can testify to the force of this expression. I understand that the great industrial city where he has his home is the best illustration of mill fires lighted at the funeral pile of slavery that can be found in the country; for the iron ore, coal, and limestone which give life to that city had lain for a hundred years under a cotton plantation, and that wealth was not brought to the surface until the emancipation proclamation was heard in the depths of the earth to make these factors better servants than had been slavery.

While I rejoice in the new development and prosperity of the South, and also of the East, let me briefly call attention to the development which came, with a force never before witnessed anywhere, by reason of the abolition of servile labor, by the granting of homesteads for the people on the national domain, and under the Republican policy of protection. We have some people now who fear the Government has been too liberal and has wasted its public land; but I can remember when the Government practically could not give away lands that are now worth $200 an acre. We have given away millions of acres of the public lands; but we have by so doing built up an empire in little more than half a century that could not have been developed in a thousand years under the old régime, and we have made men more of an asset than mere land. The map of the United States to-day as compared with the map in the geographies when I was a boy tells the story more graphically, and so do the reports of the Census Office.

When I left North Carolina to find a home in the West my map of the United States had little but Ohio, Indiana, and Illinois as the West, and beyond the Mississippi River was marked the "Great American Desert," the "Staked Plains," and the "Rocky Mountains"—a country of which few men knew anything. The United States was then practically east of the Mississippi River. There were but two States west of the Mississippi River—Missouri and Arkansas. Our total population was 17,000,000, with less than 4,000,000 west of the Allegheny Mountains. But to-day we have 91,000,000 people in the United States, and 45,000,000 of them are in that territory which was then called the West and the unexplored country beyond.

Why, in 1860 we had but 31,000,000 people in this country, and only 11,000,000 west of the Alleghenies. We encouraged and protected manufacture and agriculture; we passed homestead laws; gave public lands to the people and to aid in the construction of the Pacific railroads. This legislation covered the whole country and gave an impetus to every kind of industrial development; and, with the settlement of the old question of checking the extension of slavery, it made the East a center of manufacture and the Great American Desert and the Staked Plains the granary of the world. Even the mountain fastnesses have been converted into gardens, and millions of enterprising people there are still unable to estimate their wealth and opportunity.

I have no regret for the liberality of the Government in giving away public lands, for this liberality brought such results as would not have been recorded in many generations under the old policy of having the Government hoard its public lands and wait for purchasers. The losses to the Government were relative. The railroads and the homesteads were tremendous factors in the building of a nation; and to-day nearly one-half of our western people are there, making two-thirds of all the wealth taken from the soil and two-fifths of all the manufactured products of this country. Yes; the Government has been liberal and liberally has it been rewarded.

We were liberal in our immigration policy, and millions of men and women from every civilized country under the sun took advantage of that liberal policy to come here and become American citizens. Who can look over this American commonwealth and tell from whence came the blood of the great body of the American citizenship? We have developed men from those who here first learned the meaning of the word manhood, and we have developed industry, skill, enterprise, and intelligence in keeping with American citizenship. It is in this new West that we have the lowest percentage of illiteracy to be found in the United States. When I am inclined to grow pessimistic after reading some of the wailings and criticisms of latter-day economists and reformers, I take down the map of the United States and a volume of the census reports and find there the realization of the wildest dreams, of the greatest optimists who ever lived; and I am satisfied that the mistakes of the past were, after all, rather fortunate mistakes.

This marvelous development of the West, however, demoralized agricultural conditions in the East and in the older countries across the sea. It demoralized the western people, too, for a time, because they could not measure their own opportunities with older conditions that prevailed elsewhere. The opening of the new prairie lands of the West made competition in the East embarrassing and sent millions of acres in New England, the North Atlantic, and the South Atlantic States back to the wild lands and abandoned farms.

The House of Representatives, where the membership is based on population, tells the story of our development as a Nation. In 1840, when I went to the West, the old South had 98 Representatives; New England, New York, New Jersey, and Pennsylvania had 112, and all the country west of the Allegheny Mountains had only 32. To-day, in the same grouping, the old South

has 109 Representatives, the East 124, and the West 202; and there are 115 Members now in the House who come from States that were unknown in 1840.

The statesmen in the Washington of that day, while talking about "fifty-four-forty or fight," had not yet determined that the Oregon country was worth keeping. Notwithstanding the explorations of Lewis and Clark, in the early part of the nineteenth century, there were men in Congress in 1840 who insisted that the Rocky Mountains marked our western boundary and that a statue of the fabled god Terminus should be planted there to warn our people against tempting fate by trying to go farther.

Gen. Frémont had not then set out on his exploration of the West, and the old missionary, Marcus Whitman, had not made that memorable ride from Walla Walla down across Utah and Colorado and through Missouri in the winter to tell the wise men in the National Capital that there were Americans in Oregon who had made their way across the mountains and were beginning to set up housekeeping for themselves with a government under the American flag, but without the recognition of the parent Government. I have seen one-half of the 48 States admitted to the Union and, as a Member of the House, I have helped admit 11 of them.

THE WESTWARD COURSE OF EMPIRE.

The West is not all-wise and the demagogues have been as successful there as in the older sections of the country. They have preached new doctrines and are trying some experiments that have failed elsewhere. The people have been too busy to study these questions for themselves; but they will in time, and then they will cease to be gulled by demagogic theories as opposed to practical conditions. I have heard much talk about progress and progressive ideas and policies in the last few years; but I have seen no better evidences of progress than were manifest by the pioneers who peopled the West and created an empire greater and richer than was the whole Nation, which at that time gave more of discouragement than of aid to their progressive efforts.

I have heard in Congress some of the men who aided in that first progressive western movement denounced as reactionaries. They can not protest, because they are dead; but that is the way of progress—in the hurry to get forward we fail to note the work of the front rank who blazed the trail and opened the way for the newer Progressives. When I see men beat the air and grow hysterical about progressive policies, I am tempted to call their attention to the great picture that fills the wall space over the western stairway of the House wing of the Capitol, which portrays the progress of their forbears who went out and conquered the West. I have never been schooled in the arts, but to me that picture is one of the most inspiring paintings I have ever seen. I have passed it these many years; and I have never failed to look up at those heroic men and women who moved westward, scaling the Rocky Mountains, which some of those in Congress marked as the boundary the Almighty had placed there to limit the adventurous spirit of the American and forever fix the western confines of the Republic.

Those progressive spirits of the past did not make the air vibrate with lamentations, but with shouts of encouragement as the stalwart youths planted the flag on the higher cliffs to inspire with courage the women and children who were toiling up the path to find a way to the golden Pacific beyond. They did not even tarry long to bury the dead, but silently prepared the grave there in the mountain fastnesses and, with a benediction, passed on to the new duties and new conquests.

When the history of the West and the men and women who made it is written, larger space will, I hope, be given to the pioneers who toiled and suffered in silence than to those who have from time to time grown hysterical over the growing pains of this mighty empire that has spread in my time from the Mississippi to the Pacific and beyond the Arctic Circle and almost to the shores of Siberia.

I have for 40 years heard the lamentations of western political progressives because nature gave that section a surplus of wheat and corn which could not be turned into gold and silver at once and a surplus of silver which could not be turned into coin of the realm at the mint on demand. I have heard the lamentations of the Greenbacker and the Populist in days gone by, and they were no more doleful than some of the Progressives of to-day. More than 20 years ago, when I offered an amendment to the Mills tariff bill to place sugar on the free list, as we did not then need the revenue, the Kansas delegation to a man complained that I was striking at the great Sunflower State, which had begun to raise sorghum. They had the figures to prove that with protection to sugar Kansas would in a few years produce more sorghum sugar than would be necessary to sweeten the tooth of the whole civilized world.

The tariff on sugar has remained, but what has become of Kansas sorghum? It now sounds like a joke, but Kansas was just as earnest then and just as apprehensive of the calamity to that State from free sugar as she is now hopeful for the initiative and the recall. The grasshopper blight was no more perilous to Kansas than was free sugar, and neither of them more awful to contemplate than are reactionary policies to-day. Moses, in his rebuke to the children of Israel, said the Lord had found them in the desert lands and made them to ride on the high places of the earth and eat from the fat of the land, with milk and honey. "But Jeshurun waxed fat and kicked," and followed after strange gods. So it has ever been with the children of men. So it has been with a part of the people of these United States.

THE AMAZING INCREASE OF WEALTH.

In the last 10 years we have had the most phenomenal prosperity ever known here or anywhere else; and we have followed the example of the children of Israel and kicked until not only have we almost convinced ourselves that we are suffering unusual hardships, but have caused the people of the Old World to wonder if at last their predictions are not coming true, and that the Republic is about to crumble under dissatisfaction and division. I do not make this assertion about our prosperity on my own observation alone. I take the census figures, and I am told at the Census Office that our total wealth is to-day estimated at $150,000,000,000; it was $88,000,000,000 in 1900, $65,000,000,000 in 1890, and only $16,000,000,000 in 1860. The increase in wealth was not only the greatest in volume but the greatest in percentage in the last decade that has ever been recorded by the Census Office.

This total wealth has not been gathered into the hands of the Money Trust or the tariff barons, nor has it been centered in Wall Street. It is just where wealth has always been—among the people who go to the soil, the mine, and the factory and produce wealth. The total value of farm property increased from $20,000,000,000 in 1900 to $41,000,000,000 in 1910, and to this should be added the estimates of the Agricultural Department of $9,000,000,000 for last year's crop to make the farm wealth of the country $50,000,000,000, or one-third of the total wealth of the country.

Our manufactured product was valued at $20,000,000,000 in 1910, and this does not include the value of the plants. Our railroads are worth $20,000,000,000 and the real estate in cities and towns is estimated at between $40,000,000,000 and $45,000,000,000. So, without counting the value of the mines and the shipping interests on the coasts and on the Great Lakes, I can find no evidence that the Money Trust has gobbled up all our wealth. The value of farms and farm property not only doubled in the last 10 years, but it has increased fivefold in the last 40 years, for this farm wealth was only $8,000,000,000 in 1870, and it is now almost as great as the total wealth of the country in 1880.

It may help to relieve the fear from the Money Trust to locate this farm wealth. It is not in New York or in New England, or within a thousand miles of Wall Street. More than thirty-two billions, or more than four-fifths of it, is in the West—the country that has been developed in my time. Let me repeat the fraction—four-fifths of all our farm wealth is west of the Allegheny Mountains, in what was the old Northwest Territory, and in the States west of the Mississippi River, where the people are still supposed to be easily frightened over the bugbear of a Money Trust; but to-day those western farmers use high-power automobiles on their farms and have safe-deposit vaults in the village banks. And should this Money Trust make a raid into that country, the people could probably escape with their ready cash. Only $8,000,000,000 of this farm wealth is to be found in New England, the North Atlantic and South Atlantic States—or what was considered the United States when I was a boy in North Carolina.

New England has 4,000,000 acres less of improved farmland than she had in 1860; the Middle Atlantic States 4,000,000 acres less of improved farmland than in 1880; and the South Atlantic States 3,000,000 acres less of all farmlands than in 1860. This means that the farmers of the country are in the West and that there has been an increase of 500,000,000 acres of farms in that new empire. It means that two-thirds of all the crop values are in the West; that 80 per cent of all the cereals is raised in the West; that 77 per cent of all the cattle, 80 per cent of the horses, 77 per cent of the hogs, 86 per cent of the sheep, 66 per cent of the dairy products, and 72 per cent of the eggs are produced in the West.

This may explain to some people in the East why food products are higher now to them than a few years ago. They have to buy from the West; and the West is not only feeding them but an increased industrial population at home, as well as selling abroad when the prices are sufficient to invite export. In addition to these factors the West has 56 per cent of all the mineral products of the country. It has practically all the gold and silver, 86 per cent of the iron ore, 43 per cent of all the coal, 58 per cent of the petroleum and natural gas, and 40 per cent of all the manufactured products. The West has the raw material and is fast developing its manufacturing industries, so as to turn its own products out ready for the consumer.

THE TARIFF ISSUE FUNDAMENTAL.

This may explain why the West is not as hostile to protection as it once was. But has not the Lord blessed these western people as He did the children of Israel, making them ride on the high places and live on the fat of the land? And have not some of them waxed fat and kicked?

We settled the slavery question, and since then we have had the revenue policy as the great question to divide our people; it is a natural and legitimate issue. On that question we have had divisions since the organization of the Government, and we shall continue to divide on it for years to come. The Democratic Party still holds to the old Democratic policy of a tariff for revenue only, while the Republican Party stands for the old doctrine of protection to American production. We each have good ancestry for our political beliefs touching this question, but I think the Democratic policy belongs to the old system of labor that has been abolished.

The revenues that maintain the machinery of government form the very lifeblood of the Government, and the revenue policy is fundamental. We can cross party lines on other questions, but here is where we must represent the people on a fundamental issue; and the man who desires to take the tariff out of politics does not know what he is talking about—in my judgment. So long as we have these two schools of economic thought as to the policy governing the raising of revenues, the tariff will remain a question of politics—and of the highest and best order of politics at that.

We who represent the protection policy have been in control for many years. Since 1860 the Democrats have had complete control to enact laws in harmony with their policy for only the short period of two years. They then enacted the Wilson-Gorman tariff law. I am not going into the history of that act, but it did not meet with the approval of a majority of the American people, and for 16 years we have again been able to have this Government follow our policy of protection. The country has prospered under that policy.

The Democrats have again come into control and have all the machinery to enact a tariff law in harmony with the policy they have consistently maintained should be the proper revenue policy of this Government. Their platform last year was just as radical on this question as it was in 1892, and even more radical than in the years before the Civil War. I do not believe that policy when carried into effect will be any more satisfactory to the people than it was in 1894; but we all have maintained that platforms represent the demands of the people; and, as Mr. Cleveland said, should be accepted as the decree of the masters of Congress and written into the statutes.

President Cleveland, in his inaugural address on March 4, 1893, declared:

> The people of the United States have decreed that on this day the control of their Government in its legislative and executive branches shall be given to a political party pledged in the most positive terms to the accomplishment of tariff reform. They have thus determined in favor of a more just and equitable system of Federal taxation. The agents they have chosen to carry out their purposes are bound by their promises, not less than by the command of their masters, to devote themselves unremittingly to this service.

And yet President Cleveland refused to sign the Wilson-Gorman tariff bill, indicating by that action that either the Congress or the President forgot or ignored the command of their masters.

THE ROUGH ROAD OF REFORM.

I have no doubt President Wilson will remind Congress of the same promise—that the Democrats are to carry out the command of their masters, who have voted for a change in our revenue policy. I do not believe it will succeed any better than it did in 1894; but I recognize that it would be craven and disloyal if they did not make the effort and devote their best energies to a tariff revision in harmony with their platform—a tariff for revenue only—and set their faces sternly against incidental protection or progressive free trade, or any other compromise between the two systems. They have declared all protection to be unconstitutional and the robbery of the many for the benefit of the few. They can not compromise the Constitution, nor can they compromise with robbery. I have no doubt they will try to reach their ideal in a tariff bill, and I suspect they will find fairly good Democrats in Congress who are perfectly willing to strike down the tariff that protects some other industry in some other State, but who will urge delay touching schedules that benefit their own people in the States and districts they represent.

It is the weakness of human nature for men to be more eager to reform the affairs of others than to reform their own. We had that kind of human nature to deal with, and the Democrats will have it to deal with. They will even find the great metropolitan press, which has been with them in favor of tariff reform, differentiating as to what the term means when they come to deal with its product. But they will have to do this, whether their work meets with the approval of a majority of the people or not, for political parties are made up of the best manhood of the country, notwithstanding the wails of the muckraker, and the manhood of the Democratic Party is now compelled to go forward with legislation to carry out the platform of that party, whether their new legislation spells political defeat or political victory.

A constitutional majority of the people has given the command, and the Democrats can not ignore that command without being condemned for cowardice and treachery to the people, which would be worse than condemnation for another failure of their policy. They will be opposed by the same forces that have opposed them in the past. The opposition will not be measured by the men who are called Republicans in Congress—these may be few—but the opponents will be the people of the United States who believe in protection—the men on farm and in factory, who will be the first affected by the policy when written into law. They are the producers, and they are also the consumers of the country.

It was one of the Democratic policies that brought defeat to their political opponents last year. They furnished the votes to pass the reciprocity pact, which received the indorsement of a Democratic House in the beginning of the Sixty-second Congress. That act, carrying into law the recommendations of a Republican President, raised up more opposition to him than any other act of his administration; in fact, the good acts of his administration were not all equal in the balance to the weight of that one act with a very large part of the American people. A majority of the Republicans in Congress voted against that bill, though it came from a Republican President; but it received a hybrid majority both in the House and in the Senate that placed it on the statute books, and some men said the tariff had been taken out of politics. The opposite was true. That act raised up opposition to the President in his own party and all explanations could not satisfy the people.

We had there a demonstration of the fact that the tariff is in politics, whether men in public life choose to discuss it or not. The President's friends tried to ignore the reciprocity pact—tried to forget that there had been such recommendation and legislation; and so did the newspapers after they had secured free print paper; but the people would not forget.

This question must be settled according to one policy or the other. The Democrats have declared in favor of a tariff for revenue only, and they will break with their own people if they are not true to their profession of faith. On the other hand, they will drive back to their old moorings all protectionists who were not satisfied with the present tariff law if they do carry out the pledges of their platform. I do not see how they are to escape the embarrassment of the old preacher out on the Wabash, who said:

> You shall and you shan't;
> You will and you won't;
> You'll be damned if you do
> And be damned if you don't.

I have seen a number of efforts made at tariff revision as well as a number of tariff bills enacted by Congress. The Democratic Party tried to revise the tariff in the Forty-eighth Congress, when William R. Morrison, as chairman of the Committee on Ways and Means, reported his famous horizontal reduction bill. Some of the best protection speeches I have ever heard in the House were made by Democrats in opposition to that bill.

A HOUSE DIVIDED AGAINST ITSELF.

When the bill came up for final vote on May 6, 1884, it was George L. Converse, an Ohio Democrat, who moved to strike out the enacting clause. That motion was carried in Committee of the Whole in a House that had a Democratic majority of 74. The Democratic opponents of that bill were not satisfied without a record, and when the bill was reported from the Committee of the Whole to the House, with the recommenda-

tion that the enacting clause be stricken out. Mr. Converse demanded a roll call; and on that roll call 40 Democrats voted with the Republicans against the bill reported from a Democratic Committee on Ways and Means.

Among those Democrats who voted against the Morrison bill were Samuel J. Randall, who had been the Democratic Speaker; Andrew G. Curtin, an old Democratic war governor of Pennsylvania; and William McAdoo, of New Jersey. William R. Morrison, the first great tariff revisionist since the Civil War, was beaten in the House of his friends; and his bill only provided for 10 per cent and 20 per cent reductions on the various schedules.

I saw the Democratic Party in control of the House when it passed the Mills bill, and there was strenuous opposition by Democrats as well as Republicans to that measure. I saw Samuel J. Randall punished for his opposition when Morrison reported from the Committee on Rules a new rule taking from the Committee on Appropriations the control of many appropriation bills and giving them to other committees. That was done to minimize the influence of Randall, who was chairman of the Committee on Appropriations.

I was in the House when it passed the Wilson tariff bill, and I heard the present Speaker denounce those Democrats who opposed the bill as traitors to the people. I also heard Democrats in the House declare they would never accept the Senate bill; and after many protestations they suddenly grew tired of their opposition and adopted a rule by which the House had to vote on the whole list of Senate amendments without division. So I am impressed with the possibility that they may have trouble in enacting a tariff law in harmony with their platform, and that they will have trouble if they do succeed. Irresponsible promise and responsible performance have different effects.

We do not need any new system of initiative, referendum, and recall. The system that is as old as the Government is entirely effective. The election of a Democratic President and a Democratic Congress last fall was the initiative for a tariff for revenue only, and the people have the power to reverse the legislative engine two and four years from now. They are the only power to recall the command given last November; and, though it may be discouraging to the Democratic efforts to realize that they may be recalled, it is one of the fates of those who represent the people in our form of government.

We have had much discussion about the high cost of living and the Democrats have laid the responsibility on the tariff. They are now to demonstrate just how much and in what way the tariff affects the cost of living, especially when more than one-half of our people live in sections of the country which produce less than one-fourth of the food products.

THE MIDDLEMAN'S TOLL.

After all, it is an old saying that it costs more to market a product than to produce it. We have developed an extravagant if not a luxurious method of marketing our products, of both the farm and the factory. An ultimate consumer up in Winnipeg last fall bought a barrel of apples, and found a note in the barrel from the apple grower in Ontario, which read: "I got 70 cents for this barrel of apples. What did you pay for it?" Mind you, that was not in this country, but in Canada—a country many consumers have desired to reciprocate with in trade.

Well, the Winnipeg consumer had paid $5.25 for the apples. He was anxious to know where the $4.55 increase went, and he found that the barrel had cost 30 cents and the freight 70 cents. Still there was left $3.55 to pay for the cost of marketing the fruit. It is the same over here with a suit of clothes.

The Tariff Board gave us an example in its report. That board found that in a suit of clothes selling for $23 and upward the woolgrower received $2.32 for the wool; the woolen manufacturer received $4.78 for the cloth, and the cost of all the material that entered into the making of the suit, except the labor, was $7.55. The cost of making the suit was $3.74 and the entire factory cost of the clothes was $12.41. This was the factory price, but the consumer had to pay anywhere from $23 to $30 for that suit of clothes. If the suit sold for $23 the profits between the factory and the consumer amounted to $10.59; if it sold for $25 it cost more to get that suit from the factory to the consumer than it did from the back of the sheep through the factory.

Mr. B. F. Yoakum has estimated that in the year 1911 the farmers received $6,000,000,000 for their products, and that the consumer paid $13,000,000,000 for those same products. The railroads received $495,000,000 for transportation, so that the cost of production and transportation combined was less than one-half of the price paid by the ultimate consumer. More than $6,500,000,000 went to pay the expenses and the profits of the men who sold these products to the consumer. The tariff had nothing to do with it. This is one of the problems the Democrats have to deal with, and they will only embarrass themselves by continuing to hold the tariff responsible for all the troubles of the ultimate consumer.

When the Democrats have fulfilled their promise for revenue reform they will find how numerous are their critics, and that criticism and opposition will crystallize just as they have in times past under the same old organization and the same old principles that have dominated the Republican Party since its organization. A good many gentlemen have been agitating about the future, but I have no fear as to the future of the Republican Party. It will not be reorganized in Des Moines or in New York, or Chicago, or Kansas City, or by any group of men who are willing to undertake the direction of its affairs.

The Republican Party does not need reorganization. It is as much in evidence now as it was in 1892, when it went to defeat. It has been temporarily divided between personal ambitions, but personal ambitions have never made the party and they will be of little effect when the Democrats have enacted legislation in harmony with their policy. The Republican Party will be in the field then and the millions of Republicans will select their leaders just as they have always done in the past. In a government of the people the leaders come from the ranks and are not designated either by Divine power or by self-constituted authority. Do not make the mistake of thinking that the raiment of Lincoln has been parceled out by any board of executors who may think they have been appointed to settle the estate of the Republican Party.

Some of my former associates in the Republican Party, who have come to the conclusion they are the John the Baptists for a political regeneration, are anxious to reorganize the Republican Party. They claim that the old party has strayed after false gods and that they are the only true followers of Lincoln. I have heard this claim presented by others in the past who made no pretensions of relationship—even the remotest—to the Republican Party. For instance, the senior Senator from South Carolina, who would resent the suggestion that he is anything but an old-fashioned Democrat, traveled over my State several years ago campaigning for William J. Bryan, and carried with him a volume of Lincoln's speeches from which he quoted to show that Bryan was a better follower of Lincoln than was Theodore Roosevelt.

JUDAS OR SAUL OF TARSUS.

The Republican Party may need some reformation—not reorganization; but that work will not be left to any self-constituted leadership. It is said that Judas claimed to be one of the earliest disciples of the Master and that Saul of Tarsus was not converted until he was blinded by a great light. Does anyone now present the whole history of Judas and his 30 pieces of reform silver as an evidence that he did more than Paul to establish the Christian religion? The Republican Party is to-day constituted—just as it was before the election—of the millions of men who believe in protection to American production; and the Democratic Party in Congress is going to sound the note which will show that the Republican Party does not need any other organization than the note of alarm that will come from the House early this summer.

Both political parties have had great leaders, and these leaders have grown up in the service. They have not been selected by any small body of men to be clothed with the people's approval. We had one sad illustration of the failure of that kind of leadership when a few public-spirited men, who had opportunity to make themselves heard, selected an old-time Republican to lead the liberal hosts and the Democratic phalanx to the White House. It was one of the saddest tragedies in our political history. There were brilliant and able men in the movement of 1872, and they controlled the greatest organs of publicity in the country. They were able to make a great noise; but when the ballots were counted it was the silent deep and not the shallows that spoke.

Grant was re-elected with the most overwhelming majority ever given up to that time to a President, and Horace Greeley died of a broken heart a few days after the election. But for the tragedy which followed, that effort of Carl Schurz, Murat Halstead, Horace White, Whitelaw Reid, and Henry Watterson would have been one of the greatest jokes of American politics. As it was, it showed how a few men in control of the organs of publicity can fool a great political party by adopting the same methods those do who sell breakfast foods and patent medicines—by advertising their wares.

The Tariff.

SPEECH
OF
HON. RUFUS HARDY,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 28, 1913.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. HARDY. Mr. Chairman, I have been interested in this discussion in the very different views of the Representatives who have spoken. My distinguished friend from Kansas [Mr. MURDOCK] opened with an interesting little story about a girl who did not know where the milk came from, and who finally went out in the country and discovered the milking of the cow. She came back looking very solemn, and said she did not like the way the milk was obtained. In like manner Mr. MURDOCK announces to us very solemnly that he does not like the way this tariff bill was brought forth. I desire to submit that this girl and my friend Mr. MURDOCK are equally hard to please, for it seems to me that the good old way of getting the milk is perhaps the best, provided it is done with clean hands. My friend, I believe, would prefer to have his cow milked by machinery and his tariff reform bill produced by a tariff board. He desires to have friend PAYNE'S tariff board or his own tariff board or any old tariff board, provided its members are nonpartisan. Friend PAYNE labors to show that MURDOCK was not near the whole tariff-board show. Both seem to think just at this time, and perhaps for this time only, that the Representatives here elected by the people have not knowledge or wisdom enough to frame a bill.

Both MURDOCK and PAYNE, I think, are for any old tariff board that will block or delay tariff reduction. I want to call to your minds the fact that Brother PAYNE is perhaps the oldest Member of this House in point of service and in years and one of the leaders of the Republican protective policies. For four years I have heard him thunder and roar for high protection. The other day he told us that gratitude was "a lively sentiment, based on expectation of favors to come." With that kind of gratitude to the highly protected industries of this country both standpat and progressive Republicans seem now ready to serve the special interests. Mr. PAYNE was here when the Dingley bill was enacted. He needed no tariff board then. He was here four years ago when the Payne bill was enacted, and he sought no tariff board then; but when he has fixed up the bars and erected the barriers as high as the protected interests wanted them now he wants, must have, and can not do without a tariff board. It is an old familiar trick of a lawyer asking a continuance, wanting delay in a bad case, and my friend MURDOCK, who professes to want to reduce the tariff, has fallen into line, urging waiting to give time for the report of the Tariff Board and urging revision, schedule by schedule, after each schedule and item shall have been reported upon by this Tariff Board. He joins PAYNE and all the high priests of protection in their motion for continuance, although the platform on which he ran last year—the Bull Moose platform—demanded an immediate revision of the tariff downward, without waiting for the Tariff Board. Now, I just want to refer to a few more things. Our friend, Mr. PAYNE, makes comparisons. He says the average tariff rate on all goods imported under the Payne bill in 1912 was 18 per cent and the average under this Underwood bill, as estimated by its authors themselves, is 16 per cent. Comparisons are frequently made to deceive. The average tariff on all imports into this country is arrived at by adding the sum of the imports, both free and taxed, and dividing the total amount of duty received by the total value of goods imported. There may be a very high duty on goods dutiable, yet with a vast amount of nondutiable goods imported the average rate on all the goods imported will be small. Duties on many articles may be so high as to be prohibitive, and yet not affect the average. The comparison is absolutely worthless, and it is calculated, if not intended, to deceive. And so he tells us that American-made binders sold in Europe may be brought back here without any duty, and that therefore the claim that they are sold cheaper abroad than here is untrue; but he does not tell us the fact that it frequently happens that our manufacturers, in selling their wares abroad cheaper than they are sold at home, sell under contract with the purchaser not to bring them back into this country. A half truth is the devil's shrewdest falsehood. But I must not take up my time in these matters.

In the brief time I have I want to discuss the broad question of a tariff "for protection" as distinguished from a tariff "for revenue only."

It is fashionable still, as it has been for a long time, to taboo any discussion of the academic question whether "protection" is a right or wrong principle, a wise or unwise policy. The question of the right, the justice, the wisdom of a policy is, to my mind, always pertinent. A frequent recurrence to first principles is essential to the preservation of just government. I shall not be deterred from presenting the objections to and evils of protection by the epithet of "free trader," used by those interested in protection to frighten and alarm the timid and the greedy. Taxation is a problem as old as human government. The purpose of its levy and manner of its collection, the amount and distribution of its burden are problems almost equally old. Self-interest has been the key used to solve all these problems from the beginning. In all ancient civilization there were distinctly a governing and a governed class, and the most serious question of taxation was how much was the most the class that governed could wring from the class that paid, and how it could be extracted most easily, surely, and safely. In these later times has come a demand by the great paying, burden-bearing masses that the Government should try to find how little is the least that must be collected in order to administer just government, and how that burden may be so distributed as to bear lightest on the toiler. To state such a demand in times gone by was deemed, in high quarters, sacrilege; to urge it now is, in the same quarters, deemed demagogy. In the shepherd days, if we judge from the story of Abraham, taxation consisted simply in the patriarch taking all the fruits of labor of his servants, and, in return, giving to them food and raiment and some kind of shelter. Big men like Abraham and Lot traded with each other, each for the benefit of himself and his tribesmen; and sometimes the shrewd laborer was given an interest in the fruits of his labor, as was Jacob, working for Laban. The relation of the Highland chieftain and his clansmen was not unlike that of the patriarch and his tribesmen, and these relations were similar to those in the days of feudalism—of the baron or earl or duke and his retainers.

The feudal lord did not take all, but only a certain portion, of the substance of his retainers, and the toilers' immediate lord in turn paid in tribute a portion of his substance to a superior or supreme overlord. Just in passing permit me to say that, followed to its logical end, and substituting "the state" for "the patriarch," socialism would simply be a return, under up-to-date conditions, to the essence of patriarchal government, all men laboring for the government and the government in return, through its organized ministers, or ruling class, giving food, raiment, and shelter to the laborer.

The old systems of the patriarch, the chieftain, and feudal lord were not without reciprocal obligations on the part of the governing toward the governed classes, and these obligations were strengthened, while the burdens of the governed were tempered by the kindness of kinship and friendship and personal sympathy. The rise of cities destroyed patriarchism and feudalism. In Judea the tithing system was adopted in lieu of the "take-it-all" system.

And in other countries varying and uncertain levies of tribute and sales of privileges supplied the wants, the necessities, and demands of government and of the governing classes. Not content with such tribute as could be wrung from the toilers of their own class or tribe or country, the ruling classes began to make war. Not only did the strong man oppress the weak man, but the strong tribe or nation crushed the weak. Jacob and Esau roamed the plains of Mesopotamia with their armed retainers. They fought with and overcame the little kings of that land and came near fighting with each other for its rich pastures.

As tribe grew into nation, nation made war on nation, and all with the purpose of laying burdens on the toilers and filling the coffers of the ruling classes. Whole nations were spoiled or enslaved or driven out from the land of their heritage and their homes occupied by the victors. Other nations were made what were called tributaries, over whom the agents and emissaries of their conquerors were placed as governors and tax gatherers to send the tribute home to the ruling class. All these direct taxes and burdens, plainly seen and well understood by those who bore them, irked the toilers, and as knowledge grew selfish men began the perpetual, eternal struggle, each man seeking to avoid or evade the burden for himself and to participate in the fruits of other men's labor.

Men bought from the government certain privileges—the right to build a bridge and charge toll, the right exclusive to make or sell certain things, and so forth. In a thousand ways one man obtained advantage over another, and still the wants of the ruling or favored classes remained unsatisfied. Always the cry was for more; more tribute to the strong from the weak, to the rulers from the toilers. The puzzle grew harder and harder to solve—how to collect enough tax or tribute to feed and fatten the rulers or the favored ones. Among the means of gathering taxes, on some evil day for the human race, the idea was born of levying tribute upon trade in name while levying it upon toil in fact. Whether the idea originated, as some say, from pirates in the Mediterranean levying protection or safety money on passing ships when that great sea was the highway of nearly all the commerce of the world, and thence was adopted by the Athenian, Carthagenian, and Roman Governments, or whether it goes back into darker and more remote ages, when international trade was infinitesimal in volume, I do not know, but I do know that in its first forms its present possibilities were not dreamed of.

TARIFF ON IMPORTS.

In a small way it appears that tariffs on imports were in vogue among all the nations of antiquity concerning whose economic policies historical records are in existence. From inscriptions on tablets excavated in Egypt it is inferred that as far back as the reign of Usurtasin taxes of this character were levied. It is certain that tariff taxation was one of the means of bringing money to the state treasury among the early Athenians and later on among the Romans. In Athens, where both export and import duties were imposed at the ordinary rate of 2 per cent, an additional tax was collected from vessels engaged in foreign trade for the use of the harbors in which they anchored.

Rome in her conquered Provinces frequently allowed the individual State authorities to impose such import duties as they saw fit to collect, but stipulated that Roman citizens should be exempt from the payment of any such duties. The list of commodities on which import duties were levied was largely increased under the reign of Augustus Cæsar and still further under later Emperors. The Digest of Justinian contains a record of these import duties. In the earlier days the general rate of import duties at Rome seems to have been about 5 per cent, but under the later Emperors it appears to have gone as high as 12½ per cent.

The feudal lords of the Middle Ages practiced a system of imposts on goods in transit through their dominions which was little better than systematized robbery, and not infrequently merchants were able, either through influential friends or by the payment of a bonus, to obtain relief from the most onerous of these exactions.

In England the first tariff for revenue of which there is a record was established in the latter part of the tenth century under King Ethelred, the duty being levied on both ships and goods. Under Edward I special duties were exacted from foreign merchants which were protective in their nature, and this seems to be about the first suggestion of protection of home industries by means of a tariff.

The greatest abuse of the taxing prerogative recorded in history was the farming out of the collection of revenue, which for a while was practiced in England and flourished most viciously in France under Louis XIV and Louis XV. While these revenue farmers were confined in their activities mostly to the collection of internal taxes, it was not an uncommon occurrence that they managed also to lay hands upon import duties, though of course this had to be done more or less surreptitiously. Compared with modern commerce, international trade was in its infancy when import duties were first laid and for a long time afterwards. Its working demonstrated its smoothness. Smuggling was popular here and there with those who sought to beat the Government out of little sums for themselves, and before the merchant learned to pass the burden wholly on to his customers. Then it dawned on the trader that all he had to do was to add it in with his ships' expense, his purchase price, his house rent, and charge for all alike. Then he ceased to grumble. His customer knew nothing about it and of course did not grumble. And so the ruling class had found the great thing so long sought for, a tax that would be paid in silence, a burden that could be imposed with safety and against which there was no grumbling. In the beginning, too, only the direct effect of the tax was felt. The indirect effect, the enhancement of home products, was negligible. Wars that decimated in those days all the nations of the earth were fought when taxes were mainly direct, and the governments conducting them demanded scarcely more than a tenth of the earnings of the people, although their earning capacity was far less than it is to-day, and import duties when laid were then only from 5 per cent to 10 per cent or 12 per cent.

Twenty-five per cent of all the people's earnings now would not pay all the taxes—national, State, county, and municipal—that are gathered from the people in time of peace.

But this is not all nor even one-half the wicked beauty of the tariff tax. When international trade grew and millions and billions of dollars' worth of products began to flow from nation to nation, it was not only found that those who paid it did so without knowing it but also that hundreds and thousands of those who made the same kind of goods as those imported were ever watchful for their own interest and ready to increase the price they charged by the amount of the tax, and so were all the time, in season and out of season, boosting the tax. To them every extravagance of government was a boon, because the higher the import tax the higher the tribute gathered by them; and so two greeds—the greed of the governing classes proper and the greed of the favored leeches and bloodsuckers who fattened and filled their pockets along with the government—were joined and the world-old struggle between the masses and the classes grew harder and darker and more cruel than ever before.

That, Mr. Chairman, is the twofold evil in the tariff, that it is taken without being known or comprehended by those who pay it to the Government and that it raises a class of bloodsuckers who combine together and profit many times more than the government by every burden imposed by it.

But, Mr. Chairman, these bloodsuckers have something to say for this tax and for themselves. First, they say it is a time-honored system, established by the fathers. It is time honored. The tariff tax was established by the fathers. When this Government was formed the fathers found that all nations practically had resorted to the levy of import duties to raise revenues, and many of them for other purposes, such as to cripple the industries of other nations or to build up their own. But our fathers also knew why this tax had been resorted to, and they faintly grasped the evils that lurked in it. They needed money, more than, as they feared, the people would stand for in direct taxes, and they were not without the shrewd counsel of those who persuaded them that in our then struggling and poverty-stricken condition such a tax would help our infant industries to get on their feet. There was no question then of helping our labor against the pauper labor of England or Europe, for wages were lower here than there; and the fathers, in so far as they could, in the Constitution limited the evil of the tariff by declaring it should only be levied to raise Government revenue and that no such tax should ever be levied by the States, thereby insuring for all time the freest of trade between the States.

Had the mild and moderate purposes of the fathers been adhered to, and had the argument of the early protectionists that competition among home producers would soon bring the level of prices at home down to or below the level of prices abroad been borne out by our subsequent history, there would be no tariff question to-day. But the greed of those who benefited by the tariff made such amazing demands that the early tariffs, levied when we had infant industries which with some reason urged their need of help, came to be trifling in comparison with the later tariffs and then the vaunted home competition became so minimized that in the vast majority of cases our home prices of most manufactures do not even approach the foreign prices of the same class of goods, and at last we are brought face to face with the fact that our home producers of the great manufactures have combined to stifle competition, and in many instances not only do not sell to us at nearly as low price as the foreign maker of the same article sells it in his home market, but they do not sell to us at as low prices as they themselves send their wares abroad and sell them for.

In modern times one of the most conspicuous instances of concessions to a favored class is the enormous import duties levied by Germany upon imports of meats. This policy was entered upon at the behest of the "agrarians," who formed so numerous a party in the Reichstag as to enable them to form coalitions with other parties in the parliament and thereby compel the Government to accede to their demands for the imposition of tariff duties especially protective of their particular interests. A like policy has been pursued by the German Government in behalf of the same agrarian interest, who have greatly raised the price of the wheat grown on the lands of the German lord by an enormous duty laid on all imports of American wheat, so that to-day meat is beyond the reach of the great body of German workingmen and bread almost doubled in price. The same system in this country is fast taking meat from the mouths and woolen clothing from the backs of the poor and the toilers in great cities.

The protectionist also said that the tariff was not paid by us, but by the foreign producer. In the face of the patent fact that the goods we import with a duty on them can be bought and are bought all over the world by the people of the nations where they are made cheaper than we buy them by the full amount of the tax or nearly so, and in the face of the fact that ours is notoriously the highest market in the world for almost every manufacured article on which we levy the tax, whether we import it or make it here, he has abandoned that pretense.

The protectionist is a special pleader. At first he had no wage argument; now it is his sole remaining argument in the United States. Here it is cried from the housetops, it is proclaimed on the hills and in the valleys, in the cities and in the country, that we must have a tariff to protect the wages of the American workingman against the low wages of the pauper labor of Europe and the Orient.

The Bethlehem Steel Co., a concern that put six millions of capital in its business 10 years ago and has from its earnings added twenty millions to its capital since then, and declared last year 20 per cent dividend on its twenty-six millions capital, tells us we must keep up the tariff for the benefit of the American workingman.

The story of the United States Steel Trust, its inflation of capital and profits, when told in simple verity, staggers our capacity of belief. The story of the woolen mills is the same. Yet the laborers in these concerns are no better paid than other laborers; few of them can own their homes; many of them are women and boys and girls, paid only starvation wages, and over 50 per cent of these so-called American working people for whose benefit the tariff was levied are foreigners who can not speak our language and were imported by the tariff profit takers to beat down the wages and take the places of the American workingman. The truth is the tariff benefits go into profits and not into wages. This was shown so plainly the other day by Mr. RAINEY, of Illinois, that I will give just a short extract from his speech showing the enormous profits of a few of the corporations that cry so loudly for the American workingman:

It might be advisable at this time to call attention to some of the profits New England mills are distributing under the present tariff laws. The Acushnet Mills, of New Bedford, paid 16 per cent in dividends from 1902 to 1910, and in 1910, in order to cut down their apparent profits, they increased their capital stock 100 per cent, and in 1911 their dividends amounted to 8 per cent. The Bristol Mills, of New Bedford, pay from 4 to 6 per cent in dividends every year, and watered their stock 20 per cent in 1908, and in that year and in succeeding years they have continued to pay 5 to 6 per cent on their stock, water and all. The Butler Mills, of the same city, pay from 5 to 9 per cent each year in dividends. In 1910 they made a stock dividend of 20 per cent, and in 1911 they paid 8 per cent upon their stock, water and all.

The Dartmouth Mills, of New Bedford, paid on their common stock 8 per cent in 1902, 1903, and 1904. In 1905 they paid 20 per cent; in 1906, 26 per cent; in 1907, 66 per cent; in 1908, 66 per cent; and in 1909 they increased the amount of their common stock 100 per cent and divided it among their stockholders in order to keep down dividends. The same year they paid 13 per cent upon their common stock, water and all; and in 1910 they paid 16 per cent upon the common stock so watered, and in 1911 the same amount. In 1909 this company made a stock increase of 50 per cent on their preferred stock, and paid 5 per cent upon their preferred stock so watered in that year, and have been paying 5 per cent ever since.

He gives many more, but that is enough to show that the tariff baron beats down wages all he can, all he dares. He is found to give in dollars and cents something of a higher wage here than is given in Italy or Germany or England, because he must give enough to his laborers to enable them to pay at trust prices for the necessaries of life to hold body and soul together, but he does not pay one cent more unless he is compelled to do it by labor unions, and this is absolutely true whether the tariff is 100 per cent, 50 per cent, 10 per cent, or nothing at all. The tariff baron adds every dollar he possibly can to his profits. Wherever he has been able to effect combination and stifle competition he puts into profits, dividends, and betterments every dollar that he can wring from the business, leaving to the laborer only what is necessary to keep the blood running in his veins and the flesh clinging to his bones. Every law for the protection of childhood, of womanhood, of manhood, must be won over his protest and fierce opposition. His profits must come first. His capitalization may be only water, standing for the possibility of future dividends; but dividends it must earn if by ingenuity he can make it. Captains of every industry in the land are clamoring for protection. Every ship on the sea is clamoring for subsidy—all for the American workingman—but the imported foreign children in our woolen mills shiver in New England winter and our American seaman struggles in vain against the dollar for rules that will require, in the interest of safety and humanity, seamen capable of understanding the language of the ship's officers and hours of labor that will not strain to breaking the powers of human endurance.

The profit takers say protection has given American workingmen higher wages than Europe or England gives. I asked a leader the other day if protection did that for the American wage earner, why did it not do the same for the German, the French, and the Italian laborer. He never answered or tried to answer. All these countries have high protective tariffs, yet our defenders of protection call their labor pauper labor. If the pauper labor of these countries is our argument for protection against their products, in God's name what is their argument for protection against our products?

Do not be alarmed for fear the resourcefulness of self-interest in Germany or Italy will fail to furnish plausible reasons. The truth is that free-trade England gives higher wages than Germany or any other high-tariff country except the United States and Canada, and that the tariff does not affect wages. The real reason for protection in all countries is the same. It enables the capitalistic classes in each country to beat down labor to its lowest possible living point, and then take in profits all the tribute that can be levied on the industry and thrift and needs of that country.

Capital is without nationality and without patriotism and without benevolence. Whenever capital engaged in any industry finds that it can produce its goods cheaper elsewhere than here it is going to build its factories elsewhere for every bit of its product that it can sell elsewhere.

Prohibitive tariffs are the strangest of all inconsistencies. There is no doubt that all civilized countries can pass prohibitive tariffs. We have done so in many things. Germany, Canada, and other countries have done the same. Is it not strange that we spend $400,000,000 building a canal; we deepen harbors and send our agents and consuls abroad, make treaties, and in a thousand ways strive to promote trade with the world, and then turn around and shut our doors to all but a few things of other nations, and stimulate them by our example to shut their doors against all but a few things of ours—that we force them to trade elsewhere by refusing to take their products or to permit them to give us their products in exchange for ours? We know that many of our farm products must go abroad to find consumers. Protection not only enhances the price we must pay for the products of the factory here, but it decreases the price we receive for our farm products abroad. The South American farmer sends his $100,000 worth of corn and wheat abroad and buys a cargo of $100,000 of English or German goods in return. If we send $100,000 worth of corn and wheat and cotton abroad, we can only buy $50,000 or $60,000 worth of English or German goods with the proceeds, because we must save out $40,000 or $50,000 with which to pay duty before we can bring in our goods.

To those of us who can not be hothoused—the cotton farmer, the grain farmer, the farmer generally, and that vast army of men who have only their labor to sell—there is no bounty in protection. No tribute is gathered for them. They are the ones that furnish the bounty. They are those who, by their labor every year, contribute that vast sum which goes to make up what we proudly call our balance of trade, which serves to fill the coffers of the profit-taking protected capitalistic few. The truth is, the capitalistic few take to themselves nearly all the surplus riches that this magnificent country and people every year pour into the aggregate wealth of the world. It may be that we are consuming the corpus of our rich heritage and making our country poorer; our soil may be getting thinner, our timber may be vanishing, our mineral resources depleted, still we are living, and living fast, and our millionaires are multiplying and fattening.

Let us stop and think. Let us get some things in exchange for what we send to Europe besides samples of effete and bankrupt aristocracy. Let us have the comforts those people make in exchange for the comforts we give. But our protectionists sometimes say—and particularly do the cotton-mill men of the South say—"We are on the ragged edge; if you lower the tariff we will be destroyed. Already our mills are overstocked; we can not make a profit even now; and if we must sell lower to meet English competition we must go broke." That sounds hard, and they seem to believe it. What has happened with them? Just this: They have been hothoused. They did not need any hothousing, they were a natural and proper industry for the South, particularly in North Carolina and other States where water power is going to waste and the cotton field is at their doors and the cheapest labor in America abounds.

But they were hothoused. Now, the difference between hothousing a plant and hothousing an industry is this: If you hothouse a plant or a number of plants, the plants have no volition in the matter; every plant on the outside is not looking at the warm sunshine of the hothouse in the winter or its cool

shade in the summer and hungering for it and moving in to get it. But industries are linked up with self-interest and volition, and as soon as A, B, and C go into a business that is hothoused and given a high rate of profit, E, F, and G begin to get hungry for that same great profit, and they, too, move in and go to work in the same house, and it is the same thing on down to X, Y, and Z, until the hothouse gets overcrowded. To leave the metaphor, when by the very nature of the case our tariff can only raise the price of cotton goods in the United States, and so many have gone into cotton manufacturing in the South, tempted by these high prices and profits, that they oversupply our home market, then they glut the market, and even the high price of the product does not give enough profits to go round nicely, and they must all or many of them perish whether you lower or raise the tariff. The only relief for them is to widen their markets. Let them shake off their baby strings, get the up-to-date best machinery, best managers, and best labor in the world, and with the cheapest raw material and best natural advantages and biggest near-by market in the world as a basis, go out and conquer all the markets of the world. That is the ultimate destiny of the cotton manufactory in the South, or else decay. It is one of the anomalies and paradoxes of protection that nobody is louder in talk of capturing the markets of the world than its advocates. Nothing can be surer than the fact that any manufacturer either can compete with foreign producers of his commodity here at home or else he can not compete with him abroad.

If he can not compete at home he can not compete abroad. If the manufacturer can compete abroad but only wants protection to enable him to make a greater profit at home, he only shows his greed by his demand and we only show either our complicity in his greed or our utter want of common sense if we grant it. Let no man talk of conquering the markets of the world in one breath and in the next declare he can not compete successfully in the markets at home.

Perhaps the most important feature of protection is the combinations it makes. There is no question that in the beginning of our tariff legislation the manufacturing protectionists preached the doctrine of free raw material, with a tariff on the finished manufacture; and for their purpose, except from one standpoint, they were right. To use wool and woolen goods for illustration, it was plain that a tax on wool without a tax on woolen goods was impossible, because if the American manufacturer was by law compelled to pay 10 cents per pound more for his wool than the English manufacturer, even if he did all the work of making cloth at the same cost with his English competitor, still his competitor could undersell him by the amount of the tax on the wool which the American millman had to pay and the Englishman did not have to pay. It was also plain that in that case the American woolen manufacturer would go out of business and the American woolgrower have to take his wool abroad to sell it in the world's open market, thus losing his protection also. On the other hand, if wool were on the free list and woolens protected by a tariff he argued that he could give the home woolgrower a better price than he could get abroad, by the amount of the transportation charges both ways, and still make a profit on his woolen cloth. For a long time all protectionists fought any duty on raw wool. But protection was making a losing fight. Many people wanted to know why woolen cloth ought to be protected. Then the protectionists sought recruits and revised their creed. They had enlisted all the manufacturers; but these were too few. Then the manufacturer began to make combinations.

He discovered the doctrine of compensatory duties. What did it matter to him if there was a duty on wool, provided an additional duty on woolens was levied to compensate or a little more than compensate him for the duty he paid on wool? Then he sent for the woolgrower and they had a little friendly conference, and instead of fighting each other they combined to fight together for a duty on wool, to benefit the woolgrower, and first a compensatory duty, to recoup the manufacturer for the duty he paid on the wool, and then an additional duty on woolen cloth, for the benefit of the manufacturer. Then all the protected industries discovered that what they needed was numbers in their ranks—they needed to enlist the self-interest of enough people to enable them to dominate the whole and by combination so adjust the climbing scale of tariffs by a system of compensatory duties as to pass one tariff on and incorporate it in another, until at last it should be unloaded on the final consumer. They began to go out into the walks of all industries and hunt up every man the price of whose products might be enhanced or who might be persuaded to believe so. They went out into the highways and the byways and invited all they could induce to come to the feast, and to those they could not persuade to come they sent a piece of the feast cake. Truly, it has been a drunken debauch ever since. They knew full well that the great body of the people could not feed at their table; could only work to provide the feast. They knew also that thousands would sell their birthright for a mess of potage, and by organization and shrewd sophistries and lavish expenditure of money they set out to persuade the American people they could tax themselves into riches. They took in the weak, the simple, and the selfish. They put a tariff on chemicals, oils, and paints, from acids to vanillin; on earths and earthen and glass ware, from bricks to grindstones and slate; on metals, from pig iron to watch movements, and metal articles they could not think of they lumped for luck and put in a basket clause at, say, 45 per cent.

They put a tax on woods from brier-root wood to house furniture; on sugar and candy; on everything on the farm and the ranch, from apples and dried eggs to spices and vinegar; on spirits and wines; on tobacco and snuff; on cotton manufactures, and on wool and woolen manufactures—they spread a snare for all. But enough. Is it any wonder that with this army of healthy, hungry supporters, bought and paid for and mutually bound together, protection is hard to overthrow?

The CHAIRMAN. The time of the gentleman has expired.

Mr. UNDERWOOD. How much time does the gentleman desire?

Mr. HARDY. About 10 minutes; not more.

Mr. UNDERWOOD. I yield 10 minutes additional to the gentleman.

Mr. HARDY. The object now of the high protectionist is not to exclude anyone, but to include everyone they can. They want every recruit they can get, and they go out in the highways and byways and gather in reenforcements here and there, and so they take in the sheepmen, they take in the fruit grower, they take in the sugar men, they take in the wheat grower. They put a duty on every possible object in order that every man who gathers a little bit from the benefits of protection might swell the ranks of his forces and serve to aid in imposing higher and higher duties upon the great masses, who are not benefited and can not be benefited by it. My countrymen, no philosopher or poet ever uttered a truer expression than Burns when he said:

> But och! Mankind are unco weak, an' little to be trusted;
> If self the wavering balance shake, it's rarely right adjusted.

The time may come—God grant us mercy that when it does come that our people may resist the temptation. The Lord's prayer was wisest in the one sentence, "Lead us not into temptation, but deliver us from evil"—but if the time ever comes when it may be necessary for corn to be imported into this country, when the granaries of these United States fail to meet the demand for consumption and the granaries of the world are sought in order to supply the hunger of our labor, then God grant that our farming people may be able to resist the temptation to pile on the burdens of those who struggle hard for bread in order to put coin in their coffers.

That is what is the matter with Germany to-day. The landlords are her nobility. The highest houses there own the land in Germany, and then impose a high duty on wheat. They combine with the mill men so that the miller and landlord combining together pay one duty on wheat and a higher duty on flour, and together they compel the common laborer of Germany to pay two prices for the bread he eats. It is a world-wide truism that human greed is never satisfied; that human appetite is never surfeited. I want to add but one little thing just by way of conclusion.

We can not have free trade in this country, because we must raise revenue, but if we, under the Constitution, levied our taxes only for revenue we would not suffer much. I know our country is prosperous. It would be so if absolutely cut off from the world. If we might never see or hear from another land, in our own land among 48 States we have the soil, the climate, the mines, the forests, the brawn, the brains, the sobriety, the industry to make us, even so isolated, perhaps the greatest and most prosperous people on earth; but there is much that other people might give to us in exchange for much that we might give to them, to the wider happiness of both them and us. We have prospered not because of but in spite of restrictions on our freedom. For one I would like to see established a little world of freedom. I would like to see my home county in just such a state. Just free to buy from all the world just what we wanted to buy, and sell to all the world what we had to sell. I would sell at home all I could sell for less at home than abroad. I would sell abroad all I could sell for more there than at home. If I wanted a hat, I would like the liberty of buying it for $2, if I could, and not be compelled to pay $5 for it. I surely do not fear that the things I wanted to buy would pour in so cheaply I could not live. If I wanted to buy a horse, and my neighbor asked me $200 for him, I would like to have the freedom to go over into an adjoining county, or even to a foreign land, and buy a better horse for $150 if I could. If my neighbors and I wanted cattle and they were scarce and high in my home county, I would like the privilege of going down in south Texas, or even into Mexico, and buying them cheaper, and then of bringing them home to feed and fatten for our eating. I would like to be free to take my corn, my cotton, my potatoes, my chickens, my cattle, my horses to Maine, to New York, to California, or Florida, to anywhere in all the world, and sell them and bring back what I got there in exchange. I would like to quit paying tribute to some man no better but more favored than I. I would like to strike off the shackles that have been wrought by Satan himself to bind over half of my countrymen in chains at the chariot wheels of a favored few. I would like to see my country free once more to trade, to buy where they would, to sell where they would, and once more to look the sun of freedom in the face as free men on a free earth. [Applause on the Democratic side.]

The Panama Canal.

EXTENSION OF REMARKS
OF
HON. L. C. DYER,
OF MISSOURI.
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1913.

Mr. DYER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I insert herewith an address delivered by me at the Central Wesleyan College, Warrenton, Mo., on Thursday evening, May 1, 1913, on the subject of the Panama Canal. Following is the address referred to:

"Mr. Chairman, members of the faculty, students, and friends of Central Wesleyan College, it is a great honor and pleasure to me to talk to you this evening upon what is to be one of the greatest epochs in American history, the dedicating to the world by the United States of the Panama Canal. On a recent trip to the canal I was wonderfully impressed with this great undertaking from the standpoint of American engineering and enterprise, and I know of none that I would rather talk to upon the history, the greatness, and the meaning of the Panama Canal than to this splendid audience.

"The great Speaker of the House of Representatives, the Hon. CHAMP CLARK, who is also your Representative in Congress from this district, gave me a message to bring you. He said to me just before I left Washington:

"I understand you are soon to lecture at the college at Warrenton. I think a great deal of that college, its faculty, and the student body. They are doing a fine work. About once in two years I lecture there instead of talking party politics. I enjoy it and they seem to enjoy it. Give them all my love.

"I know that you appreciate this message from Speaker CLARK, for he is one of the very greatest of Americans.

"The Panama Canal is located, as you all well know, on the Isthmus of Panama, some 2,000 miles slightly west of south of New York and 1,400 miles quite a little east of south of New Orleans. Pittsburgh and Buffalo are practically on a straight line with the western boundary of the Canal Zone where it begins on the Atlantic side, at Colon, a city with a population of 17,740.

"The Isthmus of Panama is an east-and-west neck of land, connecting North and South America, and has a population of some 400,000. It is 32,000 square miles in area, having a length of 430 miles and a width of 70 miles. It begins at 77½° west longitude on the boundary of the Republic of Colombia, South America, and extends to 83° west longitude to Costa Rica, in Central America. It lies between 7½° and 9½° north latitude—500 miles from the Equator.

"On the Pacific side of the Isthmus is the city of Panama, with a population of 37,505. The canal extends through what is known as the Canal Zone, a strip of land 10 miles wide from the Atlantic to the Pacific. The canal crosses the Isthmus at its northerly or upward turn, and makes the canal run from northwest to southeast, and makes the Pacific entrance to the canal 22½ miles east of the Atlantic entrance—connecting an eastern sea with a western ocean. From the Tivoli Hotel at the Pacific entrance to the canal you can see the sun rise directly before you out of the Pacific Ocean.

"The history of Panama is an interesting one, and I commend its careful study to the young men and young women, the students of this college. Columbus visited the Isthmus in 1502, and although he was not the first man to actually land upon its soil, yet he being the first discoverer of land thereabouts, previously, he was naturally given credit for the finding of this narrow neck of land, as it afterwards proved to be, extending between North and South America. At the Atlantic entrance to the canal, in the city of Cristobal, stands the statue of Columbus, and no one can view it without realizing that at last the new route to India is about solved. Of course Columbus died without knowing the nature of this land. Lowell said, 'Columbus started out to find the entrance to the back door of the Old World and found the front door to the New.' The first one to learn the nature and width of the Isthmus was Balboa, who, from a peak of the Culebra Mountains, in 1513, saw the Pacific Ocean. He it was who learned that the Isthmus was 'the waist of the world,' and to-day the name of Balboa is honored by the United States in naming the Pacific entrance to the canal 'Balboa.'

"The idea of a canal across the Isthmus was conceived some 250 years before there was a United States of America. During the reigns of the Spanish Kings, Charles and Phillip, there was exploring and investigating of the Isthmus with this idea in mind. When the matter was brought before King Phillip he consulted with his advisers, including the Dominican friars, who advised against the cutting of a canal through the Isthmus. The argument that they presented to King Phillip was that, 'What God hath joined together let no man put asunder.'

"For a period of some 350 years from Balboa's discovery not much was done in regard to the project. Numerous explorers and writers visited the Isthmus and discussion was had and articles written on the feasibility, advisability, and so forth, of connecting the Atlantic and Pacific with a water route. In 1827 we find a prophetic vision of the canal from that celebrated German poet, dear to the hearts of Central Wesleyan, and in whose honor one of the splendid literary societies of this college is named—'Goethenian.' Goethe was writing concerning the theories of Humboldt, who had visited the Isthmus and given his ideas of how the canal could be made. Goethe said in part:

"All this is reserved for the future and for a great spirit of enterprise; but so much is certain: If a project of the kind succeeded in making it possible for ships of whatever lading or size to go through such a canal from the Gulf of Mexico to the Pacific Ocean, quite incalculable results would ensue for the whole of civilized and uncivilized humanity. I should be surprised, however, if the United States were to let the opportunity escape them of getting such an achievement into their own hands. We may expect this youthful power, with its decided tendency westward, in 30 or 40 years to have also occupied and peopled the extensive tracts of land beyond the Rocky Mountains. We may further expect that along the whole Pacific coast, where nature has already formed the largest and safest harbors, commercial cities of the utmost importance will gradually arise, to be the medium of trade between China, together with the East Indies and the United States. • • • It is absolutely indispensable for the United States to effect a way through from the Gulf of Mexico to the Pacific Ocean, and I am certain they will compass it. This I should like to live to see, but I shall not.

"This was in 1827, but we do not find any particular activity by the United States as regards the canal until about 1872 and 1875, when commissioners were sent by Congress to make investigations, surveys, and so forth, of the Panama and Nicaragua routes. It is true that the United States had discussed the matter of a canal years previous to this, but no formidable undertaking in that regard was had. Two of the preeminent reasons why, perhaps—nothing definite was done by the United States about this time—were the building of the Panama Railroad across the Isthmus about 1850, and the great Civil War, which took all the resources and energy of the United States for the time being.

"Lucien N. B. Wyse, a Frenchman, obtained a concession from the Republic of Colombia to dig a canal across the Isthmus of Panama, and in 1879 a company was formed in France, with de Lesseps at its head, to dig a sea-level canal across the Isthmus. Work was started in about 1881, and after the expenditure of some $260,000,000 they had succeeded in excavating only 7 miles of the less difficult part for the canal. The failure of this French company was followed by the organization of a new company in France, which determined upon a lock canal. They continued the work of digging the canal in a desultory way till the United States purchased the French rights and property on May 4, 1904, for $40,000,000. At the time the French sold out to the United States the Republic of Colombia owned the territory through which the canal was to pass. Representatives of the United States and Colombia agreed to treaties which were submitted to the Colombian Congress for ratification, by which the United States was to have absolute right to certain territory, and so forth, through which to dig the canal. The amount of money to be paid Colombia was considered by her not enough. One of the treaties provided for the payment of $7,000,000 cash and $250,000 annually after the fourteenth year; after this proposition was disagreed to, a new

treaty was entered into by which $10,000,000 in cash was to be paid her and $100,000 yearly after the ninth year. This was rejected by the Republic of Colombia October 31, 1903. Immediately following that portion of the former Republic of Colombia known as the Isthmus of Panama withdrew from Colombia and set up a government of its own, and which was on November 7 recognized by the United States Government as the Republic of Panama. The United States then entered into a treaty with the Republic of Panama to secure the necessary rights to dig the canal. This treaty, known as the Hay-Bunau-Varilla treaty, signed at Washington on November 18, 1903, was ratified by the Panaman Congress, signed by its President, and proclaimed February 26, 1904. The important provisions of this treaty were as follows:

"First. The United States guarantees to maintain the independence of the Republic of Panama.

"Second. Panama grants to the United States in perpetuity a strip across the Isthmus extending 5 miles on each side of the canal, the cities of Colon and Panama excepted. Over this strip, called the Canal Zone, the United States is conceded absolute jurisdiction.

"Third. All railway and canal rights of the zone are ceded to the United States.

"Fourth. The property of the United States in the zone is exempt from taxation.

"Fifth. The United States is to have the right to use military force, to build fortifications, and to perfect transit.

"Sixth. The United States is to have sanitary jurisdiction over the cities of Panama and Colon, and the right to preserve order in the Republic should the Panama Government, in the judgment of the United States, fail to do so.

"Seventh. The United States agrees to pay Panama $10,000,000 at once and to pay an annuity of $250,000, beginning with the year 1913.

"The necessary authority and funds having been obtained from the Congress of the United States, as well as the necessary authority from the Republic of Panama secured, President Roosevelt proceeded without delay to begin the actual work of digging the canal. He appointed commissioners, and from time to time made certain changes, finally deciding that the best results would be obtained by centering the authority in one chief engineer. This he did on April 1, 1907, when Col. George W. Goethals was appointed chief engineer and chairman of the Isthmian Canal Commission.

"In the meantime, however, much had been done in the way of preparing for the digging of the canal. The United States having obtained from the French the Panama Railroad, found that there was much work to be done in the way of laying track, providing equipment, etc., to get the necessary use out of the railroad for the work of the canal. Some $9,000,000 was spent in doing this. The quartermaster had to gather together the necessary supplies; sanitation was one of the great problems to be considered. Col. A. W. Gorgas, the great American yellow-fever expert, was placed in charge of this, and a great deal of money and work was spent in ridding the Canal Zone of the mosquito and diseases of various kinds, with the result that the zone to-day is as healthy as the United States. Schools had to be established, as many Americans coming to work on the canal were bringing their families with them. Hotels, restaurants, etc., had to be built for the men and their families. Cold-storage and refrigerating plants had to be built to provide proper food for the workmen, with the result that to-day the best plants of this kind anywhere are located there, there being in addition plants for making ice, baking, coffee roasting, ice cream, laundry, packing, etc. Every morning at 4 a. m. a train loaded with provisions for the workmen throughout the Canal Zone is started out from Cristobal, the Atlantic terminus of the canal, these meats and provisions going out from Cristobal in refrigerating cars. In addition to all these necessary preparations, some of which have been casually mentioned, there had to be gathered together on the Canal Zone the necessary machinery and equipment for the work. In order that you may fully understand the enormous task of bringing these things to the canal from New York and other places in the United States and Europe, I will name some of the principal equipment now or that has been in use in digging the canal, to wit:

Canal service.

"With the equipment at hand, with food and clothing, the zone made healthy, etc., we find one more thing necessary before work can be begun in earnest. This is to get the necessary laborers. After much effort along these lines the Isthmian Canal Commission was plentifully supplied in that regard by laborers, mostly from Jamaica, and have, as a general rule, given good service. The skilled workmen, mechanics, engineers, etc., have all come from the United States. The total number of laborers employed in the digging of the canal, the rebuilding of the Panama Railroad, etc., average about 30,000. In addition, there are about 5,000 Americans, skilled in various ways. With this word in regard to the necessary preparations of supplies and men, I will take up with you some of the really big things of the canal, to wit, locks, dams, spillways, and lakes—necessarily brief, however.

"The locks are six in number, there being three at Gatun, one at Pedro Miguel, and two at Miraflores. They are all in pairs, so that vessels can go in opposite directions at the same time.

"A lock is a walled chamber between two bodies of water of different levels, having gates at either end, in which it is possible to confine vessels while they are being raised or lowered from one level to another by allowing water to flow in or out of the lock chamber.

"The locks are built entirely of concrete, each one being 1,000 feet long and 110 feet wide. The total length of the Gatun flight, with approach walls, will be over 3,500 feet, or nearly two-thirds of a mile, and the entire width about 300 feet at the top. The massive side walls will be 81 feet high, 45 to 50 feet wide at the floor level, and then gradually taper to 8 feet at the top. The huge middle or separating wall will be 60 feet wide, carrying near its base a great central culvert, through which the water, rushing in turn into smaller or lateral branch culverts under and up through the floors of the locks, will flood each chamber and float the passing vessel. This main central culvert, extending the entire distance of the lock, will be 18 to 22 feet in diameter and could hold a mogul locomotive, while the laterals would make an easy driveway for a two-horse truck wagon. There are also culverts in the two side walls of corresponding size, so that an entire lock can be filled or emptied, using one culvert, in 15 minutes and 42 seconds, and, using two culverts, in 7 minutes and 51 seconds. This will be extraordinarily quick work, considering the enormous size of the locks, but will provide quick passage for ships. These culverts are also so arranged and controlled by valves that the water from one lock can be used to fill the one below it or the one alongside of it. The locks are built in parallel pairs for reasons both of safety and expedition. If one set is out of commission, the other can be used. If vessels are coming up in one set, others can be descending in the parallel set.

"The lock gates or leaves almost overwhelm one with their magnitude and majesty. The layman wonders how they can be safely and successfully manipulated. The individual leaves of the gates vary in height from 45 feet 7 inches at the end of the upper flight or third level to 79 feet at the beginning of the first flight or level. They are 7 feet thick and 65 feet long. Two sets of gates separate the high level from the lower level as protection in case one set is damaged by a collision with a vessel or otherwise put out of use. A huge chain is also dropped in front of the gates, made of such size and strength that it could check a ship of 10,000 tons moving at 5 miles an hour.

"For absolute safety still another remarkable precaution is provided. At the head of each flight of locks are emergency dams, consisting of swing bridges, which in case of an accident can be drawn across the locks. From these swing bridges wicker girders are let down. They, in turn, are supported by a sill at the bottom and the horizontal truss work of the bridge at the top. These wicker girders act as runways for gates which are lowered and gradually stop the flow.

"In each lock are intermediate gates forming lesser lock chambers of 600 and 400 feet length, respectively, to take care of the great majority of vessels and to save the necessity of filling the whole 1,000 feet of the regular locks.

"Ships will not be allowed in either of the locks under their own steam, but will be towed from one end to the other by specially designed powerful electric-motor locomotives running on tracks laid along the central and side walls of the locks. There will be two of these motors in front on either side and two behind, so that they will have absolute control of the vessel. The electricity which will not only operate these motors but all the gates and valves of the canal will be generated by water turbines located at the spillway of the Gatun Dam.

"The Gatun Dam is a huge earth structure and is, in fact, more of a mountain than a dam. It is so constructed as to complete the natural range of mountains which, excepting at this one point, entirely surround the low-lying basin of the Chagres River. By completing this basin it is possible to retain the waters of the Chagres and thereby form the Gatun Lake.

"The dam is constructed of two outer walls of dry fill, a large part of which was excavated from the Culebra Cut. These two walls, or toes, as they are usually called, were constructed so as to be 1,200 feet apart (inside measurement), and this space in between the two walls is filled with a mixture of sand and clay which is sucked up from the river bed of the Chagres, both above and below the dam, by means of large suction dredges and then pumped through long pipe lines into the space between the two walls of dry earth fill. About 20 per cent of the material passing through these pipe lines is solid matter, the balance water. After the solid matter settles the surplus water is drained off and in that way the inner portion of the dam is built up. This inner core is usually known as the hydraulic core and forms the water-tight portion of the dam. After the hydraulic core has been carried a short way above the water level it will be discontinued and the outer walls will then be carried higher and closer together until they entirely incase and cap over the inner core.

"The Gatun Dam at the base is 2,100 feet, or about a half mile thick, 400 feet thick at the water surface, and 100 feet wide across the crest. The crest of the dam stands 105 feet above sea level and 20 feet above the surface of the water of the lake. The length of the dam measured along the crest is 7,500 feet, but of this length only 500 feet will be subject to the full pressure of 85 feet of water due to the natural rise of the ground along the inner slopes of the dam.

"The spillway, which is located about midway of the dam, is built right into a natural hill, which stood at an elevation of 110 feet above sea level. This hill was practically solid rock, so they simply cut a channel 300 feet wide through it and lined it with concrete, building a dam across the head of this channel to form the spillway or regulating works for Gatun Lake. This dam forms nearly a semicircle across the head of the spillway channel and will be constructed of solid concrete up to an elevation of 69 feet. At this level piers rise 45 feet apart on the crest of the solid portion of the dam, and in between these piers come the steel gates which will control the level of the lake. Water can be discharged from the lake, either over the top of these gates at an elevation of 87 feet, which would be the height of the crest of the gates when closed, or by raising the gates the water can be discharged under them and over the concrete portion of the dam at an elevation of 69 feet. At the latter part of each rainy season the gates will be closed and the lake level increased from 85 to 87 feet. This would give 2 feet of water over 164 square miles, which would be sufficient to make 58 lockages a day during the dry season; that is, 10 more than could possibly be made with vessels following one another at intervals of one hour. Then, when the rainy season begins again and the large floods occur, the gates could be raised, allowing water to escape below them at an elevation of 69 feet, which would result in an increase in the volume of the water discharging through the spillway, due to the pressure of the water standing above the point of discharge. In this way as the level of the lake rises the efficiency of the spillway automatically increases.

"The spillway will be capable of discharging 154,000 cubic feet per second, which is more than the greatest momentary discharge of the Chagres River at Gatun. In addition to the control of the Chagres effected by means of the spillway, there is the great reservoiring effect of the Gatun Lake, it being of such great area that it would take the greatest known flood of the Chagres River nine hours to raise the level of the lake 1 foot, even though no water was discharging through the spillway at Gatun.

"Gatun Lake will impound the waters of a basin comprising 1,320 square miles. When the surface of the water is at 85 feet sea level the lake will have an area of about 164 square miles, and will contain about 183,000,000,000 cubic feet of water. During eight or nine months of the year the lake will be kept constantly full by the prevailing rains, and consequently a surplus will need to be stored for only three or four months of the dry season.

"The Culebra Cut begins at the point where the canal leaves the valley of the Chagres River, near Bas Obispo, and follows the winding valley of the Rio Grande until it reaches the Continental Divide, near Culebra. After cutting through the divide it follows the valley of the Rio Grande to Pedro Miguel.

"The average depth to which it was necessary to excavate below the natural surface at Culebra Cut was approximately 120 feet through the entire length of the cut. At the point where the Continental Divide was severed between Gold Hill and Contractors Hill, the cutting will average 375 feet. The lowest point of the Cordillera Mountains, which reach in a majestic barrier for 10,000 miles from the Yukon River, in Alaska, to the Straits of Magellan, in southern Chile, will be at the bottom of Culebra Cut, which, when the canal is completed, will be exactly 40 feet above sea level, and the deepest cut of which will be at Gold Hill, 495 feet.

"The cut is 9 miles long and 300 feet wide at the bottom. It is widened at right angles so that vessels 1,000 feet long can make the turn with perfect ease. The amount that had been

excavated at Culebra Cut to April 1 was 91,847,517 cubic yards, and there was remaining to be excavated 7,510,300 cubic yards.

"The Culebra section of the canal is terminated by the Pedro Miguel Locks, which, with a small earth dam about 1,104 feet long, and having a concrete core wall connecting the lock and the high ground to westward, and a crest of 105 feet above mean sea level, forms a small lake and bay.

"The Pedro Miguel and Miraflores Locks are the same in all essential features as the Gatun Locks. There is only one lift at Pedro Miguel, of 30½ feet. We then have the Miraflores Locks, two in number, with a combined lift of 55⅓ feet. From the Miraflores Locks the vessel is lowered to sea level and passes out to the Pacific Ocean and to deep water.

"The canal excavation to date is about as follows:

	Cubic yards.
By French companies	78,146,960
French excavation useful to present canal	29,908,000
By Americans:

"The excavation of the canal would equal a tunnel or subway 13 or 14 feet in diameter through the 8,000 miles of the earth. The total excavation, dry and wet, for the canal as originally planned was estimated at 103,795,000 cubic yards in addition to the excavation by the French companies. Changes in the plan of the canal, made subsequently by order of the President, increased the amount to 174,666,594 cubic yards. Of this amount 89,794,493 cubic yards were to be taken from the central division, which includes the Culebra Cut. In July, 1910, a further increase of 7,871,172 cubic yards was made, of which 7,330,525 cubic yards were to allow for slides in Culebra Cut, for silting in the Chagres section, and for lowering the bottom of the canal from 40 to 39 feet above sea level in the Chagres section. These additions increased the estimated total excavation to 182,537,766 cubic yards. In 1911 a further increase of 12,785,613 cubic yards was made, of which 5,257,281 cubic yards was for slides in Culebra Cut and the remainder for additional excavation and silting in the Atlantic and Pacific entrances, raising the grand total of estimated excavation to 195,323,379 cubic yards.

"In 1912 a still further increase of 17,180,621 cubic yards was made, of which 3,545,000 cubic yards was for slides in Culebra Cut and the remainder for dredging excavation at Gatun Locks, silting in the Atlantic entrance, and for the Balboa terminals, bringing the grand total of estimated excavation to 212,504,000 cubic yards. The Balboa terminals embrace 7,371,000 cubic yards of wet excavation and 1,423,000 cubic yards of dry excavation for the basin and docks. Deducting these amounts the total for canal excavation proper, according to the estimate of 1912, is about 203,710,000 cubic yards.

"Over 99 per cent of the total of 4,446,530 cubic yards of concrete to be placed in the locks had been laid at the close of work on April 12, the amount in place being 4,425,410 cubic yards.

"About 98 per cent of the concrete for the system of three twin locks at Gatun has been laid, the amount in place at the close of work on April 12 being 2,013,511 cubic yards out of a total of 2,043,730. In the spillway of Gatun Dam there had been placed 224,253 cubic yards out of a total of 225,000 cubic yards.

"Concrete work in the lock at Pedro Miguel is almost completed, 919,503 cubic yards having been placed at the close of work on April 12.

"Over 99 per cent of the concrete for the system of two twin locks at Miraflores was in place on April 12, the total amount on that date being 1,491,585 cubic yards, bucket measurement, out of a total of approximately 1,499,800.

"Over 2,000,000 cubic yards of concrete have been required to construct the Gatun Locks alone. This would make a wall 8 feet wide and 12 feet high 133 miles long, or half way around the State of Delaware, while all the concrete used in the construction of the canal, about 5,000,000 cubic yards, would completely inclose that State with a wall of these dimensions and be able to impound the largest fresh-water reservoir in the world.

"Another fact worth mentioning is that all the concrete used in the locks, spillways, dams, etc., would build a wall 12 feet high, 8 feet thick for 266 miles, the distance from New York to Washington.

"The total fill placed in dams is about as follows:

Year.	Gatun.		Pedro Miguel.	Miraflores.	
	Wet.	Dry.	Dry.	Wet.	Dry.
	Cubic yards.	*Cubic yards.*	*Cubic yards.*	*Cubic yards.*	*Cubic yards.*
To January 1, 1911	5,833,076	6,128,105	260,852	294,712	609,863
1911	3,493,388	2,613,066	57,669	366,336	460,514
1912	1,402,501	2,498,492	352,159	.....	418,042
1913	.....	334,502	22,198	.....	130,993
Total	10,728,965	11,574,165	692,878	661,048	1,619,411

Grand total, 25,276,470 cubic yards.

"The canal proper begins in the deep water of the Caribbean Sea, near Toro Point breakwater, which is 11,000 feet long, and is to protect Limon Bay from heavy storms, which are very frequent there, and is dredged directly south of Limon Bay for 5 miles to regular shore line, and thence 2 miles through lowland in a straight line to entrance of the Gatun Locks. This 7-mile channel has a minimum depth of 41 feet and a width of 500 feet. This is the Atlantic side sea-level part of the canal and is 7 miles in length.

"At Gatun we have three locks, which I have already discussed to some extent. Vessels are here lifted from the sea-level part of the canal to 85 feet above sea level through a flight of the three locks. Then the vessel passes directly into Gatun Lake, which is an artificial body of water 164 square miles in area.

"After the ship is raised from the sea-level part of the canal of Gatun Lake, 85 feet above sea level, by the Gatun Locks, it is free to proceed for 24 miles on the Gatun Lake, the channel for this distance being from 1,000 feet to 500 feet wide; then for 9 miles, extending through Culebra Cut to Pedro Miguel Locks, the channel is 300 feet wide. At Pedro Miguel the vessel enters a lock and is lowered 30½ feet to a small lake, called Miraflores Lake, which has an elevation 54⅓ feet above sea level, and then passes through the lake for 1½ miles to Miraflores. There it will enter two locks, in series, and be lowered 54⅓ feet to sea level, passing out into Panama Bay and the Pacific Ocean through a channel 8½ miles in length with a width of 500 feet. To protect the channel in the Panama Bay a breakwater has been built from Sosa Hill to Naos Island for 3 miles. This is to prevent the canal from being filled with silt or sand from waters of the Panama Bay. This breakwater is made with material from Culebra Cut. Thus it will be seen that the length of the canal from deep water to deep water is approximately 50 miles, 15 miles of which being sea level. The maximum width of the canal is 1,000 feet, the minimum 300 feet, and the minimum depth 41 feet. Forty ships can pass through the canal in 24 hours—20 each way.

"To pass a vessel through the canal will take from 10 to 12 hours, according to the size of the ship and the rate of speed at which it can travel. To go through the three locks at Gatun it takes one hour and a half—30 minutes to each lock, or 3 hours for all the locks. This is a remarkably short time, considering the ponderous mechanism employed, and is also an interesting contrast with the old way, for by the new way vessels can go from Colon to Panama in 12 hours, accomplishing the journey which when made around South America takes 30 to 40 days.

"One of the great benefits to come from the Panama Canal is the decreasing of the distances between eastern and western

ports of the United States. It is interesting to note the distance in nautical miles that will thereby be saved. As an example of this we will take the city of New York and see what is saved by vessels sailing from there via the Panama Canal on trade routes, to wit:

	Miles.
New York to San Francisco by way of—	
Magellan	13,135
Panama	5,262
Saved	7,873
New York to Guayaquil by way of—

Saved	2,822

"St. Louis and Missouri will also benefit by reason of the shorter route for its products. St. Louis is to-day exporting some $50,000,000 worth of goods annually to South American countries. St. Louis will be nearer the western coast of South America, when the canal is finished, than any other manufacturing city. The export trade of St. Louis will greatly increase, and as its manufacturing industries enlarge and its product becomes greater, so will the great agricultural sections of the Mississippi Valley feel this impulse, and greater prosperity come to it also. In a short time I expect to see a deep-water channel in the Mississippi River from St. Louis to the Gulf of Mexico. Then we will see big ocean steamers loading the wares, merchandise, and products of St. Louis and its near-by territory at the St. Louis wharves, and then steaming on down the Mississippi to the Gulf, and on through the Gulf of Mexico and the high seas via the Panama Canal, delivering their cargoes to the western coast cities of North and South America, and on to Honolulu, Yokohama, and the East. When this has been accomplished the manufacturers of St. Louis will save almost one-half in freight rates that they are now paying to send goods to the same points by railroad. There are other great and beneficial results to the American people that will come from the completion of the canal besides the commercial one mentioned. One other is the benefit it will be in case of war with some foreign country. Our battleships can go from the Atlantic to the Pacific or from the Pacific to the Atlantic in much less time, and will be a great benefit to our country, one of the reasons being that we will not need so many battleships. Most all of you remember the memorable trip of the battleship *Oregon*, during the Spanish War, from San Francisco to the Atlantic waters. It had to make the long and perilous trip around the Horn to join the Atlantic Fleet. Many of the wars of the future will begin and end in less time than it takes to make this trip. The canal will also be a great boon to the passenger traffic, shortening trips and saving many lives. It also teaches the people of America, and civilization in general, the great possibilities of American genius and the splendid progress of our Nation, for we accomplish one of the greatest known engineering feats, one that has baffled the great engineers and people of other countries. America is showing to the world that we can successfully do the biggest thing that has ever been done for civilization, and we are also letting them know that we have no motives and purposes in digging the canal other than the great and lasting benefit it will be to all mankind. America is satisfied for itself with the glory that we have been able to do the job. It is the greatest project of its kind that the world has ever seen; its locks are bigger and more ingeniously constructed than any ever before attempted. Its dams, spillways, lakes, tunnels, mechanism, and all, are the wonder of the world and greater in each case than ever before seen.

"The drilling through rocks for purposes of blasting, that has been necessary, would make a hole through the entire earth; 500,000 pounds of dynamite have been used at Culebra Cut alone each month for blasting; rivers have been diverted from their regular channels and been given new beds; an artificial lake, 164 square miles in area, is one of the wonders of this great undertaking. In fact, the only way that one can adequately appreciate the greatness of the work being done there is to see the canal while under construction and before it is filled with water. It is now predicted that the canal will be open to the commerce of the world by October next. Of course unlooked for slides, many of which have taken place in the last year or so, may delay this. These slides have been wonders in themselves. It is stated that one of these slides took in in its movements 160 acres of territory. Col. Goethals, the chief engineer, stated to me that he felt no great uneasiness about the slides of the future, and that after the canal had been finished and water turned in the danger of slides would be lessened and that those that did happen could be taken care of with dredges.

"One of the important questions concerning the future of the canal is as to whether or not tolls shall be charged to all ships passing through the canal, or whether American ships shall receive any preference in that regard. The Congress of the United States during the Sixty-second Congress decided by an act that tolls should not be charged to American coastwise ships. There was considerable opposition to this in Congress and throughout the United States, based principally on a treaty entered into between the United States and Great Britain and known as the Hay-Pauncefote treaty of December 16, 1901. This treaty provided that all nations should be allowed to use the canal on equal terms and conditions. The exact language of that treaty in part is as follows:

"The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

"Another section, however, of this treaty is as follows:

"It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost or by gift or loan of money to individuals or corporations or through subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

"The United States has gone ahead and fortified the canal, and taken other means to exercise complete control over it. Those who have favored excepting American coastwise vessels from paying tolls claim that that provision in the treaty providing that all nations shall be treated on terms of equality does not include the United States, for the reason, that the United States owns and is furnishing the money and doing the work of building the canal. The Hay-Pauncefote treaty was entered into to take the place of what was known as the Clayton-Bulwer treaty, which was conceived to form an obstacle to the United States building the canal, in that it provided in part that the United States and Great Britain should exercise equal rights to the use and management of the canal, and that it should be open also on equal terms to all other nations. This would have prevented our country from occupying or fortifying the canal to the exclusion of Great Britain. The United States was not willing to spend the necessary money in the enterprise with that treaty in existence. Therefore the Hay-Pauncefote treaty was entered into to supersede the Clayton-Bulwer treaty. With reference to this question, Secretary Hay, on January 15, 1904, said:

"The Clayton-Bulwer treaty was conceived to form an obstacle, and the British Government therefore agreed to abrogate it, the United States only promising in return to protect the canal and keep it open on equal terms to all nations in accordance with our traditional policy.

"For the reasons stated, and because, perhaps, of a broader one, to wit, that it would injure the commerce and good name of the United States should we even apparently take any advantage in the matter, there is very strong sentiment with the American people that Congress should repeal that portion of the law which now provides that American coastwise vessels shall be exempt from the payment of tolls, and that they, along with all other ships passing through the canal, shall do so on equal terms as to the payment of tolls. This, no doubt, will finally be done, and, in my judgment, it will be another splendid argument in favor of the greatness of the United States and its people, that even though they have built this canal at great expense and labor, yet they are willing to dedicate it to the good of the commerce and the people of the whole world, reserving no special benefits to the United States except, of course, in time of war. As I stated to you before, we have already fortified the canal for use in time of war. We also, in case of war, will give preference to our battleships and troop ships in passing through the canal, especially as opposed to those of the nation or nations with which we may be engaged in war. It seems very clear that the American people should have some special benefits from the canal because of the great amount of money that has been expended and risked in this great project, the total cost of which, when the canal is completed, will be approximately $375,000,000. I myself believe that the only preference this Nation should take in the use of the canal should be in time of war.

"While I feel that the treaty referred to gives us the right to the absolute control of the canal, and that we have a perfect right to give preference to our own coastwise shipping, yet, that we may do a great good and set a splendid example for the world in general, I am of the opinion that we can well afford to open the canal on equal terms to all nations, including our own, with the single exception referred to—in time of war. This question of the right and propriety of the United States in exempting its coastwise ships from the payment of tolls is one that will be much discussed during the present Congress, and I would specially urge upon the students of this college that they give deep study to that great question. The Members of Congress act in a great measure upon the advice and wishes of their constituents, and the only way in which a Member of Congress can intelligently vote the wishes of the people is by them giving intelligent consideration to questions that Congress must determine and by the people voicing those sentiments in petitions and otherwise to the Congress. This country has on numerous occasions demonstrated to the world that it is for the advancement of all the people, and that we want to help them whenever we can in the enjoyment of peace, happiness, and prosperity. I believe that everything honorable should be done as regards the Panama Canal by this country to prevent war and to settle all international questions and disputes by arbitration. War is a horrible thing, and brings suffering and want to many. Therefore in the settling of this dispute between the United States and Great Britain as to the question of the United States favoring American coastwise-trade vessels let us so settle it that we will be adding to, in the words of Charles Sumner—

"The great temple of universal peace, whose dome shall be as lofty as the firmament of heaven and as broad and comprehensive as the earth itself."

"And now, Mr. Chairman, in closing I want to express to you and to the faculty, students, and friends of this great college my sincere appreciation of being here to-night. I remember with a great deal of pleasure and benefit the years that I spent in this college as a student. The good that this college is and has been doing for many years for the young men and young women who are privileged to enjoy its benefit is immeasurably great. Men here, like Profs. Frick, Vosholl, Kriege, and the many other newer teachers whom I am not so well acquainted with, because they have come since I was here, as well as the good and splendid instructors that have passed away, such as good old Dr. Koch, Rinkle, and Kessler, have builded for themselves a monument that will redound to their glory and the good of our country in the many years to come. Their work for the Nation is as great as that of men who are much greater known and talked about. In fact, while the history of the Panama Canal will always be closely connected with the administrations of the great and good William McKinley, who was President of the United States when the real beginning of the canal was begun; the determined and successful President, Theodore Roosevelt, and that splendid and able statesman, President William Howard Taft, education in this section of the country for all that is best will be closely akin to the lives of the splendid and excellent teachers of this college, present and past, that I have named."

Farming Implements.

EXTENSION OF REMARKS
OF
HON. CLYDE H. TAVENNER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 20, 1913.

Mr. TAVENNER. Mr. Speaker, the congressional district which I have the honor to represent in this body—the fourteenth Illinois—boasts of some of the greatest implement factories in the world, giving employment to thousands of workmen and shipping their products around the globe.

The farmers of the entire world, one might say, are the clients of these concerns, and they take a deep and sincere interest in the welfare of those who till the soil, spending large sums of money in instructing the farmer how to get the best and surest crops.

Some of the most sensible articles on the subject of soil culture that I have ever read have emanated from the high-salaried expert investigators employed by these world's greatest implement manufacturers, and my purpose in making these remarks is to present an article which points out two things: First, that the American farmer is not the cause of the existing high prices; and, second, that the farmer can benefit himself as well as consumers by taking more interest in the raising of live stock.

It is a great pity that these tracts do not have a more extensive circulation among the farmers of this country. I am going to take the liberty of suggesting to this House and to my good friend Dr. Joseph A. Arnold, the very competent chief of publications of the Department of Agriculture, that it might be a good idea if these tracts, such as the one I now present, could be adopted as public documents and be listed and sent out upon request as farmers' bulletins, which are proving so popular among the farmers in every one of our districts.

The particular pamphlet which I desire to be reproduced here is from the pen of Dr. W. E. Taylor, director of the soil-culture department of Deere & Co., Moline, Ill. Dr. Taylor is one of the recognized soil-culture experts of the United States. It is my pleasure to know this gentleman personally. He knows the methods of modern soil culture, because he devotes his entire energy to studying them. And when he is not studying farming he is speaking to the farmers in the schoolhouses and fairs throughout the United States or is making addresses to farmers' organizations.

Regarding Dr. Taylor's article, which follows, the Moline (Ill.) Dispatch has the following to say editorially:

DR. TAYLOR'S ARTICLE.

Dr. W. E. Taylor's article in this issue on "What about the cost of living?" is well worth careful perusal not only by the farmer but by the city man and woman.

Dr. Taylor in this article corrects some mistaken notions and he controverts some bad advice that has been given by alleged experts to the farmers in this region.

The farmer is being blamed for the high cost of living. The doctor shows that prices of all staple farm products are unusually low. Prices of meat and dairy products are very high. For this the farmer is largely to blame, but he has the excuse of having been advised by high authority against the raising of live stock in connection with grain farming, because a given amount of grain will feed more people than the same amount of grain when converted into meat. The doctor shows the error of this position, and he urges the farmer to produce more live stock, learning first to give the animals a balanced ration of the coarser grains, and thus putting himself in position to largely increase his profits and to maintain the fertility of his soil.

The article contains some fresh statistics, direct from the official records in Washington, showing that we have practically ceased to export meat products and have begun to buy meat from other countries. So long as we pursue this course the cost of meat is bound to continue to increase.

Not only are we ceasing to export live stock and meats, but the live-stock census shows an alarming decrease in the number of animals of all kinds in the United States.

The doctor seeks to controvert also the notion that our soil is losing its fertility. Under more scientific farming yields to the acre have been increasing for 60 years.

And, due to improved implements and farming methods, the labor entering into a crop has been vastly reduced. For instance, in 1850 it required three hours of labor on the average to produce a bushel of wheat; now it requires only 10 minutes.

WHAT ABOUT THE COST OF LIVING?

[By Dr. W. E. Taylor, director soil culture department, Deere & Co.]

Is the cost of living abnormally high?

Is the farmer receiving more than a reasonable compensation for the products of his soil?

Is the soil losing its fertility?

These are questions of vital importance. So much is being written and said that it may be well to make some inquiry in order that we may know the facts.

It is possible that the gloom man, who is by nature a pessimist, is creating an impression which is not only erroneous but alarming the people.

The staple farm crops are lower in price now than the average price for the previous five years. Many crops, especially the staple ones, are 50 per cent lower than a year ago.

FARM PRODUCTS LOW.

The price of corn is nearly cut in two. Last year and the previous year it was worth from 70 to 75 cents a bushel, and now the farmer is receiving from 35 to 40 cents.

Wheat is selling from 70 to 80 cents a bushel, oats from 25 to 30 cents, potatoes are cheaper than they have been in many years and in sections where potatoes are grown extensively they are a drug on the market.

The prices of barley, rye, hay, buckwheat, and apples is at a very low ebb.

In fact, the farmer is receiving hardly enough for his crops to pay a fair interest on his investment and nothing but a bare living for his labor. The reason is not hard to understand.

The price of the farmer's products is governed by the inexorable law of supply and demand. When the price of his products is high or, in other words, when the price is very attractive to the farmer, he, without difficulty, produces abundantly, and if the supply exceeds the demand there is a reaction from a higher to a lower price. During the year 1912 practically all the products mentioned were high in price, due to a shortage in production the previous year, as will be seen by referring to the Government statistics. But, on account of the enormous production last year, which became available late in the fall, the prices, in strict obedience to the law of supply and demand, went down until no one who is at all familiar with conditions would regard them exorbitant or even high.

MEATS AND DAIRY PRODUCTS HIGH.

There is one class of food, however, which is produced on the farm that is extremely high, namely, meats and dairy products. The reason is strictly in keeping with the law of supply and demand. The flocks and herds have gradually been decreasing until the demand far exceeds the supply.

The following figures from the Bureau of Commerce indicate how rapidly the depletion is taking place. The figures indicate that we have practically ceased to export and that we are buying meat from other countries.

BUYING MEAT ABROAD.

Exports of fresh beef for the 9 months ended March 31, 1913, 5,400,000 pounds.

Exports of fresh beef for the 9 months ended March 31, 1907, 200,169,729 pounds.

Cattle exported in the 9 months ended March 31, 1913, 5,210 head.

Cattle exported in the 9 months ended March 31, 1907, 307,726 head.

Imports of cattle for the 8 months ended February 28, 1913, 222,216 head.

Imports of cattle for the 8 months ended February 28, 1907, 12,513 head.

Statistics further show that during the last 6 years beef cattle have decreased in the United States 14,306,000 head.

It is very evident that if the decrease in beef animals continues for another year or two, we will not only cease to export entirely but our purchases from abroad will increase and with that increase the price to the consumer will ultimately be prohibitive.

OTHER STOCK DECREASES.

The decreases in other meat products are equally as startling. For instance, during the year 1912, sheep decreased 880,000 head, dairy cows 202,000 head, and swine 4,232,000.

Butter, milk, cheese, and in fact all dairy products are extremely high and for the same reason that meat is high.

Who is to blame? What has brought about what appears to be an alarming condition?

Primarily the decrease in beef cattle began when the home seeker preempted the free ranges in the West. As those lands have been converted into cultivated farms, the herds have disappeared and the farmers in the Mississippi Valley and the Eastern States have not made up the deficit.

BAD ADVICE TO FARMERS.

Unfortunately the farmers in the Mississippi Valley have not been encouraged, to make stock raising an important feature, but, on the contrary, they have been advised not to raise live stock in connection with grain farming. For some unaccountable reason they have been told, even by prominent experts, that they should not raise stock in connection with grains, and have been given as a reason that a hundred bushels of grain will feed five times more people than will the same amount of feed converted into meat.

They seem to lose sight of the fact that meat to the American people is indispensable as a diet, and they also ignore the great value of manure from the stock to maintain the fertility of the soil.

They do not attempt to teach the farmer that if he will feed the coarser products of his farm to live stock in a scientific way—that is, give the animal a perfect balanced ration—he (the farmer) will secure double and sometimes treble the market value of his products in addition to the manure. The farmer is not told that the manure contains approximately 80 per cent of the plant food required to make the feed, nor that the organic portion of the manure when placed on the soil is converted into humus, a substance which is of even more value than the plant food it contains.

TWO INTERDEPENDENT FEATURES.

Most farmers appreciate the fact that when barnyard manure is applied to their soil its productiveness is greatly increased, and all farmers should know that there is not a people nor a country on earth that has failed to make farming a success when they have observed stock raising as a feature of equal importance with crop raising. They should not forget that barnyard manure is the one sheet anchor that has always maintained fertility of the soil and always will until the whole economy of plant life has been changed.

Where the interdependence of the two features has not been observed, the people have suffered because of the high cost of living, either of meat or grain products, and the fertility of their soil has gradually lessened.

RAISE MORE LIVE STOCK.

The solution, therefore, to the high cost of living, which all centers around meat and dairy products at the present time, is to raise more live stock for meat and more dairy cows, or, in other words, make the two features, namely, stock raising and crop raising, of equal importance.

The consumer should not hold the producer responsible for any profits or prices asked by the middleman or dealer. He should also remember that freight rates make a wide variation in prices in different localities.

Are our soils losing their fertility?

Are our crop yields decreasing?

SOIL GROWING MORE PROLIFIC.

The story was told a few years ago that our crop yields were gradually diminishing because of a loss of fertility of the soil, and that in a few years our people would come to want. That story has been told so many times that most people think it to be true.

Statistics show that the yield to the acre has been gradually increasing for the last 60 years, and that the highest crop yields ever secured have been in the last 15 years. Occasionally we have had a poor year, but the general trend is upward.

Stimulated by a high price for corn and by adopting better farming methods, Illinois farmers increased their corn crop for the year 1912 7⅞ bushels an acre; Iowa made an increase of 12 bushels an acre; Missouri 6 bushels; Texas 11⅞ bushels; in fact, all the corn States increased the production very materially and most of them reached their highest mark.

The same is also true of other crops, such as wheat, oats, barley, rye, and potatoes, all indicating that the fertility is in the soil and can be made available by adopting scientific methods.

CHANGE IN 60 YEARS.

It is estimated that 60 years ago approximately 80 per cent of the people of the United States were employed on farms, and that at that time we did not produce enough to feed our own people. To-day with only 33 per cent of the people on farms enough is produced to feed our population, which amounts to nearly 100,000,000, and have a goodly amount for foreign nations. This is due to improved implements and better farming methods.

For instance, in 1850 it required three hours of labor to produce a bushel of wheat, and now but 10 minutes; then the cost of labor was 17½ cents a bushel, and now 3½ cents. The time of labor required to produce a bushel of corn at that time was 4½ hours, and now but 41 minutes. The cost then was 35¾ cents a bushel, and now 10½ cents; all due to improved and better methods.

Without question, if prices of farm products were sufficiently attractive, our farmers would now be able to double the present production.

While most of our soils are still bristling with fertility, which can easily be made available by adopting the right methods, most of them are beginning to need humus or organic matter, a substance which can easily be supplied by applying barnyard manure.

It must be remembered that soils are sensitive to neglect, and prices soar just in proportion to the decrease in production. From 1751 to 1801, a period of 110 years, farms were neglected and the production was inadequate to meet the needs of the people, with the natural result that during the entire period of 110 years the lowest price paid for wheat on the Liverpool market was $1.52 and the highest price was $3.07. During that period the cost of breadstuffs throughout the world was certainly high, and the people had just cause to lay the high prices to the farmer, but at the present time we feel that it is unjust to hold the farmer responsible, except for the high price of meat and dairy products, and in that he has been misguided.

The Tariff.

EXTENSION OF REMARKS
OF
HON. GEORGE M. YOUNG,
OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. YOUNG of North Dakota. Mr. Speaker, I desire to call attention to a statement prepared by one of the large grain growers of my district upon the subject of the drawback as related to wheat. The statement reads:

DRAWBACK PROVISION MEANS FREE WHEAT.

For a number of years there has been a drawback provision in the tariff law which has permitted the rebating of 99 per cent of duty paid where the wheat imported is afterwards exported in the shape of flour. The flour millers have not been able to use the law to speak of, because it has been necessary to pay duty on the by-products—bran and shorts. That is to say, the drawback has been operative only as to a portion of the wheat, because there is no export demand for bran and shorts. So the existing drawback law has been practically a dead letter so far as flour is concerned.

ENTIRELY DIFFERENT IN THE UNDERWOOD BILL.

The Underwood bill is entirely different, because bran and shorts are on the free list, and because the Underwood law expressly provides that where the by-product is on the free list then the whole of the duty paid shall be refunded.

MAKES WHEAT PRACTICALLY FREE.

It is plain, then, that wheat is practically free to the extent of the flour exported. Last year over $50,000,000 worth of flour was exported, which will make it possible to use quite a large

amount of Canadian wheat under the drawback privilege in looking after the export trade. The farmers want to be treated upon the level. We do not want to have it understood that wheat is being protected when, in fact, it is not. Free flour and the right to mill Canadian wheat under more liberal drawback privileges will destroy the protection which would otherwise result from the duty of 10 cents per bushel on wheat. This unfair and unjust provision of the bill should be corrected. The way to correct it is to put the by-products of flour, bran and shorts, on the dutiable list. Better still, put flour on the dutiable list at about 50 cents per barrel. In fact, the only way to furnish real protection to the wheat raiser is to put wheat and that which is produced from it—flour, bran, shorts, and screenings—on the dutiable list. It is plain that for every barrel of Canadian flour imported about 5 bushels of American wheat will be displaced. It is almost as bad for the farmer to have flour on the free list as to put wheat on the free list. The effect is much the same.

This will not hurt the consumers, because it has become well known that the change in price of a few cents per bushel for wheat does not affect the price of flour or bread.

The Postal Savings Fund and School District Bonds.

EXTENSION OF REMARKS
OF
HON. JOHN E. RAKER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, May 15, 1913.

Mr. RAKER. Mr. Speaker, on April 7, 1913, I introduced the following bill:

A bill (H. R. 107) to amend an act entitled "An act to establish postal saving depositories for depositing savings at interest with security of the Government for the repayment thereof, and for other purposes," approved June 25, 1910.

Be it enacted, etc., That an act entitled "An act to establish postal saving depositories for depositing savings at interest with security of the Government for the repayment thereof, and for other purposes," approved June 25, 1910 (36 U. S. Stat. L., pp. 814–819), be, and the same is hereby, amended by inserting after section 17 thereof a new section, to be numbered and known as section 18, reading as follows:

"SEC. 18. Notwithstanding anything in this act contained, the board of trustees of said postal savings fund shall have the right, and it shall be their duty, to make loans from such fund upon school-district bonds direct, without the intervention of any bank or banking institution, upon the application of the board of trustees of any school district within the United States of America."

Under the proposed bill the Federal Government may loan its postal funds to the various public-school districts throughout the country at the rate of 2½ per cent, or at a saving of fully one-half to the school district. At present school bonds bear anywhere from 4½ to 8 per cent interest, the poorer districts paying the heaviest interest. The postal-savings funds, of which there is already $38,000,000, and which may increase to $50,000,000 before the end of next year, are, under the law, loaned to banks at 2½ per cent interest. The plan under H. R. 107 is for the Government to purchase the bonds for school districts, which offer a safe investment and at the same time the districts will pay 2½ per cent interest instead of 4½ or 6 or 8 per cent as at present. For instance, just now the city of San Francisco, Cal., is paying interest on $9,000,000 on bonds issued for school purposes at the rate of 4½ per cent. In other words, something over $400,000 annually goes for interest on these bonds. Under the plan suggested by H. R. 107 the amount could be reduced nearly 50 per cent.

The California State Legislature at its recent session unanimously passed a resolution favoring the plan suggested in H. R. 107. The resolution is as follows:

Assembly joint resolution 2, relating to requesting the United States Congress to forthwith amend and direct the Postal Savings System to loan its funds to school districts.

Whereas under the act of Congress now in force which establishes a Postal Savings System throughout the United States, there is no authority by which the board of trustees of said Postal Savings System is permitted to loan the funds of said system to the various school districts throughout the Nation; and

Whereas it appears that if such authority existed the school districts of this State and every State would be able thereby to obtain money directly from the funds of said Postal Savings System with more facility and at lower rates of interest; and

Whereas it appears that by their ability to borrow money more easily and under better conditions the school districts of this State and of every State will receive great benefits of economy, saving, and financial prosperity, which will consequently afford the rising generation of our Nation better education and development: Be it therefore

Resolved, That the Senate and Assembly of the State of California hereby join in requesting the Congress of the United States to amend the act establishing the Postal Savings System in such manner as will authorize and direct the board of trustees of said Postal Savings System to loan the funds of said system (in school district bonds of the various school districts of the several States) and that our representatives in the Senate and House of Representatives of Congress do their utmost to further such legislation as will effect the above result; and be it further

Resolved, That copies of these resolutions be forthwith transmitted by the clerk of the assembly to the President of the Senate of the United States and the Speaker of the House of Representatives of the United States and a copy hereof to each Member of Congress and to each newly elected Member of Congress.

Hon. James E. Delzell, superintendent of public instruction for the State of Nebraska, indorses the bill in the following letter:

STATE OF NEBRASKA,
DEPARTMENT OF PUBLIC INSTRUCTION,
Lincoln, March 28, 1913.

Hon. JOHN E. RAKER,
House Office Building, Washington, D. C.

MY DEAR SIR: Mr. Murray has presented the matter of House bill No. 107 to this department, and we are heartily in sympathy with same. I am writing a letter of introduction to each of our Congressmen, urging them to investigate the matter, that the boys and girls of Nebraska may have the benefit of a low rate of interest on the bonded indebtedness of our school districts.

Very truly, yours,
JAS. E. DELZELL,
State Superintendent.

In a favorable comment on this proposed legislation Hon. John F. Murray, of San Francisco, ex-State superintendent of schools of Colorado, says:

SAN FRANCISCO, CAL., *May 10, 1913.*

Hon. JOHN E. RAKER,
House of Representatives, Washington, D. C.

DEAR SIR: I most heartily indorse and approve of your bill H. R. 107, which provides for the loaning of United States postal funds to school districts.

The postal fund is handled by a board of trustees composed of the Postmaster General, the Attorney General, and the Secretary of the Treasury. Some time ago I wrote to these men setting forth my ideas on this matter. They replied as follows:

"POSTAL SAVINGS SYSTEM,
"OFFICE OF BOARD OF TRUSTEES,
"*Washington, September 5, 1911.*

"JOHN F. MURRAY, *San Francisco, Cal.*

"MY DEAR SIR: In reply to your recent letter I beg to state there is no authority in the act of Congress creating the Postal Savings System which would authorize the board of trustees to loan postal savings funds to school districts. School-district bonds which meet the requirements of the regulations are acceptable as security for postal savings funds deposited in banks qualified to receive them.

"Very truly, yours,

"T. L. WEED,
"*Secretary Board of Trustees.*"

CHILD CONSERVATION; SIN'S ANNIHILATION.

As the child is both cause and effect of government, and as the public school is the only institution that lays a helping hand on the shoulder of every child in the Nation, it is evident that whatever strengthens the public school is in a measure a benefit to every child in every school district in the Nation.

A few years ago the Federal Government established a postal savings fund. At present that fund amounts to $38,000,000.

This money is being loaned only to "National banks, State banks, savings banks, and trust companies doing a banking business" at 2½ per cent per annum, the banks being required to give as security for the loan "bonds backed by the taxing power."

This money is under the control of a board of trustees composed of the Postmaster General, the Attorney General, and the Secretary of the Treasury. They have ruled that school-district bonds come under the heading of "bonds backed by the taxing power," and banks have borrowed money thereon.

The amendment is very simple and can be easily understood by any voter. It in no way interferes with the operation of the existing law, save cutting out the middleman in the placing of school-district bonds in the hands of the Federal Government and getting the money thereon for 2½ per cent per annum.

"SEC. 18. Notwithstanding anything in this act contained, the board of trustees of said postal savings fund shall have the right, and it shall be their duty, to make loans from such fund upon school-district bonds direct, without the intervention of any bank or banking institution, upon the application of the board of trustees of any school district within the United States of America."

Here is an amendment which, if enacted into law, will be a great benefit to every school district in every State in the Nation. And the beauty of it is that to give this vast benefit to the children we take nothing from anyone nor do we add a penny to the burden of the taxpayer.

Surely all recognize the benefit to redound to government through a proper development of the children, and our Government should not hesitate to put forth every effort it can in that direction, as herein lies the cure for all corruption.

Ours is the greatest government the world ever saw. The Federal Constitution is the most liberal ever written. Our natural resources are valuable beyond computation. Yet with all these advantages poverty and crime are increasing on every hand.

The founding of each government that ever existed was for the best good of the whole people. Soon, however, selfish greed caused the powerful to usurp the nation's natural resources. Then followed protests from the masses, corruption from privilege holders, moral decay, and death of the nation.

In America we have run this gamut so rapidly that, according to the words of leading thinkers, we while yet in our youth have reached the stage of vice and corruption that immediately preceded the downfall of Rome. Will we allow history to repeat itself?

If we are honest with ourselves, we will discuss our present deplorable moral condition with calmness, but with truth, deep, searching truth. While we should blush for shame at existing conditions, still it is the part of wisdom to search out the facts, as we can not remedy the disease without knowing the cause.

But a few years ago this Nation held in reverence the words "mother, home, and heaven." To-day all thinking people stand aghast at the awful truth. Never since the days of Christ has there been such an unsettled condition of the public mind. Statesmen are at their wit's end; courts and legislatures are as a rudderless vessel on a stormy sea; the bonds of society are being relaxed. We trample on the things our mothers held sacred until to-day many writers tell us "If the home is to survive, marriage must be modernized," and the devils in hell approve.

WHEREIN LIES OUR WEAKNESS.

Consider well this statement. The collectivity can not think. While each individual can reason, the thoughts of the whole are as grains of sand. The collectivity never wrote a book, painted a picture, nor conceived an invention. On the other hand, the collectivity never committed perjury, never bribed a jury, nor corrupted a legislative body.

There are in the United States about 100,000,000 persons. The power to think is in each individual head. Each person thinks according to his occupation and environment. A moment's thought will show you the tremendous amount of agitation—speaking and writing—required to arouse this vast multitude into united, thoughtful action.

This certainly should convince all of the awful responsibility resting upon our leaders, such leaders as the President and Cabinet, Senators and Representatives, governors and legislators, mayors and city councils, editors, ministers, and school directors.

The sin of omission is equal to the sin of commission. Hence I unhesitatingly declare that unless these, our leaders, strive strenuously and continuously to bring about a better moral condition, their souls will be smeared with the blood of the debauched women and children of their day.

There is an old saying "Strike while the iron is hot." There has been a great amount of agitation for moral reform during the past 20 years, and President Wilson seems to look with favor upon such efforts; and so I believe that the hour has arrived for a far-reaching, clearly defined movement looking toward a better moral condition through proper child development. "For as the twig is bent the tree inclines." If we rear our children strong and clean, government will be strong and clean.

ALARMING INCREASE OF CRIME AMONG CHILDREN.

* * * * * * *

Crime among children, insanity, and feeble-mindedness among our youth are on the increase three times the birth rate. If you desire further information on these matters get a copy of the report of the Commissioner of Education, a copy of the report of the late Secretary of War, a copy of the report of the late Police Commissioner Bingham, of New York; a copy of the Medical Journal, containing the speech of Dr. H. H. Hazen, of April 18, 1913; also send for copy of report of the late Secretary of Commerce and Labor, containing the statistics on the increase of crime and insanity. How long, oh, leaders, will the ballot have any sacredness under this rapid increase of inefficiency?

Seeing the terrifying flood of vice and corruption that is sweeping over our land, I would that I could cry out so loud that every minister, editor, politician, public speaker, and writer could hear me. Then would I say to them, Why spend your time digging drains to a swamp place when the inflow of corruption is three times as great as your ditches can possibly carry away?

There are in this Nation about 45,000,000 children; 27,750,509 of them are of the school age. The average daily attendance last year was 12,843,357. Such treatment of the child is like a retired merchant who purchased a fruit farm. He found thereon thousands of young, straight, thrifty trees and a few old hulks. He spent his time in a vain endeavor to straighten up the old hulks, and as a consequence at fruit-picking time he found most of his young trees with bodies bent and broken, with limbs twisted and misshapen, and all because of his misapplied effort.

From eternity to eternity there is nothing but the child. Man is but a child of larger growth. Give every child proper care and guidance and you will minimize, and eventually abolish drinking, gambling, white slavery, divorces, labor troubles—all man's inhumanity to man. But we are

PATCHWORK REFORMERS.

Jesus Christ declared against patchwork in child development. But we split upon his advice. We deific the child, then erect jails and penitentiaries in which to cleanse it. We saturate the child with filth, then we separate into groups to fight drink, divorce, white slavery, etc.

Our efforts against evil are like the efforts of several physicians who are doctoring the patient for blood poison. One poultices the feet, one poultices the hands, another bloods the patient. As none of them has reached the seat of the disease the patient continues to grow worse.

And yet there never was a time in the world's history when so many warm-hearted men and women were devoting their time and their money to the betterment of humanity. Why do we fail? We do not go to the seat of the trouble. If we would sweep vice and corruption from the land, we must see to it that every child has proper development.

TYRANNY OF HABIT.

But let us not deceive ourselves into the belief that all we have to do is to hold meetings and pass resolutions. For 2,000 years the church has been thundering against evil from a million pulpits, while the fearless press has laid bare sin's ravishings. Yet sin and corruption grow apace. Remember that it is hard to teach an old dog a new trick. We have so lived these many years that our loose way of thinking has become a habit with us. Now, habit is the strongest human characteristic. It can even grapple with love, throttle it, and trample it into the dust. A drunkard or a gambler may sincerely love the woman he marries, but when habit calls love, wife, and children are forgotten. If we want men and women to have habits of clean living, we must inculcate such habits in the child.

Mental habit is as tyrannous as physical habit, hence we ninety-nine times in a hundred demand a precedent before we act. Habit is as the roadbed of a railroad over which hundreds of ponderous trains pass daily only to be carried to safety or destruction according to the strength of the rails. It is as hard for a slave to habit to break away therefrom as it is for a train to leave the rails and run up hill or across country. The supreme necessity is to

SAVE THE CHILDREN.

There was a rapid river with a high falls over which no person could be carried and live. The river was full of children whose hands were tied. They were being carried over the falls in large numbers. A cry of alarm was heard, and the whole people ran to the rescue of the children. Yet despite their strenuous and continuous efforts many children were swept to their death. Word came to the people that a number of men were up stream tying the children's hands and casting them into the river. With one accord the people rushed upon these men and chased them out of the country. Thus by going to the source of the trouble all the children were saved with less effort than was put forth to save the few.

And as one weed in a garden may scatter its seeds and foul the whole garden, so one vile or vicious child may foul a whole neighborhood or school. And so the future must see to it that every child gets proper care and counsel.

The wise farmer gives greater care to the tiny shoot than to the mature plant. Are plants of more value than men? If a plant becomes dwarfed or crooked, it can be pulled up by the roots and that ends it, but if a child becomes mentally dwarfed or morally crooked it will be a lifelong curse to itself and all its associates.

THE LAWS OF GOD AND MAN.

Too many of us think lopsided. We forget that the foreordained laws of God are from everlasting to everlasting. Did you ever sit by old ocean and wonder at its ever-moving vastness? Yet you can tell a thousand years in advance just when it will be high tide or low tide on a given day. Did you ever look into the heavens and, seeing the thousands of whirling worlds, become lost in wonder? And still you can know 10,000 years in advance just when there will be an eclipse of the sun or moon or just what time the moon changes will take place. Then, have you realized that in his sphere man is supreme? He can act or he can refuse to act. But if man transgresses the laws of nature he can not escape punishment. A man sitting by a fire could put his hand into the fire or he could keep it out. But if he put his hand into the fire his free will could not save him from the foreordained laws of nature.

Working in harmony with nature is like a man with a two-wheeled cart, with but little effort he can move straight forward. To deny foreordained natural laws or free will man power is to take one wheel off the cart, and though the man work ever so hard he moves in a circle and gets nowhere.

Nature has provided that the proper atmosphere for child development is the home environment. Where a man and woman love, marry, and live in peace there is the nearest heaven on earth the mind of man can conceive. Hence the revised school systems must have a home atmosphere; and as there are millions of homeless children in this Nation, the school must take care of every homeless child.

MAN'S SCHOOL LAWS DEFY NATURE'S LAWS.

The first law of childhood is activity; our school boards make activity in school a crime. Nature calls for men and women to marry and proves that mother love is the nearest Christlike attribute of humanity. Our school boards consider motherhood in a teacher an offense. Nature has endowed each child with different capacities; the school boards tie them together and make them walk in lock step. We are like the man who attempted to erect a many-storied brick house on the ocean.

Child development and the public-school question are as far-reaching as every other question of human activity combined. Our schools must become the very soul of the community. They are as a great mill into which we pour every kind and condition of people and then expect that superior grist American citizens. How varied and steadfast must be the influences to accomplish that great work.

THE FUTURE HOME SCHOOL.

As selfishness, weakness, and corruption are far-reaching and deep-seated, the remedy therefor must be continuous and as far-reaching. So the future school must be a permanent home. The studies and occupation must be such as to keep the child from becoming supercilious, noninitiative, seeker after clerical employment, afraid of manual labor. So each child will be required to do enough manual labor to keep its physical system in proper condition, so that its brain will be clear and its stomach strong; then its blood will flow through its veins with such force as to sweep every disease-breeding germ from its body. At present too many of our school children have weak hearts, weak stomachs, sluggish blood, diseased bodies, general debility.

Let us take our present school system for a foundation; then add to each school site 10, 20, 40, or more acres of ground; then place two of your best teachers in this school home, the parents of the district being the only power to remove. Give every orphan child in the district a home here as one of the teachers' own children. This would abolish at one move all child poverty, child slavery, and child idleness.

Referring to California, my home State, I assert that if a school was located under such conditions on a 10-acre tract of grapes, apples, prunes, or citrus fruits it would be self-sustaining. Give the children opportunity, not charity.

Here the boys, while developing their bodies and brains, would have plenty of time and ability to erect the needed cottages, bathrooms, recitation rooms, music rooms, conservatory, library, auditorium, gymnasium at little or no expense.

Here would be a band stand, baseball grounds, tennis grounds, basket-ball grounds. These, with the trees, flowers, and beautiful lawn, would form such an attraction that few young people would think of leaving the home grounds to look for pastime in the city.

Here every week there would be a singing class, a spelling bee, a lecture, or a debate.

On each school ground there would be a carpenter shop, a blacksmith shop, and a shoe-repairing shop; thus fitting the boys for life's actual duties.

GIVE CHILDREN HELPFUL TRAINING.

Here boys and girls would get practical farm training by doing farm work. They would find pleasure in caring for animals and looking after the crops. Thus when they reached maturity their desire would be for farm life or mechanic's life, but always clean life.

And here our girls would get real home training in home making. Home making is the greatest business on earth. It is the foundation for all contentment. A happy home makes a man's toil light. A man who sits at home in the evening smoking his pipe or pottering around the garden, finds himself in good condition to meet the next day's work. But how can our girls make home comfortable and happy, if they know nothing about home keeping and have to depend on hired help, who, very likely, know as little about home making as does the mistress.

The first thing for us to do is to fit our girls to be heads of households, then make our sons worthy to be the husbands of such girls, then give them to understand that the farmer's wife is the real first lady of the land and the mechanic's wife is her sister.

Each district would have an electric power plant to supply light and power for the school. How easy to supply light and power to the farmers of the district at a low rate and yet at a profit.

Each school-teacher would be commissioned a postmaster. The rural mail carrier, instead of trudging around from one farmhouse to another,

would ride up to the schoolhouse, pass out the incoming mail and parcels, take the outgoing mail, then hasten away to the next school. In the evening as the children started home the teacher would pass out the mail. Thus the vexing question of free rural mail delivery would be solved to the remotest home of the Nation.

OUR MORAL FORCES AS ROPES OF SAND.

Jesus Christ, in speaking of the moral character of the children, said we should build upon a foundation solid as a rock if we wanted our children's honor to stand the stress of business. He told us if we would build upon a loose moral character like sand the honor of the children would fall at the slightest test.

On such a school farm the children would grow up morally strong, physically healthy, and mentally steadfast. Then, when they entered the business avocations of life, they would be numerous enough and morally strong enough to remodel all our activities. And the same would be accomplished as unconsciously as a healthy tree brings forth fruit after its kind.

One grave, if not fatal, weakness in "government by the people" is the inability for a great thought to be put into the minds of all the people at the same time. Our territory is so large and our people so scattered that the most widely circulated publication reaches comparatively but a few.

But here in this home-school system all that would be remedied. A Federal commission of five capable persons would prepare a monthly address on humanity's welfare, not politics, which would be read in every schoolhouse in the Nation, and everyone in the class for which it was prepared must be at their local schoolhouse on that night.

* * * * * * * * *

And in the warm afternoons, when nature called to the tired child, mother would gather it to her arms and place it in a restful position where the sunshine and warm breezes would soothe it to rest and restore its mental and physical vitality.

Think of the uplifting influence of such a home school. Every child well fed, well dressed, its little body kept clean, and tucked into bed each night with a kiss and a smile. At present too many of them go to bed with a kick and a curse as their nightly benediction. And they will return measure for measure when they come into power.

Here an education would mean the completest mental, moral, and physical development, so a wider knowledge, a broader culture, a stronger character, and a higher standard of life's duties would follow.

Here every pupil would gain the strength of character given by rural environment as well as the intellectuality gained at our best city schools.

WHAT CAN SAVE US FROM OURSELVES?

* * * * * * * * *

Our treatment of the child is like the farmer who planted an apple seed. It sprouted, grew, and in due season bore fruit. When the farmer went to gather his apples, he found this tree had bore crab apples. He was disappointed, but as he looked the tree over he saw that the fruit grew on the ends of the twigs, and so in his ignorance he said to himself, "I will snip off the ends of the branches upon which these crab apples grow. Then next year I shall expect a crop of Pippins or Baldwins." Then the devils in hell laughed.

CHARACTER BUILDING THE PARAMOUNT ISSUE.

Our present school system is too sedentary, which carries with it several detrimental effects. It habituates us to the ways and wants of office life, and so when we leave school our desires are away from physical labor to clerical employment. We have to go to the city to find work suited to our desires.

* * * * * * * * *

As a man thinketh in his heart so is he. False thoughts put into a child's mind will go with it through life. Yet visitors at our schools are apt to laud and magnify the glories and powers of captains of industry, of politicians, of the rich and powerful. Now, we all well know that not one child in a thousand can go through life without working, and so we are false leaders and teachers if we fill the child's mind with the idea that to earn its daily bread by the sweat of its brow is degrading, something to be shunned. We mislead the children when we give them to believe that wealth or political power makes the man or that jewels, fine dresses, and social leadership makes the woman.

Proceedings for Contempt Against Charles C. Glover.

REMARKS
OF
HON. HENRY ALLEN COOPER,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,

Friday, May 9, 1913.

The House had under consideration the following resolution (H. Res. 99):

"*Resolved*, That the Speaker do issue his warrant, directed to the Sergeant at Arms, commanding him to take in custody wherever to be found the body of Charles C. Glover, of the city of Washington, in the District of Columbia, and the same in custody to keep, and that the said Charles C. Glover be forthwith brought to the bar of the House of Representatives on this the 9th day of May, 1913, to answer the charge that he, on Friday, April 18, 1913, in the city of Washington, D. C., committed an assault upon the person of Representative THETUS W. SIMS, a Representative in the Sixty-third Congress from the State of Tennessee, because of words spoken by the said Representative SIMS in debate on the floor of the House of Representatives while the House was in regular session during the Sixty-second Congress, and that in committing said assault Charles C. Glover has been guilty of a breach of the privileges and a contempt of the House of Representatives; and that the said Charles C. Glover be furnished with a copy of this resolution and a copy of the report of the select committee of the House of Representatives appointed to investigate the charge made against him in the House of Representatives."

Mr. COOPER. Mr. Speaker, I did not intend to say anything at this time on this question, and changed that intention only after hearing the gentleman from Tennessee [Mr. MOON] attack in so virulent a manner the character of Mr. Glover.

I never spoke to Mr. Glover but once in my life. I have had no business relations with him. I have never owned an inch of real estate in the District of Columbia, nor even the slightest interest in any such real estate. There would be nothing necessarily wrong if I had owned something of that kind, but I have not. Parks and park extensions here are of no interest to me, except that I wish, as our people everywhere wish, to see Washington in all respects made worthy of its proud position as the Capital City of the Nation. But I agree cordially with this passage in the report of the special committee:

"The House of Representatives is vitally concerned with the safeguarding of its privileges and the preservation of its legislative integrity and dignity. It is just as seriously concerned, however, with the maintenance of such a course of conduct on the part of each of its individual Members as will assure to every citizen of the land protection from defamation on the floor of the House."

I speak now to assist, if I may, in rousing a spirit here which, in the language of that report, will protect citizens from defamation on this floor.

I well remember when this trouble began. I heard the speeches by Mr. Andrus, then a Representative from New York, and by the gentleman from Tennessee [Mr. SIMS]. Mr. Andrus is a business man—a millionaire several times over—and business men, we are often reminded, are presumably very accurate. But see how grossly he was mistaken: He said—RECORD, March 3, 1909—that on March 27, 1906, Senate bill 5289 called for $660,000—referring to the property on which Mr. Glover had an option; that on March 30, 1906, "evidently a conscience was pricked"—those were his words—"evidently a conscience was pricked, and a bill was introduced for $550,000, $50,000 less"; that "on February 16, 1907, the conferees of the House and Senate came to an agreement of $475,000, which," he said, "was not satisfactory," but that "the thing took on new life," and so forth.

Then, he said, a new bill was brought in here asking for $423,000. Thereupon a Member of the House asked him if it was the same proposition, and Mr. Andrus replied that it was; the same bill. He said, "We are talking now about $423,000 as against $600,000 three years ago."

The gentleman from Tennessee [Mr. SIMS] followed Mr. Andrus and said: "They started in on this tract at $600,000, and now they have got it down to $435,000."

But he also was entirely mistaken.

Now, here is what Mr. Glover said about this before the Committee on the District of Columbia:

> Mr. Chairman, the statement that I offered that property to the Congress of the United States at $600,000, that I was pricked by conscience and reduced the sum to $550,000, that it was embodied in any bill by my authority at $475,000, or, as Mr. SIMS says, is now before the House at $435,000, is an unqualified falsehood. I never offered the property save at the one single price of $420,000, plus the $3,000 added by the Commissioners of the District of Columbia. * * * I do not believe, Mr. Chairman, that these gentlemen intended to make an untrue statement—

That was Mr. Glover's language—

> I do not believe, Mr. Chairman, that these gentlemen intended to make an untrue statement; but the bill was before them. Here is the identical bill, and the last clause of the bill says that the price of that land was $423,000.

In reply to this, the gentleman from Tennessee [Mr. SIMS] made a speech in the House on the 15th of January last in which he sought to explain his mistake, for it was a mistake, the fact being that this $600,000, $550,000, and $475,000 reduction was upon Meridian Hill property and not at all upon the Massachusetts Avenue—Rock Creek Park—property, on which Mr. Glover had an option for park purposes.

The gentleman from Tennessee [Mr. SIMS] said:

> I heard the remarks of the gentleman from New York, Mr. Andrus, and I was yielded five minutes, in which I discussed the bill as best I could. * * *
>
> Now, the facts were that the bill was for $423,000. I am quoted in the RECORD as saying $435,000.

He omitted to mention that he was quoted in the RECORD as saying in his speech that $600,000 had been first demanded for the land in question.

> Now, at nearly the hour of midnight, on the last day of the session, on a motion to suspend the rules, when there was no time to investigate and understand anything, almost anyone was liable to be misled. But the gentleman from New York, Mr. Andrus, spoke before I did, and read from a report by Senator GALLINGER.

And so forth.

> But as that bill, which this report accompanied, also embraced another tract of land known as the Meridian Hill tract, the two being together, the gentleman from New York, Mr. Andrus, made the mistake of reading from that part of the Senate report which referred to the Meridian Hill property instead of this Rock Creek Park addition.

Mr. POU. Mr. Speaker——

Mr. COOPER. One moment. I have only 10 minutes, and I wish to get through with this. I would have said nothing at this time had there not been this attempt, needlessly—because we are now simply to vote whether there shall be an arrest and a hearing—to go into an ex parte statement of the alleged facts, when the RECORD itself shows that the gentleman from Tennessee [Mr. MOON] himself was as utterly mistaken as was his colleague [Mr. SIMS] when he and Mr. Andrus made the first charge.

Mr. POU. Mr. Speaker——

Mr. COOPER. I can not yield.

Mr. MOON. You have made a statement in reference to the matter that the RECORD shows is not correct.

Mr. COOPER. I have not the time to yield. The gentleman from Tennessee [Mr. SIMS] said on January 15 that he made that mistaken statement at about midnight, "when there was no time to investigate and understand anything." But in saying this the gentleman was again mistaken. For his speech of March 3, 1909, is in the RECORD of that date, on page 3793, and the same RECORD shows that after his speech there was a roll call, a speech of some length by Mr. BURTON, a message from the Senate, and the transaction of other business, until the House took a recess on a motion made by the gentleman from New York [Mr. PAYNE] (RECORD, Mar. 3, 1909, p. 3802):

> Mr. Speaker, I move that the House do now take a recess until 10 o'clock this evening.
>
> The motion was agreed to.
>
> Accordingly (at 6.15 p. m.) the House was declared in recess.

This RECORD, showing the recess at 6.15 p. m., following the transaction of business after the speech of the gentleman from Tennessee [Mr. SIMS], is an absolute demonstration that the speech was made not at "nearly the hour of midnight" but during the afternoon, and not far from 4 o'clock.

I know that the privileges of the House of Representatives, and especially, Mr. Speaker and gentlemen, the right of free discussion on this floor and in the Senate, are necessary to the preservation of the liberties of the American people. No patriot with any knowledge of constitutional history doubts that this is absolutely true. But I do know also that there is nothing else so dear to an honorable man as is his reputation for integrity. Bitter, merciless charges were made in speeches in the House against the integrity of Mr. Glover. Here is the public record of these charges confronting him and his family and friends, and here after he has passed from earth, here always while the years come and go, this record will remain to confront his descendants.

Mr. Speaker, though we can not excuse an attack upon a Representative in Congress for words spoken in debate, yet in view of the admitted facts in the pending case we may pardon something to the feelings of a man who is without remedy under the Constitution, denied opportunity to be heard in court, utterly helpless, against charges that would forever rob him of his good name.

The SPEAKER. The time of the gentleman has expired.

Mr. POU. I should like to ask the gentleman a question.

The SPEAKER. The gentleman has no time to answer.

Mr. COOPER. Mr. Speaker, under general leave to extend remarks I desire to call attention to certain pertinent facts not already mentioned and to discuss more fully others to which reference has been made.

I have never been a member of the Committee on the District of Columbia and have therefore been obliged, when District bills were before the House, to rely for knowledge of the facts upon gentlemen presumed to be familiar with them.

On March 3, 1909, I voted against the bill to extend Rock Creek Park, my vote being influenced by statements made in the debate by the gentleman from Tennessee [Mr. SIMS] and the gentleman from New York, Mr. Andrus. Their speeches began the controversy by making charges and impugning motives. It now appears that the whole controversy turned on the confusion by these gentlemen of the Massachusetts Avenue project with the Meridian Hill project. The Massachusetts Avenue project called for an appropriation of $423,000. No more ever was asked for it. The other project called originally for an appropriation of $600,000. Both gentlemen confused the two, as the gentleman from Tennessee [Mr. SIMS] in subsequent speeches admitted.

Mr. Glover, as he said under oath, December 30, 1912, before the House Committee on the District of Columbia, never saw the speech of the gentleman from Tennessee [Mr. SIMS] until the month of December last. He declares in his newspaper article—January 25—that he was so disappointed and disgusted by the defeat of the park bill that he did not read even the newspaper accounts, and, until December last, never saw the report in the CONGRESSIONAL RECORD, which publication he does not take and does not ordinarily read. Although he was in and out the House gallery during the debate on March 3, 1909, he says that he was not in the gallery during the speech of the gentleman from Tennessee, and therefore was entirely ignorant of it until December, 1912.

Having been summoned, on December 30, 1912, as an expert witness on land values before the House Committee on the District of Columbia, then investigating the so-called "insurance company charges," Mr. Glover, apparently filled with indignation which the speeches of March 3, 1909, had excited, proceeded suddenly, on the spur of the moment, and apropos of the discussion of land values, to tell the story in reply to the gentleman from Tennessee. This he did without having with him any of the options or other papers relating to the Massachusetts Avenue Park project. Naturally in such an offhand statement, without documents at hand, minor inaccuracies occurred, but the substance and the important part of what Mr. Glover said was correct, as was shown in his subsequent newspaper article after he had consulted the documents in the case.

Following the statement of Mr. Glover before the House committee came the speech of the gentleman from Tennessee [Mr. SIMS], on January 15 last, in which he quoted Mr. Glover's statement before the House committee, admitted that he had been confused and misled as to $600,000 being first demanded for the park project, but then proceeded by further insinuation practically to reiterate his charges.

To this second speech Mr. Glover replied in an article in the Washington Post and other papers on January 25. With that article he printed a sample of one of the options covering the greater part of the property, namely, 88 acres out of 99 $\frac{14}{100}$ acres. The remainder of the tract was in small parcels, including a small one of 2 $\frac{1}{10}$ acres belonging to a Member of Congress, who, Mr. Glover said, was more unwilling to sell than were even any of the other owners and demanded and received promise of a higher price because he was unwilling to sell. I have recently learned that this Member was from an Eastern State.

Mr. Glover said also in his article that, in general, the owners were reluctant to sell, because it was known that the land was rising in value; and that for the same reason they were reluctant to extend options at the one price, namely, $420,000, agreed upon at the beginning of the negotiations in which he had secured the options, which price, with the additional sum of $3,000 added by the District of Columbia for official expenses, remained the price to the end. But, as Mr. Glover further said, and he was confirmed by Mr. Charles J. Bell in his own subsequent newspaper statement, he—Mr. Glover—did get extensions under the options which covered the whole period of the negotiations with Congress looking to legislation necessary to secure the property. The text of the sample option shows clearly that it could be used only for public park purposes, and that Mr. Glover could not personally make a dollar of profit out of it.

In his testimony before committees of Congress Mr. Glover made no statement as to the names of the owners of the property nor in concealment of them. Knowing the difficulty he had had in getting the options, knowing, as he said, that the price of the land was advancing and that he could not have secured an extension of the options but for the effects of the financial depression of 1907 which checked the sale of property generally, and being eager to add to Rock Creek Park, which the facts show had been created largely through his efforts, Mr. Glover very probably thought the names of the particular owners a negligible quantity.

I am convinced from a thorough reading and study of all of the documents and pertinent facts in the case that the charges and insinuations in the speech made January 15 last by the gentleman from Tennessee [Mr. SIMS], that the owners were combining with Mr. Glover to unload their land on the Government at an unreasonable price, and that Mr. Glover himself could have made some personal profit out of the sale, are disproved by the known facts set forth in Mr. Glover's newspaper article of January 25 and in a subsequent newspaper statement of Mr. Charles J. Bell. I have no personal acquaintance with Mr. Bell, nor have I ever, directly or indirectly, had any communcation with him. I do know him, however, by reputation as one of the leading business men and citizens of Washington. A little later in these remarks I shall insert his statement.

The gentleman from Tennessee [Mr. SIMS], in a speech in the House, February 5 last, replied to Mr. Glover's newspaper article. In this, his third speech, the gentleman changed his ground and attacked the good faith of the options themselves and the good faith of all who had taken part in them. He charged that these were bogus options, and treated the sample option as though it were the only option. He also repeated the charge that Mr. Glover had misled the Appropriations Committee when he said that the options could not be renewed, and

declared that Glover was not actually in possession of options covering the whole period of the efforts before Congress.

Thus the gentleman from Tennessee once more impugned the honesty of Mr. Glover and the good faith of all concerned in the transaction with him. In closing this speech the gentleman said that he would not follow the matter further, and "one of my reasons for not doing so is that I do not wish to add further to the mortification and humiliation of a dishonored, discredited, self-impeached man."

After making this bitter concluding statement, and also before beginning this speech, the gentleman from Tennessee [Mr. SIMS] did ask unanimous consent that Mr. Glover's newspaper article might be published in the CONGRESSIONAL RECORD. These two requests were defeated by the objections of another Member.

Subsequently—February 13 last—Mr. Charles J. Bell published in the Washington Post a statement of his own, to which I have referred, refuting absolutely Mr. SIMS's statement as to the options. I am unable to find that any attempt was made to get Mr. Bell's statement in the RECORD, such an attempt probably seeming hopeless in view of the exclusion of the Glover article. Nor can I anywhere find a denial of the truth of the Bell statement, nor any attempt to answer it. Here is the statement in full as it appeared in the Post:

"DENIES SIMS'S CHARGES—MR. GLOVER DID HAVE PARK LAND OPTION, MR. BELL SAYS—NO 'FRAUD ON GOVERNMENT'—PROOF EASILY OBTAINABLE BY REPRESENTATIVE, ASSERTS FINANCIER—CONCESSIONS WERE DIFFICULT TO SECURE, HE ADDS—WITNESS BEFORE INSURANCE INQUIRERS MERELY QUOTED ONE CONTRACT.

"Charles J. Bell, president of the American Security & Trust Co., last night gave out the following statement, based upon the viewpoint of the trustees and owners of the Massachusetts Avenue property which between 1906 and 1909, was offered under an option from the owners by Charles C. Glover for public park purposes:

"'My attention has been directed to a statement made by Representative SIMS on the floor of the House, in which, while he speaks of myself and other trustees in a complimentary manner, he makes the statement that the option given to Charles C. Glover in March, 1906, by which the trustees of the Massachusetts Avenue syndicate agreed to sell through him to the United States Government, for park purposes, a tract of land lying between Rock Creek and the National Cathedral, was "a bogus option," "a mere framed-up counterfeit device." And he further charges Mr. Glover with making, under oath, "a deliberate false statement, known to be false when made," when he, Mr. Glover, stated that he had a continuous option from the trustees and owners of the land, running through the various sessions of Congress from March, 1906, to the close of the second session of the Sixtieth Congress, expiring in the spring of 1909.

"PROOF OF THE OPTION.

"'If Mr. SIMS had taken the trouble to call at my office I should have been very glad to exhibit to him absolute proof of the existence of these options, running from March, 1906, to the close of the second session of the Sixtieth Congress, and thus prove to him conclusively that the statement made by Mr. Glover was absolutely correct, and that during all the period of time he was offering this property to the United States Government he had a full and complete option, made in perfect good faith, granted to him by the trustees and owners of the property.

"'Mr. SIMS also charges Mr. Glover with making a false statement in relation to the difficulty the trustees had in getting the owners to consent to the extensions of the original option. As I had personal charge of this matter for the trustees and owners, I speak with authority in stating that it was with the greatest difficulty I succeeded in getting a number of the owners to consent to these extensions, so that Mr. Glover was entirely justified in the statement he made to the subcommittee on appropriations that he believed it impossible to renew the option.

"SHOULD HAVE LEARNED FACTS.

"'Mr. SIMS is undoubtedly correct in his definition of a falsehood as being a "false statement made by a person who knew it was false at the time he made it," but surely Mr. SIMS does not believe that any man is justified in making reckless and unwarranted statements charging three gentlemen with being parties to the giving of a bogus option to the United States Government, and another with uttering a falsehood without first having at least taken the trouble of finding out the truth or falsity of the charge, especially when he makes these statements on the floor of the House of Representatives under immunity granted to Members of Congress.

"ONE OPTION AS SAMPLE.

"'It must be evident to any intelligent reader of Mr. Glover's recent published statement, first, that when he appeared before the insurance investigating committee he spoke offhand and without any documents before him, and, second, that when he prepared his statement in reply to Mr. SIMS, he quoted only from one option contract and one renewal as a sample and for the specific purpose of showing that the option was for public park purposes exclusively, and that no private profit could come to him from the transaction.

"'Mr. Glover needs no defense from me; his position in the community and his many acts of public service are well known to all of us, but I feel I would be false to myself, to Mr. Glover, and to my cotrustees if I did not publicly deny the truth of the accusations made by Mr. SIMS.'"

Mr. Glover, having been thrice attacked by the gentleman from Tennessee [Mr. SIMS] on the floor of the House, and his answer having been refused publication in the CONGRESSIONAL RECORD, being unable to proceed against the gentleman from Tennessee in the courts because of the immunity granted that gentleman by the Constitution, and, as he says, feeling deeply the gross injustice which had been done him, did, in a moment of passion—as he admits in his letter to the special committee—and, under great provocation, slap the gentleman from Tennessee twice in the face upon meeting him for the first time after this open controversy began. This, as the testimony reported by the special committee shows, he did openly, while fronting the gentleman from Tennessee, not from behind nor secretly.

Moreover, the testimony before the special committee overwhelmingly shows that the statement on this floor of the other gentleman from Tennessee [Mr. MOON] that Glover slapped his [Mr. MOON'S] colleague only once, and that he did this mildly and only with a view to provoking his colleague to strike back, so that Glover might have color of justification in fatally wounding him, is without foundation.

To say that Mr. Glover's remark to Representative JOHNSON expressing regret that the laws against dueling prevented a man from calling to account one who, he said, had slandered him, meant that Mr. Glover had a purpose to commit murder is unwarranted.

Undoubtedly all this trouble could have been averted if, after Mr. Glover, in December last, called attention to the error of the gentleman from Tennessee and at the same time acquitted him of intentional misstatement, there had been an acknowledgment of the mistake unaccompanied by new attacks upon Mr. Glover's integrity.

Mr. Speaker, this project was not an isolated one, but was in complete harmony with the general park improvement of the city of Washington. It would have fitted in with Rock Creek Park and the National Zoological Park to the north of Massachusetts Avenue, with Potomac Park to the south on the river front, and with the connecting parkways between Rock Creek Park, the Zoological Park, and Potomac Park, which connections were authorized by Congress at its last session. The press in this city have declared—and it is well understood by the citizens of Washington—that Mr. Glover has been a leader in public-spirited efforts to obtain for the National Capital, and therefore for the entire country, a park system unequaled in the world. He had been the chief factor in securing Rock Creek Park and Potomac Park, and naturally worked for the connecting park lands between them.

Upon inquiry I have learned that the property in question, for which was asked $4,000 an acre, is now being held and sold at 80 cents per square foot. Allowing net only 30,000 square feet for an acre, this rate would make the present value of the land $24,000 per acre—certainly more than $20,000 an acre.

But the gentleman from Tennessee [Mr. MOON] supports his colleague [Mr. SIMS] in that gentleman's claim for credit, because a portion—about 17 acres—of the 100-acre tract has been reserved for park purposes by the syndicate which is now selling the rest of the tract by the square foot after having cut down trees and leveled the land for building purposes. This portion the gentleman from Tennessee [Mr. SIMS] describes in one of his speeches as "a gulch, a deep ravine between precipitous hills." It is evident that it could not be built upon, and therefore was of necessity reserved for park purposes. For park purposes it might well be worth $4,000 an acre, but it would not be worth $4,000 an acre, much less $24,000 an acre, for building purposes. Nor does its preservation compensate for the loss to the park system of the rest of the 100-acre tract with all its remarkable natural beauty. This beauty, now forever destroyed, I well remember, and I remember, also, to have heard Ambassador Bryce, an authority of the highest distinction, say that the failure to preserve it means to the city of Washington a loss that is irreparable.

The price of $4,000 an acre secured by Mr. Glover for the Government under the options was a low one compared with prices paid by the Government and other purchasers years before for similar property in the same general neighborhood.

In 1898 the Protestant Episcopal Cathedral Foundation paid $245,000 for about 30 acres, or more than $8,000 an acre, for the property which it now occupies west of the proposed addition to Rock Creek Park, and in May, 1902, deed dated May 21, 1902, the same Foundation paid $24,256, as the deed recites, for 3 $\frac{11}{100}$ acres on Woodley Road adjoining its former purchase.

In 1901 the United States Government purchased additional lands within the Naval Observatory Circle, on Massachusetts Avenue, as follows:

Plat 1. Robert D. Weaver, 8.645 acres, purchased at a cost of $37,657.62.

Plat 6. J. W. Thompson, 7.895 acres, purchased at a cost of $85,976.55.

Plat 2. Theodore Barnes, 0.389 acre, purchased at a cost of $4,050.07.

Plat 4. John A. Barber, 0.425 acre, purchased at a cost of $2,221.56.

It will be noticed that these prices ran from about $4,000 an acre to nearly $12,000 an acre, and this in 1901.

Two other tracts, one belonging to Philip Young, of 0.714 acre, for which the Government offered $4,665.28, and one belonging to A. W. Fleming, of 1.732 acres, for which the Government offered $15,089.18, had to be secured by condemnation, the owners refusing to accept the prices fixed by the Government appraisers. They were subsequently secured at a much higher price.

Plat 6, for which the United States paid in 1901 over $10,000 an acre, was part of the Thompson tract, which furnished 88 acres of the proposed park addition that Mr. Glover tried to secure for the Government.

Besides these purchases the Navy Department and Commissioners of the District of Columbia in 1904 agreed that the District of Columbia should sell to the United States Government a tract of land belonging to the District and occupied by the Industrial Home School, within the Naval Observatory circle, consisting of 6.764 acres, for the sum of $74,404, or $11,000 an acre, exclusive of buildings. The Acting Secretary of the Navy, Hon. Truman H. Newberry, under date of April 24, 1906, submitted this proposition to the Committee on Naval Affairs of the Senate and House of Representatives in a letter and with a draft of a bill authorizing the purchase of the land and the removal of the Industrial Home School to another site. A separate price of $110,000 was named for the buildings on the Industrial Home School site.

This property has a limited frontage on Wisconsin Avenue, but at that point is so far below grade that it would be costly to fill it in for building purposes.

EXTRACT FROM THE MINUTES OF THE MEETING OF THE TRUSTEES OF THE PROTESTANT EPISCOPAL CATHEDRAL FOUNDATION, SEPTEMBER 7, 1898.

"The bishop further stated that after several conferences with Mr. Barber, in which he endeavored to obtain a reduction of the price, Mr. Barber had this morning consented to reduce the price to $245,000 for the whole lot if he, the bishop, would accept this offer in the course of the morning, and that he, the bishop, had done so upon his own responsibility, hoping for the ratification of his action by the board, and that he had paid to Col. Robert I. Fleming, the agent of Mr. Barber, $5,000 on account of the purchase money."

* * * * * * *

"Contract approved and adopted by the board for the purchase of about 30 acres."

REPORT OF THE CHIEF OF THE BUREAU OF EQUIPMENT TO THE SECRETARY OF THE NAVY, 1901, PAGE 65.

"The naval appropriation act approved March 3, 1901, contains the following clause:

"'Naval Observatory, purchase of lands: For the purchase of lands lying within the observatory circle, as established by the joint resolution of August 1, 1894, $149,571.08; and the Secretary of the Navy is authorized to sell, at such time and in such manner as may be most advantageous, but at prices not less than those fixed in 1894 by the board of appraisers, of which John W. Ross was chairman, such lands of the Naval Observatory reservation as are situated within the limits of said circle.'

"The illustration accompanying this report indicates what steps have been taken to comply with this provision of Congress, as follows:

"'Plat 1. Robert D. Weaver, 8.645 acres; purchased at a cost of $37,657.62.

"'Plat 6. J. W. Thompson, 7.895 acres; purchased at a cost of $85,976.55.

"'Plat 2. Theodore Barnes, 0.389 acre; price of $4,050.07 accepted; purchase under way.

"'Plat 4. John A. Barber, 0.425 acre; price of $2,221.56 accepted; purchase under way.

"'Plat 3. Philip Young, 0.714 acre; appraised at $4,665.28; price not accepted; condemnation proceedings under way.

"'Plat 7. A. W. Fleming, 1.732 acres; appraised at $15,089.18; price not accepted; condemnation proceedings under way. Only $15,000 was appropriated for this purchase, leaving a deficiency of $89.18.

"'Plat 5. District Industrial Home School, 6.764 acres; no appraisal.

"'Plats 8 and 9. Observatory property, outside of circle.'

"It is recommended by the bureau that steps be taken to acquire plat 5, now the property of the District of Columbia.

"It is also recommended that the land in plats 8 and 9 be not sold at present, owing to its increased prospective value."

The latter recommendation is official testimony to the general expectation of increase in value.

The gentleman from Tennessee, Mr. SIMS, the gentleman from Tennessee, Mr. MOON, and Mr. ANDRUS, formerly a Representative from New York, have in speeches in the House reflected severely upon Mr. Glover. The two gentlemen from Tennessee have gone so far as to charge that in the matter of this proposed park extension he was lacking in personal integrity. In view of these charges and of the fact that the gentleman from Tennessee [Mr. SIMS] twice on the floor of the House asked unanimous consent that Mr. Glover's article of January 25 last be printed in the CONGRESSIONAL RECORD, and as the article has never appeared therein, I submit it herewith:

[From the Washington Post, Jan. 25, 1913.]

"C. C. GLOVER REPLIES—VIGOROUSLY DENOUNCES REPRESENTATIVE SIMS'S SPEECH ON ROCK CREEK PARK PLANS—GROSS INJUSTICE WAS DONE HIM, THE BANKER DECLARES—PRESIDENT OF RIGGS NATIONAL QUOTES AT LENGTH FROM RECORDS TO PROVE THAT HE SOUGHT NOT ONE PENNY OF PERSONAL PROFIT—WORKED SOLELY FOR THE CITY'S WELFARE—ELABORATES ON TESTIMONY BEFORE INSURANCE COMMITTEE.

"Charles C. Glover, president of the Riggs National Bank, made public the following statement last night in response to the charges made by Representative SIMS, of Tennessee, on the floor of the House of Representatives on January 15:

"Instead of admitting in a frank and manly way, that would have done him honor while doing me justice, that he was entirely wrong in his attack on me in the House of Representatives on March 3, 1909, to which I replied before the insurance investigating committee on December 30, 1912, just after it had been brought for the first time to my attention, Representative SIMS, of Tennessee, made another unwarrantable speech about me in the House on the 15th of the present month. A reply is necessary because his latest speech is even worse than his former one, since he can no longer pretend to be ignorant of the facts and because by insinuation he makes a worse charge than he made before. It is true that a careful reading of his latest speech in the light of the record shows that he had to admit that his former statements were untrue. But this admission is obscured by other misstatements and by an innuendo which goes beyond anything he said before in its falsity and malice.

"AGREES WITH TWO STATEMENTS.

"With two statements of his speech of January 15, 1913, I agree. The first is (p. 1576, CONGRESSIONAL RECORD):

"I want to say, Mr. Speaker, that any Member of this House who in debate on the floor of the House makes a false statement about what is pertinent to be considered at the time and misleads the Members of the House and causes them to vote otherwise than they would ought to be expelled. No such man has any business in this House."

"That is exactly right.

"The second is in part of the next paragraph, on the same page, as follows:

"I am aware that Members of the House, under the privileges of this House, can get up and denounce individuals and make derogatory statements about men, and under the law they can be held responsible for it nowhere else. Consequently I do not think it is a manifestation of great moral or physical courage to get up here and denounce individuals when you can not be called to account for it.

"Out of his own mouth in these statements Mr. SIMS stands convicted of conduct justifying his expulsion and of moral cowardice.

"RECALLS SPEECH OF MARCH 3, 1909.

"It will be remembered that the substance of Mr. SIMS's charge on March 3, 1909, which so misled the House that it defeated the bill that would have added 100 acres to Rock Creek Park at a low cost to the Government, was that I, having secured options upon that land, had offered it first at $600,000, then at $550,000, and finally at $435,000, with the implication that I had tried to cheat the Government. He distinctly made those assertions. Confronted by the facts in my recent statement before the insurance investigating committee, he now grudgingly and obscurely admits that he was wrong, but says he was misled by the statement of another Member in the de-

bate, who read from a report of the District Commissioners on another park project—that of Meridian Hill—and applied it to the Rock Creek Park addition. Although, as the CONGRESSIONAL RECORD shows, his remarks of March 3 were made in the afternoon of that day, he further excuses himself by saying that they were made in the fatigue and confusion of a midnight session.

"But he has gone further in his speech of January 15, 1913, in which (p. 1578, CONGRESSIONAL RECORD), in speaking of the land in question, and after misquoting me as saying that in 1908 it was worth $11,200 an acre—which I never said—he says:

"QUOTES SIMS'S SPEECH.

"'At what he swears was then the value—over $11,000 an acre—he would make nearly, if not quite, $1,000,000.

'Now, if that language was true, and he says that it was and swears to it, the assessment shows that if he could have exercised his option, paid for it, and could have given the Government more than half of it, he would have made a big profit out of the balance.

'But he did not exercise that option. He let it go back to those who held the property or the option or contract on it.

'This is the insinuation, the innuendo, to which I have referred.

'Now, this, and every other material statement on the subject by Mr. SIMS, was made—as he says, page 1576, CONGRESSIONAL RECORD, in his latest speech—when 'the matter had been before the House so often that the subject was very well understood by Members who had been in the House when bills for the same purpose had formerly been considered, and they knew perfectly well what was referred to.'

'And, in addition, he had on January 15, 1913, the truth as it was fully stated in my recent statement before this committee.

"SAYS TRUTH IS ON RECORD.

'Fortunately, this truth is of record. I did not have the records or even a memorandum of them with me when, on the spur of the moment, I made my former statement, but they have always been accessible to Mr. SIMS and every other Member of Congress since the project was first brought up.

'The foundation document is, of course, the contract for an option which I secured, wholly in the public interest and in order that the Government might get the property at a low price on an advancing market. There were three separate options given by three different sets of trustees, all on the same terms, and therefore I quote only from that covering the greater part of the tract, namely, the 88 acres known as the Thompson syndicate property.

'This contract, dated March 9, 1906, between the trustees of that syndicate and Charles C. Glover, says:

"EXTRACT FROM CONTRACT.

"'Whereas the parties of the first part are the owners of the pieces and parcels of ground hereinafter described; and

"'Whereas the parties of the first part are willing that the said pieces and parcels of ground shall be made and shall become a public park upon the terms and conditions hereinafter stated; and

"'Whereas the party of the second part desires, without compensation and in consideration of the public interests to be thereby promoted and subserved, to aid so far as he can properly do so in having said pieces and parcels of ground made a public park on the terms and conditions hereinafter stated:

'This agreement witnesseth that the parties of the first part, each for himself or herself, and in respect of their several and respective interests, each for himself and not one for the other, in consideration of the sum of $1 lawful money of the United States to each of them in hand paid by Charles C. Glover before the signing and sealing of this agreement, the receipt whereof is hereby acknowledged, and in consideration of the other payments and the performance of the conditions hereinafter specified, do hereby covenant, promise, and agree to and with the said Charles C. Glover to sell to the United States or to the District of Columbia, for the purposes of a public park, for and in consideration and at the rate of $4,000 per acre and a fraction of an acre, all those pieces and parcels of ground in the District of Columbia described as follows.

"PRICE ASKED WAS $420,000.

'The total amount of the land was 99.74 acres. A slight difference in the acreage price of one of the smaller tracts brought the total price of the whole up not to exceed $420,000. No other price was ever named to Congress or expected under the options. There was, of course, no warrant for any statement that $600,000 or $550,000 or $435,000 was ever asked.

'The bill for the acquisition of this park property as presented to Congress added $3,000 to the $420,000 at the instance of the District Commissioners in order to cover official expenses in the matter, so that the amount named for appropriation in every bill on this subject was $423,000, or so much thereof as might be necessary.

"DECLARES BILL ANSWERS SIMS.

'No one could honestly believe that under these options anything whatever could be done with this land except to secure it in its entirety to the Government as a public park. The mere quotation from the text of the contract, which was accessible at all times to Congress, answers sufficiently the slander of Mr. SIMS's insinuation. The text of the bill for the acquisition of this park property, as I caused it to be introduced in 1906 and again in 1908, and as it was approved in the strongest way by the Commissioners of the District of Columbia and by the committees of the Senate and the House, is the answer to all the false statements as to the amount of appropriation required.

"No sane man could believe, no honest man would say, that I could by any possibility make one penny of personal profit out of the transaction covered by these options or that the United States was ever asked to pay for the land more than its actual cost under these options, with the addition of the $3,000 for the official expenses, or in all not exceeding $423,000.

"PANIC CAUSED EXTENSION.

"These options were procured by me only by great and prolonged effort and through many difficulties. A renewal of them was secured by me in contracts made the 15th of January, 1908, with the same trustees only because the panic of 1907 had prevented the trustees from marketing the property on more advantageous terms after they had told me repeatedly that no extension could be secured, and I had so reported to the commissioners and to the committees of Congress in perfect good faith. It was, of course, throughout a labor of love with me, faithfully carried on until it was finally defeated by the misleading remarks of Mr. SIMS and Mr. ANDRUS, of New York, on the afternoon of the 3d of March, 1909. I never read those misleading statements until, as I said in my former statement, just a short time before I appeared before the committee in December last.

"Let me now request an examination of the latest speech of Representative SIMS, beginning on page 1575 of the CONGRESSIONAL RECORD, under the date of January 15, 1913, in order that I may point out in detail its misstatements, in view of the gross injustice they do me.

"Mr. SIMS first quoted from the printed record of the insurance committee the portion of the statements made by me on the 30th day of December last, in which, after quoting what had been said by Mr. SIMS and Mr. ANDRUS in the debate of March 3, 1909, I said:

"MR. GLOVER CITES HIS STATEMENTS.

"'Mr. Chairman, the statement that I offered that property to the Congress of the United States at $600,000; that I was pricked by conscience, and reduced the sum to $550,000; that it was embodied in any bill by my authority at $475,000, or, as Mr. SIMS says, 'it is now before this House at $435,000,' is an absolute and unqualified falsehood. I never offered the property save at the one single price of $420,000, plus the $3,000 added by the Commissioners of the District of Columbia.

"'As that charge stands, I can well understand why Maj. Judson has had to defend my character before some Members of the House. It leaves me, instead of being a public-spirited citizen, a man with an option on a piece of property at $420,000 endeavoring to palm it off on the Government of the United States at $600,000.

"'I do not believe, Mr. Chairman, that these gentlemen intended to make an untrue statement, but the bill was before them. Here is the identical bill, and the last clause of that bill says that the price of that land was $423,000.

"A STATEMENT BY SIMS.

"Mr. SIMS then proceeds to make the statements which I have just approved, that a Member who misleads the House, causing it to vote otherwise than it would, by false statements, ought to be expelled, and that denunciation of individuals by Members on the floor who can not be called to account for it is not 'a manifestation of great moral or physical courage.'

"In giving next a short history of the bill, he makes the inaccurate statement that I added $3,000 to the option price to cover any expenses that might be incurred in connection therewith. It was, of course, the District Commissioners who added that $3,000. Then comes this gratuitous insinuation:

"He claimed to want the Government to own it for park purposes.

"AGAIN QUOTES CONTRACT.

"The option contract and the bill itself answer that.

"In referring to the favorable action of the Senate and of the House Committee on Appropriations, to whom the Senate bill was referred, in 1908, he makes the admission above quoted, that the matter was so well understood by Members of the House that it was not necessary for the Appropriations Committee in its report to give any details whatever about the matter, so that they simply recommended the passage of the bill.

"Then he comes in his story to March 3, 1909. He describes that day as—

"The last day of that Congress when, as we all know, we have to stay up all night to consider conference reports and matters of that kind.

"Then, a few lines further on, he says:

"Now, at nearly the hour of midnight on the last day of the session, on a motion to suspend the rules, when there was no time to investigate and understand anything, almost anyone was liable to be misled.

"This is intended to be an excuse for his adoption of the mistake of Representative ANDRUS, who had preceded him in the debate, in reading from the report of the District Commissioners on the Meridian Hill Park bill and applying it to the Rock Creek Park addition bill so as to charge me with asking first $600,000, then $550,000 under the prick of conscience, and finally, as Mr. SIMS said:

"Now they have got down to $435,000.

"If Mr. SIMS, in honest and manly fashion, had only said that he was misled and so had misled the House or helped to do so, and that he was very sorry for it and for the injustice done to a private citizen who could not defend himself on the floor and who could not call him to account elsewhere, there would be no occasion for my making this additional statement to-day. In any event, I would not have noticed his misstatement as to the time of day when he made his attack on March 3, 1909. But it is characteristic of the reckless and misleading style of speaking in which he indulges, even to the point of absolute misrepresentation, that he does not even tell the truth as to the time of day.

"SAYS VOTE WAS IN AFTERNOON.

"I have taken the pains to read the CONGRESSIONAL RECORD of March 3, 1909, and invite your attention to the fact that the debate in which Mr. SIMS and Mr. ANDRUS, by their misleading statements, killed the Rock Creek Park addition bill, together with the yea-and-nay vote on that bill, took place in the afternoon, not at night. The proof is found on page 3802 of the CONGRESSIONAL RECORD of March 3, 1909, near the bottom of the right-hand column of the page, where the following is recorded:

"RECESS.

"Mr. PAYNE. Mr. Speaker, I move that the House do now take a recess until 10 o'clock this evening.

"The motion was agreed to.

"Accordingly (at 6.15 p. m.) the House was declared in recess.

"AFTER RECESS.

"The recess having expired (at 10 p. m.), the House was called to order by the Speaker.

"And the debate in which Mr. SIMS and Mr. ANDRUS killed the bill by misleading Members of the House and causing them to vote otherwise than they would is recorded in the same CONGRESSIONAL RECORD of March 3, 1909, 10 pages back, namely, on pages 3792 and 3793, while the yea-and-nay vote by which the bill was defeated is found on page 3794, and it is evident from the most cursory inspection of the RECORD that much business was transacted between that vote and the recess taken at 6.15 o'clock for dinner.

"The published official record of the proceedings of the House strips from Mr. SIMS his poor excuse of midnight weariness and confusion for the wrong that he did the National Capital and incidentally one of its private citizens in misleading the House to defeat that bill.

"He has to admit, of course, in the face of the text of the bills and the reports of the District Commissioners, that his statements were misleading, even though he denies that they were technically false, and seeks to defend them even while he admits that they misrepresented the facts.

"ALLEGES NEGLIGENCE OF DUTY.

"In the very next passage in his speech, in which he publishes as part of his defense the report of Senator GALLINGER in 1906 on a composite bill framed in that shape by the Senate Committee on the District of Columbia so as to contain the two separate bills, that for the Rock Creek Park addition and that for the Meridian Hill Park project, and the two reports of the District Commissioners on the two projects, all of which he had had three years to examine in connection with the matter which he himself states was so familiar to the Members of the House that in 1908 it was perfectly understood, so that it was not necessary for the Committee on Appropriations to do more than recommend the passage of the bill, he convicts himself of negligence of duty as well as wrong performance of his duty as a Member of the House.

"I insert for information the copy of Senator GALLINGER's report as quoted by Representative SIMS:

"MR. SIMS QUOTED GALLINGER.

"Mr. GALLINGER, from the Committee on the District of Columbia, submitted the following report to accompany S. 5201:

"The Committee on the District of Columbia, to whom was referred the bill (S. 5201) to acquire certain land in the District of Columbia as an addition to Rock Creek Park, having considered the same, report thereon with the following amendments:

"On page 1, line 14, before the word 'which,' insert the words 'and the location of proposed new streets.'

"On page 3, line 14, after the word 'therefrom,' insert the words 'along the center of a proposed new street.'

"SEVERAL AMENDMENTS TO BILL.

"On page 3, line 16, after the word 'line' where it first occurs, insert the words 'following the center line of a proposed new street.'

"On page 6, line 1, after the word 'plan,' strike out the words 'as 90 feet in width.'

"On page 6, line 2, after the word 'are,' strike out the word 'not,' and after the word 'for,' in the same line, strike out the words 'in said plan' and substitute the word 'herein.'

"Add sections 7, 8, 9, 10, and 11 to the bill.

"Also amend the title so as to read: 'To acquire certain land in the District of Columbia as an addition to Rock Creek Park and in Hall & Elvan's subdivision of Meridian Hill for a public park.'

"Two bills, S. 5201, 'To acquire certain land in the District of Columbia as an addition to Rock Creek Park,' and S. 5289, 'To acquire certain ground in Hall & Elvan's subdivision of Meridian Hill for a Government reservation,' were submitted to the Commissioners of the District of Columbia for examination and report, and their replies are hereto appended, as follows:

"REPLIES OF COMMISSIONERS.

"OFFICE COMMISSIONERS OF THE DISTRICT OF COLUMBIA,
"*Washington, March 27, 1906.*

"SENATOR: The Commissioners of the District of Columbia have the honor to submit the following on Senate bill 5201, Fifty-ninth Congress, first session, 'To acquire certain land in the District of Columbia as an addition to Rock Creek Park,' which you have referred to them for report touching the merits of the bill and the propriety of its passage:

"A blue print is inclosed, showing, on a large scale, the pieces and parcels of land proposed to be condemned for the addition to Rock Creek Park, and also a map on a smaller scale, showing the relation of the proposed addition to Rock Creek Park and the connection between the two.

"Rock Creek Park, as now established, starts at the District line, extends along both sides of Rock Creek to the Zoological Park, and then south of this latter park in a narrow strip along the east side of Rock Creek to Massachusetts Avenue. South of this point the United States owns a small strip of land about 500 or 600 feet in length, bought for the use of the Washington Aqueduct.

"ADDITION JOINS PARK.

"The addition proposed by this bill joins this latter part of the park. It will lie along the west of Rock Creek and extends up the valley of a small branch running about parallel to Massachusetts Avenue. The valley of this branch is very deep, and the tract of land abutting the creek is well wooded with large and beautiful trees, making it an ideal piece of property for park purposes. The tract proposed to be acquired extends about 4,000 feet along Rock Creek and northwest about 4,000 feet along Massachusetts Avenue, with a width of 500 to 1,000 feet.

"The tracts included in the proposed addition have been owned by two or three estates, which up to the present time have not developed the property. Recently, however, in continuation of the rapid development of that section, a large tract of land has been purchased by a syndicate, and arrangements are being made to lay off the land into lots and blocks for the purpose of building. This tract includes about 88 acres of the land this bill proposes to purchase for park purposes, and unless the land is acquired by the Government it will undoubtedly be built upon within a short time. All of this section will probably develop rapidly during the next year or two and the value be greatly enhanced.

"CONSIDERED PRICE REASONABLE.

"In determining on the part of these tracts to be used for park purposes, it was endeavored to leave what was most suitable for building purposes and take for park purposes such part as was best adapted to such use. The area of the land proposed for a park is about 100 acres, and the price is about $4,200 per acre, which is considered to be reasonable, in view of all the circumstances. Options are left on it so that it can all be acquired at such figures as to bring it within the amount appropriated in the bill.

"It is further provided in the bill that a small piece of property belonging to the United States lying south of Massachusetts Avenue may be exchanged for an equal amount of land lying to the north. The Naval Observatory grounds are located in this vicinity. The original grounds of the observatory contain about 75 acres, irregular in shape. The opening of Massachusetts Avenue and Observatory Circle, in accordance with the authorized system of highway extension leaves two strips of the original tract—one on the north of Massachusetts Avenue, containing 14 acres, and one on the south side of the avenue, lying in the angle between Massachusetts Avenue and Observatory Circle, containing about seven-tenths of an acre. This latter strip is proposed to be exchanged. It is of little value to the observatory or to the United States on account of being separated from the remainder of the holdings of the observatory by streets, so that it would seem desirable to exchange it, as proposed in the bill, for an equal amount of land that can be used. The 14 acres to the north can be used as a part of a park or such other use as the United States may desire.

"BENTON STREET SUPERFLUOUS.

"The bill further provides that a short section of a projected street called Benton Street shall be abandoned as a highway. This is private property, and the provision means simply that the system of street extension is changed to that extent. It can be seen from the small map that this street will be superfluous if the land is acquired for park purposes.

"The bill further provides that the landowners surrounding the proposed park shall dedicate 30 feet for a street and establish a building line of 15 feet, and that the United States shall do the same along the park boundary. This will give a street practically 90 feet wide around the park, which is eminently desirable.

"MINOR AMENDMENTS NECESSARY.

"In order to more fully carry out the intention, a few minor amendments are necessary to be made in the bill, as follows:

"Insert, in line 14, page 1, before the word 'which,' the words 'and the location of proposed new streets.'

"Insert after the word 'therefrom,' in line 14, page 3, the following words: 'along the center of a proposed new street.'

"Insert, in line 16, page 3, after the word 'line,' the following: 'following the center line of a proposed new street.'

"Strike out the words 'as 90 feet in width,' line 1, page 6, and also the words 'not' and 'in said plan,' in line 2, page 6. Also insert after the word 'for,' in line 2, page 6, the word 'herein.'

"RECOMMENDED BILL'S PASSAGE.

"The commissioners recommend the passage of this bill as being a measure of public benefit. The land is located within easy access of a large population. It is eminently suited to park purposes on account of the hilly character and the magnificent trees, which could not be grown in many years. It is to-day, although private property, used by many persons as a park, and with the rapid increase of population will certainly prove of the greatest value. The commissioners further be-

have that if not purchased before being subdivided and developed its cost would be greatly increased, and, besides, many of the trees will be cut down and the beauty impaired.

"Very respectfully,

"HENRY B. F. MACFARLAND,
"President Board of Commissioners, District of Columbia.

"Hon. J. H. GALLINGER,
"Chairman Committee on the District of Columbia,
"United States Senate.

"WANTED LAND ON MERIDIAN HILL.

"MARCH 30, 1900.

"SENATOR: The Commissioners of the District of Columbia have the honor to submit the following on Senate bill 3289, Fifty-ninth Congress, first session, 'To acquire certain grounds in Hall & Elvan's subdivision of Meridian Hill for a Government reservation,' which you referred to them for report touching the merits of the bill and the propriety of its passage:

"A plat is inclosed showing in blue the land proposed to be condemned.

"The object of the bill is to acquire for a Government reservation tracts of land, aggregating about 10 acres in extent, lying between Euclid Street, Columbia Avenue or Fifteenth Street, W Street or Florida Avenue, and Sixteenth Street extended, in Hall & Elvan's subdivision of Meridian Hill. The reservation is similar in nature to the small reservations or parks now existing throughout the city of Washington, such as Lincoln Park, Judiciary Square, Garfield Park, Franklin and Lafayette Squares, which reservations add so much to the attractiveness and health of the city.

"SCARCITY OF PARKS.

"There are no parks of this type north of Florida Avenue, and nothing in the shape of public reservations to the south, except small triangles, nearer than Iowa or Dupont Circles, a mile or more distant, and the nearest large park is the Zoological Park, in the valley of Rock Creek, about three-quarters of a mile away. The land is being rapidly built up as a residence section, and a large section of the subdivisions of Columbia Heights, Mount Pleasant, and Meridian Hill, and, in addition, those living in the portion of the city to the south, would make use of this reservation.

"An inspection will show the great use of these small parks in the residence sections and will demonstrate their utility as well as their beauty. This proposed reservation might also be made use of for governmental purposes, such as the construction of buildings, the laying off of gardens, etc. For a small reservation its location is unique. There is no other tract of land in this vicinity which could take its place for such use. It lies along the great boulevard, Sixteenth Street, which connects the White House with Rock Creek Park, and is situated on the crest of the line of hills surrounding the lower valley of the Potomac. All of this crest, from North Capitol Street to Rock Creek, is now practically built up, so that it is the only space of its kind that remains unimproved.

"VALUABLE FOR ITS VIEW.

"It has a view over the city and town and the valley of the Potomac River, and in the summer is exposed to the southwest breezes prevalent in this section of the country. It extends down the steep slope of a hill from a point between Chapin and Belmont Streets to W Street, and this slope is necessary as a part of the reservation to prevent the construction of houses which would cut off the view and the sweep of the wind. This portion would also give greater diversity in the character of the park. The upper part is flat and well adapted either to the laying out of a garden or the erection of public buildings. To diminish the size of the park would be detrimental to its value as a park.

"The price named in the bill—$600,000 for about 437,000 square feet of land, or about $1.37 per square foot—is in excess of the estimate of value of the land by the board of assessors, their value being $320,000. Very little property has changed hands in this immediate vicinity recently, so it is difficult to gauge the value, but from the price paid by the District for the condemnation of Sixteenth Street extended about five years ago, which amounted to from $1.25 to $1.75 per square foot, and from figures at which it is known some of the owners of the land in this vicinity hold the same, it is not thought that the land could be obtained for less than that named in the bill. In fact, it is due to a large portion of this tract being on the market on account of the settlement of an estate that so low a figure as that proposed in the bill can be obtained. Conditions are improving in that vicinity, and an early increase in the value of the land is anticipated.

"AN OPPORTUNITY FOR CITY.

"The commissioners believe that this is an opportunity to obtain a reservation in the line of those laid out in the original city limits, in a locality which is without a park at present, and where one is much needed now, and will be more needed as this section of the city builds up; that to obtain this reservation will greatly enhance the beauty of the city and its environments, and will add greatly to the beauty of the Sixteenth Street Boulevard, and in that way would be of benefit to all the people of the United States, a great number of whom, in visiting Washington, drive on this boulevard; that at the present time the land can be purchased at a more reasonable figure than it can be in a year or two from now, and that there is no other site in the District as suitable for a Government reservation.

"The commissioners therefore recommend favorable action on the bill.

"Very respectfully,

"HENRY B. F. MACFARLAND,
"President Board of Commissioners of District of Columbia.

"Hon. J. H. GALLINGER,
"Chairman Committee on the District of Columbia,
"United States Senate.

"It will be observed that the commissioners recommend the purchase of the properties included in both bills, and for the purpose of simplifying the matter your committee have combined them in one bill, the passage of which is recommended.

"CALLS SPEECH ATTACK ON HONOR.

"It would seem incredible, if we did not have the speech before us in the CONGRESSIONAL RECORD, that after all this Mr. SIMS should make next, in his treatment of the matter, what is really the gravest attack on my honor of any that he has made, either on March 3, 1900, or on January 15, 1913. That it is in the form of an insinuation, an innuendo, makes it worse. He did not dare make the direct charge that it was possible that I might have made a million or a half a million of dollars out of the transaction. Knowing the facts, as he assuredly did, such a direct charge was too much even for him to make. But to cover up the admission which had been wrung from him that he had misrepresented the facts, misled the House, and so defeated the bill and deprived the National Capital of a beautiful park of 100 acres, he insinuates this covert charge into the RECORD. I have read it to the committee.

"I restrain my natural indignation and content myself with pointing to the text of the option contract as the all-sufficient answer, an answer also which was perfectly accessible to Mr. SIMS or any other Member of the House at all times from the date of the first contract, the 9th of March, 1900, to the present day.

"SAYS SIMS WANTS CREDIT.

"After this Mr. SIMS makes an attempt, more ingenious than ingenuous, to claim that he is entitled to credit for securing, by the defeat of the bill, the dedication by the owners of the principal tract that it sought to acquire of a small portion, about one-sixth of the 100 acres, which portion, as he says, 'is a gulch, a deep ravine, between precipitous hills.'

"It must be clear to everyone who thinks at all that the subsequent action of the owners in setting apart for the purposes of their suburban villa sites a portion of this tract suitable only for park purposes as a small park affords no adequate compensation to the National Capital for the loss of the natural beauties of 100 acres now inevitably altered for commercial purposes.

"The report of the District Commissioners to the Senate Committee on the District of Columbia upon the bill to acquire this addition to Rock Creek Park, under date of March 27, 1900, closes with these words:

"COMMISSIONERS RECOMMEND BILL.

"The commissioners recommend the passage of this bill as being a measure of public benefit. The land is located within easy access of a large population. It is eminently suited to park purposes on account of the hilly character and the magnificent trees, which could not be grown in many years. It is to-day, although private property, used by many persons as a park, and with the rapid increase of population will certainly prove of the greatest value. The commissioners further believe that if not purchased before being subdivided and developed its cost would be greatly increased, and, besides, many of the trees will be cut down and the beauty impaired.

"Very respectfully,

"HENRY B. F. MACFARLAND,
"President Board of Commissioners, District of Columbia.

"Hon. J. H. GALLINGER,
"Chairman Committee on the District of Columbia,
"United States Senate.

"SITE IS GONE FOREVER.

"What the commissioners foresaw, what we all foresaw, has happened. There is a fine commercial suburban property, incidentally preserving a small ravine now, but the noble park of 100 acres that we worked so hard to get for the National Capital is gone forever with all its great natural beauties.

"Passing over some personal sneers at myself, which are part of my reward for working so hard to try to save to the National Capital this park land, I come next to Mr. SIMS's misleading statement that I said that 'the land is now worth $2,000,000 to $4,000,000 on account of the rapid increase in value, but he never told the committee that many hundred thousands of dollars had been expended in improving the western portion of the land.'

"I expressly did tell the committee of the improvements referred to. But the assertion that I told anybody that the land had become worth $2,000,000 to $4,000,000 is simply another of his misstatements. He quotes me in that immediate connection as saying before the House Appropriations Committee in 1908 that the land in 1908 was worth $11,250 an acre, a statement which I never made. All I said to the committee was that I had been informed by Mr. Charles J. Bell, one of the trustees of the tract, that it was then assessed at $7,500 an acre. Mr. SIMS rings the changes on his assertion that I said the land was worth $11,250 an acre, and so claims that the dedication of the ravine by the owners in their villa-tract project amounted to 'nearly $200,000 worth of real estate.'

"MEMBER OF CONGRESS OWNED LAND.

"After that Mr. SIMS says that I was not candid or frank, because I did not volunteer the information when the bill was pending that a Member of the House had an interest in the smallest of the three portions, including about 3 acres. The fact is that I had more difficulty in getting the option on that small tract than on either of the others, because that very Member of Congress was the most unwilling of all interested to let me have it at what he held was one-half of its then value in 1900. He would not allow his trustees to give the option until he had been personally importuned. Of course I referred Congress to just what I had, the options with trustees for the three separate portions of the tract. The Member of Congress did not want to sell at the price, and was very glad when the options lapsed. He immediately sold part of it for more than twice the option price. Even Mr. SIMS has the grace to say in this connection that 'the Member of the House who owned part of the land was offering to sell it to the Government through that option at a loss, which was no discredit, if the facts had only been known.'

"SAYS PARK DID NOT HELP LAND.

"Representative SIMS then proceeds to comment upon statements I made before the committee as to land that I bought on Sixteenth Street bordering Rock Creek Park many years after that park had been acquired by the Government and the rise in value which has taken place in that land. Mr. SIMS was not, of course, candid or frank enough to say that the rise in value was due to the opening of Sixteenth Street and to the extension of the Fourteenth Street car line and not to the opening of Rock Creek Park, which, like other parks, does not of itself enhance the value of adjoining property.

"It is difficult to credit at face value Mr. SIMS's statement in his speech referring to my efforts in trying to secure for the capital the 100-acre park:

"I have not the slightest disposition to treat Mr. Glover unjustly. I have no quarrel with him. I have no reason to quarrel with him. He had a right to do this thing and to pursue his own course.

"Such a statement seems hypocritical when shortly afterwards, in the same speech, he tries by what he thinks, apparently, is sarcasm to impugn my motives and deprive me of my share of the credit for the park improvements of the National Capital.

"MR. GLOVER FATHER OF PARK.

"'He claims,' says Mr. SIMS of me, 'to be the father of Rock Creek Park, the father of the movement.' Yes; I do so claim; and I have the right to have my claim allowed, in view of the years of persistent effort, in season and out of season, which I devoted to this public service. I did have the bills introduced; I did press them; I did have the act approved by the President; I did recommend to President Harrison the three unofficial members of the Rock Creek Park Commission whom he appointed—R. Ross Perry, H. V. Boynton, Samuel P. Langley, secretary of the Smithsonian. This is all well-known history here.

"If I need to offer any proof of this, allow me to offer this letter from one who has now passed on to his reward, the late John J. Hemphill, of South Carolina, who did so much for Washington when he was chairman of the committee:

"HOUSE OF REPRESENTATIVES,
"October 7, 1896.

"MY DEAR MR. GLOVER: The bill to establish Rock Creek Park, which passed Congress only after the most strenuous efforts, has been approved by the President and is now a law. As it was at your request that this bill was introduced setting aside this beautiful section of the country as a park for all time, I desire to congratulate you on the final approval of the measure and to say that without your earnest, intelligent, and untiring efforts during the entire contest it would, in my judgment, have failed to become a law.

"Your valuable work in behalf of this great pleasure ground at the National Capital ought to be known and long remembered by the many thousands who shall hereafter enjoy it.

"Yours, most sincerely,

"JOHN J. HEMPHILL.

"QUOTES AN EDITORIAL.

"Again, the Washington Evening Star said in an editorial about the same time:

"Congratulations and credit for the creation of the Rock Creek Park are due to many public-spirited citizens and to many intelligent legislators, but the lion's share of honor undoubtedly belongs to C. C. Glover, without whose energy and enthusiasm the project would never have been crystallized into legislation.

"I have always given full credit to the 'many public-spirited citizens' and 'many intelligent legislators' to whom the Star editorial referred. Without them, of course, nothing could have been done. But I think it is only the truth of history to say that I started the movement, that I stuck to it until success was won, and that I gave more effort to it than anyone else. Not the least of my labors was to interest and stimulate others to cooperation in this community movement, just as I did in the case of the Potomac Flats Park improvement, for which I worked harder than for anything else in my life, except the Rock Creek Park improvement.

"May I add that it seemed to me perfectly natural that I should continue to work for Rock Creek Park when I saw an opportunity to acquire an additional 100 acres necessary to complete it, and to begin the connection with the Potomac Flats Park below, so carrying out my pet idea of increasing parks and connecting them the District round?

"And after Rock Creek Park had been established, years after, when I bought land on its eastern border at prices far below the present prices, I offered to let the Government have that land for exactly what I had paid for it, although the prices had already begun to rapidly rise. But that opportunity was had already begun to rapidly rise. But that opportunity was neglected, and I finally withdrew the options which I had given.

"A LETTER FROM MR. HEMPHILL.

"May I read another letter from Representative Hemphill?

"FIFTY-SECOND CONGRESS,
"COMMITTEE ON THE DISTRICT OF COLUMBIA,
"HOUSE OF REPRESENTATIVES, UNITED STATES,
"Washington, D. C., March 3, 1893.

"(J. J. Hemphill (chairman), South Carolina; John T. Heard, Missouri; J. D. Richardson, Tennessee; Harry Welles Rusk, Maryland; James E. Cobb, Alabama; John R. Fellows, New York; Tom L. Johnson, Ohio; Samuel T. Busey, Illinois; Elisha E. Meredith, Virginia; Cornelius A. Cadmus, New Jersey; Alfred C. Harmer, Pennsylvania; Philip S. Post, Illinois; William Cogswell, Massachusetts; James J. Belden, New York; Edwin Hallowell, Pennsylvania; William P. Pollock, clerk.)

"MY DEAR MR. GLOVER: My official connection with the District of Columbia as Member of Congress closed with the session recently ended. During my service in the House I was eight years a member of the Committee on the District of Columbia, and four of these its chairman.

"In that time I have availed myself so frequently of your extensive knowledge of District affairs and of your unselfish and patriotic advice that it seems not improper to express my high appreciation of your public-spirited labors in the advancement of the best interests of this community.

"In the passage of the bill providing a permanent system of highways in the District, so recently enacted into law, your efforts were most timely and efficient throughout, and largely contributed to the final favorable result.

"This act and the one establishing Rock Creek Park are of great, general, and permanent interest to the capital of the Nation, and it should be especially gratifying to you to know that you have been able to render such splendid service in bringing both these important measures to a successful termination.

"With sentiments of the highest esteem,

"Yours, sincerely,

"JOHN J. HEMPHILL.

"To Mr. CHARLES C. GLOVER,
"Care Riggs & Co., City.

"EDITORIAL FROM THE POST.

"I must give you the contemporaneous opinion of the Washington Post of March 1, 1897. On that day it said editorially:

"SHALL IT BE 'GLOVER PARK'?

"The President has signed the bill devoting what are known as the Potomac Flats to the purposes of a public park. It is the consummation of a work of years, prosecuted faithfully under every discouragement and setback by one public-spirited and courageous man, Mr. Charles C. Glover, the active manager of the Riggs National Bank, in this city. There has been much opposition to the measure, chiefly conducted by impulsions new Congressmen from remote districts, who innocently supposed that the first duty of a true statesman was to hold down the District and to make a record as defenders of the groaning masses against its selfish and rapacious schemes. It happened, however, that there was in Congress good sense enough, to say nothing of wisdom and information, to set aside this opposition and to disregard the clamorous demagogy that inspired it. The bill passed both Houses, and the President has now, by his signature, made it law.

"PARK IN PLACE OF MUD BARS.

"The result can easily be foreseen. We shall have in place of the unsightly mud bars that now fill up the channel of the Potomac a beautiful and gracious park, open to the enjoyment of the public from all parts of the country—a delightful green spot where now is shabby desolation—a summer resort of surpassing value and attraction and an ornament to the Capital at every season of the year.

"All this is to be credited to the patriotic and disinterested efforts of a gentleman—a private citizen—who has already laid the city under grave obligations by labor and achievement in other important directions. It is to Mr. Glover that we owe the realization of the Rock Creek Park scheme. It is to Mr. Glover that we owe lasting gratitude for his potent help in the matter of the new Corcoran Art Gallery. It is to him that we are now indebted for this last and crowning achievement at present under discussion. Alone, against every ignorant and frivolous opposition, he has labored patiently and bravely for years. Alone, sustained only by his personal influence and force, he has confronted and prevailed over the apathy and prejudice of Congress. Mr. Glover secured the passage of the bill, and it is Mr. Glover that we have to thank for the attractive and delightful prospect that has been thus revealed to us.

"INDEBTED TO CHARLES C. GLOVER.

"We have no doubt that the work of beautification will be prosecuted with all due energy and skill. It is to be expected that within a very few years the now unsightly 'flats' will be converted into a beautiful and gracious spot where our people may resort with benefit and comfort to themselves. It should be called 'Glover Park' by every rule of justice and propriety, but, whatever name they give it, we shall all know that we are indebted for it to the unselfish and public-spirited efforts of our distinguished fellow citizen, Charles C. Glover.

"Also the editorial from the Washington Times of March 14, 1897, headed 'Potomac Park':

"Few of our citizens are aware of the great importance attaching to a bill, not 10 lines long, which, after the most earnest solicitation, President Cleveland formally approved a few minutes before his term expired. This was the bill declaring the Potomac Flats a public park and dedicating it, or, as Mr. Cleveland would probably observe, 'consecrating it forever to the use and for the recreation and pleasure of the people.'

"This adds in one body nearly 700 acres of ground to the park system of the Capital City, and when it shall have been laid out in ronds and walks skirting the half dozen or more artificial lakes and

nearly 3 miles of river front, it will be difficult to exaggerate its beauty and attractiveness. Joined, as Potomac Park will be, with the Monument Grounds, the Agricultural and Smithsonian Grounds, the Botanic Garden, and the Capitol Terraces, all of which will be united in one comprehensive and intercommunicating park, certainly no city of this continent, and possibly only Paris of European cities, with its expansive Bois de Boulogne, can be considered as having the slightest pretensions to rivalry.

"PRAISE FOR MR. GLOVER.

"To Mr. Charles C. Glover, more than to any or all of the citizens of Washington, are her people indebted for this great boon. It was he who conceived its practicability, as well as its possibility, when in 1897 he invited a score or more of prominent citizens to meet at his residence and begin the work of promotion. The succeeding steps have all been taken under Mr. Glover's direction, and every progressive movement has been promoted and energized by his persistent endeavors. Conflicting titles to some of the tracts involved, which bade fair at one time to make shipwreck of the whole project, have dually been adjudicated or bought up, until at last the title has been declared unequivocally in the Government. Money has been annually appropriated to carry on the necessary work of reclamation—not automatically or spontaneously as some might suppose, but because Mr. Glover has made it his business to see that the necessary machinery was put in operation. His crowning service was the last one, when, against a very strong open opposition and an equally powerful but subtle secret hostility, he worked through the passage of the bill dedicating the ground thus obtained for the use and benefit of the people, and not of the railroad interests, which were determined to have it.

"We do not always agree with Mr. Glover in his views, but we do not care to withhold a particle of the praise which is justly his due in this instance. It has been his unflagging work—in and out of season—his unselfish work, we may also add, which has made this great public benefaction possible, and we shall be glad to testify our acknowledgments at any time in something more enduring than type-printed words.

"Thus, year by year, Washington is made more beautiful in the eyes of its own people—more attractive to the tens of thousands who make an annual pilgrimage to its shrines, and more worthy of its name and its possibilities—the cherished Capital of a Nation of seventy and soon to be a hundred million people.

"STREETS ADDED TO VALUE.

"As to the remarks of Mr. SIMS with respect to assessment of benefits for the adjacent land by the Rock Creek Park Commission after the acquisition of the original park lands, I have only this to say, that I do not consider that that acquisition of the park land added to the value of the adjacent property. It was the opening up of Sixteenth Street and the extension of the Fourteenth Street car line later which enhanced the value of the land on the eastern side of the park, and the gradual improvement of Connecticut Avenue and the Chevy Chase region which enhanced the value of the lands on the west side of the park.

"It was the opening up of Sixteenth Street and the extension of the Fourteenth Street car line which increased the value of the land adjacent to the eastern boundary of the park, which I bought afterwards, and part of which I have since sold at an advance.

"I am not a lawyer, but it is common sense, and I believe also good law, that no assessment for benefits could be made justly except at and as of the time when the park lands were acquired for Rock Creek Park by the Government. Certainly no one would claim that it would now, 15 years later, be equitable or even legal to assess the adjacent property for benefits really caused by the opening of Sixteenth Street and the extension of the Fourteenth Street car line, or even by the opening of roads in the park itself.

"WORK OF PARK COMMISSION.

"Now, I promised the insurance committee that I would ascertain exactly what was done by the Rock Creek Park Commission in regard to this matter. I have obtained and now submit an official copy of an extract from the minutes of the Rock Creek Park Commission on this subject, as follows:

"WASHINGTON, D. C., *October 4, 1898.*

"The commission met in room 53 of the District Building at 3 o'clock p. m., pursuant to adjournment at previous meeting.

"Present: Gen. Wilson, Gen. Boynton, Mr. Langley, Capt. Beach, and Mr. Weightman.

"The chairman introduced to the commission Mr. Richard Weightman, who was appointed by the President of the United States to succeed Mr. R. Ross Perry, resigned.

"The minutes of the last meeting were read and approved.

"Mr. William P. Richards, who made the survey of Rock Creek Park, testified, and his testimony will be found in the stenographer's report of even date. No other testimony was offered. The commission then proceeded to discuss the question of special benefits, and after each member had given an expression of opinion in the matter the following resolution was adopted:

"NO BENEFIT TO NEIGHBORHOOD.

"*Resolved*, That the Rock Creek Park Commission, having, as directed by section 6 of the act authorizing the establishing of a public park in the District of Columbia, heard testimony from all parties who came before it, after public advertisement required by said section, and having made a personal examination of the ground, are of the opinion that, while they believe Rock Creek Park, if improved, would be of special benefit to surrounding property, yet in its present condition, that of an unimproved tract of public land with no thoroughfare through it to allow of communication from east to west and acting as a barrier to the development of property lying adjacent to its eastern and western boundaries, they believe that it has, to date, conferred no appreciable benefit on surrounding property, and, therefore, the commission, in carrying out the provisions of section 6 of the act that it assess such proportion of the cost of the land for the park upon the lands, lots, and blocks situated in the District of Columbia specially benefited by reason of the location and improvement of the park, as nearly as may be in proportion to the benefits resulting to such real estate, do determine such benefits to be inappreciable at this time and not sufficient to be indicated by a money value.

"*Resolved further*, That the executive officer of the commission is directed to prepare a report to the Supreme Court of the District of Columbia, embodying the conclusion of the commission, as expressed in the foregoing resolution, and submit a copy of same to each of the members of the commission for his approval, the approved report to be then signed by the commission and forwarded to the court.

"There being no further business before the commission, it was moved, seconded, and carried that the commission adjourn to meet at the call of the chairman, and it accordingly adjourned at 3.45 p. m.

"JOHN M. WILSON,
"*Brigadier General, Chief of Engineers, Chairman.*
"*Executive Officer and Secretary.*

"A true copy.

"DANIEL E. GARGES,
"*Clerk to the Commission.*

"ARGUES AGAINST ASSESSMENT.

"May I add that I do not believe that any court in the world or any man of common sense would hold that now, 15 years after that action was taken, with the conditions all changed, benefits should be assessed?

"At this point in his speech Mr. SIMS tries to discredit my statement that I did not know of the attack upon me of March 3, 1909, until my attention was called to it in the CONGRESSIONAL RECORD of that date only a short time before I last appeared before this committee. He does this by relating a conversation which he says occurred between him and me at my place of business in November, 1909, in which he quotes me so as to make it appear that I knew then all about the attack that he had made on me. He may have had a conversation with me at that time and place. I have no recollection of any such conversation as he reports. Certainly his intimation that I knew then that he had attacked me as he did in his speech of the 3d of March, 1909, is absolutely false. I would not have welcomed him to my office or allowed him to remain there unless he came to apologize if I had known then that he had made such an attack on me in the House.

"The fact is that while I was in and out of the Gallery of the House and talking with Members in the corridor at the time on the afternoon of March 3, 1909, when the debate was going on in which the attack was made on me, I did not hear any of the attack nor read any of it until I read it in the CONGRESSIONAL RECORD the week before I appeared before the committee in December last. After the vote was taken that afternoon and the bill defeated I was so disgusted that I went straight home without speaking to anyone, except to say to my friends that I would never appear at the Capitol to ask for legislation again. I was so disgusted with the defeat of my long effort in the public interest that I did not want to read even the newspaper accounts, and did not do so. I do not take the CONGRESSIONAL RECORD, and I did not see the CONGRESSIONAL RECORD of March 3, 1909, until December, 1912, when a friend called my attention to it. Different people spoke to me about the matter, naturally, but no one told me of the attack upon me. Obviously I would have replied then, if I had known of it, as I have replied now.

"Mr. SIMS himself furnished the proof of this in this very statement about the alleged conversation (p. 1577, CONGRESSIONAL RECORD) when he says:

"I said to him, 'I will be glad, Mr. Glover, to correct anything in the RECORD that may have been said to put you in a false light, and anything that *you* will send me I will be glad to put in the RECORD.'

"WOULD HAVE ANSWERED SOONER.

"It must be plain to everyone that if I had then known of the attack, and if Mr. SIMS had made me such an offer, I would have availed myself of it at the time.

"That is the way that any man in my situation would have acted. Even Mr. SIMS does not claim that I made any response to this alleged offer to set me right in the CONGRESSIONAL RECORD.

"By another characteristic inaccuracy, Mr. SIMS attributes to me a statement that was really made by Mr. GEORGE, in the hearing before this committee, when I made my former statement.

"Mr. GEORGE made the assertion that the price paid for the land in Rock Creek Park was eight times the assessment. I did not know whether that was the fact or not, and therefore I did not say whether it was the fact or not. When Mr. GEORGE first made the statement I answered, as in a question, with the word 'Yes?' and should have been so reported. He repeated the statement (p. 431 of the record of the hearing before this committee), as follows:

"GEORGE SAID PRICE WAS TOO HIGH.

"Mr. GEORGE. And the sum paid was $1 125,215, and the assessment was for $133,334; so that the Government paid 8.06 times the assessed value of the property.

"All I said was:

"Mr. GLOVER. Property was not looked upon as very valuable out in that section.

"And on page 426 of the hearing, when Mr. Chairman JOHNSON asked me a direct question as to the assessment of the land taken for Rock Creek Park, I said:

"Mr. GLOVER. I do not know what the assessed value of the property was, but I know it was taken at vastly more than its real value.

"SAYS HE QUOTED NO VALUE.

"So I put no value upon it before this committee or elsewhere.

"The latter portion of Mr. SIMS's extraordinary speech of January 15, 1913, on page 1570 of the CONGRESSIONAL RECORD, contains some of his most extraordinary statements. He says that he is, and has been, opposed to taking advantage of options on land secured for the benefit of the Government, and prefers that the land should be acquired by the power of condemnation, and that the owners should get the full value for it. Speaking of this particular case, he says:

"I do not think it reflects any credit upon a banker of large means to have acquired an option on land at not much more than one-third of its value from private owners, and then sell it to the Government even without profit, which is abundantly able to pay all that it is worth.

"CITES ANOTHER 'INSINUATION.'

"In that last sentence he stuck in the phrase, 'even without profit,' in furtherance of the insinuation upon which I have already commented. But leaving that out, he says that he would rather pay three times the value of land acquired by the Government than take it under an option secured to save the Government two-thirds of its value. This will be interesting reading to his constituents and to all who talk about economy in Government expenditures, and to all who desire to get things cheaply for the Government.

"He says in the next sentence:

"Another thing: I do not approve of the members of the District government going around and getting options on land in this District and then lobbying in either House to have us purchase it.

"This is his ungrateful allusion to the methods by which the District commissioners have gotten better bargains for the District government in purchasing lands for public uses, by securing suitable options, than could possibly have been obtained under condemnation proceedings, as the record of condemnation proceedings here and elsewhere abundantly proves.

"LAND NOW WORTH MILLIONS.

"Finally Mr. SIMS, after once more claiming credit for saving to the Government $70,000 for the ravine now dedicated for park purposes by the owners of the tract—$70,000 if it had been obtained under the option, and, as he says, 'in round numbers, $200,000 if the property had been acquired by condemnation'—winds up by saying that the owners of the property ought to be thankful for the defeat of the bill, since their land 'is now worth to them $2,000,000 to $4,000,000.'

"Of course, if Mr. SIMS had not defeated the bill the Government would now have had that land, according to his statement, worth from $2,000,000 to $4,000,000, the National Capital would now have a 100-acre addition to the Rock Creek Park, preserving all the remarkable natural beauties in the vicinity of the Connecticut Avenue Bridge and the Massachusetts Avenue Causeway (which, together, cost the District of Columbia $1,250,000); and also the beginning of the park connection that must be made, and that will be made, but at far greater cost, with the Potomac Park on the south.

"SIMS PROUD BILL WAS DEFEATED.

"It is hard to see how even Mr. SIMS, as a Member of Congress, a representative of the people of this great country, who desire their National Capital to be the most beautiful on earth, and who desire their Government to acquire land on the most reasonable terms, can say, 'To the extent that I had any part in defeating that bill I am proud of it.'

"Still less is it possible to understand how any man fit to sit in the House of Representatives could take pride in so misusing his privileged position as to malign a private citizen for his years of effort to serve the National Capital.

"The very last words of Mr. SIMS's speech of January 15, 1913, are these:

"Now, I have not said any unkind word in the way of adverse comment on Mr. Glover, but I will leave the question to you as to whether Mr. Andrus or myself ought to be expelled.

"I am perfectly willing to leave the matter just where Mr. SIMS left it, without further comment.

"OPTION WAS EXTENDED.

"Articles of agreement made and concluded this 15th day of January, in the year of our Lord 1908, by and between Charles J. Bell, Amos H. Plumb, and John Cassels, trustees, under decree entered April 15, 1903, in the Supreme Court of the District of Columbia, in equity cause 23345, parties of the first part, and Charles C. Glover, of the city of Washington, party of the second part.

"Whereas by an agreement bearing date the 9th day of March, 1906, an option was given to Charles C. Glover to purchase two certain parcels of land, a copy of which agreement is hereto attached and made a part hereof; and

"Therefore it is hereby mutually agreed to and with each other that the said option shall be held and considered as continuing and being in full force, operation, and effect until the termination of the first session of the present Congress (the 60th Cong.), and for such time thereafter as may be necessary to obtain the payment of any sum or sums of money appropriated at said session of Congress, and shall then cease and determine and be of no effect.

"TEXT OF OPTION.

"Articles of agreement made and concluded this 9th day of March, in the year of our Lord 1906, between the persons whose signatures are hereunto attached as owners of interests in the pieces or parcels of ground hereinafter described, constituting a part of what is known as the Thompson syndicate property, title to which said property was vested in Charles J. Bell, Amos H. Plumb, and John Cassels by decree entered on the 15th day of April, 1903, in the Supreme Court of the District of Columbia in equity cause No. 23345, parties of the first part, and Charles C. Glover, of the city of Washington, D. C., party of the second part:

"Whereas the parties of the first part are the owners of the pieces and parcels of ground hereinafter described; and
"Whereas the parties of the first part are willing that the said pieces and parcels of ground shall be made and shall become a public park upon the terms and conditions hereinafter stated; and
"Whereas the party of the second part desires, without compensation, and in consideration of the public interests to be thereby promoted and subserved, to aid so far as he can properly do so in having said pieces and parcels of ground made a public park on the terms and conditions hereinafter stated:
"This agreement witnesseth that the parties of the first part, each for himself or herself, and in respect of their several and respective interests, each for himself and not one for the other, in consideration of the sum of $1 lawful money of the United States to each of them in hand paid by Charles C. Glover before the signing and sealing of this agreement, the receipt whereof is hereby acknowledged, and in consideration of the other payments, and the performance of the conditions hereinafter specified, do hereby covenant, promise, and agree to and with the said Charles C. Glover to sell to the United States or to the District of Columbia, for the purpose of a public park, for and in consideration and at the rate of $4,000 per acre and fraction of an acre, all those pieces and parcels of ground in the District of Columbia described as follows:

"Parcel No. 1: All that part of the aforesaid property lying to the south of the south building line of Massachusetts Avenue and to the east of the center line of Rock Creek drive, as said drive is shown on the plan of the permanent system of highways in the District of Columbia, and containing 3¼ acres more or less.

"Also parcel No. 2: All that part of the aforesaid property described as follows: Beginning at the center of Rock Creek Drive, as shown on the said plan of the permanent system of highways, where said center line crosses the property line between the said property of the Thompson syndicate and Woodley Park; thence southerly along said property line to the boundary of the said property of the Thompson syndicate at or near Rock Creek; thence along said property line down Rock Creek to the north building line of Massachusetts Avenue; thence northwesterly along said building line of Massachusetts Avenue to the point where the property line of the said property of the Thompson syndicate leaves said avenue; thence following said property line in a northerly and northwesterly direction to its intersection with the north building line of the Observatory Circle; thence along said building line of said circle in a westerly direction to its intersection with the center line of Thirty-fourth Street, as said Thirty-fourth Street is shown on said plan of the permanent system of highways; thence due north along the center line of said Thirty-fourth Street to the center line of Garfield Street, as said Garfield Street is shown on said plan of the permanent system of highways; thence due east along the center line of Garfield Street to a point 325 feet distant at right angles from the center line of Cleveland Avenue, as said avenue is shown on said plan of the permanent system of highways; thence southeasterly and parallel to said center line of Cleveland Avenue and 325 feet distant therefrom to the point where said line intersects the center line of Twenty-ninth Street, as said Twenty-ninth Street is shown on said plan of the permanent system of highways, said line running parallel to Cleveland Avenue to be the center of a 90-foot street; thence southeasterly by a reversed curved line to the intersection of the center line of Rock Creek Drive, as said Rock Creek Drive is shown on said plan of the permanent system of highways, said reversed curved line to be the center of a 90-foot street; thence about 350 feet along the center line of said Rock Creek Drive to the point of beginning; and containing 84½ acres more or less; the pieces or parcels of land aforesaid containing together 88 acres of land more or less.

"A further condition and consideration for the conveyance by the aforesaid trustees to the United States of the pieces or parcels of land above described is that that portion of Benton Street, as shown on said plan of the permanent system of highways, shall be abandoned by the United States from where said Benton Street intersects the reversed curved line referred to in the aforesaid description of the land to be taken for a park eastwardly to the junction of said Benton Street with said Rock Creek Drive, the purpose of said abandonment being that the reversed curved street is to be the boundary of the park at this point and shall take the place of that portion of Benton Street proposed to be abandoned.

"A further condition and consideration for the conveyance of the above-described pieces and parcels of land by the aforesaid trustees to

the United States is that wherever the park line follows the center of a street as now laid out on the said plan of the permanent system of highways or a street to be laid out as provided herein, a strip of land 30 feet wide on each side of said center street line shall be dedicated for roadway and sidewalk purposes by the United States, and the aforesaid trustees out of and from any piece or parcels of land within said 30-foot strips owned or that may be owned by them severally.

"The covenants hereby made and entered into are upon the express condition that they shall be executed in their entirety, and that all and not a portion of the pieces and parcels of land herein provided to be set apart and become a park shall be taken and paid for according to the terms herein set forth.

"Upon the performance of the conditions herein prescribed and the full payment of the purchase money herein provided for to John Cassels, Charles J. Bell, and Amos H. Plumb, the trustees who hold the title to the above-described property, the said trustees and the survivor or survivors of them shall and they are hereby directed to make, execute, and deliver proper conveyances, and to do and perform all acts necessary in their judgment to carry into effect the purposes of this agreement.

"It is further agreed that this agreement shall continue in force until the end of the first session of the present Congress, the Fifty-ninth Congress, and shall then cease and determine and be of no effect, unless the legislation herein contemplated and specified be obtained and an appropriation made for the purchase money herein designated at said first session.

"This agreement is to bind as well the heirs, executors, administrators, and assigns of the parties hereto as the parties themselves.

The Tariff.

SPEECH

OF

HON. BURTON L. FRENCH,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 26, 1913.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. FRENCH. Mr. Chairman, it now seems to be the very settled policy of the Democratic majority of the House to bear the full responsibility of shaping the tariff legislation that it proposes to give the country.

The Democratic Party for the first time in 20 years is placed in control of the House and the Senate and the Executive branch, as well, of the Government. In view of that, I recognize the point of view, at least, of the majority in this House when that majority decides to pass a measure without giving to the Republicans, or the members of any other party for that matter, the opportunity of submitting amendments with any reasonable hope of their receiving consideration.

I do not defend the caucus method of arriving at a conclusion upon the part of our Democratic friends. It was the method that they condemned so earnestly when followed by the Republicans when the Republicans were in control.

However, this question is one that the country will hold the Democratic Party responsible for in the same way that the country will hold the Democratic Party responsible for the particular tariff bill that it will pass.

I desire to-day to call attention very briefly to my position upon the tariff question. We can not, if we would, approach the question of the tariff as though we had not had a tariff in the history of the country or as though there had not been a protective tariff. I do not know, if the question were to be raised for the first time, whether or not it would be the best policy to adopt a protective tariff. I believe that had there been no protective tariff granted by act of Congress for the encouragement of the various industries of our country more than 100 years ago and had no protection been granted since that time our country would not be the country that it is to-day. Our population would possibly be one-half as large. Instead of many transcontinental lines of railroad there might be one pioneer railway connecting the East with the West. The great cities of our Central and Western States would to-day be towns and villages and hamlets or else have no existence whatever. So in our Eastern States. Conditions would be very similar to the conditions that existed the middle of the last century, with, of course, some impetus that would have been given by modern inventions and discoveries.

On the whole, I believe that as regards population, and as regards industrial development our country would be one-half a century behind what it is to-day if we had not adopted the policy of a protective tariff.

Maybe had this been the case our country would have been just as well off. Maybe our country would have been better off if we had made progress more slowly, if we had not adopted a system that in itself tended to encourage people by the thousands and millions to immigrate to our shores. Maybe our country would have been as well off if the great States to the west could have remained Territories for another 25 or 50 years. All this discussion, however, is beside the mark. The fact is, we adopted the policy of a protective tariff when the first tariff law was passed that received the approval of the first President of our Republic. From that time, with more or less fidelity, with more or less vacillation, we have maintained the policy of a protective tariff.

It is, then, from the standpoint of industries developed, of a population that equals almost 100,000,000 people, certain definite wages paid for employment of labor, certain prices paid for the products of the mines, the mill, the farm, from which in return these wages are paid and profits yielded to the employer of labor or the captain of industry—it is with these considerations that we must view the question of maintaining the principle of a protective tariff.

It would be elementary for me to discuss the question of a tariff and the theoretical influence that a tariff has upon industries. From the examination that I have been able to make I have not the slightest doubt that a protective tariff does protect. It may protect too much. Having committed ourselves to the policy of a protective tariff, or, rather, I would say, having been committed to the policy by our fathers during more than 100 years, the true problem is, Shall we scale down the tariff at once, so that there shall be no protection? Shall we have regard to industries, to wages, to certain standards of living that have been attained under the application of the protective principle, or shall we, without regard to all these considerations, adopt a principle that a new people might adopt, untrammeled and unhampered by the actions of any predecessors?

I said a few moments ago that a tariff might give protection enough or it might protect too much. Having committed ourselves to the policy of protection, we can not in good conscience abandon the policy for such a one as will bring disaster upon the people interested in any line of business. On the other hand, I am as earnest as any Member of this Congress in my desire to see to it that our tariff schedules shall be scaled down in every instance so that in not one of them will there be represented in the duty placed upon commodities imported from foreign countries one iota of protection in excess of the difference in cost of production within this country and the cost of production in foreign countries.

What, then, is the basis that should be followed in determining this difference? In my opinion the question has already become so involved that the facts can be ascertained only by the most careful and painstaking examination by those who may be intrusted for a considerable time with the responsibility of inquiry into the questions of wages, cost of raw material, amount of raw material that enters into various commodities, and so forth, such as can be ascertained through a tariff commission of permanent character.

ELIMINATION OF COMPETITION.

We are living in a remarkable age. Nearly everything that enters into the home in the way of commodity or luxury is produced by a comparatively few persons engaged in that particular line of production. Realizing our great development as a nation, realizing that our population has doubled since the middle of the last century, realizing the fact that commodities are consumed in an even greater increase of ratio than is suggested by population, we are amazed to find that in nearly every line of production, aside from agriculture, there are less agencies engaged in production than there were at the middle of the last century. There are less manufacturing establishments producing woolen goods than there were in 1850. There are about two-thirds as many producing boots and shoes; less than one-fifth producing leather; less than half as many producing agricultural and farm implements; less than half as many producing the salt that goes upon our table as there were in the middle of the last century. And I could amplify this many times, and then I could call your attention to other lines of activity where there has been scarcely a perceptible increase in the number of producing agencies in spite of the fact that during this time there has been an increase of more than 100 per cent in population and a still greater increase in the consumption of the commodities produced.

It is not difficult to find the reason for this. The inventive genius of man has been given tremendous encouragement in our country, with the result that the sickle has been superseded by the combined harvester; that the ox wagon has been superseded by the automobile; that the log chains and teams that hauled the logs to the mill have in part been superseded by the overhead wire, along which by electric power is conducted log after log from the heart of the forest to the bank of the stream or to the railroad to be hauled to the place where they will be manufactured into lumber.

And so we can go to all the various lines that have to do with supplying the wants of mankind either upon the farm, within the mine, the forest, or the mill, and there we will discover these agencies of a more up-to-date world. It is also apparent that it costs more money to equip a sawmill with the machinery of the present day than it cost to equip a sawmill with the machinery that was in vogue 50 years ago. It costs more money to construct a railroad from New York to Chicago than it cost to establish a freight line with horses and wagons and drivers that would connect New York with some interior city in the early part of the last century. It costs more money to establish a great steel plant than it cost to open up a blacksmith shop or a forge, from which were wrought the various implements made of iron and of steel in the days of our fathers.

The result of all this is that the many can not engage in these various lines of production because they do not have the means. Only a few working individually can engage in them, and only a comparatively few, measured by the population of the country, can engage in them when combining and associating their money, having then the capital of one gigantic institution necessary to conduct the business.

The country generally believes, however, and I think we may all believe, that this development has meant for good, not for ill; that the average citizen to-day has comforts of life that kings did not dream of a century ago, and that all things considered the very development has been in the way of progress.

However, with this progress one great agency that we had almost believed to be a true law and that had to do with the fixing of prices for finished products has been more and more nearly eliminated. That great agency is competition. If the freighter with his dozen mule teams and several freight wagons charged too high a price for hauling goods from some center of trade to a smaller business community some miles away, another freighter could engage in business with half as many mules and horses and half as many wagons, and he, at any rate, could force down the price and probably they both could make an honest living.

If the shoemaker on the corner making boots and shoes for the people of one community charged too high a price for his product, public-spirited citizens of the community saw to it that another shoemaker opened up a shop just across the street and prices were reduced. If the buyer of hides did not pay enough to the farmers for the hides that had been curing in the old shed during the past season, some other buyer was induced to come in and the prices of hides would go up. If the sawmill man did not pay as high wages as he should to his engineer, his sawer, and his men to stack lumber or to drive logs, they would leave him and go to some other manufacturer of lumber where their services could be better appreciated in dollars and cents.

In fact, we had come to think of competition as rather an invariable law—rather, a just law—and on the whole I think that so far as the masses of the people were concerned it was a law quite to be commended. Under competition it mattered little, so far as the producers were concerned, just what the tariff might be so long as it was enough to protect. If it furnished a margin of protection to such an extent that in the production of boots and shoes the manufacturer could make a profit of $1 per pair, and manufacturers generally could get along with a profit of only 50 cents per pair, the profit through competition was held down to 50 cents per pair and not $1.

A TARIFF COMMISSION.

With the elimination of competition in large part, with the consolidation of industry in large part, the relation of industries to a protective tariff is absolutely changed. Shall we strike down the protective tariff entirely? No; that does not seem the way to meet the situation. That might bring ruin and disaster to the industries, few in number though they may be, engaged in the production of certain commodities. The industries, we must remember, have been built up with respect to a tariff policy.

If the people can not be protected without striking down the industry, then undoubtedly the rights of the people should prevail. But there is a way to protect the people, whether they be laborers engaged in mill or mine or factory or the farmers selling their raw material to the vast body of consumers of the country or purchasing the products of industry or those who have invested much money in productive enterprises, and that method does not consist in maintaining a tariff duty that is one whit above a duty needed for protection. That method does not consist in striking down all protection. That method does not consist of making any sliding reduction, reducing the tariff a little this year and a little next year, and so on, until it shall be reduced to the point necessary. That policy does consist in striking down at once the duty upon every schedule to the precise point that represents the difference in cost of producing here and in foreign countries.

This should be the measure of our protection, and I believe that the way to obtain the information necessary to enact a tariff law that will recognize this is through a tariff commission. Sometimes a guess made upon a very complex problem will be found to be correct and the person who makes the guess will receive something of the praise that might otherwise go to him who, as a result of careful, painstaking effort, discovered the same answer. It may be that our Democratic friends, upon the basis of the report of the Tariff Commission touching a few schedules and upon the basis of what general and common information we all have, will be able to prepare a tariff bill at once that, enacted into law, will be perfect. If so, they will undoubtedly receive their measure of applause just as though they had prepared the bill as the result of grave research and inquiry into every schedule.

THE PRESENT PROGRAM.

But, gentlemen, I do not think that such a happy termination will result. I do not know what ratio the possible right guesses may bear to the possible wrong guesses. My idea is that you have a small possible chance of guessing right.

We are a great country, and every section of our land is interested in one tariff schedule or another. The manufacturers of New England, of the South, the agriculturalists of the Middle West, and the farmers and miners of the great West are all bound in interest alike. Take the State that I have the honor to represent in part upon this floor—the State of Idaho. Probably no State is more vitally interested in the tariff schedules than is that State. Our lead mines produce nearly one-third of all the lead produced in the United States. The miners receive good wages. A large section of country is dependent upon the industry. The zinc industry is carried on with it. Both are dependent upon a tariff, and without it many of our mines would be forced to reduce their wages paid or cease to operate. Just where the line of protection might be drawn is somewhat difficult to determine, but it is our duty to assume difficult tasks. To strike the duty down entirely would mean not only the closing down of most of our mines but the checking of development. To maintain the schedules where you have placed them in the pending bill may be almost as disastrous.

Our sugar industry is of vast importance. We have but a few factories in Idaho, but last year there was paid out a million and a half of dollars to the farmers for sugar beets and to the laborers for their services. To carry through the program that you have outlined on sugar will mean the dismantling

of our factories and the forcing of our people to seek other lines of thrift and industry.

Turn to our stock industry and it is the same. We produce annually millions of dollars' worth of live stock and the products of live stock. Last year we sold between six and seven million pounds of scoured wool. The schedules which you propose spell ruin and disaster. Your bill is in the interest of foreign countries and against the well-paid laborer of our own. So we could continue. In industry after industry it is the same, and the main question seems to be, How much havoc will your measure bring?

Mr. Chairman, if I were mean enough to place the welfare of my party above my country, I could hardly wish anything better than the passage of the pending measure, that has been considered for a few days and which, it is understood, will be passed within the next few weeks by a Democratic majority in Congress and approved by a Democratic President. I believe, however, that I am broad enough and large enough to place the welfare of my country, the welfare of 100,000,000 people, above the advantage to any organization, no matter how long a time it may have been favored by the people of this country. For that reason I could wish that the majority party in this Congress would do that which from my standpoint would be the most patriotic thing that could be done by any political party intrusted with responsibility.

The great parties of the country in the last campaign told the people that they would consider the tariff question and indicated to the people something of what they proposed to do. I believe that party responsibility is something that the people of this country have come to expect, and that the majority party in Congress to-day has resting upon it the duty of meeting the question that was discussed during the last several years, and especially in the last two campaigns. There are two ways of meeting that question, gentlemen, that are presented to this Congress to-day. One of them is to meet it in the way that you are meeting it—to guess off a tariff bill; to enact a tariff statute without regard to the true understanding of conditions that exist in this country and in foreign countries and in absolute disregard of the facts that a nonpartisan board has placed before the Congress and made available to the thoughtful people of the United States. I believe that the other way, however, is the way that would commend itself to thoughtful people in the Nation. That way is to meet in extra session, as we are met, and within 60 days from the time of the meeting enact a tariff statute touching Schedules K and I—the wool and cotton schedules—and provide for a duty that would follow the line that can be clearly marked as indicated to the people of this country by the Tariff Board that reported upon both of these schedules only about one year ago. That could be done within 60 days. Then I would follow that up and within another period of 60 days—you having control of the House, the Senate, and the Presidency—by another law touching other features of the tariff question that you can reasonably modify and rely for information in framing it upon the Tariff Board's incidental findings and upon what information is available to all of us. This all should be accomplished within a period of about four months. And, third—and I think this should be done immediately—provide for a permanent tariff commission, not of partisan but of nonpartisan character, not bipartisan, not tripartisan, but of nonpartisan character, I say, whose duty it would be to inquire into the conditions of our labor, the conditions touching industries, the conditions concerning the consumers of this country, the producers here and in foreign countries, and then indicate to the country that the Congress proposes in the future to hold to tariff laws that will be in line with the facts that such a commission would report.

INCOME TAX.

And now a word upon the income-tax feature of the bill, for you have incorporated the question of an income tax with the question of the tariff.

With the ratification of the amendment to the Constitution of the United States under which an income-tax law may be utilized for the purpose of raising revenue by the Federal Government, it can probably be accepted as quite certain that this species of tax will constitute a definite and permanent part of our revenue system for the future.

This is as it should be, for, regardless of whether or not it has been found in times past to be in part unsatisfactory in places where it has been tried, conditions to-day are vastly different from conditions that existed prior to the last generation and there is undoubtedly a class of people who are abler than the average citizen to bear a reasonable portion of the burden of government which, as a matter of fact, is bearing the minimum of that burden simply because our revenue laws were enacted to meet conditions that existed at a time when the laws were passed and have not been brought up to date.

Essential principles that must be considered in the enactment of any revenue-producing law are fairness and uniformity, together with the reasonableness and certainty with which collection may be made.

Probably the first essential of government in its beginning was to constitute some organization that would serve to protect human life, to ward off a common foe, to protect and sustain the individual earnings of the members of society or the earnings of society as a collective body. The beginning was so simple that in the few words that I have used to describe the end to be attained by government I have indicated the essentials. With the development of society, however, the wants of mankind expanded, and more and more it was found that there could be done collectively to great advantage much that it had been thought could be best attained by private initiative, or yet which to attain there was no demand at all. With the development of government and the taking over of responsibilities from time to time, with the adding of the responsibility of building highways to the responsibility of protecting life, with the adding to these responsibilities further responsibilities in the way of public libraries, schools, improvement of rivers and harbors, maintenance of institutions for the encouragement of art and science, maintenance of courts, and agencies, in fact, either for the service of the public as agencies or for the purpose of protecting the public against private organizations upon which society had come to depend, such governmental machinery was necessary as to call for tremendous expense upon the part of organized society supporting its government.

For this purpose we must raise revenue. To this end we must provide systems by which money may be collected from the people generally to sustain a government that has to do with so many ramifications.

In primitive government, more nearly than under modern, the individual units were more nearly identical, so far as their ability to bear a part of the responsibility of government was concerned.

The result was that the poll tax was adopted as probably the best means of raising revenue, or, in other words, a system that exacted the identical contribution from each member of society. Maybe it was work; maybe it was money; maybe it was the fruits of work. At any rate, the responsibility rested fairly equally upon the members of society. By and by, with the responsibilities of government, and without attempting to indicate which anticipated the other, functions of government or amplified enterprises upon the part of the citizens, private citizens began to assume, and government came to protect them in assuming, title to land, rights of one kind and another that were not possessed by the people generally. The result was that here and there an individual was found who owned vastly more than his neighbor in the way of property. The building of a road helped him and his property in far greater ratio than it helped his neighbor and his property. The same principle applied generally to society caused a demand that some type of raising revenue be adopted that would apportion the responsibility of government more equitably, and the result was the adoption of the property tax.

Until the last comparatively few years property taxation was regarded as equitable, and it was regarded as a system that with much certainty exacted taxes from those who were capable of paying them. Under this system A, whose property was worth twice as much as the property of B, was expected to pay twice as large an amount of taxes as was exacted of B, and it was right that he should be asked to do so.

Conditions, however, developed that made it necessary for government to reach out for other methods of taxation. Among these conditions were, first, the enlargement of the function of government and the consequent necessity for vastly greater revenues than had ever been required in the past.

To meet the additional revenue required by calling upon the people to bear each an equal part of the expense of government, was to impose a burden upon those who were least able to bear additional burdens. Again to ask that the revenues be raised from taxes upon land or physical property was to place a burden that could be seen and felt and keenly realized by those who were the owners of physical property, and as well to make the burden heavy upon the poorer landowners.

The result was that governments began to cast about for some system of raising revenue that would be indirect, that would, if possible, result in the collection of the money necessary to defray the expenses of government, but that in its collection the smallest burden would be imposed upon the person contributing his share of the revenue. Accordingly various kinds of taxes that might be called consumption taxes were adopted. We provided excise taxes. We provided for the raising of money by placing duties upon commodities imported from foreign countries. We provided even that a small fee should be paid by the purchaser of a stamp for the mailing of a letter or upon recording an instrument, requiring a stamp to be placed upon the instrument, or before a check could be cashed requiring a stamp to be placed upon the check. In fact, so completely did we become impressed with the advisability of indirect taxation that the vast part of the taxes for the Federal Government has been raised in this manner.

A second condition that contributed to the demand for a change in our revenue system has made itself manifest a few times in the history of other countries. It is especially a condition that compels our attention to-day, and probably in the future, during the years that we can reasonably anticipate, will continue to demand the attention of our country in an ever-increasing degree.

Property used to be considered as something physical, something real. To-day property has come to be recognized as vastly more than this. It oftentimes consists of rights or of privileges. More than this, we have approached a time when many of the wealthiest citizens of our country have their wealth invested in property that is other than real. It is invested in franchises, for which a minimum charge has been made. It is invested in institutions that have become vastly profitable on account of the special privileges that either law or natural monopoly has conferred upon them, without regard to the amount of the original investment.

The question, then, that presents itself is, Shall we adhere to the old system of raising revenue? We abandoned the idea of raising revenue alone by requiring each unit of society to contribute his part as under a poll-tax system. We abandoned this as individuals began to own property and their ability to bear the burden of taxation increased.

We abandoned these as agencies alone for raising revenue, and adopted the indirect methods when the demands of government and the expenses of government reached the point where direct taxes would have been intolerable to a large part of our population.

We are now face to face with new conditions, and the Government in enacting an income-tax law is merely asking one class of society to bear a share of the burden of government that under our former system it may have in large part avoided.

We hear it said that the system of indirect taxes—excises, taxes on imports, and so forth—is the system that should prevail. It is probably true that this system will continue to be an important one in our Government, but I submit that under this system the burden of taxes rests unequally upon the members of society measured by the ability of the members to bear each his part in government.

A tax upon bread might raise sufficient money to run the Government, but would anyone contend that the poor man earning his wages by his day's labor would eat less than the millionaire? Would anyone contend that the clothing worn by the banker or the dealer in stocks and bonds bears anywhere near the ratio in cost to the clothing worn by the bookkeeper in the bank or the carpenter working at his trade as the wealth of the one bears to the wealth of the other?

It is true that the expenses of families of wealth for food which they must eat, clothing which they must wear, and homes within which to live are greater than the expenses of the poor man for food for himself and family, for clothing, and for his habitation, but it is not true that there is a ratio of difference between the cost upon the one side and upon the other that can be measured by the wealth of the one when compared with the wealth of the other.

So long as government relies upon this method of indirect taxation, so long will it place the responsibility of government in an unequal manner upon the shoulders of those who are not so capable of bearing the responsibility of government as are their more fortunate fellows in society.

The income tax is a departure from this system and it is a departure against which nothing can be said, providing the system is practicable. I probably should not fail to mention the fact that to require a tax upon income is also to require the citizen to bear the responsibility that he ought to bear when measured by the responsibilities required of other citizens of wealth whose investments have been made in classes of property that can be readily located and upon which taxes may be levied.

IS THE INCOME TAX JUST?

A few days ago in writing a friend with regard to possible legislation of the present Congress, I facetiously congratulated him that his income was not in excess of $4,000 per year.

It had never occurred to me that anyone would seriously contend that a limit fixed by law below which incomes may be exempted and above which an income tax may be levied could in anywise interfere with the laudable ambitions of citizens of this country to better their condition. Yet apparently there are some who contend that such is the case.

There has come to my desk a copy of an article that is signed by a very responsible citizen of Atlanta, Ga., and which appeared in the Atlanta Constitution on April 2 last, which takes this very point of view. The author raises the question that if $5,000 be fixed as the minimum below which an income tax shall not be required—

> A man would say to himself, "Why should I strive to have an income of $5,000 or more per annum when I must begin to pay a direct tax to the Government for enjoying that privilege? Why should I not be content to make $4,000 or $4,500, or even $4,900, and escape taxation?" It is evident that such an exemption would put an arbitrary limit upon his ambition and stunt the possible commercial growth of the citizen.

That statement seems to me to carry its own refutation upon its face.

If the income tax equaled or approximated the amount of a man's earning in excess of the minimum fixed by law, the logic might be good; but in view of the fact that no income tax is suggested that even proposes more than an exceedingly low rate of taxation upon an income, it certainly occurs to me that the average citizen will not limit his energies when his income shall reach the minimum provided by law simply because if he exceeds the minimum he will need to pay 1 per cent or a small per cent, not of his income but of the excess income above the minimum, in the way of taxation.

Is it possible that any citizen who may be earning $4,000 per year and who may be exempt from the income tax would refrain from expending such energies as might be necessary to raise his income to $10,000 per year, even though by so doing his taxes would actually amount to $60 upon his excess income? So I say the proposition is too extravagant to receive great consideration.

The same writer, however, raises another question that is deserving of some consideration. He says:

> It seems but just and right that if a man has an income of $1,000 per year he should pay for the benefits he enjoys as a citizen, and on a basis of 1 per cent income tax it would be no harder for him to pay $10 per annum to the Government than it would be for the man whose income is $10,000 to pay $100. They would and should be on a parallel basis, the Government treating everyone alike.

If the income tax were the only tax that the citizens of the Government were called upon to meet, there would be much merit in the argument that has been suggested; but such is not the case. Does anyone believe that a flat capitation tax would be reasonable that would place the same burden upon the day laborer as upon the president of a great railway or a man worth $10,000,000? Not at all. Yet aside from the income and inheritance tax our methods of taxation suggest this principle.

We might place a tax upon coffee imported into the country. Here is a tax that is borne by the users of coffee everywhere. The day laborer who earns $3 per day drinks his cup of coffee in the morning before leaving for his work, as does the president of a bank, whose salary may be $10,000 per year, or as the multimillionaire, whose annual income may be $5,000,000. It may be true that the man of wealth purchases a somewhat better grade of coffee than does the poor man. It may be true that the poor man pays for his coffee 30 cents per pound; but if the man of wealth paid at the same ratio for the coffee that he uses his coffee would cost him $1,000 per pound, $2,000 per pound, or possibly even an amount far in excess of that. Does anyone pretend that such is the case? Absolutely not. Worse still would be the contention that the rich man by any possible means uses 1,000 or 5,000 times as much coffee as does the poor man; and, as a matter of fact, the difference in cost is not great between that which goes upon the table of the poor man and that which goes upon the table of the man of wealth. The fact is the poor man pays vastly more in proportion than does the rich.

If our system of taxation is to be one that apportions taxes not according to ability to pay them, not according to amount of property owned by individuals, but so that each member of society shall pay an identical amount with his fellow, we had better abandon the income-tax idea altogether. But such is not the case. We have largely abandoned the capitation tax because it was unjust. We are trying as much as possible to ease those least able to bear the burden of taxation. The principle that is fast becoming recognized as cardinal or basic, and in which I firmly believe, is that the members of society shall pay taxes in proportion to their ability to pay.

The great question, then, is, How shall we attain a knowledge of what that ability may be?

The writer of the article complains because the man who earns his bread by day labor in such an amount as can be measured in a few dollars per day is not asked to pay from that income a share of his taxes, when he is forgetful of the fact that the common poll tax that means one or two days' labor, upon the part of the poor man represents but a few minutes income upon the part of the rich, and not as much as he might pay for the use of a taxicab to convey him from his office to his home at night.

He forgets that the poor man pays his full share of taxes upon property. He forgets that the poor man pays far more than his share of taxes collected in the way of duties and excises, and that under any of these methods it is wholly impossible for the man of wealth to be required to bear his burden of taxation.

The writer says that both are citizens of the same Republic and that they are served to the same extent by the same public agencies, and yet the writer is forgetful that this same service makes it possible, on account of different ability or circumstances or conditions over which the individual may have little to do, for the one man to attain an income of thousands or even millions per year, while it is all the other man can do to earn food and clothing for those who by the ties of kinship are dependent upon him.

If the writer does not think that such is the case, may I ask what success would he be making in his business if government could be abolished? As we approach the absence of government among the people of the world to-day, in the most primitive corners of the earth, we find the minimum of difference between the individual members of society.

In lands where there is no government, or where the government is merely tribal, there are no millionaires and there are no beggars. Government as we know it, and as we are proud of it, in a certain theoretical sense does mean the same to all citizens of the country, but in another sense it does not mean the same, for it does not guarantee that all shall succeed to the same extent.

In a government that is so constituted that an individual member of the society of that government may be able by his own initiative to bring about such a condition as will yield him profits annually to the extent of thousands of dollars or millions of dollars, surely the beneficiary of such a condition can not with any degree of justness complain because he is asked to pay a tax to his government for its maintenance upon so much of his income as may be regarded as the margin above which it reasonably may be said that it will cost a family to live.

After all, the reason for a minimum above which an income tax is required is that there may be a figure establishd that may be regarded as the measure of living for the American family. It may be that the figures that have been placed in the bill—$4,000—are too high. That is not the question here. The question is one of principle, and, as a matter of principle, I have not the slightest doubt in the justness of an income-tax law that will provide a margin below which the income tax shall not be required.

From an examination of the various features of the pending bill I am convinced that several of them should be modified. These features will be considered later on under the five-minute rule, and I shall not discuss them now. I have tried merely to indicate in a brief way my approval of the principle involved and to meet a few of the chief criticisms directed against the legislation.

IN CONCLUSION.

And now a word in conclusion. In a comparative way it would cost but little to maintain government if the policing of a people were all that government need consider. But government means more than that, and civilized peoples demand more because there are some burdens and problems that can be met by society in a collective sense instead of by society laboring through its individual units.

Experience has demonstrated abundantly that expenses far greater than those that are borne to-day by government for the maintenance of certain institutions that we have developed would need to be borne by the individuals as members of society in supplying the various wants of mankind that are supplied by government.

The principles suggested by our Socialist friends argue, in fact, that we are doing but part of the great work that we might do in a collective manner. I do not care to discuss that question. I merely want to say that probably, with scarcely any exception, the people of our Nation approve of the work that is being carried on by us as a Nation for the benefit of the Nation's people.

We approve of our splendid educational system, although it costs millions of dollars every year to maintain the same. We approve of the building of roads and bridges, although the purposes for which they are maintained are different from the purposes for which the original highways were constructed by men. It costs millions again every year to maintain these highways. We approve of the great work that is being carried on by the Agricultural Department that has meant for the development of better grains, better forage plants, better foods, better stock, and more wholesome conditions generally for those interested, especially in farm work, although the budget necessary to maintain this great department of government represents millions and millions of the people's money.

In the same way and for the same reason we approve of the Post Office Department. We approve of the improvement of rivers and the maintenance of harbors, and facilities necessary to the marketing of the products of the mine, the factory, and the farm. And so we could continue, and we could turn to the various agencies with which government has to do, and looking at the agencies, one after the other, we would pronounce upon them the approval of the Nation, even though it means vast expense to maintain these agencies for the benefit of society.

Who shall maintain these agencies? Who shall maintain government? Upon whose back shall the burden be placed? That is the vital question, and that has been the question that has probably caused no small amount of dissension and discord and war with all its carnage during the centuries that have gone by.

Who shall bear this responsibility? There are those who say it should be borne by people generally in proportion to the benefits received. The rich and the poor, the strong and the weak, need the protection of government. They need the protection of life and of property; they need the advantages that may be afforded by schools, by the various agencies of government, and it is urged that all alike need these things and actually share them in almost equal degree, and consequently the burden of taxation should be placed upon them all alike, or in proportion as nearly as may be to the benefits received from government

In fact, there are some who go further than this and say the poor and the weak need the protection of government in far greater degree than the wealthy and strong, because the latter may themselves supply that in the way of schools and libraries and roads and even protection to life and property that the poor and the weak may not. And yet I can not find myself in accord with this idea of proportioning the responsibilities of bearing the burden of government.

Another theory is that the burden of government should rest upon the individual members of society in proportion to the ability of the individual members of society to meet that responsibility.

This after all is the true measure of duty that a citizen owes to government. It is the true measure of service to be performed by the rich and the poor, the strong and the weak, and, in my judgment, whatever methods of taxation may be considered to-day, regard should be given to the placing of the burden of taxation upon those who can best bear that burden.

The rich would not exchange their places with the humbler members of society. Organized society running perhaps through the hundreds of years has made it possible for them to assume their place of superior eminence among their fellowmen, and falling heir as they have to the untold blessings of organized society through the countless years, ability to serve should be fixed as the measure of service that every member of society owes to the organization of which he is a part.

It is for this reason that I believe in an inheritance tax. It is for this reason, referring to the tariff law, that I have always favored the idea of requiring the heaviest burden of taxation to be borne by those who purchase the luxuries of life.

It is for this reason that I have favored the amendment to the Constitution of the United States making it lawful for our Government to maintain an income tax, and that I believe an income-tax law should be enacted.

If such a law will do as many have assumed, cause the public to be vitally interested and watchful of the wayin which public funds are expended, and bring the representatives of the people in the various offices of public trust to be more solicitous of public welfare, another service of vast importance will have been attained. Our patriotic citizens do not begrudge the money that they pay in taxes provided there be returned to them dollar for dollar of service.

A New Tariff Policy.

This new tariff policy will put in motion a train of misfortunes that will travel along every avenue of trade, commerce, and business, touch every profession, avocation, and calling of life, and visit with its unwelcome shadow every household, fireside, and home in the land.

SPEECH

OF

HON. DICK T. MORGAN,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 28, 1913.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. MORGAN of Oklahoma. Mr. Chairman, we have met in an extraordinary session of Congress. We have come together at the call of the President. The chief work before us is the revision of the tariff. We now have under consideration H. R. 3321. Judged by its title, this is "A bill to reduce the tariff." But the title is misleading. This is not a bill to reduce tariff rates, but a bill to revolutionize our tariff policy. The real purpose of this bill is not a reduction of tariff duties, but the introduction of a new tariff system. The main question is not the percentage of duty levied, but the principle of political economy involved. If this bill shall become a law, we will have abandoned the great national policy of protection; we will have committed this Government to the policy of a tariff for revenue only. Such a change is not revision; it is revolution.

Personally, I have no objection to any reasonable reduction in our tariff rates. I believe that from time to time duties may be lowered, schedules may be readjusted, rates may be changed. But I do not believe in a change of policy. I am not in favor of abandoning the principle of protection. I am opposed to a tariff for revenue only. I believe that the passage of this bill would threaten our industrial independence, endanger our national prosperity, check the growth of our country, decrease employment of labor, reduce wages, and lead the country from its splendid position of safety and security out upon the perilous rocks and reefs of an ocean of doubt and uncertainty.

THE PRESENT LAW.

The present tariff law is a protective tariff measure. It has been upon our statute books nearly four years. It has gone through the ordeal of criticism. It has stood the test of time and experience. Four years of probation have largely vindicated the measure. Conditions in the country to-day are most favorable—times are good, business is prosperous, commerce is flourishing. All our industrial forces are active. Capital is employed, labor is in demand, and good wages are paid. There never was a time in our history when our people were better clothed, better fed, and better housed. There never was a time when they enjoyed superior advantages, had greater opportunities, or were more richly and abundantly blessed with all the good things of life.

This protective tariff measure, enacted four years ago, did not close a single factory, destroy a single industry, or bankrupt a single individual. It did not restrict the employment or reduce the wage of a single American laboring man. It did not disturb business, destroy confidence, retard enterprise, or block progress. It did not depress trade, discourage commerce, or frighten investors. It made no bankrupts, paupers, tramps, or beggars. It caused no depreciation in the value of property, and did not multiply debts, mortgages, or incumbrances.

Under this protective tariff law our farmers have received good prices for their products, and the value of their lands have been enhanced. Our merchants have extended their trade, increased their business, and augmented their profits. There is something for every man to do at remunerative wages, and there is a demand for every product at good prices; in brief, throughout the length and breadth of the land there abounds peace, plenty, prosperity, and happiness.

A NEW POLICY PROPOSED.

In face of this happy condition the party in power proposes to repeal the present law and establish a tariff for revenue only. The advocates of this measure certainly do not realize what this change in our tariff policy will mean. This revolution in the economical policy of the Nation will require the readjustment, reorganization, and remodeling of our industrial fabric. A long period of doubt, uncertainty, and gloom is inevitable. Prices, values, rents, incomes, wages, salaries, earnings, profits—all must change to square with the new order of things. As the tariff goes downward, everything else must travel the descending scale. Our standards of living, prices, values, and wages—all must seek the level prevailing in foreign countries. This new tariff policy will put in motion a train of misfortunes that will travel along every avenue of trade, commerce, and business, touch every profession, avocation, and calling of life, and visit with its unwelcome shadow every household, fireside, and home in the land.

DISLOYALTY TO AMERICAN INTERESTS.

In the majority report upon this bill the statement is made that this bill has been prepared "without thought of protection." This is tantamount to saying that the authors of this bill are wholly indifferent as to the effect its provisions will have upon the farmers, the manufacturers, the wage earners, and the general business interests of this country. This to my mind sounds like rank disloyalty to American business interests and to the 35,000,000 men who constitute our industrial army. In my judgment, the authors of this bill have misinterpreted the voice of the people. There are thousands of people who believe in the reduction of the tariff, but who do not believe in the abandonment of the principle of protection. The vast majority of the voters of this country believe in the principle of protection. They will not approve a measure that has been drawn "without thought of protection" to the great industries that support and sustain our own people, and to which we must look for our industrial strength and independence.

AN INCREASE OF IMPORTATIONS.

The majority report declares that in the preparation of this measure the attempt has been made "to introduce in every line of industry a competitive tariff basis, providing for a substantial amount of importation."

This declaration reveals the principle underlying this bill. Importations of all kinds are to be largely increased. The bill is designed to encourage our people to purchase more largely from abroad, to consume an increased amount of goods manufactured in foreign countries, to patronize more liberally the institutions, the establishments, and the industries of other countries, and to send more money across international boundaries and over the seas to enrich the farmers, the manufacturers, and the wage earners of other lands.

This is a strange doctrine. I can not support such a policy. We should patronize home institutions. The less we buy abroad the better. Money sent to another country never returns. Every dollar we pay for foreign-made products means one less dollar at home. Consumption of foreign-made goods means less demand for homemade goods. Less demand for homemade goods means less employment for home labor. Less employment for labor inevitably means lower wages. To increase foreign importations means loss on every hand. If this bill becomes a law we will send abroad many millions of dollars annually that should remain at home to bless and benefit all our people, to build up our industries, to add to our wealth, and to increase the sum of human happiness under the Stars and Stripes.

A BOON TO OTHER COUNTRIES.

The increase of importations under this bill will be a great boon to the farmers, the manufacturers, and the wage earners of other countries. They will have an increased demand for their products, for their goods, and for their services. This will mean to them higher prices, better wages, and augmented profits. What they gain our farmers, manufacturers, and wage earners must lose. Under such conditions capital will flow to other countries, our farmers will be encouraged to emigrate to Canada and other countries where land is cheaper, where taxes are less, and where farm labor is not so expensive, but where under our new tariff policy they will still have access to our American markets. So we go on from bad to worse. You have adopted a tariff policy that drains our country of wealth, that cramps, cripples, and dwarfs our fundamental industries, that curtails production on the farm and in the factory, that lessens the demand for labor, lowers wages, and decreases the earning capacity of our people; that tends to stagnate business, demoralize enterprise, and impede progress, and that will impoverish our country, weaken our national strength, and bring on an endless train of misfortunes, calamities, and disasters.

FOREIGN COMPETITION NOT A CURE FOR THE TRUSTS.

A tariff for revenue only is presented as a cure for all the ills with which our business and industries are afflicted. The authors of this bill propose, through foreign competition, to destroy the trusts, annihilate monopoly, suppress combinations and conspiracies, and eradicate all other existing evils in our commercial, financial, and industrial affairs.

Competition from abroad is not a remedy for monopoly at home. To cure the trust evil we should apply a remedy that will act on the trust alone. The reduction of the tariff to a competitive basis will act upon all industries alike. The good and the bad, the guilty and the innocent, the just and the unjust, the individual and the corporation, the farmer and the manufacturer, the independent concern, and the illegal combination must take the same medicine. The good must go down with the bad, the innocent must suffer with the guilty, the farmer meets the same fate as the manufacturer, and the small business concerns must take the same dose of foreign competition that is intended to strangle the gigantic industrial corporations of our Nation. The result is obvious. The trust can stand foreign competition that will destroy the independent concern. The trust has the advantage in capital, in credit, in organization, in markets, in raw material, in transportation facilities, in the amount of its product, and many other important factors and elements which affect the cost of production.

The three indisputable propositions—first, that trusts flourish in free-trade England; second, that trusts control products in this country that are upon the free list; and, third, that there are trusts in articles upon which the tariff duty levied is not protective—demonstrate two things: First, that protection has not created the trusts, and, second, that a tariff for revenue only will not cure them.

Mr. CAMPBELL. Will the gentleman from Oklahoma [Mr. MORGAN] permit me to suggest that he explain the relation of the tariff to the Baseball Trusts?

Mr. MORGAN of Oklahoma. That would be an example.

Mr. LOBECK. He would make a hit if he does.

Mr. THOMPSON of Oklahoma. I take it, of course, that the gentleman from Oklahoma is opposed to the Underwood tariff bill. What I would like to know is if he is opposed to that provision which provides for free lumber.

Mr. MORGAN of Oklahoma. I will say that when the Payne tariff bill passed upon five different roll calls I voted for free lumber.

Mr. THOMPSON of Oklahoma. I would like to know, now, if the gentleman is opposed to the income-tax provision of the Underwood bill.

Mr. MORGAN of Oklahoma. If you will present that separately, so that I can, I will vote for that. [Applause.]

Now, I can not yield any longer.

The point I wish to make is this, that the enactment of this bill into law will not destroy the trust. The fact is that the trust is the last business concern this bill will destroy. Our great industrial corporations, commonly called trusts, are business concerns that have the least need of protection. The United States Steel Corporation, with its immense capital, splendid organization, efficient equipment, will cope with foreign competition and be doing business when the small concerns are in the scrap pile and their employees are tramping through the country hunting for jobs.

We have in this country 268,000 manufacturing establishments. They employ nearly 7,000,000 persons, and 30,000,000 people depend upon these concerns for support. Not as many as 500 of these manufacturing establishments are trusts or corporations that possess any monopolistic control. The 267,500 smaller manufacturing establishments will be the first to go down in competition with foreign concerns that employ cheap labor. These smaller concerns are in competition with each other and with the large establishments. You propose to introduce foreign competition, but in doing so you will destroy the establishments which constitute our home competition. We may then have competition, but it will be the competition of the foreign trust against the home trust. Then will follow the international trust, and our country is worse off than ever before.

I do not know how others feel about it, but, so far as I am concerned, if I must buy of a trust I do not want to buy of a foreign trust. I prefer to buy of a trust that pays taxes to an American Commonwealth, that employs American labor at good wages, that is amenable to the laws of the United States, and that does business under the Stars and Stripes. [Applause on the Republican side.]

FEDERAL COMMISSION NEEDED.

I have said that the reduction of the tariff will not solve the trust question. This, to my mind, is self-evident. The greater part of the monopoly of this country exists wholly independent of the tariff. If we would destroy the trusts and place proper and effective control over our large corporations, many of which possess dangerous monopolistic power, we should enact additional laws to prevent the formation of monopolies and create some kind of a national commission, which shall have jurisdiction and control over our great industrial corporations similar to the control the Interstate Commerce Commission has over the railways, express, telegraph, and telephone companies. Most of our monopoly is the result of business methods and not the result of the tariff. The Sherman antitrust law should be supplemented with additional laws to regulate, restrict, limit, and control the methods and practices of our big corporations, and then all of our gigantic corporations, possessing any considerable degree of monopolistic control over any particular business, should be placed under the strict supervision of a Federal commission. This will be practical legislation and will bring real, practical results.

Mr. Chairman, on the 25th day of January, 1912, I introduced in this House H. R. 18711, which was entitled "A bill to regulate the commerce of certain corporations, and for other purposes." I have reintroduced the bill this Congress. This bill not only creates a national commission with jurisdiction over the big corporations but contains a number of important provisions which will destroy existing monopoly and prevent the formation of additional monopolistic concerns. On February 21, 1912, in the House of Representatives I delivered a speech in which I advocated the creation of such a commission. So far as I know this was the first bill introduced in the House to create such a commission, and so far as my knowledge goes I was the first to advocate in a formal address on the floor of the House the creation of such a commission. When the Republican national convention met in Chicago in 1912, in referring to the control of our great industrial corporations, it declared in its platform, June 22, as follows:

> In the enforcement and administration of Federal laws governing interstate commerce and enterprises impressed with a public use engaged therein, there is much that may be committed to a Federal trade commission, thus placing in the hands of an administrative board many of the functions now necessarily exercised by the courts. This will promote promptness in the administration of the law and avoid delays and technicalities incident to court procedure.

The Republican Party was the first to recognize in its platform the necessity of a Federal commission to deal properly and effectively with big business. The Progressive Party was organized in August following, and in its first platform declared on this subject as follows:

> We therefore demand a strong national regulation of interstate corporations. • • • To that end we urge the establishment of a strong Federal administrative commission of high standing, which shall maintain permanent active supervision over industrial corporations engaged in interstate commerce, or such of them as are of public importance, doing for them what the Government now does for the national banks and what is now done for the railroads by the Interstate Commerce Commission.

Two of our national political organizations have indorsed the idea of creating a national commission as a governmental instrument with which to deal with our giant corporations commonly called trusts. We are losing valuable time. It is, as I think, unfortunate for the country that the Democratic Party now in power apparently stands for the idea that a change of the tariff policy will destroy the monopoly existing in our business and will be a remedy for the so-called trust evil. The people are doomed to disappointment. We might have years of absolute free trade and the trust and gigantic corporation would abide with us still.

HIGH COST OF LIVING.

A tariff for revenue only is presented as a remedy for the high cost of living. The great increase in the cost of living during recent years is due to the higher prices of food products. And what we eat constitutes about 60 per cent of the cost of maintaining a family. Any legislation enacted to reduce the cost of living is legislation to reduce the price of food products. Food products come from the farm. If a tariff for revenue only reduces the cost of living, it will reduce the price of farm products. To this I am unalterably opposed. I am against any legislation that has for its object the reduction of the prices of farm products. First, because it is unjust to the farmers; and, second, because I believe any injury or loss inflicted upon agriculture will react and redound to the detriment and loss of every other trade, occupation, and business.

It is true that in 10 years farm products have doubled in values. But 15 and 20 years ago farm products were too low to give the farmer a legitimate return for his labor. Farming was unprofitable, lands decreased in value, and the farmers and their families suffered untold loss and privation. Farm products are not too high. I am opposed to reducing the tariff upon the farm products, with a view to reducing the prices of farm products by importations from abroad. One thing is certain, the prices the farmers receive are not the result of a farmers' trust. There is free competition among the 6,500,000 farmers of the United States. If there is any monopoly in food products it will be found among the middle men who handle farm products. The farmer gets only 46 per cent of the price the consumer pays for food products. Over half the price the consumer pays goes into the pockets of the middle men who handle farm products. If food products are too high, if the prices of food products are the result of monopolistic control, the trouble is with the transportation, manufacturing, storage companies, or with the wholesale, retail dealers, commission men, and distributors of these products. Transportation companies, storage companies, wholesale and retail dealers, commission men, and distributors of food products are not protected by the tariff. There is no protective duty on their business. A tariff for revenue only will not give them any additional competition or destroy any monopoly they now possess. These facts illustrate the absurdity of adopting a free-trade tariff policy to reduce the cost of living. The remedy will not be effective. The innocent farmer will be the only one to suffer from foreign competition. His market will be filled by products from other lands. He will be compelled to compete with the farmers of other countries, but the railway companies, storage and elevator companies, wholesale, retail, and commission men will go on unmolested by any foreign competition, wholly unconcerned and oblivious about any changes made in our tariff policy. If the prices which people pay for food products are the result of combinations, conspiracies, illegal agreements, or of monopolistic control in any form, can we not discover a remedy that will reach the diseased spot, that will punish and control the guilty, without inflicting injury and loss upon the innocent? If living is too high we ought to ascertain where the trouble is. We ought to find out who is to blame. We should learn the cause. We have the power. The Congress of the United States is clothed with ample authority. Then let us adopt a remedy that would be effective and a remedy that would not inflict great injury and loss upon the 45,000,000 people who reside upon our farms, and let the real culprits, the actual conspirators against free competition, go undisturbed, unmolested, and unpunished.

WHY NOT RAISE WAGES?

There has been much said about reducing the cost of living. I have pointed out that the effect of this agitation is the creation of a belief among many people that the prices of farm products are too high. Hence, the nonfarming population are inclined to favor any proposed legislation that promises to reduce the prices of food products. If, however, the wage-earning classes do not receive a wage that enables them to live according to American standards, why can we not reach the same end by raising the scale of wages and salaries? Why not inaugurate a movement to raise wages, instead of demanding a reduction of the prices of farm products? Why not raise wages to the level of our prices? This would accomplish the same purpose. More than that, this would be the logical and natural procedure, and is a safer process for our business affairs. Because when you reduce prices of food products, by the introduction of foreign competition, the reduction may go to a point that will bring great and irreparable loss to agriculture and work untold injury to our farmers. The farmers of this country should clearly understand what is the purpose of reducing the tariff upon farm products. There can be but one purpose, and that is to increase the supply of food products by importation of farm products from abroad and rely upon the increased supply of such products to reduce the price. In other words, by bringing into the markets of the United States large quantities of food products from other countries, the law of supply and demand will naturally and inevitably lower the prices of such products. When prices once start downward, no one can tell when or where the downward movement will end. There will be no power to arrest the downward movement until the farmers have suffered untold and irretrievable loss. I am opposed to any such policy. I am opposed to trying experiments upon the farmers of this country. Let us enact laws that will compel those who employ labor to pay a wage scale that will enable our wage earners to pay farmers reasonable prices for the food products that come from the farm, and supplement such laws with legislation that will prevent middlemen from arbitrarily controlling prices, and we will have solved the real problem, preserved the prosperity of our farmers, and yet distributed to labor its just share of wealth by the payment of wages commensurate with the service rendered and the wealth produced.

AGRICULTURE AND MANUFACTURING.

Agriculture and manufacturing are the two great fundamental industries. Trade, transportation, commerce, mercantile pursuits, banking, insurance, professional employment, personal service, and similar occupations are subsidiary, secondary, and supplemental industries. About 75,000,000 of our population are supported by the two fundamental industries. In the grand parade of our industrial progress agriculture and manufacturing constitute the main performance. All the subsidiary industries live by tribute levied upon the wealth primarily produced by agriculture and manufacturing. For many years the economical policy of this Government has been founded upon the principle that the prosperity of agriculture and manufacturing meant prosperity to all other industries. Through the levying of protective tariff duties we have encouraged and promoted the growth, development, enlargement, and expansion of these two great basic industries. Experience has more than justified the wisdom of this policy. In every line of human activity we have had an era of unparalleled growth and development. We lead not only in agriculture and manufacturing, but we have surpassed all other nations in the production of wealth, in the development of internal commerce, and in the variety, extent, and volume of internal business transacted.

Whatever may be said to the contrary, in no other great country is wealth so evenly and widely distributed among the masses of our people. In face of this record the administration in power—the political party that controls both the executive and legislative branches of the National Government—proposes to abandon the policy that has made this country rich, great, and prosperous. Protection is to be withdrawn as a pillar of support to agriculture and manufacturing. Our farmers and manufacturers are to be placed in competition with the farmers and manufacturers of other countries. Who will be benefited by this change of policy? What good will be accomplished? What will be the result? You can not help the subsidiary and supplemental industries by injuring agriculture and manufacturing. The 20,000,000 people supported by trade, transportation, commerce, banking, insurance, mercantile pursuits, clerical and personal service can not prosper unless the 75,000,000 people supported by the farm and manufacturing establishments are prosperous. When you strike at agriculture and manufacturing, you deal a blow at all other industries. When you cripple, embarrass, hinder, or burden agriculture and manufacturing, you adopt a policy that will dry up the very fountains of wealth from which all prosperity flows. When you take out the prop that upholds, sustains, stimulates, safeguards, and protects our farmers and manufacturers, you are inviting disaster to the people in every other business, calling, avocation, and profession of life.

It may be asked why should we protect agriculture and manufacturing and not protect other industries. There are two main reasons:

1. Because agriculture and manufacturing are fundamental industries upon which all others are built and from which all others draw their support.

2. Because agriculture and manufacturing are the only great industries that are subject to competition from abroad.

The banks, mercantile establishments, express, telegraph, and telephone companies, public-service corporations, storage companies, hotels, theaters, newspapers, professional occupations, and many other occupations are not subject to competition from abroad. The nature and character of the business exclude competition from abroad. Our people can not deposit their money in foreign banks; they can not trade with local merchants in other countries; they can not patronize public-service corporations in foreign lands; they can not transport their freight on the transportation companies of Europe; they can not get the news from newspapers printed across the ocean; and from necessity must patronize our home lawyers, doctors, teachers, and preachers. But the farmers and manufacturers of other countries, if protection shall be abandoned, may ship their goods and products by cheap ocean freight to this country, distribute them throughout the Nation, and sell them in every hamlet and home in the land. If we rely entirely upon our home competition in trade, transportation, commerce, banking, merchandising, personal service, clerical and professional pursuits, why is it necessary to have foreign competition in agriculture and manufacturing? Why is it unjust, inequitable, or unfair to give to agriculture and manufacturing, through protective tariff duties, some exemption from foreign competition, when other great industries have complete protection from such competition by the very nature and character of their business? But aside from its fairness, protection to agriculture and manufacturing is in harmony with sound economical principles and wise statesmanship, because increased prosperity will come to all through greater prosperity to agriculture and manufacturing.

CONCLUSION.

Mr. Chairman, in these remarks I have discussed general principles. I have not considered the bill in detail. Later on I hope to discuss some of the provisions of this bill as they

affect some of the products of my own district and my own State.

So far as I am concerned, I would like to see our country and our people benefited by any changes that may be made in our tariff policy. There is so much at stake that no one for mere party advantage can wish for failure to the administration now in power in the new tariff policy about to be inaugurated. But it is, nevertheless, the duty of those who constitute the minority in this House, before it is finally too late, to point out the defects of the measure, to call attention to its probable effect upon the country, and warn the majority in this House of the imminent danger in abandoning the principle and policy of protection, under which our country has made its greatest strides of progress and attained its highest plane of prosperity, and in substituting for protection a tariff for revenue only, under which when last tried, during the Cleveland administration, our country suffered its greatest business depression, our industrial development met with its severest and most bitter reverses, and when our people felt most keenly the awful scourge of poverty and hard times.

Washington, Jefferson, and Franklin on War.

EXTENSION OF REMARKS
OF

HON. RICHARD BARTHOLDT,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 13, 1913.

Mr. BARTHOLDT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I insert the following:

[From an address on "The Principles of the Founders" before the city government and citizens of Boston in Faneuil Hall, July 4, 1903.]

(By Edwin D. Mead.)

Independence for the sake of independence, a new nation for the sake of a new nation—that was not the aim and motive of the founders of this American Republic. Their dream was of a new nation of juster institutions and more equal laws; a nation in which should dwell righteousness, and which should mark the beginning of a new era among men. It should be especially an era of peace and brotherhood among the nations. They hated war. They believed that the time had come when the bloody dispensation of war, with all its terrible wickedness and waste, should cease; and their ambition and high hope was that their new Republic might lead in the new dispensation of peace and order and mutual regard. This abhorrence of war was a cardinal and controlling sentiment with the men who achieved our independence, and no eloquence can be so powerful and persuasive as the simple presentation of their words.

We call Samuel Adams the "Father of the American Revolution." He first clearly foresaw it, and he did most in the days before 1775 to determine its character and direct its course. Of all the statesmen of the Revolution he was the one whose views were closest to those of the great author of the Declaration of Independence. When in 1801 Jefferson prepared his inaugural address as President, he wrote to our venerable Boston patriot: "In meditating the matter of that address, I often asked myself, Is this exactly in the spirit of the patriarch of liberty, Samuel Adams? Is it as he would express it? Will he approve of it? I have felt a great deal for our country in the times we have seen, but individually for no one so much as yourself." Among the manuscripts of Samuel Adams there exists one of the most remarkable and prophetic documents of that prophetic time. Whether it ever became a legislative act we do not know; but it is in the form of a letter of instructions from the Legislature of Massachusetts to the Delegates in Congress, and it apparently belongs to the period between the close of the Revolution and the adoption of the Constitution. The General Court in this letter declares the instruction to be one "which they have long had in contemplation and which, if their most ardent wish could be obtained, might in its consequences extensively promote the happiness of man." The instruction is as follows:

> You are hereby instructed and urged to move the United States in Congress assembled to take into their deep and most serious consideration, whether any measures can by them be used, through their influence with such of the nations in Europe as they are united with by treaties of amity or commerce, that national differences may be settled and determined without the necessity of war, in which the world has too long been deluged, to the destruction of human happiness and the disgrace of human reason and government.

If it was found that no definite action could then be taken, it was urged that it would redound to the honor of the United States that its Congress attended to this subject, and that it would be accepted as a testimony of gratitude to God for his signal blessings upon the States; and the Delegates were instructed to have the letter entered in the Journals of Congress, to remain for the inspection of Delegates from Massachusetts in future time.

This proposition from the father of the American Revolution—whose severe general exposures of the banefulness and inconsistency of militarism in democracy are so well known—for some regular and permanent arrangement for international arbitration among the nations of Christendom to make an end of war was penned more than a century before the similar proposition of the Czar of Russia resulted in the conference at The Hague and the establishment of the permanent international tribunal, whose creation is the distinctive historical event and the crowning glory of the present age.

Washington, Franklin, and Jefferson—these are the three names of world-wide fame in connection with the achievement of our independence and the birth of the Nation. What was their attitude toward war and the military system? What was their ideal and desire for the United States? By fortunate fatality the history of Jefferson's administration has been written by a descendant of John Adams, the great defender of the Declaration of Independence on the floor of Congress, and nowhere else have the political purposes and aspirations of the great author of the Declarntion been so well stated briefly as by Henry Adams in this history:

> Jefferson aspired beyond the ambition of a nationality, and embraced in his view the whole future of man. That the United States should become a nation like France, England, or Russia or should conquer the world like Rome, was no part of his scheme. He wished to begin a new era. Hoping for a time when the world's ruling interests should cease to be local and should become universal; when questions of boundary and nationality should become insignificant; when armies and navies should be reduced to the work of police, he set himself to the task of governing with this golden age in view. Few men have dared to legislate as though eternal peace were at hand, in a world torn by wars and convulsions and drowned in blood; but this was what Jefferson aspired to do. Even in such dangers he believed that Americans might safely set an example which the Christian world should be led by interest to respect and at length to imitate. As he conceived a true American policy, war was a blunder, an unnecessary risk; and even in case of robbery and aggression the United States, he believed, had only to stand on the defensive in order to obtain justice in the end. He would not consent to build up a new nationality merely to create more navies and armies, to perpetuate the crimes and follies of Europe; the central government at Washington should not be permitted to indulge in the miserable ambitions that had made the Old World a hell and frustrated the hopes of humanity.

To Thomas Pinckney, in 1797, Jefferson wrote a word which suggests an utterance of John Bright's forescore years afterwards giving the truth a broader application to the United States and her opportunity as the great peace power of the world. Wrote Jefferson to Pinckney:

> War is not the best engine for us to resort to. Nature has given us one in *our commerce*, which, if properly managed, will be a better instrument for obliging the interested nations of Europe to treat us with justice.

John Bright, in the House of Commons in 1879, speaking by interesting coincidence on the Fourth of July, set forth to England and the nations of Europe the folly of their burdensome armaments and exhausting taxation, and the terrible disadvantage under which they labored in competition with the United States, unhampered as she was by such taxation, by costly armies and navies, and a "spirited foreign policy." Her resources were all free for constructive purposes. If the United States persisted in her political wisdom and commercial common sense for a quarter of a century, the nations of Europe would be compelled, he believed, to throw over their costly military system in mere commercial self-protection. Incredible to the great English statesman and lover of America would have been the intimation that before the quarter of a century rolled by we should see the growth among us of a movement recklessly seeking to throw away this very commercial advantage and our chief lever for pressing downward the disarmament and peace of the nations; incredible that we, too, should be wasting hundreds of millions on needless and wicked wars, we, too, shouting for a "big navy" and organizing "navy leagues," descending to meet the nations of Europe on their own terms and plane instead of forcing them up to ours, tempted to put on their hoary old plumes and arms and false prides and ambitions just when the best minds among themselves are striving so earnestly to make them put them off.

One year after his letter to Thomas Pinckney, Jefferson, in a letter to Sir John Sinclair, gave memorable expression to his abhorrence of the war system.

> I recoil with horror—

> He said—
>
> at the ferociousness of man. Will nations never devise a more rational umpire of differences than force? Are there no means of coercing injustice more gratifying to our nature than a waste of the blood of thousands and of the labor of millions of our fellow creatures? Wonderful has been the progress of human improvement in other lines. Let us hope, then, that the law of nature, which makes a virtuous conduct produce benefit and vice loss to the agent in the long run, which has sanctioned the common principle that honesty is the best policy, will in time influence the proceedings of nations as well as individuals, and that we shall at length be sensible that war is no instrument *entirely inefficient toward redressing wrong; that it multiplies instead of indemnifying losses.*

And in this striking passage he proceeds to urge the economic argument against war:

> Had the money which has been spent in the present war in Europe been employed in making roads and conducting canals of navigation and irrigation through the country, not a hovel in the highlands of Scotland or mountains of Auvergne would have been without a boat at its door, a rill of water in every field, and a road to its market town. • • • A war would cost us more than would cut through the Isthmus of Darien; and that of Suez might have been opened with what a single year has been thrown away on the rock of Gibraltar.

The word comes with new and added force just as we are preparing to cut through that Isthmus of Darien by the taxation of the people, after wasting three times its cost in damaging and demoralizing war.

Jefferson became an honorary member of the Massachusetts Peace Society almost immediately upon its founding, and his letters to Noah Worcester, the founder of the society—especially his treatment of wars as the duels of nations and his prophecy that they would run the same course and come to the same end as dueling among gentlemen—are among the most significant papers in the first volume of the peace society's journal, "The greatest of human evils." That was Jefferson's verdict upon war.

It was to Jefferson that the new Republican Party appealed and dedicated itself in its Philadelphia platform of 1856; it declared its purpose to restore the action of the Federal Government to "the principles of Washington and Jefferson." Abraham Lincoln, the year before his election as President, wrote to a great Republican gathering in Boston to celebrate Jefferson's birthday:

> The principles of Jefferson are the definitions and axioms of free society. And yet they are denied and evaded, with no small show of success. One dashingly calls them "glittering generalities," another bluntly calls them "self-evident lies," and others insidiously argue that they apply to "superior races." These expressions, differing in form, are identical in object and effect—the supplanting the principles of free government and restoring those of classification, caste, and legitimacy. They would delight a convocation of crowned heads plotting against the people. They are the vanguard, the miners and sappers of returning despotism. We must repulse them or they will subjugate us. This is a world of compensation; and he who would be no slave must consent to have no slave. Those who deny freedom to others deserve it not for themselves, and under a just God can not long retain it. All honor to Jefferson—to the man who, in the concrete pressure of a struggle for national independence by a single people, had the coolness, forecast, and capacity to introduce into a merely revolutionary document an abstract truth applicable to all men and all times and so to embalm it there that to-day and in all coming days it shall be a rebuke and a stumbling block to the very- barbingers of reappearing tyranny and oppression

Could the words of Lincoln reach to-day the Republic which Jefferson dedicated, and which he at Gettysburg rededicated in Jefferson's words, what other words than Jefferson's would he choose to bring home to us the enormity of the subjugation by the Republic of a protesting, struggling people, and the enormity of all unjust and unnecessary war?

To the common sense of Franklin we should naturally expect that the military system would seem folly; and as matter of fact we find that his condemnations of the wickedness and waste of war are even more numerous and more energetic than Jefferson's. Some of them are well known; but it will be useful to bring this strong body of testimony together. First, Franklin's letter to Dr. Richard Price, in 1780. This was in the very midst of the war, and Dr. Price was a London clergyman, a subject of King George; but Franklin and he remained warm friends throughout, and this letter is one of many which Franklin sends from Paris:

> We make daily great improvements in *natural*, there is one I wish to see in *moral* philosophy: The discovery of a plan that would induce and oblige nations to settle their disputes without first cutting one another's throats. When will human reason be sufficiently improved to see the advantage of this? When will men be convinced that even successful wars at length become misfortunes to those who unjustly commenced them and who triumphed blindly in their success, not seeing all its consequences?

In 1782, in a letter from Franklin to Dr. Priestley upon man's common inhumanity to man occurs the following famous passage:

> In what light we are viewed by superior beings may be gathered from a piece of late West India news, which possibly has not reached you. A young angel of distinction, being sent down to this world on some important business for the first time, had an old courier spirit assigned him for his guide; they arrived over the seas of Martinico in the middle of the long day of obstinate fight between the fleets of Rodney and De Grasse. When through the clouds of smoke he saw the fire of the guns, the decks covered with mangled limbs, and bodies of dead or dying, the ships sinking, burning, or blown into the air, and the quantity of pain, misery, and destruction the crews yet alive were thus with so much eagerness dealing around to one another, he turned angrily to his guide and said: "You blundering blockhead, you undertook to conduct me to the earth, and you have brought me into hell."
>
> "No, sir," says the guide; "I have made no mistake; this is really the earth and these are men. Devils never treat one another in this cruel manner; they have more sense and more of what men vainly call humanity."

The next year, 1783, the treaty of peace was signed which recognized the independence of the United States; and Franklin writes as follows to Sir Joseph Banks:

> I join with you most cordially in rejoicing at the return of peace. I hope it will be lasting, and that mankind will at length, as they call themselves reasonable creatures, have reason enough to settle their differences without cutting throats; *for, in my opinion, there never was a good war or a bad peace.* What vast additions to the conveniences and comforts of life might mankind have acquired if the money spent in wars had been employed in works of public utility. What an extension of agriculture, even to the tops of the mountains; what rivers rendered navigable, or joined by canals; what bridges, aqueducts, new roads, and other public works, edifices, and improvements, rendering England a complete paradise, might not have been obtained by spending those millions in doing good which in the last war have been spent in doing mischief—in bringing misery into thousands of families and destroying the lives of so many working people who might have performed the useful labors.

In the same year he writes in the same strain from Paris to David Hartley in London:

> I think with you that your Quaker article is a good one, and that men will in time have sense enough to adopt it. • • • What would you think of a proposition, if I should make it, of a compact between England, France, and America? America would be as happy as the Sabine girls if she could be the means of uniting in perpetual peace her father and her husband. What repeated follies are these repeated wars. You do not want to conquer and govern one another. Why, then, should you be continually employed in injuring and destroying one another? How many excellent things might have been done to promote the internal welfare of each country; what bridges, roads, canals, and other public works and institutions tending to the common felicity might have been made and established with the money and men foolishly spent during the last seven centuries by our mad wars in doing one another mischief. You are near neighbors, and each have very respectable qualities. Learn to be quiet and to respect each other's rights. You are all Christians. One is *The Most Christian King*, and the other *Defender of the Faith*. Manifest the propriety of these titles by your future conduct. "By this," says Christ, "shall all men know that ye are My disciples, if ye love one another." "Seek peace and ensue it."

In 1783, when peace was uppermost in his thoughts, he wrote also to Mrs. Mary Hewson:

> All wars are follies, very expensive, and very mischievous ones. When will mankind be convinced and agree to settle their differences by arbitration? Were they to do it even by the cast of a die, it would be better than by fighting and destroying each other.

Four years later, in 1787, just after the close of the Constitutional Convention, he returns to this aspect of the subject in the following impressive letter to his sister, Mrs. Jane Mecom:

> I agree with you perfectly in your disapprobation of war. Abstracted from the inhumanity of it, I think it wrong in point of human providence. For whatever advantages one nation would obtain from another, whether it be part of their territory, the liberty of commerce with them, free passage on their rivers, etc., it would be much cheaper to purchase such advantages with ready money than to pay the expense of acquiring it by war. An army is a devouring monster, and when you have raised it you have in order to subsist it, not only the fair charges of pay, clothing, provision arms, and ammunition, with numberless other continuent and just charges to answer and satisfy, but you have all the additional knavish charges of the numerous tribe of contractors to defray, with those of every other dealer who furnishes the articles wanting for your army and takes advantage of that want to demand exorbitant prices. It seems to me that if statesmen had a little more arithmetic, or were more accustomed to calculation, wars would be much less frequent. I am confident that Canada might have been purchased from France for a tenth part of the money England spent in the conquest of it. And if, instead of fighting with us for the power of taxing us, she had kept us in a good humor by allowing us to dispose of our own money and now and then giving us a little of hers by way of donation to colleges or hospitals or for cutting canals or fortifying ports, she might easily have drawn from us much more by our occasional voluntary grants and contributions than ever she could by taxes. Sensible people will give a bucket or two of water to a dry pump that they may afterwards get from it all they have occasion for. Her ministry were deficient in that little point of common sense; and so they spent one hundred millions of her money, and after all lost what they contended for.

To Alexander Small, in England, he wrote in 1787:

> You have one of the finest countries in the world, and if you can be cured of the folly of making war for trade (in which wars more has been always expended than the profits of any trade can compensate) you may make it one of the happiest. Make the most of your own natural advantages instead of endeavoring to diminish those of other nations and there is no doubt but that you may yet prosper and flourish. Your beginning to consider France no longer as a natural enemy is a mark of progress in the good sense of the nation.

Finally, in 1788, he wrote as follows to M. Le Veillard in France:

> When will princes learn arithmetic enough to calculate, if they want pieces of one another's territory, how much cheaper it would be to buy them than to make war for them, even though they were to give a hundred years' purchase? But if glory can not be valued, and therefore the wars for it can not be subject to arithmetical calculation so as to show their advantage or disadvantage, at least wars for trade,

which have gain for their object, may be proper subjects for such computation; and a trading nation, as well as a single trader, ought to calculate the probabilities of profit and loss before engaging in any considerable adventure. This, however, nations seldom do, and we have had frequent instances of their spending more money in wars for acquiring or securing branches of commerce than a hundred years' profit or the full enjoyment of them can compensate.

With these remarkable letters, showing Franklin, as does so much besides, so far in advance of his time, or for that matter of ours, should be read his Observations on War. Remarking upon the fact that Europe till lately had been without regular troops, he lays his finger on the reason for the portentous growth of armaments in our own time and the great difficulty of disarmament save in concert: "One powerful prince keeping an army always on foot makes it necessary for his neighbor to do the same to prevent surprise." He laments the frightful loss to the world of the labor of all men employed in war, and notes that the soldier loses habits of industry to such degree that he is rarely fit for sober business afterwards. It is for the interest of humanity that the occasions of war and the inducements to it should be diminished; and he urges the nations to hasten in better mutual organization:

By the original law of nations, war and extirpation were the punishment of injury. Humanizing by degrees, it admitted slavery instead of death. A farther step was the exchange of prisoners instead of slavery; another, to respect more the property of private persons under conquest and be content with acquired dominion. Why should not this law of nations go on improving? Ages have intervened between its several steps; but as knowledge of late increases rapidly, why should not these steps be quickened?

If it is ever permitted the departed to come back from the other world to this, then surely the spirit of Franklin must have hovered over the peace conference at The Hague, where the law of nations took a step so momentous and sublime; and it must have been present in the great church at Delft when, on that 4th of July in 1899, by invitation of the commissioners of the United States, the members of the conference gathered there about the tomb of Grotius and the silver wreath was laid upon it in tribute to the father of international law, in behalf and by instruction of the Government of the great Republic which Franklin and Adams and Jefferson and Washington brought into being with the prayer that it might bring a new era to the world, an era of peace on earth and good will among men.

Washington, the father of his country; what of him? From him, too, we have the strong, constructive word. As in other things, so here, Washington unites the common sense of Franklin and the vision of Jefferson. "Cultivate peace and harmony with all nations" was one of the charges of his Farewell Address; and his cautions against those policies and entanglements which so naturally lead to war are known, or ought to be, by every American. His admonition to keep ourselves always in a "respectable defensive posture," when strained, as it so often is by our militant folk, to cover their schemes is wantonly misused. He knew, as well as John Bright knew a century later, how happy is our position and how impregnable we are so long as we act like Christians; and the measure of his idea of a "respectable defensive posture" is the fact that the total expenditure for national armament under his sanction during the entire eight years of his administration was less than $8,000,000. In the last half dozen years we have spent in direful and needless war $800,000,000, and we are multiplying battleships by the dozen—surely not needed for "respectable defense"—a single one of which costs almost as much as our whole Army and Navy appropriations during Washington's long term as President. In the Farewell Address itself he denounced great armaments and spoke with deepest feeling of their dangers to democracy. "Overgrown military establishments are, under any form of government, inauspicious to liberty, and are to be regarded as particularly hostile to Republican liberty." Washington was no parochial statesman. No man in his great day saw so far west as he; to-day his vision would sweep around the world. Freeman wrote of him as "the expander of England," because he first drastically and effectually taught England that her empire could expand and endure only by justice. He was much more the great expander of the Republic, and he would be the great expander of the Republic's true influence among men. He would tell the Republic to-day that it is no longer boy, but man, and that it must acquit itself like a man. While he was yet with us, he foresaw the time "when, our institutions being firmly consolidated and working with complete success, we might safely and perhaps beneficially take part in the consultations held by foreign States for the advantage of the nations"; and he would tell us that a hundred relations are imperative for us to-day which were not expedient for us a hundred years ago. But he would also tell us that there are truths which do not change with the centuries and with which the nation that measures its power on a continental scale may no more trifle with impunity than the new man child. There is an indissoluble union, he would still repeat to us, between "an honest and magnanimous policy and the solid rewards of public prosperity"; and the smiles of heaven can not be expected on a nation when it "disregards the eternal rules of order and right."

A nation never does this more flagrantly, he held, than in unjust and unnecessary war, and the war spirit is the subject of his constant rebuke. One of the points which he puts down to urge among the early hints for the Farewell Address is "That we may never unsheath the sword except in self-defense so long as justice and our essential rights and national respectability can be preserved without it." To David Humphreys, secretary of the commission sent abroad to negotiate treaties of commerce, he wrote, in 1785, concerning war:

My first wish is to see this plague to mankind banished from the earth, and the sons and daughters of this world employed in more pleasing and innocent amusements than in preparing implements and exercising them for the destruction of mankind.

In the same tone he wrote in the same year to the Marquis de la Rouerie, an officer just appointed to the command of a French army corps:

My first wish is (although it is against the profession of arms, and would clip the wings of some of your young soldiers who are soaring after glory) to see the whole world in peace, and the inhabitants of it as one band of brothers striving who should contribute most to the happiness of mankind.

To Rochambeau, in 1786, he expressed his abhorrence of the "rage of conquest" among the nations of Europe, and of the "effusion of human blood for the acquisition of a little territory." To the Marquis de Chastellux, in 1788, he wrote, while the "great personages" of the north of Europe were "making war under the infatuation of Mars":

It is time for the age of knight-errantry and mad heroism to be at an end. Your young military men who want to reap the harvest of laurels do not care, I suppose, how many seeds of war are sown; but for the sake of humanity it is devoutly to be wished that the manly employment of agriculture and the humanizing benefits of commerce would supersede the waste of war and the rage of conquest; that the swords might be turned into plowshares, the spears into pruning hooks, and, as the Scriptures express it, "the nations learn war no more."

In the same year he writes to Lafayette:

Would to God the harmony of nations were an object that lay nearest to the hearts of sovereigns, and that the incentives to peace, of which commerce and facility of understanding each other are not the most inconsiderable, might be daily increased!

And again:

There seems to be a great deal of bloody work cut out for this summer in the north of Europe.

If war, want, and plague are to desolate those huge armies that are assembled, who, that has the feelings of a man, can refrain from shedding a tear over the miserable victims of regal ambition? It is really a strange thing that there should not be room enough in the world for men to live without cutting one another's throats.

At the same time he wrote to Jefferson:

In whatever manner the nations of Europe shall endeavor to keep up their prowess in war and their balance of power in peace, it will be obviously our policy to cultivate tranquillity at home and abroad and to extend our agriculture and commerce as far as possible.

To Rochambeau he wrote the next year, 1789:

Notwithstanding it might probably in a commercial view be greatly for the advantage of America that a war should rage on the other side of the Atlantic, yet I shall never so far divest myself of the feelings of a man interested in the happiness of his fellow men as to wish my country's prosperity might be built on the ruins of that of other nations.

To the merchants of Philadelphia he said in 1793:

The friends of humanity will deprecate war, wheresoever it may appear, and we have experienced enough of its evils in this country to know that it should not be wantonly or unnecessarily entered upon.

In his speech to Congress just before this, in 1792, he spoke the following serious word, which it becomes his countrymen never to forget:

It would be wise, by timely provisions, to guard against those acts of our own citizens which might tend to disturb peace with other nations and to put ourselves in a condition to give that satisfaction to foreign nations which we may sometimes have occasion to require of them. I particularly recommend to your consideration the means of preventing those aggressions by our citizens on the territory of other nations and other infractions of the law of nations, which, furnishing just subject of complaint, might endanger our peace with them.

Such were the sentiments of the leaders of the American Revolution and the founders of the Republic concerning war; such their solemn warnings to us against its wickedness and waste; against great armies and navies, against the indulgence of the military spirit so hostile to democracy; against the rage of conquest and the lust for territorial aggrandizement—that "original sin of nations," as Gladstone so well called it—and against injustice to any people; and such their lofty summons to the Nation at its birth to make itself the great peace power of the world and hasten the day when the arbitrament of reason should supplant everywhere the arbitrament of arms.

Commodore Perry's Flagship Niagara.

EXTENSION OF REMARKS
OF
HON. MILTON W. SHREVE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 28, 1913.

Mr. SHREVE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I insert the following:

[From an address on Perry's Victory Centennial Celebration, delivered in the city of Erie June 7, 1913, by Hon. MILTON W. SHREVE, on the occasion of the second launching of Commodore Perry's flagship *Niagara*.]

"The impressment of our seamen by Great Britain, her disregard of neutral rights and unwarrantable seizure of our merchant marine, so inflamed the public mind that on June 18, 1812, the Congress of the United States declared war against the United Kingdom of Great Britain and Ireland. This famous ship now being launched for the second time played an important part in that war.

"The first nine months of war had witnessed the fall of Detroit, the evacuation of Fort Dearborn, and the massacre of the River Raisin. In fact, the events of the war up to the early part of 1813 had been particularly disastrous, and the settlers of the frontier were left practically defenseless from the savage outrages of the Indians.

"In this impressive ceremony there are two characters that stand out preeminently in the history of this historic ship—Capt. Daniel Dobbins, who first apprised the National Government of the situation on the Great Lakes in the summer of 1812, and Commodore Perry, who won the splendid victory in the Battle of Lake Erie, September 10, 1813.

"Capt. Dobbins, a resident of Erie, then a hamlet of four or five hundred, with the schooner *Salina*, was lying in the harbor at Mackinac during the summer of 1812 when the post was captured by the British. His schooner fell into the hands of the enemy, and it was with difficulty that he made his way back to Erie. On his return he immediately reported to Gen. Mead, and was at once dispatched to Washington, where President Madison was so taken with his appearance that he called a meeting of his Cabinet, before whom Capt. Dobbins gave in detail his experience and strongly urged the President and Cabinet to lose no time in fortifying the frontier border on the Great Lakes and at the same time to begin the construction of a fleet to meet the advances of the enemy.

"Capt. Dobbins, as a result of this meeting, was commissioned sailing master in the Navy; was given $2,000 and ordered to return to Erie and begin the construction of a navy. He immediately sought the services of Noah Brown, one of the most skillful shipbuilders of his time, and together they began building the fleet, the five vessels not being completed for 10 months thereafter.

"In the spring of 1813 Gen. Proctor, commander of the British forces, was assembling his army, augmented by several thousand Indians, on the northern shore of Lake Erie, while Gen. Harrison, commander of the American forces, was camped near Sandusky with a body of men, most of whom were Kentuckians. Commodore Barclay was reconstructing his fleet at Malden, and the American fleet was being built in the landlocked harbor of Erie. It was evident that a great battle was soon to take place on Lake Erie, and Commodore Perry, a young man of 26, asked the War Department to be assigned to service on the Great Lakes.

"Before making the perilous trip to Erie in March, 1813, he had been 12 years before the mast as midshipman, lieutenant, captain, and post commander, and just prior to his departure for Erie had charge of a flotilla of 17 gunboats in the harbor of Newport and was fully equipped for the important position assigned him, and impartial historians have given him a place among naval heroes which time can not destroy.

"Oliver Hazard Perry was born on the 21st of August, 1785, at South Kingston. The chief characteristics of Oliver's early years were an uncommon share of beauty and a sweetness and gentleness of disposition and a perfect disregard for danger. At an early age he learned to read under the tuition of his mother and was removed to a private school for the education of the children of the neighborhood. Afterwards he was sent to Tower Hill, distant 4 miles from Judge Perry's farm, where Oliver's father continued to reside. He was so proficient in his studies that his father, desiring to secure for his children a better education than South Kingston afforded, established his family at Newport.

"Here Oliver was placed in the private school of Mr. Frazer, under whose careful and judicious tuition he made rapid progress in all his studies.

"In Newport, Oliver attracted to himself no less attention and good will than among his friends in South Kingston. His modesty and gracefulness of manner won for him many friends, among the number Count Rochambeau, son of the distinguished general of that name, who commanded the French auxiliary army during our Revolutionary War. This noble, being driven by the terrors of the revolution from his own country, had established himself in Newport, where his father's previous residence prepared for him many friends.

"Newport offered many attractions to persons of refinement, and many of the inhabitants were wealthy and highly educated, and the tone of society in which Oliver early mingled was elegant and intellectual. At 11 years of age he was confirmed in the Episcopal faith.

"It was Oliver's father's wish that his son should become a naval officer, and his school days, though well improved, were short. At the age of 14 he left school to become a seaman. His residence in Newport and the occupation of his father brought him much in connection with ships and seamen and blended with his inclination for a military life a desire to make his home upon the sea. Oliver's name was placed upon the list of midshipmen on board the *General Green*, and in April, 1799, he received his warrant and order to report for duty.

"The young midshipman made several cruises with his father. His health and strength increased with life in the open air. He soon developed great capacity and courage, and participated in the action that resulted in the reduction of Jacmel with great credit to himself, receiving for his skilled service the approbation of his father. This was the last active service of the *General Green*. Perry then served as lieutenant in the Tripolitan wars in the squadron of Commodore Morris and later with Commodore Rodgers as lieutenant commander of the U. S. schooner *Revenge*, employed to prevent infraction of the embargo laws. After he returned to America at the conclusion of peace with Tripoli he served in various capacities, proving himself an efficient leader.

"The first service upon which the young commodore was employed after the commencement of war with England was taking charge of a flotilla of gunboats stationed at Newport. This service was not strenuous enough for Perry to satisfy the deep desire for action. To the north of the shores of the great chain of inland seas there was an impending conflict. Every indication pointed to the concentration of power on the Great Lakes. Perry was impatient, and went to Washington and asked to be ordered into active service against the enemy. He also wrote Commodore Chauncey and offered his service. Commodore Chauncey, knowing Perry and knowing his worth, asked the War Department to send Perry to Lake Erie; and, accordingly, on the 18th day of February, 1813, Perry received his orders to proceed to Sacketts Harbor with the best men of his flotilla. So anxious was Perry to carry out the order that on the very day, before nightfall, he had started his first detachment of 50 men under one of his lieutenants. Two days later another detachment of 50 men followed, and five days later 150 men had been dispatched, fully one-third of whom were held on Lake Ontario by Chauncey, and never reached Erie.

"On February 22 Perry set out for his command over mountains and hills and through a trackless forest. It was a severe journey at that season of the year. Perry had with him his little brother, a lad of 13, whom he was taking to be a midshipman on his ship. After 11 days' traveling, much of the way through a dreary country where the only evidence of human life was fleeting glimpses of savages as they hovered around the white man's trail, the two brothers reached their destination and reported at Sacketts Harbor.

"Sacketts Harbor was a mere hamlet possessing a few houses and was the official headquarters of the Army of the North. It is said that the principal business of the community was smuggling, and the arrival of the United States officials was looked upon with suspicion and displeasure. The English were in undisputed control of Lake Erie, and at Sacketts Harbor Perry learned that they were preparing plans for extending the Dominion of Canada along the Ohio and Mississippi Rivers to the Gulf so as to permanently separate the United States from the great undeveloped country to the west.

"It was Perry's duty to regain control of Lake Erie, a task that would tax his skill and ability as a naval commander to the utmost. At the time of his arrival at Sacketts Harbor it was expected that the English would make an attack on the

place, so Perry remained two weeks to assist in its defense. The attack did not materialize, and on the 16th of March he set out for Erie. On the 24th he arrived at Buffalo, and from there made his way in a sleigh to Erie, and arrived on March 27 and established his headquarters at Duncan's Hotel. Capt. Dobbins, who had been in charge of the American naval affairs on the Lakes, had, with the assistance of Noah Brown, laid down several vessels, which were now nearly completed. Maclay, the historian, tells us that 'the two brigs, *Niagara* and the *Lawrence* were being constructed at the mouth of Cascade Creek at the time Perry arrived'; that they were being built with white and black oak and chestnut frames, the outside planking being of oak, while the decks were of pine; that many trees found their places in these vessels the same day they were felled in the forest; that the brigs were 110 feet over all, and had a 30-foot beam; that the '*Lawrence* was so named by order of the Secretary of the Navy; and that two gunboats nearly planked were at the mouth of Lees Run, while work on the schooner *Scorpion* was just begun.' McKenzie writes:

"In the evening of the 27th Perry reached Erie, and immediately called around him the persons engaged in building and equipping the squadron. These were Mr. Noah Brown, of New York, the master shipwright, and Sailing Master Dobbins, who was a resident of Erie, and who superintended the construction by direction of Commodore Chauncey.

"I am satisfied that much of the preliminary work of constructing the fleet had been accomplished under Capt. Dobbins, and I do not find that Perry ever claimed credit for the planning, designing, and constructing the ships here referred to. Capt. Dobbins, to my mind, has never received full credit for the distinguished service he rendered his country during that period.

"At the time Perry arrived satisfactory progress had been made in the construction of the ships, and it was practically to their equipment that Perry turned his attention. Perry at once sent Capt. Dobbins to Buffalo, and went himself to Pittsburgh in search of needed supplies.

"Capt. Dobbins was with Perry in June, 1813, when he returned from his expedition against Fort George, bringing with him the five vessels which had been blockaded by the British in the Niagara River. He was also with Perry during the engagement of September 10, 1813. Sailing Master Dobbins, as he was then called, was in charge of the *Ohio*, a boat used in supplying the wants of the Navy, and at the time of the battle was returning from a trip to Erie for supplies, and it was in consequence of being a few miles away from the scene of the conflict that he was lost sight of by the historians of that period.

"I will not attempt to follow Perry through the various vicissitudes incident to equipping the fleet, securing men and material to man his ships. Neither will I attempt to describe the celebrated battle, so familiar to every schoolboy—a battle that brought great fame to him who won it. It was the first time a whole British fleet had been taken in open conflict. Perry was applauded throughout the land. He became a national hero, and so remains to this day. The enthusiasm and excitement when the news was received at Newport, his home and where his family resided, knew no bounds, and all were anxious for his return, but it was not until November that he reached Newport. His triumphant march home was a continuous ovation, the people seeking every opportunity to honor him. Every town from Boston to Savannah praised him. The legislatures of the various States, including Pennsylvania, passed commendatory resolutions. Pennsylvania also voted a gold medal, but it was not completed until after the death of the commodore, and was given to his wife on the 29th day of November, 1819, by Col. U. N. Irvine, who was intrusted to perform that duty. Medals of every kind were voted Perry. New York City gave him the freedom of the city in a gold box, on the cover of which was a view of the battle he had so bravely fought and won. Boston gave him a silver service, and his home town gave him a silver vase surmounted with emblematic figures. On one side was engraved a view of the battle, where Perry was passing from the *Lawrence* to the *Niagara*.

"No conquering hero ever returned with greater honor than did Commodore Perry. During the remaining years of his life he continued to uphold the reputation he had won.

"While on a diplomatic mission to South America, on the evening of August 23, 1819, his thirty-fourth birthday, he died at Trinidad of yellow fever. At 5 o'clock on the afternoon of the following day the body of the dead commander was laid to rest with military honors amid a large concourse of people, all joining with the American seamen in their sorrow in the great loss the Nation had sustained. Seven years later the American Government sent a ship of war for the honored remains of Perry, and on the early morning of the 27th of November, 1826, the vessel entered the harbor of Newport with its sacred burden. A few days later the body was buried in the cemetery at Newport with imposing ceremony, where the State of Rhode Island has erected a monument befitting his memory.

"Dr. Usher Parsons, a resident of Providence, who was surgeon on the *Lawrence*, said of him:

"His literary acquirements were respectable, his taste refined; he united the graces of a manly beauty to a lion heart, a sound mind, a safe judgment, and a firmness of purpose which nothing could shake.

"The first memorial to the memory of Perry and his brave men was erected in 1862 by popular subscription by the people of Cleveland. The inauguration was one of the great events of that period. The ceremony was inspiring and bequeathed to posterity a rich heritage relating to the events of the Battle of Lake Erie. Many distinguished Americans who were with Perry participated in that event. The old colored fifer was there. Mr. Quinn, of Pittsburgh, who made the cordage; Capt. Brownell, who commanded the *Ariel;* and Dr. Usher Parsons, surgeon of the flagship *Lawrence*, at that time the last surviving commissioned officer of the fleet.

"Gov. Dennison, who welcomed the Rhode Islanders, quoting President Madison, in speaking of the Battle of Lake Erie said:

"It was never surpassed in luster however much it may have been in magnitude.

"Gov. Sprague, the war governor of Rhode Island, who is still living, replied in part as follows:

"I thank your excellency very sincerely for the kind welcome which you have given to the Rhode Island delegation. That delegation consists of two veterans who served in the Battle of Lake Erie; Capt. Brownell, on my right, as second officer of the *Ariel;* and Dr. Usher Parsons, on my left, whose services on board the *Lawrence* in ameliorating the sufferings of the wounded have become historical; a son of the heroic Perry, bearing the honored name of his father, and two nephews; our secretary of state; a large delegation of the State legislature; the gentlemen of my personal staff; the general staff of the State; the major general of the State; and a brigadier general of the line, staff officers, and 101 members of the First Light Infantry Company of Providence, whose ranks are filled to-day by some of our most valuable and eminent citizens; the mayor of the city of Providence, as their guest; the line and staff officers of the Battery of Light Artillery in Providence; and the former chief engineer of the fire department in their ranks. It will, sir, I am sure, be considered as giving special interest to the presence of the Infantry who have accompanied me here to-day when I state the fact that they bore the remains of the heroic Perry to his last resting place. Such the State of Rhode Island sends here to represent her on this great occasion, with her cordial greetings to the people of Ohio.

"Nearly a century has rolled around since the living participants of that struggle for liberty received the plaudits of their countrymen, and it is eminently fitting and proper that the centennial celebrating 100 years' peace with Great Britain and in memory of the honored dead should be observed. By reason of our history, tradition, and location we are particularly interested in the proposed memorial.

"Probably its most conspicuous adornment will be a bronze tablet bearing the names of the commissioners who drafted the treaty of Ghent, which is the greatest peace achievement in international history. The prominent Americans who composed the commission were John Quincy Adams, Henry Clay, Joseph Russell, Senator Bayard, and Albert Gallatin. It was a commission made up of statesmen.

"John Adams, at the age of 11, accompanied his father on a diplomatic mission to Paris and got his first introduction into distinguished society. At 17 he accompanied Francis Dana as envoy to Russia as his private secretary. Later he joined his father in Paris, where that gentleman was engaged with Franklin and John Jay in negotiating the treaty of peace between the Colonies and the mother country. He aided as additional secretary in the preparation of that instrument which settled the question of the independence of our country. After the signing of the treaty his father was appointed as minister to the Court of St. James, and the young man had another opportunity to mingle with men of public affairs. However, he concluded to go home and enter Harvard College, where he was graduated in high standing. He studied law in Boston, and in 1794 was nominated minister to The Hague. His nomination was confirmed and on his twenty-seventh birthday he received his commission.

"Adams had rendered such valuable diplomatic service to his country that in 1797 he was transferred to Berlin, where he accomplished a treaty of commerce between Russia and the United States. He was recalled in the closing days of his father's administration and returned to Boston and resumed the practice of law, but was soon elected to the Senate of Massachusetts, and in 1803 the legislature of that State elected him to the United States Senate. In 1809 he was appointed minister to Russia. During the whole period of his stay in Russia the great wars of Napoleon were in progress. He saw the burning of Moscow and the disastrous retreat of the haughty invaders. He was the personal friend of Alexander, who in 1812 suggested his willingness to act as mediator between the United States and Great Britain in bringing about peace. However, this offer, although rejected by Great Britain, was the means of Great Britain submitting a proposition to the United States to consider terms of peace.

"Henry Clay was a Member of Congress from Kentucky, fiery, patriotic, and a great lover of his country. It was Clay, who probably more than any other man, while Speaker in Congress, should be given the credit of inciting the American people to a full realization of the wrong and cruelties that had been heaped upon them by the mother country. It was Clay's irresistible effort and determined spirit that inspired the American people to patriotism and love of country and a declaration of war.

"Albert Gallatin, born and educated in Geneva, Switzerland, first settled in Boston and soon went to Virginia, where he took the oath of allegiance to the United States; afterwards came to Pennsylvania and purchased a large tract of land in Fayette County, where he made his future home. He was several times a member of the Pennsylvania Legislature, and introduced a system of county taxation that endured for many years. He also proposed a plan for county schools that was after wards adopted.

"In 1793 he was elected to the United States Senate, but after taking his seat was excluded from that august body because he had not been a resident of the United States 9 years, the length of time prescribed by the Constitution, although he had been actually 13 years in this country, some 4 years or more before taking the oath of allegiance.

"Gallatin had so endeared himself to his people that he was elected to Congress from the Fayette County district, where he remained some time. In Congress he established the Ways and Means Committee, and was recognized as one of the greatest financiers of his age.

"He was Secretary of the Treasury during the War of 1812, and, although foreign born, had acquired a keen perception of the needs and requirements of the American people, while Adams, born an American citizen, had spent most of his time abroad and was not in touch with the common people.

"Russell was a minister to Sweden, and largely under the influence of Clay and Bayard, a United States Senator from Delaware, while having opinions of his own, usually agreed with John Adams.

"With this brief survey of the members of the commission, so different in character, habits, and experience, it is easy to understand how to make them agree among themselves was as difficult as to make a satisfactory treaty with Great Britain.

"The first proposition made by England was to the effect that the great Northwest Territory should be ceded to the Indians under an English guaranty or protectorate, and should renew the treaty rights giving the English the right to navigate the Mississippi. To the first proposition all of the members of the commission dissented, but to the second Adams was inclined to agree. Clay strenuously objected, and with the same tenacity and fixedness of purpose that he fought for the declaration of war he now fought not only to preserve the totality of our country but also to protect the rights of navigation on the Mississippi River, and thereby save from further oppression the great western part of our country.

"And so for five long months they contended, during all of which time it was the master mind of Gallatin who, by his logical reasoning and accurate conclusions, persuaded the members of the commission to agree.

"I will not attempt to recount all of the propositions and counter propositions that passed between the parties, nor the many altercations between Clay and Adams.

"The treaty when signed did not contain a single word regarding the impressment of seamen, order of council, or neutral rights. However, it was hailed with delight by both countries and brought great credit to those who participated in its confirmation. And for a hundred years, along the 3,000 miles of imaginary boundry line between the United States and Great Britain there has not been a single regiment or company or soldier to protect either nation.

"We have enjoyed nearly a century of peace with Canada and the mother country, and to-day 10 great States of the Union and the National Government are preparing to celebrate the anniversary of the 100 years of peace with Canada and Great Britain and fittingly commemorate those who took part in the great northwestern campaign under Gen. Harrison and the Battle of Lake Erie won by Commodore Perry. A magnificent monument will be erected at Put-in-Bay which will surpass that of Brock at Queenstown, which, from the English point of view, will forever stand as a monument to his bravery and valor in capturing Hull's American army August 16, 1812, at Detroit. He was killed at Queenstown October 15 the same year.

"The memorial will be grander and more imposing than the monument in Trafalgar Square, London, perpetuating the memory of that great general, Nelson, whose name is honored in every country and under every flag.

"The memorial will be more beautiful than the celebrated statue of Frederick the Great opposite the Emperor's palace Unter den Linden in Berlin, probably the grandest monument in Europe and perpetuating the memory of one who, at the age of 33 years, was the most conspicuous sovereign of his time.

"The memorial will be more magnificent than the Hotel de Invalides, Napoleon's tomb, on the banks of the River Seine in Paris, which will forever tell of the remorseless ambition of the hero of Marengo, Austerlitz, and Paris; of his defeat and disaster at Leipzig, of his banishment to Elba; of his escape and retaking an empire, and the awful carnage upon the battle field of Waterloo, where Napoleon's army suffered final defeat. It will tell of Napoleon at St. Helena, where, when approaching his end, he said: 'It is my desire that my remains be carried back to the land of my nativity and buried upon the banks of the River Seine among the people whom I loved.' His last wish was granted, and to-day his remains rest beneath the dome of a magnificent sarcophagus of black Egyptian marble, upon which is chiseled his inspiring words, which indicate that, notwithstanding his success and defeat, his joys and sorrows, notwithstanding the widows and orphans he had made and the fabulous sums spent for his glory, after all there was implanted in his heart a sacred love for his country.

How different the story told by the Perry memorial. Perry never was engaged in many wars, and yet, at the age of 27, he achieved a victory in one battle that so endeared him to the American people that 100 years after that momentous event 10 States are engaged in erecting to his memory a monument that will be grander than any of these, grander than any monument erected to a hero of modern times save Washington. It will tell of honor, valor, and the noble achievements of Perry. It will also commemorate the campaign of the Northwest Territory under Harrison; it will be a reminder of the fearful havoc of the River Raisin, of the fall of Detroit, and of the Battle of the Thames. It will tell of the story of Erie Harbor; how Capt. Dobbins, cruising in the vicinity of Detroit, was captured; how he was released and went to Washington and informed the President of the situation on the Great Lakes. It will tell of Perry and his little band sailing out of Erie Harbor; how for days his fleet remained under the protection of the islands around Put-in-Bay; how anxiously they watched for the sails of the enemy, and how Perry on the eventful day, when the sails were seen in the distance, unfurled his battle flag bearing the inscription, 'Don't give up the ship,' and flung it to the breeze and gave his first order in the eventful struggle which was soon to follow. It will tell of the terrible attack sustained by the *Lawrence*, and how Perry, in an open boat, reached the *Niagara* in safety, and how in a brief space of time the battle was fought and won, American supremacy established upon the Great Lakes, and the Northwest Territory restored to the United States.

"The Perry memorial will not shelter the honored ashes of Perry. His remains, like Napoleon's, were carried back to the land of his nativity and buried among the people whom he loved.

"It will shelter the honored remains of American and British officers who died in the battle—Lieut. Brooks and Midshipman Laub, of the *Lawrence*, and Midshipman John Clark, of the *Scorpion*, of the American fleet, and the captain and first lieutenant of the *Queen Charlotte* and the first lieutenant of the *Detroit*, of the British fleet.

"Immediately following the battle the men of both fleets participated in the solemn burial of their dead. At 4 p. m. the boats moved slowly in procession, with oars keeping time to the music of the fife and drum, the flags were at half-mast, and the signal guns were fired at regular intervals. The landing place was wild and picturesque. The graves had been dug beneath the spreading branches of a lofty willow near the shore. The American and British walked two by two in alternate couples to the graves of their heroes. The last gun was fired and the sorrowing company departed to their ships, and there for a century their remains have reposed in absolute solitude, American and English side by side and undisturbed. The wounded of both fleets, after the Battles of Lake Erie and the Thames, were sent to Erie, where Barclay was seen, with tottering steps, supported between Harrison and Perry, as he walked from the landing place to his quarters.

"From this monument the American people will catch a new vision of a united country, all free, all vitally related, bound in a universal brotherhood of peace and good will."

The Indian Appropriation Bill.

REMARKS

OF

HON. HARRY LANE,

OF OREGON,

IN THE SENATE OF THE UNITED STATES,

Tuesday, June 17, 1913.

The Senate had under consideration the bill (H. R. 1917) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes.

Mr. LANE. Mr. President, I am of the fixed and firm opinion that in authorizing the expenditure of moneys, as is done in the Indian appropriation bill, we, as Senators, act in the limited capacity of agents only, and that no liberty of action is granted to us or should be assumed by us greater than that which is allowed to any other agent. I believe also that we are in duty bound to use every means at our command, carefully and properly to safeguard the expenditure of such moneys. I go even further, and claim that by reason of the fact that we have been especially honored in being elevated to fill the positions of high estate which we occupy as members of this body, that our obligation is even greater than that of a business agent in the daily walks of life. Acting in this capacity, I am of the opinion that it is a matter of plain duty with us to deal fearlessly and openly with all measures presented here for our consideration, and mete out to them without prejudice the exact amount of respect and consideration to which they are entitled and no more. If a measure is presented which is of dubious character to begin with, and whose most persistently urged claim for consideration seems to be an urgent desire to secure its enactment regardless of the consequences which will ensue from the enforcement of its terms, I feel that if we do nothing else we should at least label it as accurately as we can, in order to call attention to its defects, and it is with this object in view that I undertake the disagreeable task before me today. I am fully aware of the fact that it would be much easier for me and more pleasing to numbers of others if I were to let this measure take its usual course without too much question concerning it, yet I feel that in fairness to myself I must pursue the other course.

The bill now before us is officially entitled "An act making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with the various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1914." Right here I wish to call attention to the comprehensive grant of power contained in the right given to administer the affairs of this bureau "for other purposes" than those specified. For what "other purposes" we are asked to grant a general ukase I do not know, but I am beginning to harbor an increasing amount of respect for the long-headed gentleman, whoever he was, who so sagely and with such far-sighted wisdom added that portion of the enacting clause to the measure.

There are certain conditions which accompany the affairs of the Bureau of Indian Affairs and this bill as it relates to them, which, it seems, have existed for years, and which, when compared to the ordinary affairs of life, are anomalous to say the least. I am willing to, and do, acknowledge myself to be in the dark respecting the working of many of its provisions, concerning which I have evinced some curiosity, yet I am of the opinion that I am not more ignorant in that respect than the majority of the Members of this body, some of whom are members of the Committee on Indian Affairs. If it were so that free access could be had to a full statement of the facts as they relate to the affairs governed by this measure, I have an idea that the Senate would have before it at this time a bill differing in many ways from the one which we are about to consider. In justice to the measure and the affairs with which it is concerned, it is due to them to state that they have the general and seemingly well-earned reputation of being about, if not actually, the worst with which we have to deal, which is no mean compliment, as you all must allow. In fact, I am told that, by sheer merit, they have attained to the great distinction of being in many respects the flower and the very fruition, as it were, of every variety of skullduggery that has ever been devised or suggested by the fertile mind of man.

The bill itself is a most interesting measure, and the rights conferred in its provisions as they appear upon the surface are by no means the most interesting portion of it; for, snugly ensconced under its not too discursive enactments, "full many a gem of purest ray serene" lies concealed to the eyes of all but the initiated. Withal, the condition in a general way is a pathetic one, for the reason that no man, however honest he may be, can hope to deal with its affairs officially in an effort to better conditions without having questions raised concerning his integrity, and no man familiar with its conduct in the past who cares to keep his name or his hands clean desires to have anything to do with it.

The measure authorizes the direct expenditure of between ten and eleven million dollars in cash during the next 12 months, and in addition thereto the personal and property rights of about 300,000 human beings are involved in it in one way or another. Just how many Indians are entangled in the web of its varying provisions I do not know, there being a difference of opinion, amounting to several thousand, between the Indian Bureau and the Census Bureau in regard to the same. In accounting for this condition it is claimed by some who say that they know whereof they speak that numbers of Indians who for years have dwelt in the "happy hunting grounds" still live upon the rolls of the Bureau of Indian Affairs and prove themselves in their disembodied forms to be even more useful to their pale-faced brothers in securing for them the titles to valuable allotments of lands than they were aforetime, when they roamed about in this vale of tears, encumbered with no "allotments" and no clothing other than a plug hat and a pair of spurs. How true all this may be I do not know, but that it is not impossible, reasoning by analogy, I am prepared to believe, for the reason that I once knew an enterprising gentleman who dominated a Republican convention by industriously voting the proxy of a man who had been dead for five years, and the diligent and effective work of the gentleman deceased, I am told, prepared the way for the election of one of my distinguished predecessors to a seat in this august body—but I am digressing.

What I wished to call attention to was the fact that under the provisions of this measure (which, like charity in that respect, but perhaps in no other, covers a multitude of sins) there rests the ultimate fate of property rights which are estimated to have a value of about $900,000,000. The many different kinds of things which can happen to $900,000,000 in cash and realty when resourceful men are turned loose upon it, authorized by law to administer upon it for "other purposes," and with no responsibility fixed upon them for so doing, is pretty well indicated by the continuous wail which goes up from the owners of the said property from all over the country.

In my short experience as a member of the Committee on Indians Affairs I have found that much interest is evinced in this bill by many persons, not all of whom are Indians, generically speaking. As a matter of fact, and without prejudice to anyone, it may be said, and I believe it to be conceded by the persons in charge of Indian affairs, that the condition of affairs in this bureau of the Government in many respects is one which at no time in the past has reflected any credit upon this Nation, and that those existing at this time are deplorable and not improving; that larceny, both petit and grand, is practiced upon the Indian, and that physical and moral degradation and disease and death by starvation and even by poison go hand in hand and blithely accompany and seemingly are directly, and at times even officially, attached to our supervision of the affairs of these, our unfortunate wards and hapless fellow creatures.

Where there is so much complaint coming from so many different quarters and from all classes of people, backed up and corroborated by circumstantial evidence which is seemingly irrefutable and apparent to anyone who cares to look at it, the conclusion is inevitable that there is something radically wrong and that, in one way or another, much of it owes its being and its continued existence to the authority which is granted in one way or another in this bill. It is the legislative casket, as it were, from which the Indian's Pandora looses all evils upon him.

Believing that if we could secure an analysis of its provisions such as would permit an insight into the reasons, financial and otherwise, for their existence, we would be in a position to aid in bringing about a better condition of affairs in this branch of the Government's affairs, and believing, also, that until this is done, and done thoroughly, no permanent relief will come to the Indian, I have urged the necessity of such a scrutiny. I have thought also that, accompanying each appropriation which was sought from the people in this bill, we, as their trusted agents, in authorizing the disbursement of some ten millions of dollars of their money and legalizing other rights and grants affecting so many, were entitled to a succinct statement to accompany each request for the different appropriations, such a statement as would set forth plainly the actual facts concerning the same—such a statement, indeed, of each specific appropriation as banks all over the world require of their customers before they advance money to them with which to carry on the ordinary business affairs of everyday life. I am quite willing to concede that I have failed to secure such data, except in a few instances, and that I am unable to account for many things which puzzle me and others in connection with this important piece of legislation.

The first item of appropriation in the bill confers the right to survey, resurvey and classify, etc., the lands of the Indians throughout the country, and appropriates $200,000 for such purpose. The object to be derived from the expenditure of this money is said to be necessary and of great importance to the Indians, and in the main, such may be and probably is the fact as it relates to that work. Upon the other hand, however, much complaint comes from the Indians concerning the rights which it loosely grants. They fear it worse than they do a rattlesnake for the reason they say that under its provisions, despite their protests, they can be and do sometimes find themselves resurveyed and allotted out of their best agricultural and other lands after they have improved the same. I am told in this connection that after an Indian has undergone such an experience two or three times and finds himself, to his indignant surprise and disgust, resurveyed out of his improved farm, and finally landed by allotment onto a sand dune, being constitutionally of a grave and rather serious turn of mind, and lacking that true sense of humor which is so essential in cases of this sort, he becomes unduly discouraged and undertakes the hopeless task of trying to drown his sorrow in fire water, "hoochinoo," peyote, or some similar intoxicant, and is no more a "good" Indian. With careful forethought no doubt for this ensuing condition, the very next item in the bill provides an antidote for his distemper by authorizing an appropriation of $100,000 for the "suppression of the traffic in intoxicating liquors." What more could anyone ask?

In this connection I present for your inspection at this time the blue print of a map which shows one of the said "resurveys" for which a similar appropriation was made. By an engineering feat which is not accounted for in the primitive system of logic current among Indians they find themselves separated from much of their best and most valuable timber lands on one well-known reservation. The untutored savage who loaned me the map requested of me as a favor to refrain from getting him personally involved in connection with any complaint concerning this "resurvey," for the reason that he desired to continue to dwell peacefully, if he could do so, on that reservation; and as a precaution, you will observe, I have carefully scratched his name off the exhibit. He also stated that the Indians on that reservation desire to send a delegation to Washington to see their "Great White Father" and explain to him the manner in which they have seemingly been "bunkoed" out of their holdings in this respect. Having been refused the funds necessary to make the trip, their case has not been presented in due form, and for that matter it may never be.

The fact that a deficit which was incurred through the unauthorized expenditure of public moneys and is interwoven with and covered in an appropriation in this bill which specifically sets forth that the money is to be expended for work which is to be performed during the ensuing fiscal year, without a word of warning or explanation to this body of the existence of such irregularity, should be sufficient indication of the need for full and balanced official statements to accompany each item of appropriation which is asked to be authorized by this body. That deficits can be and are so easily disposed of is proof that something is radically wrong with our methods of handling the affairs of the people, and stern measures should be taken to rebuke the imposition of irregularities of such a grave character upon the Senate.

Among other appropriations authorized in the bill there are about 30 items which provide for the "support and civilization of Indians" at the different reservations scattered throughout the country, which in all authorize the expenditure of some $700,000 or $800,000 for these beneficent purposes. On examination, however, it is found that in some cases not a cent of the money specifically appropriated for that purpose is spent for either the "support" or "civilization" of the Indians, except and unless the payment of salaries to employees can be classed as such. Upon the contrary, it is frankly stated by those in charge of the bureau, who seek such appropriations, that there is no intention to expend any money for the "support" of Indians if it can be avoided. I have no objection to offer to the policy which encourages Indians to support themselves where such a course is proved to be practicable. I do object, however, to honoring requisitions for money for the specific and definitely stated purpose of the support of Indians when it is known by the persons asking for the money, before they ask for it, that they not only will not spend the money for such purpose but actually intend to, and will, expend it for something else. It smacks too much of false pretense and lying to suit me.

It is worth while to know also that under the cover of these authorizations of moneys for the "support and civilization of Indians" that there lie other things which are not apparent to the casual observer. For instance, in one item, in which the sum of about $35,000 is specifically set aside for the support and civilization of the Indians at one agency, an analysis of the item shows that it carries with it and under it, as an attachment and sort of a by-product, as it were, the authority to administer upon a fund amounting to $834,000 in cash, which is dismissed with the simple statement that it is "loaned" to "different banks." No names are given of the aforesaid "banks" in which the money is deposited by which they can be identified, nor is it stated upon what, if any, security the money is loaned, or what rate of interest the "different banks" pay the Indians for the use of the money, or anything else concerning the transaction—just the bald statement that $830,000 belonging to the Indians is "loaned to different banks." The addition of two letters would make it read to "indifferent" banks. Such matters of information are apparently considered to be unimportant and not worth the time which it would take to explain them, and they remain unexplained.

Besides this large amount of money, there is over $2,000,000 worth of other property belonging to the same Indians which is unaccompanied by as much as a "whisper" of information concerning the same. I must repeat, at the risk of tiring you, that such methods of conducting public business would not go far in private affairs.

Some data officially submitted should accompany transactions of such magnitude. Of the entire number of about 30 of these appropriations, we succeeded in getting statements pertaining to about half of them, concerning which we find that small details relating to minor matters are carried out in full, while those of large concern, such as I have quoted, receive but passing and cursory mention. It would be tiresome to go over all of these appropriations for the so-called "support and civilization" of the Indians. In fact, one of the heads of the bureau has frankly stated in one of the numerous "hearings" that the justifications do not show the itemized amounts which are supposed to be expended for such purposes.

In the "hearings," or "listenings," upon this bill which were held by the Indian Committee (true to the traditions of the past, I am told), such information as was secured by the committee was gleaned by a series of tiresome cross-examinations of witnesses, voluntary and otherwise, not all of whom agreed in respect to facts, upon questions which arose when individual members of the committee were engaged in fishing for information concerning the appropriations. To obtain even a general idea of the facts, as they relate to this bill, it is rendered necessary, in addition to the examination of such witnesses as voluntarily present themselves, to check through innumerable so-called "hearings" which have been evolved in the past. Necessarily, this method is ineffective, and merely skirts the edge of things, although sometimes something useful and illuminating does crop out. In the meantime those most nearly interested in the bill—the sophisticated—sit tight in possession of facts which would be invaluable were they known to those in search of them.

In another of the interesting appropriations for the so-called "support" and civilization of the Indians the entire amount, some $300,000 I am informed, is to be paid out to settle a lot of old bills which the Indians have incurred at traders' stores in the past. No specific showing was made to the committee concerning the transaction, nor was any definite reason volunteered showing why it was necessary for the Indians to go in debt in the first place, or why it would not be cheaper and better to change the plan and have them pay cash for their purchases of supplies in the future. In another instance where some "aged Indians" are said to be suffering from want, the statement shows an average of about $33 or $34 per capita spent last year for the sustenance of such aged and indigent Indians, and several hundred dollars expended for the purchase of "sheep dip," if you please.

In some instances in connection with these items appropriating money for their "support," it was shown that the Indians were actually self-supporting, that they were well-to-do; in fact, that they even possessed property worth above $20,000 apiece, and that not one-quarter of a cent was expended for the beneficent purpose of either their support or civilization.

In another case much more money was expended for "cement" sidewalks than was spent for the actual "support" of the Indians.

Hundreds of thousands of dollars are authorized to be expended for reclamation projects in cases where the lands of the Indians are made responsible for repayment of the expenditure incurred in such work, although in many cases the lands of the Indians held responsible for the outlay can not be and never

will be watered, while the land of the white man can and will be irrigated.

In one section of the bill the creation of a commission is authorized to reestablish a roll and adjudicate certain matters concerning which there is some dispute on the part of certain Indians. The particular interesting feature pertaining to this item is that the identical membership of the commission has been named, I am informed, in advance of the passage of the bill which creates the commission—"taking time by the forelock," as it were. One of the members of the commission thus designated before the bill becomes a law is said to be an attorney who represented a large lumber company and drew contracts with Indians, which contracts are now being disputed in the courts regarding the fairness of their terms and the methods used in securing the same. Indians claim they do not like this and that they regard it as being a proceeding similar in nature to what is known among palefaces as a packed jury. They also say that there is power invested in this commission under this authorization which will make it hard for an Indian to ascertain what is going to happen to his property, or when it is going to happen; that he must keep on the qui vive and watch out for the notices and the form of the notices respecting his rights which the commission will send out for his information; and that they fear that the worst will come to them. They claim also that they are forbidden under another law to employ lawyers to defend their rights if they desire to appeal to a court of law from the decisions of this commission.

It does seem queer to one not familiar with that method of doing business that the identical membership of the commission should be selected and even be named in advance of the legislative action which creates the commission itself. That is, it seems so to me, but I will concede that I am unused to a whole lot of things with which, I presume, I will become better acquainted later on. In my opinion that provision ought to be stricken out of the bill unceremoniously on general principles.

As an illustration of what methods can be and are being pursued in the management of the ordinary affairs of this Government when Congress carelessly grants powers without responsibility or even asking for an accounting to its servants to carry out its wishes, I will call your attention to a condition which exists at this time in the affairs of the Chippewa Indians. These Indians have sold under contracts the timber growing upon a certain and definitely specific portion of their lands to a large lumber company, which is engaged in manufacturing it into lumber. The Indians allege in respect to this transaction that the contracts were secured and drawn in the first place in a manner which discriminated against them and unduly favored the lumber company. Be that as it may, they also state as a matter of fact that the said lumber company persistently enters upon other of their lands, which are not under contract, and cuts timber from it. They also claim that in order to derive profit from so doing, the same lumber company, either carelessly or by design, sets out fires which it allows to escape in places where such fires will burn, around lands containing good timber, and then designates and cuts all of the timber within the burned area, both dead and live timber, and pays for it on the false assumption that it is all burned and dead timber, such dead and burned timber being rated at a lower price in the contracts than is live timber, despite the fact that it frequently happens that the burned timber is but a small portion of the amount which is classed as such.

Upon making inquiry concerning these complaints, and not from any information officially submitted relating thereto or voluntarily tendered by the official guardian of these wards, we were assured by him that the aforesaid lumber company was actually engaged in "trespassing" upon and cutting timber from lands of the Indians, upon which they had no lawful right to enter for that purpose. As evidence of the vigilance and good faith of the Indian Bureau, however, the same official assured us that he had employed timber cruisers and set them to "counting the stumps" left upon the lands which had been unlawfully logged off, in order to ascertain, as nearly as he could do so, the amount of timber which had been removed, upon which information, when secured, he intended to base a claim for a settlement with the lumber company. In some places, if a person enters upon lands not belonging to him and removes the timber therefrom without first obtaining the permission of the owner to do so, the owner of the land thinks he has been robbed and designates the act by a harsher term than "trespass," and it is the other fellow who undertakes the task of "counting the stumps" and trying to make "terms of settlement" before the facts are brought to the attention of a grand jury; which method, it seems to me, might properly be followed in dealing with this lumber company in this instance. Poaching upon the timber lands of these Indians is cause sufficient to forfeit all contracts with the lumber company and could be used to compel it to be ejected from the reservation, and the Indian Bureau has both the right and the power to do so, and by right ought to rid the Indians of such neighbors, yet it has not taken any steps in that direction, so far as I can ascertain.

As the matter stands it is said to be more profitable for the lumber company to cut timber from the uncontracted lands of the Indians than from the contracted lands, and prolong negotiations with the Indian Bureau and keep it "counting stumps" in its wake as long as possible, for the reason that the price of timber has gone up since the contracts were entered into. I am informed that the Indian Bureau is incidentally, but perhaps ignorantly, engaged at this time in compounding a felony in its attempt to make a settlement for what is an unlawful act.

In closing—I know you are glad to hear me speak those welcome words—I would say, in passing a share of my interest in this matter over to you for your consideration, that I am informed it has been the custom heretofore in the final stages of this bill to throw the legislative machinery of Congress into the "high gear," as it were, and speed the measure through, and—after the evils which follow in its wake become entrenched behind the barriers of its enactments—to begin an "investigation" upon some far-distant agency, respecting some one or another of the individual charges of wrongs arising under it and consequent upon it, if you please. These investigations, it seems, have caused to be printed a set of so-called "reports" and hearings consisting of thousands upon thousands of pages of printed matter, and the net results seem to have been a large outlay of the money of the people to pay for printing the same. That this method is the exact and proper way to defeat every attempt to remedy conditions seems to be proved by the experience which has been obtained from it in the past and may have had something to do with its adoption. At any rate, it is an old game, if I may be pardoned for calling it such, and like the old-time English courts of chancery can be so prolonged and drawn out as to lead far afield, and fritter away both the time and the money of such as seek relief from it, until, becoming exhausted, they fold their tents and steal silently away.

Given 300,000 people, possessed among them of $900,000,000 worth of property, in cash and otherwise, it would seem on the face of the proposition that the affairs of such a people might be so handled as to bring to them a reasonable amount of health and happiness, instead of reacting upon them like a scourge visited by an outraged and offended God. Rich in property, yet helpless wards who may not benefit by its use, groping their way about in blindness, with eyesight seared out with trachoma, huddled into insanitary hovels, racking themselves to death with consumption, in dirt, destitute, unhappy, hopeless, and wretched to a degree, thousands of helpless women and little children are lifting their feeble hands appealingly up to you and to me to-day. On us rests in a large measure the responsibility—and we can not evade it—for the unhappy state of these our unfortunate fellow creatures.

It seems to me that in one way and another it all comes back home to us here for our careless methods of legislation. We are the power which grants and bestows the right to administer these affairs. We make large grants loosely drawn and without any responsibility attached to them or fixed anywhere and, as a result, the Indian loses his property, and no sophistry of reasoning can evade the logic of the deduction that in the last analysis the responsibility comes back here, right under this roof, into this Chamber, and rests upon us, you and me.

Protest Against the Raker Bill.

EXTENSION OF REMARKS
OF
HON. DENVER S. CHURCH,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 6, 1913.

Mr. CHURCH. Mr. Speaker, under leave granted to extend my remarks in the RECORD I submit the following:

MODESTA, CAL., *May 27, 1913.*

Hon. DENVER S. CHURCH, *Washington, D. C.:*

Whereas a determined effort is being made all over the United States for the conservation of water and other natural resources for the development of contiguous territory; and

Whereas San Francisco is making a determined effort to divert the waters of the Tuolumne watershed for its uses, much to the detriment of the welfare of the San Joaquin Valley; and

Whereas it has been clearly proved that San Francisco can secure an adequate supply for its own use from other sources where the water is not needed for the contiguous territory: Therefore be it

Resolved, That the Stanislaus County Board of Trade protest against the diversion of any and all waters from the watersbed of the Tuolumne and call upon our Representatives in Congress to use all legitimate means to protect the interests of the San Joaquin Valley and thereby assure the proper development of its semiarid lands as well as make permanent the development of the natural resources of the State.

STANISLAUS COUNTY BOARD OF TRADE,
By GEO. T. MCCABE, *Secretary.*

MADERA, CAL., *May 26, 1913.*

Hon. DENVER S. CHURCH, *Washington, D. C.:*

The Madera County Chamber of Commerce to-day indorsed the resolution of the Stanislaus County Board of Trade, protesting against the appropriation of the waters of the Hetch Hetchy or Lake Eleanor or any waters of the San Joaquin Valley watershed by San Francisco, and urging the people of San Francisco in their own interest and the interest of California to seek their water supply from available sources that will not permanently injure the agricultural interests of California depending on irrigation.

MADERA COUNTY CHAMBER OF COMMERCE.

VISALIA, CAL., *May 31, 1913.*

Hon. DENVER S. CHURCH,
House of Representatives, Washington, D. C.:

The Tulare County Board of Trade, representing 11 civic organizations, heartily indorses the resolution passed by the Stanislaus County Board of Trade, relative to the diversion of the waters of Tuolumne River from the San Joaquin Valley to San Francisco.

J. SUB JOHNSON, *President.*
A. E. MIGT, *Secretary.*

DENAIR, CAL., *May 31, 1913.*

Hon. DENVER S. CHURCH, M. C.,
Washington, D. C.:

The Denair Board of Trade heartily indorses the resolutions adopted and wired you by Stanislaus County Board of Trade.

A. M. MORTON, *Secretary.*

WATERFORD, CAL., *May 29, 1913.*

Hon. DENVER S. CHURCH, M. C.,
House of Representatives, Washington, D. C.:

We hereby ratify the action taken by the Stanislaus County Board of Trade in their protest wired to you on May 27.

WATERFORD CHAMBER OF COMMERCE,
GEO. W. COLLINS, *President.*
C. C. HORSLEY, *Secretary.*

PATTERSON, CAL., *June 4, 1913.*

DENVER S. CHURCH, M. C.,
Washington, D. C.:

We hereby indorse resolutions adopted and wired you by Stanislaus County Board of Trade, protesting against granting to San Francisco any right to waters of the Hetch Hetchy. We earnestly request that you make every effort to protect the water interests of this valley by opposing San Francisco claims.

PATTERSON CHAMBER OF COMMERCE.

Lobby Investigation.

SPEECH
OF
HON. CLEMENT C. DICKINSON,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 9, 1913,

On House resolution (H. Res. 198) directing the Speaker of the House to appoint a select committee of seven Members to inquire into and report upon all matters of an alleged lobby organized by and on behalf of an organization known as the National Association of Manufacturers for the purpose of improperly influencing legislation.

Mr. DICKINSON. Mr. Speaker, I care not so much for the form of the resolution to be passed by this House, seeking to provide for the investigation into the truth of the charges made in said resolution regarding unlawful and corrupt efforts of certain lobbyists, who have sought to influence either this or other bodies, as I do that the investigation be speedily and thoroughly made, and I care less about the mere wording of the resolution and the country cares less than it does about the personnel and strength and character of those who shall compose the committee to be appointed to make such investigation. The country desires and demands a real investigation and has a right to expect it at the hands of this House. The honor and integrity of this House and of Congress demands an honest and searching inquiry. The country is entitled to know the whole truth, and that speedily.

A failure to make a thorough investigation and an earnest effort to put an end to unlawful lobby influence will be hurtful not only to this body but to every Member thereof.

For years the press and magazines of the country, read recently with so much interest, have continually charged the presence and influence of an ever-present lobby in Washington, seeking to influence legislation, and the country has believed in the existence and activity not of one but of many lobbies, organized by and on behalf of great business concerns for the purpose of improperly influencing legislation by Congress, and no small per cent of the people of the country have believed that the efforts of these lobbyists in a measure have been successful; that the lobby would not exist and the agents of these great interests would not be in attendance in Washington when Congress is in session unless their efforts bore some fruit.

In recent years, prior to this date, it was charged that Mr. Archbold and the Standard Oil Trust were guilty of great crimes against the public. In a recent magazine, speaking of a period five years prior to this date, the following language was used, which I quote:

> Steel, sugar, tobacco, coal, every trust on the black-flag list, had been and was buying Senators and House men, judges, and governors, as industriously as were Mr. Archbold and Standard Oil. The only difference between them and Mr. Archbold was that no one had come forward thus far with their letters. They had not been found out.

Such a condition is charged to have existed prior to this date. A very short while ago, there came an utterance from the White House in which President Wilson said:

> Washington has seldom seen so numerous, so industrious, or so insidious a lobby. The newspapers are being filled with paid advertisements calculated to mislead the judgment not only of public men, but also public opinion of the country itself. There is every evidence that money without limit is being spent to sustain this lobby, and to create an appearance of a pressure of public opinion antagonistic to some of the chief items of the tariff bill.

The country reads the utterances of the press and reads greedily the magazines of to-day, and President Wilson to-day has the listening ear of the public and the country is ready to read, and will read with interest, what is being brought out in these investigations, and will want to know how much of proof there is in the charges made by Mulhall and Lamar and other confessed corrupt agents of special interests, and the country is entitled to know at the hands of this body the real facts, if possible, and nothing less than a fearless, vigorous, and impartial investigation will satisfy the country. The failure to satisfy the demands of the country for such an investigation as it is entitled to have at the hands of Congress will make vacant many a seat in this legislative body.

Let the inquiry be so impartial and so searching and so honest that an end shall come to all efforts at corrupt lobby influence. The corrupt lobby has become a stench in the nostrils of the American people, and it will ever be so. The main purpose of a lobby or the presence of agents of special interests seeking to influence Congress or its organization or any part of its membership is due to the desire to prevent legislation useful and beneficial to the public interest.

I believe in the honesty of this body, and in the honesty and good purpose of the overwhelming majority of the Members who compose this House of Representatives, but I believe it is up to this membership to convince the country, by its own courageous conduct in this lobby investigation, that it is absolutely free from the corrupt influence of any outside agencies. It is the duty of this House to give evidence to the country that however numerous and however industrious and however insidious the lobby spoken of to-day by President Wilson may be, that it has and will fail utterly to stay legislation demanded by the public, and this Congress demands that a most searching investigation be made. It is the duty of this Congress to show to the country that whatever success in the past has attended the steel, tobacco, coal, and other great industries that were charged with buying Senators, Congressmen, judges, and governors, that these great special interests are powerless to-day to corruptly influence the American Congress.

Let the measure be passed and passed quickly, and then let the committee of strong, courageous, able men be appointed to carry out the mandate of this House without delay, and from time to time speedily report to the House the result of their investigation, so that the country may know all of the facts while it is fresh in their minds. Let not the public be wearied by long-drawn-out investigations.

Let it not die of dry rot. Let not the conduct of this committee be such that the press and magazines of the country, or anyone, charge that the investigation was a failure. Let it not be believed that the investigation is other than a true, honest, searching, determined inquiry to the end that the utmost publicity regarding what has been going on may be had, so that the devilish actions of those who would strike a corrupting blow at the law-making body of the country may be unfolded to the eager gaze of all the people, and to the end that effective legislation may be enacted by virtue of which no corrupt agent of any selfish interest shall ever dare again, in daytime or night, to corrupt or attempt to corrupt any Member of Congress.

The press, the pulpit, and the stump orator have poured into the willing ears of the public charges of corruption in high places, until many have believed that their public servants are absolutely unworthy of their trust. Charges of shortcomings

have not only been made against those who wore the robes of justice, but Federal judges have been charged so long and without end of having been reached by the agents of selfish corporations, and executive officers from time to time have been believed to be unworthy of public confidence.

The Senate of the United States has purged its body and driven from its halls recently a United States Senator believed to have been corruptly elected to his place in the Senate, and the public in the past have believed that other men have come to Congress by corrupt methods and expenditure of large sums of money and undue influence of great corporate interests, until great cries of wrongdoing in high places went out over the land. The Senate of the United States was denounced throughout the length and breadth of all the country. Cries also went up for an amendment to the Constitution of the United States to the end that Senators could be elected by direct vote of the people.

We hear less to-day about the evil influence in connection with that great body than we have heard in the past. A wonderful change in a brief, short while. Very recently a Federal judge has been tried by this House before the Senate, found guilty, and he was stripped of his judicial robes and driven from his high place on the Commerce Court.

In several States of the Union very recently members of legislative bodies have been prosecuted and convicted and ousted of their membership because they have yielded to the corrupt influences of agents of vested interests. The country demands that this House protect its honor and its integrity and its virtue, and protect the honor, integrity, and virtue of this country by punishing those who seek to corrupt.

If the evidence shall show that any Member has yielded to the influence of any corrupt lobby or lobbyist, the committee and the House should act upon it. Go on with the investigation fearlessly, courageously, and searchingly, so that the country shall believe and know that there has been an honest and real investigation.

The country has read with interest the utterances of Lamar, the wolf of Wall Street, and the vile utterances made by him and Lauterbach, his associate, against public men, who enjoy the confidence of the public and will perhaps discount much said by him against others held in less favor by the public; but much of what they have said about Wall Street will be believed. Though Lamar be a self-confessed liar, he may know Wall Street and tell the truth in some things. But more particularly will the country read the confessions and disclosures made by Mulhall, the long-time agent of vested and corporate interests, who have sought to control legislation for many years, and to the extent that Mulhall is corroborated his testimony is valuable and will be taken seriously by the country.

The public has believed and the Democratic Party has charged in its party platforms and through its public speakers and accredited leaders that these interests have been controlling affairs at Washington and preventing legislation desired in the public interest, and the Republican Party went out of power largely because of the settled belief in the public mind that there was a close alliance between special interests and many Republican leaders and that legislation was being prevented and influenced by the agents of corporate wealth.

Do not discard the testimony of Mulhall and others merely because of the source from which it comes, but let the country have the benefit of the disclosures, and let the committee sift the evidence, so that the real and full truth be known, to the end that good shall result and Congress and the country be the better by reason of this investigation.

I know that a committee of the highest character and of determined purpose will be named by the Speaker, who knows the membership of this House and believes in the honesty of its membership, and I feel confident that such committee will respond to and vindicate the hope of Congress and of the country.

The Sugar and Wool Schedules.

SPEECH

OF

HON. FRANCIS G. NEWLANDS,

OF NEVADA,

IN THE SENATE OF THE UNITED STATES,

Friday, June 13, 1913.

The Senate had under consideration the motion of Mr. MARTIN of Virginia to recede from amendment of the Senate numbered 2 to the bill (H. R. 2441) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1914.

Mr. NEWLANDS. Mr. President, regarding the attitude which I took in my recent speech of May 16 with reference to the transfer of sugar and wool from the dutiable to the free list, I have received from my constituents numerous letters and telegrams, of which some are critical and some commendatory, but all of which express the hope that dissensions will be avoided. No one indulges this aspiration to a greater degree than myself; but I believe that party harmony is to be secured by party justice, and that party justice involves an equitable adjustment of tariff burthens and benefits as between industries and sections.

The earnestness of that speech was regarded by some as indicating antagonism to the administration, but this is not so. The warmth of my expression on that occasion was prompted by the unjustifiable contention of the Senator from Kentucky [Mr. JAMES] that the party platform bound all loyal Democrats to free sugar.

NOT BOUND TO FREE SUGAR.

I served on the platform committee of the Baltimore convention as a substitute for Mr. Belford, of my State, who approved a tentative platform which I had drawn, and who desired me to have the opportunity to press it. Mr. Belford's views regarding the gradual reduction of tariff duties were in harmony with my own and were embodied in a plank which I drew and which he approved. That platform, together with numerous others, was presented to the committee, and the result was a composite platform, the tariff plank of which I regarded as substantially embodying the views which I had entertained for years, and which I have repeatedly urged upon Congress as to a gradual reduction by a sliding scale.

I shall append to my remarks the tentative platform referred to and quote therefrom the following:

THE TARIFF.

Fourth. The protective tariff is one of the chief sources of high prices. Whilst refusing to indorse the principle of protection, we recognize the fact of protection, and that under a protective policy industries have been stimulated which it would be unwise violently to disturb. We therefore favor the gradual reduction of tariff duties toward a revenue basis, so accomplished as to disarm the charge that reduction of excessive duties will cause a flood of importations which will displace American labor and impair American industries. We declare our purpose to feel our way prudently and with a due regard to American wages and industry toward a revenue basis.

I also quote from the Democratic platform adopted at Baltimore in 1912, as follows:

TARIFF REFORM.

We favor the immediate downward revision of the existing high and in many cases prohibitive tariff duties, insisting that material reductions be speedily made upon the necessaries of life. Articles entering into competition with trust-controlled products and articles of American manufacture which are sold abroad more cheaply than at home should be put upon the free list.

We recognize that our system of tariff taxation is intimately connected with the business of the country, and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry.

QUESTION LEFT OPEN.

I served on both the main committee on platform and on the subcommittee at the Baltimore convention and shared in all the deliberations relating to the tariff, and I state most emphatically that the subcommittee, realizing that the House Democrats of the Sixty-second Congress, though differing in view, finally declared for free sugar and dutiable wool, whilst the Senate Democrats favored dutiable sugar and wool, though at reduced rates, determined to indorse neither contention, but to leave the whole question to the party councils after anticipated victory. It was for this reason that the platform declared only for material reductions on the necessaries of life and for the ultimate attainment of the principles of the Democratic Party by legislation that would not injure or destroy legitimate industry.

Upon the subcommittee which framed the tariff platform were Mr. Bryan, Senator O'GORMAN, Mr. WALSH, now Senator from Montana, Senator CULBERSON, myself, and four or five others whose names I do not now recall. I have recently consulted Mr. Bryan, Mr. O'GORMAN, and Mr. WALSH, and I find that their recollection as to the framing of this platform accords with my own; namely, that the party platform was not intended to, and did not, commit the party either for or against free sugar or free wool.

The Democratic Party realized that we had lost in every campaign mainly through the defection of the industrial workers, who, though naturally sympathetic with our party, indulged the fear, sedulously cultivated by our opponents, that if we were placed in power we would act so radically regarding the tariff as to imperil industry and wages.

TOOK MIDDLE GROUND.

The very purpose of our action was to avoid the hysterical outcry against needed economic changes, which had so often beaten us, and to steer clear of business depression and panic, than which nothing could be more prejudicial to our success,

either at the election or in subsequent control and administration of the Government.

It is true that in a plank not relating specially to the tariff the Baltimore platform indorsed the action of the Democratic House of Representatives in the last Congress, but it specifically stated the particulars in which it indorsed that action, referring to numerous reform measures which passed the House, and there was no expression—in fact, it studiously avoided any expression regarding the contention which existed among Democrats as to whether sugar and wool should be entirely taken off the dutiable list, some contending for a low revenue duty and others for free listing.

It is also true that the Democratic House of the last Congress declared in favor of free sugar and dutiable wool. Obviously, then, if the Baltimore platform, by indorsing the action of the Democratic House in the previous Congress, declared in favor of free sugar, it also declared in favor of dutiable wool, for the House bill of that Congress put wool upon the dutiable list. And so the present Underwood bill, if this contention be maintained, would be a violation of the Baltimore platform, because it places wool upon the free list.

THE SENATE DEMOCRATS.

As a contemporaneous construction of the Baltimore platform it is well to add that immediately after the adjournment of the Baltimore convention the Democratic Senators and Congressmen who were present there returned to their unfinished duties at Washington, and thereafter the Senate Democrats by a unanimous vote, both in the Committee on Finance and upon the floor of the Senate, declared that wool and sugar had throughout the entire history of the party been dutiable articles, and that they should be maintained as such in the bill then pending. I shall insert an extract from this report of the Senate Democrats on sugar:

[Senate Report No. 763, pt. 2, Sixty-second Congress, second session.]

DUTIES ON SUGAR.

Mr. WILLIAMS, from the Committee on Finance, submitted the following views of a minority:

The tariff on sugar is peculiarly a revenue tariff. Very much the major part of the tax levied upon the consumer of sugars and sweets goes actually into the United States Treasury for the use and behoof and benefit of the American people. A minor part of the tax goes into the pockets of the producers. Upon numberless articles in the Payne-Aldrich tariff bill the duties are either prohibitive, or very nearly prohibitive, or highly exploitive, and in all these cases very much the major part of the tax levied upon the consumer goes into the pockets of the American producers, a special and favored class, and very scantily, and sometimes not at all, reaches the Treasury. In the next place the majority of the tariff schedules which have been adopted by the House and sent over to the Senate during this Congress make a reduction of about one-third. In the face of its record in connection with other bills, the House reduced the duties upon sugars and the products of cane and sugar beets 100 per cent; in other words, entirely canceled the existing duties. It seemed to us that this was not in keeping with the promise of Democratic platforms to reduce present protective duties "gradually" toward and finally to a revenue basis. We have seen no reason why sugar should have been excepted from the general policy advocated by the Democratic Party and believed by us to be right.

Again, in levying an import duty upon sugar for revenue purposes, we are imitating the time-honored and time-justified precedents.

The abolition of the Dutch standard and of the differential, together with the reduction of duties upon refined sugar, will strike a serious blow against one of the great American trusts, which has not been scrupulous either in its dealings with the Government or with the people. We do not believe that the reduction of duties which we propose will seriously disturb any legitimate or fair business. We think the only effect will be to reduce excessive and undue profits made by sugar-beet factories, some of which have been enormous, while cheapening the product to the household.

With regard to cane sugar, the cost of the production of sugar from which is greater than the cost of the production of beet sugar, owing to the fact that the labor engaged in the production of beet sugar is intelligent, efficient white labor, and the labor engaged in the production of cane sugar is for the most part unintelligent and inefficient, there may accrue some disturbance to businesses not well equipped and not well managed, but none to any business well equipped and well managed.

That the reduction which we propose is a sufficient reduction our political antagonists confess by the fact that one faction of them does not propose any reduction at all, and the other faction proposes a reduction much smaller than the substitute which we advocate makes.

We have not felt that it was wise to surrender fifty millions of public revenue at one swoop by putting sugar and sugar-cane and sugar-beet products upon the free list, especially in view of the fact that there exist numberless other import duties prohibitive in their character from which the people's treasury does not procure any money at all, or else a negligible revenue, the practical operation of such taxes being to take money from the pockets of the consumer and put it into the pockets of the producers.

We feel confident that within a few years the duty which we propose will bring as much money into the Treasury as the duty now existing under the Payne-Aldrich tariff brings, owing to the cheapening of the product, the encouragement of its use, and the increase of the demand, and the increase of the importations to meet the demand.

JOS. W. BAILEY.
F. M. SIMMONS.
W. J. STONE.
JOHN SHARP WILLIAMS.
JOHN W. KERN.
CHARLES F. JOHNSON.

The fact is, Mr. President, that at the Baltimore convention the question as to differences of opinion between Democrats regarding the policy of imposing revenue duties upon sugar and wool were discussed in the committee on platform itself, and we came to the conclusion that it would not do to carry these contentions into the campaign. They were left to be settled later on, after victory was secured, in the councils of the party.

RADICAL ACHIEVEMENT BY PROGRESSIVE STEPS.

Mr. President, I have long entertained the view, frequently expressed upon this floor, that the surest way toward reform in tariff matters is, whilst having a radical goal in view, to reach it by moderate and progressive steps, and that if violent readjustments should be attempted they would involve general business disturbance prejudicial to the country and to party success. I have contended that the Democratic Party should have a lease of at least eight years of power within which to accomplish its beneficent purposes, and that it should not take the risk by disturbing or radical action of being thrown out of power and thus defeating itself in accomplishment. I shall insert in my remarks quotations from certain of my utterances upon this subject, and particularly an article in the Independent, published shortly before the last election. The matter referred to is as follows:

[From remarks of Hon. FRANCIS G. NEWLANDS in the Senate of the United States, June 22, 1911.]

HIGH CUSTOMS DUTIES—SHALL WE JUMP OR SLIDE DOWN?

As to customs legislation, we are very much in the position of a man who has climbed to the top of a high steeple and who realizes that he can not remain there long, that it is dangerous for him to remain there, and he hesitates as to whether he should jump down or slide down. The question now before us is, the American people having made up their minds that this tariff shall be reduced, and materially reduced, whether Uncle Sam, having reached this high and perilous pinnacle, shall throw himself to the ground or shall gradually slide down. So far as I am concerned, I believe in the sliding process. We have made so little progress during the last 50 years in tariff reform that if we should take 25 years to accomplish that which we desire I would not regard the time as very lengthy. In the history of governments and of great economic movements it does not make much difference whether a thing is accomplished in 1 year or in 25 years as compared with the great eras of time through which governments live and in which economic principles operate. So I would rather slide down slowly to a correct standard than tumble down or throw our entire economic and industrial system into confusion.

[Extract from an article in the Independent for Oct. 3, 1912, by Senator NEWLANDS, entitled "Possibilities of a Democratic administration."]

The Democratic Party is opposed to radical readjustments and has declared its purpose to feel its way gradually and prudently toward a revenue basis. Realizing that the American industries have become interlocked with a high protective system it has declared its intention to accomplish its ultimate purpose in a way that will not impair or injure any legitimate American industry. In giving this assurance it will disarm the fear of the workers in the protected industries, numbering several millions, who, naturally affiliated with the Democratic Party in sympathy, have been frightened by their employers into voting against that party on the ground that its policies constitute a menace to their employment and their wages. We will at the same time disarm the fear of wealth that radical increases will be made in its burdens. If we reduce our revenues from customs duties slowly there will be no reason for rapidly increasing the taxation of wealth. By pursuing this policy we will avoid the hysterical outcry against needed economic changes, which has so often beaten us; we will pacify labor, the manufacturer, and law-abiding wealth, and we will steer clear of business depression and panic, than which nothing could be more prejudicial to our success either at the election or in subsequent control and administration of the Government. We must break up the habit of swinging like a pendulum from reform to monopoly through the intermediate process of panic.

[Extract from legislative program for the extra session of 1913 offered by Hon. FRANCIS G. NEWLANDS, of Nevada, in the Senate of the United States, Mar. 13, 1913.]

TARIFF AND TAXATION.

Resolved, That the Senate Committee on Finance report at as early a date as possible during the extra session upon the following questions:

(a) Whether the prices of any farm products in the United States are raised above the international level of prices by the duties now imposed on such products; and if so, what products, and whether such duties on such products can be abolished or materially reduced without injury to American industry, and to what extent. In such inquiry shall be included meats, cheese, wool, sugar, tobacco, wines, citrus fruits, and dried and preserved fruits.

(b) What products now on the dutiable list should be put on the free list.

(c) Whether it is practicable and advisable to change all duties from specific to ad valorem duties.

(d) The average percentage of the duties imposed by the existing tariff, and the average percentage to which it is desirable to reduce the duties imposed under the proposed revision of the tariff, and the maximum and the minimum duties which it is desirable to impose.

(e) Whether it is practicable and desirable to distribute the proposed reduction over a period of four years.

(f) Whether it is practicable and advisable after making the contemplated reduction in the tariff to organize an administrative tariff board, which, acting under rules fixed by Congress, shall have the power, either upon its own initiative, or upon the initiative of any importer, producer, or consumer, to further inquire into complaints of excessive duties prohibiting or unduly restricting importations, or of diminished duties permitting excessive importations, to the prejudice of existing domestic industries, and to the injury of the capital or labor employed therein, or of excessive duties prejudicial to domestic consumers, such board to present to the President and to Congress such recommendations as it may deem advisable.

(g) Whether it is practicable and advisable to give such tariff board, after full investigation and hearing, the power, with the approval of the President, to make reductions or increases in duties, within certain

limitations and under rules prescribed by Congress; and if so, what limitations and rules should be prescribed.

(h) Whether it is practicable and advisable to make such rules and regulations for the action of such a tariff board as will enable the Government to feel its way gradually from a higher protective to a revenue basis without readjustments prejudicial both to domestic labor and capital, and without denying to the consumers needed relief from the imposition of excessive taxes upon foreign imports and excessive prices for domestic products.

(i) Whether it is advisable to provide a graduated income tax and a graduated inheritance tax with a view to making up any deficit in revenue caused by a reduction in customs duties, and also with a view to extending the operations of the National Government in cooperation with the States in the improvement of post roads, the regulation of rivers in aid of navigation, irrigation, water-power development, and swamp-land reclamation, and also in cooperation with the States in the advancement of vocational education

MR. WILSON'S POLICY.

Mr. President, the great thing that attracted me in the candidacy of the President was his masterly expression of radical achievement through moderate and progressive action, and I now recall with pleasure the clearness of his expression when, prior to his nomination, he declared that it was the duty of the Democratic Party to cut out the corrupt without injuring the healthy tissue. His masterly conduct of the campaign was in line with that statement and did more than anything else to disarm the fears of the wage earners, who, though naturally sympathetic with the Democratic Party, had been repeatedly driven from its support at election time by the false alarm that Democratic victory meant the disturbance of employment and wages.

We won, Mr. President, and the entire administration of the President has thus far vindicated the high opinion which we formed of his abilities and policies. He has pursued his course with strength, with vigor, with dignity, with purpose. His very action regarding sugar and wool indicates that he had in view the adjustment of tariff reform to the business requirements of the country; for his suggestion to the House Democrats that the bill as agreed upon by them should be changed by transferring wool from the dutiable to the free list and by taking sugar off the free list and putting it upon the dutiable list for three years was doubtless inspired by the belief that immediate free listing would not harm the wool industry but would harm the sugar industry. The principle upon which his action was based indicated that if a similar extension of time were shown to be necessary in order to save the wool industry he would not oppose it, and that as to both of these industries he might be disposed to look with favor upon an extension of time beyond the three years if accompanied by gradual reductions to a lower or free-trade basis.

So I declare that I am not in antagonism to the administration in its general policy, but that, on the contrary, I am in sympathy with the declaration of the President before he was elected and with his actions since in proposing to so adjust these duties as not to make a violent wrench in any industry, but to save all, if possible, whilst reforming all.

Mr. President, regarding sugar and wool, the Democrats of the Senate will shortly enter into a great council, and we shall be called upon to exercise our unbiased and uninfluenced judgment regarding these questions. With reference to those two industries I wish to present these considerations:

It is announced that the recent action of the majority members of the Finance Committee has striken almost all farm products, such as wheat, oats, barley, hay, butter, eggs, and so forth, from the dutiable list and put them upon the free list. I applaud that action, because it involves taking off the dutiable list sham duties which have neither produced revenue nor given protection, and which were placed in a protective tariff by the skilled minds of the Republican Party with a view to deceiving the farmers and making them believe that they were partners in the protective system. I am against all shams, and therefore I approve the action of the majority members of the Finance Committee. Yet this action accentuates the fact that almost the only far western products retained upon the dutiable list will be the citrus and fruit products of California. This, too, in face of the fact that nearly 4,000 articles competitive with the products of eastern manufacturers are retained by the pending bill upon the dutiable list, involving a total revenue of $260,000,000 to the Government, with the power to the manufacturers of similar products to increase their prices to the amount of the duty, thus imposing upon the consumption of the country a tax to the manufacturers of nearly ten times the amount paid to the Government, whilst practically no duties, either revenue or protective, are levied upon imported articles similar to the products of the far West.

REVENUE PRODUCERS SACRIFICED.

The party will thus be subjected to the charge that it has maintained the products of the Atlantic and Middle Western States upon a protective basis, whilst it has drifted the products of the Southwest and the West to a free-trade basis; and also to the charge of sacrificing two industries—sugar and wool—which are large revenue producers, whose prosperity is essential to the country, and whose prostration may make us depend upon foreign countries for two products entering into the daily use and comfort of our people.

The wool and sugar industries are essential to the prosperity of the West. The wool industry will gradually change in control from the large ranch and range owner to the small farmer, and the sugar industry will promote the intensive cultivation so essential to the success of our irrigation projects.

The arid West now produces annually over 600,000 tons of beet sugar, worth about $50,000,000, of which one-half goes to the farmers, one-fourth to the sugar factories and the labor employed in them, and one-fourth to the railway carriers and jobbers.

The arid West could in time, aided by our insular possessions, whose product amounts to about 1,000,000 tons annually, supply the entire consumption of the United States aggregating nearly 4,000,000 tons. This would be an addition to the productive capacity of the arid West of between $200,000,000 and $300,000,000 annually.

A beet-sugar factory has recently been established in an irrigation project in my own State of Nevada capable of handling in a season 100,000 tons of beets, which would mean the production of about 12,000 tons of sugar, worth about $1,000,000, the larger portion of which will go to the farmers and the men employed in the factory. The process of establishing such a factory is a slow one. Although the mill had a capacity to handle 100,000 tons of beets in a campaign of 100 days, there were only 4,000 tons produced the first year, and about 20,000 or 30,000 tons will be produced this year. The progress of development is slow, and should meet with no discouragements. Fifty such manufactories could be maintained in the fertile valleys of Nevada, if fully developed by irrigation, and they would yield a revenue far greater than that of all Nevada's mines. Every beet farm would be an agricultural school, showing the value of intensive cultivation, and would aid in the industrial and commercial development of the State.

It has been the policy of all European countries to stimulate beet-sugar production by bounties and protective duties. Why should we deny this great industry the merely incidental protection secured by a low revenue duty, which will enlarge the revenues of the Government and contribute to its expenses?

HIGH DUTY NOT CONTENDED FOR.

It must be remembered that I do not contend for the maintenance of the present high duty on sugar. I believe in immediate reduction of one-fourth, and at the end of three years in a further reduction of one-half of the existing duty. All that I contend for is that the same graduated principle of reduction which has been applied to the Atlantic coast and middle western products shall be applied to the products of the far West.

And now, Mr. President, I wish to refer to a charge which has been made in my own State, that my suggestion of an ideal tariff which would involve a gradual reduction of the existing duties to the 25 per cent level fixed by the pending bill and a gradual imposition of duties on articles now on the free list, commencing at 1 per cent and ending at 5 or 10 per cent, would involve taxing the necessaries of life. I declare that the existing free list shaped by the Republican Party does not include the necessaries of life, but includes numerous chemicals and other articles which enter into manufacture, the free listing of which was intended as a further subsidy to the manufacturers. My critic in Nevada evidently supposed that the existing free list covered food products, whereas, on the contrary, almost all food products are on the dutiable list, and the free list simply covers articles which largely enter into manufacture and thus cheapen the cost to the manufacturers.

Mr. President, I have always favored putting food products either on the free list or on a low dutiable list, and the only exception I have urged was as to hothouse products, like sugar and wool and the citrus fruits, which have required tariff stimulation to maintain life; and as to those I have advocated simply a gradual reduction in the heat, so as to accustom them to a normal temperature.

I stand either for low duties or the free listing as to all necessaries of life; but I also stand for such gradual action in this line as will not destroy any stimulated industry which employs labor and whose product is necessary to the economic development of the country.

Whilst I have believed in a revenue tariff, Mr. President, I have also believed in gradual downward steps from a high protective to a revenue basis, and I have believed in placing upon the dutiable list almost all commodities except food products. You may ask, then, Why should I not also except sugar and wool and citrus fruits from the dutiable list? Simply because they are all hothouse products, products which have been stimulated by a protective tariff, for the wool industry itself, though protected by a tariff duty, has not largely increased in this country and has barely been able to hold its own. As to sugar and citrus fruits, they would never have been built up as industries except under protection of a wall, either revenue or protective.

Mr. SHEPPARD. Mr. President, may I ask the Senator a question?

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Texas?

Mr. NEWLANDS. I would prefer, if the Senator will permit me, not to be interrupted.

Mr. SHEPPARD. I merely want to call attention to one fact which may be of some value in the discussion. The fact is that the highest price wool ever brought in the history of this country was during a period of free wool.

Mr. NEWLANDS. In what period was that?

Mr. SHEPPARD. About 1814.

Mr. NEWLANDS. That is a long time ago, Mr. President, and I am not, of course, prepared to meet contentions upon conditions of a century ago. I will merely say that wool has only been able to hold its own without increased domestic production, notwithstanding the high protective duty, and that for that reason I believe in lowering the duty gradually, in the hope that the character of the industry itself will gradually change from an industry pursued in the far West by great ranch owners, owning enormous ranges, to an industry followed by the small farmers, who, under the intensive cultivation of the new irrigation projects, are gradually taking the place of the large ranch owners. I hope that whilst this duty is being gradually reduced to a low revenue, or even to a free-trade basis, by a process of evolution, the industry will be saved and not destroyed, for I believe that a great Nation like ours should not be dependent upon other nations either for its food or for its clothing supply, and that it is the highest public policy in every way to see that self-development is secured regarding industries that affect the necessaries of life.

It is for this reason also that I hope to see the sugar industry maintained and developed, because I realize that sugar is not to-day the luxury that it was 50 years ago. It has become a necessity of life, and it has come within the reach of the humblest person by reason of the systems of bounties and protection which have prevailed in all the countries of Europe, under which beet-sugar production has grown within less than 100 years so that in tonnage it now equals the cane production of the world, accompanied by a reduction in price from over 10 cents to 5 cents a pound. This system of encouraged and stimulated production has steadily lowered the price of sugar, whilst all other food products within the last 15 years have been steadily rising in price.

It must be recollected, Mr. President, that I make no contention for high duties. I believe that so far as wool is concerned, instead of having a 45 per cent or a 50 per cent duty as under existing law, it should be reduced to 15 per cent, and later on, if the party wills it, to free trade, scattering the reduction over a series of years by a sliding scale. I believe that as to sugar the duty should be immediately reduced 25 per cent, and at the end of three years should be reduced 50 per cent, and that thereafter it should be reduced by a sliding scale until it reaches either a low revenue basis or, if the party wills it, free trade. I believe that as to lemons, an industry now approaching firm establishment on the Pacific coast, threatened under this bill with destruction by its Sicilian competitor, the duty should be reduced immediately one-third, that within three years it should be reduced another third, and finally to a low-revenue basis, if not to free trade, according to the will of the party.

I am not contending for high protective duties. I am simply contending that the temperature of these hothouse industries should not be suddenly reduced so as to destroy them, but that it should be gradually reduced so that they can become accustomed to a normal temperature.

MAGNITUDE OF INDUSTRIES.

The magnitude of these industries in the West is well known. One-half of the wool industry of the country belongs to the arid and semiarid region. It is one of the most important industries there, closely and intimately connected with the commercial, the transportation, and the banking life of that region. It will not do rudely to disturb it. It will not do to put it even in a disturbed state of mind. The treatment of this question is not merely economic; it is psychological. We should so legislate as to disarm the fears of the people engaged in these industries; and in order to disarm fears we must exercise caution in legislation.

As to the sugar industry, we all know that over 600,000 tons are produced annually in the arid and semiarid region; that the total consumption of this country approximates 4,000,000 tons; that of that consumption about a million tons are furnished by our insular possessions, Hawaii, Porto Rico, and the Philippines; 300,000 tons are furnished by Louisiana; 600,000 tons are furnished by the arid and semiarid West, nearly 2,000,000 tons in all, and that the balance comes from the island of Cuba, which since the Spanish War has rapidly increased its production consumed in this country, notwithstanding a handicap of 1½ cents per pound, or $27 per ton, imposed upon that production through our revenue duties.

If Cuba, in order to meet the demands of our consumption, can rapidly increase her production in 13 years from 500,000 tons to 2,300,000 tons under the discouraging condition of an almost prohibitory tariff of $27 a ton, the tariff duty almost equaling the cost of Cuban production, what will Cuba do when she is relieved of that handicap? Her sugar, delivered in New York and New Orleans to-day at a cost of 2 cents a pound, will make its way to the centers of population in this country, after having passed through a cheap cleansing process called refining and having paid trifling rates for transportation, whilst the western sugar, for which the farmer receives in the beet 2 cents a pound—the same price paid for Cuban raw sugar at New York and New Orleans—has to pass through an expensive factory process of cutting and slicing and granulating and refining, and to suffer high rates of transportation over long distances, before it reaches the centers of population and competes with Cuban sugar.

How will it be with our insular possessions, whose production has increased under the stimulus of a protective tariff until it has nearly doubled within the last 10 years, but whose production has not increased by anywhere near the proportion that the production of Cuban sugar has increased under the most discouraging conditions? How will the industry suffer in those islands, with which we have built up 300,000,000 of trade, sugar representing almost the entire insular contribution to that trade? Can you imagine the readjustments there when Cuban sugar takes the place of their product, the readjustment in transportation from those islands to the mainland, the readjustment in commerce between our insular and our continental territory? Is it a thing to enter upon lightly and cheerfully, as if it involved nothing serious?

INQUIRY BY EXPERTS.

How do other countries conduct themselves in the face of such economic conditions? What did the European countries—Germany, Italy, Austria, France, Belgium, and Holland—do when England, disturbed by the economic conditions of her dependencies growing out of the condition of the sugar industry, applied to them for a conference? Did they dismiss the matter as lightly as we do? Did they give it the cheerful and accidental treatment which we accord to it? No. It was held to be a matter of sufficient importance to warrant a council of the nations; and diplomats met in Brussels to confer upon the economic question of the relation of sugar to the food supply of the nations, with a view to securing it at a reasonable price and maintaining an equilibrium of production. At that conference it was determined to do away with the bounties, to reduce the high protective duties to a moderate duty of about one-half cent a pound, and since then free-trade England has subjected her people to a duty approaching one-half cent a pound. To-day, throughout the civilized world, sugar is regarded as one of the most reliable revenue products, upon which moderate duties are imposed, not prejudicial to the consumers, but beneficial to the Government itself, and all involving an incidental protection that steadies the industry in the locality in which it is pursued.

Mr. President, whenever England considers a question that relates to her dependencies, her insular possessions, she enters upon the inquiry with grave and painstaking solicitude. A royal commission is generally appointed, to which the representatives of the islands are summoned for participation, and before which experts give their views regarding the proposed change or the development of an industry.

England acts upon judgment and inquiry. How do we act with reference to these insular possessions which fortune has thrown into our hands, all of them now subjected to high labor charges and high supply costs under our high protective system and suddenly to be thrown for the market of their products into unprotected markets?

It would be a wise thing if, right at this juncture, we should authorize not a royal commission but a democratic commission, consisting of the Secretary of War, who has charge of our insu-

lar possessions; of the Secretary of the Interior, who has charge of our irrigation projects and control over the island of Hawaii; and of the Secretary of Agriculture, whose jurisdiction extends over agriculture and that system of agricultural stimulation which public policy has decreed as the concern of the Nation. Take these three officials, authorize them by law within the next month to bring together their experienced men and their experts in sugar and wool as well as the officials of the islands, and let that commission make a report to the Senate before final action, which will be at least two months hence. We would then have action after deliberation, comparable to that of the Brussels sugar conference, which resulted in the abolition of bounties and high protective duties and the substitution of a low revenue duty, comparable also to the royal commissions which England always appoints in dealing with matters relating to the welfare of her dependencies. The report of such a commission, composed of high officials having jurisdiction, respectively, over our insular dependencies, our irrigation projects, and the development of farm industry, would be based upon inquiry, information, and deliberation with the aid of the experienced and expert judgment at their command. Such a report would either inspire caution or disarm fear.

POLITICAL EMBARRASSMENTS.

Mr. President, these questions involve not only economic but political embarrassments in the far western region, which heretofore has been strongly Republican and protective and which within recent years has increased its Democratic representatives in the Senate from 1 to 14—a region which, whilst it believes in the honest and downward revision of the tariff, will not favor the placing of two of its chief industries upon the sacrificial altar, whilst high though reduced protective duties are still maintained upon Atlantic coast and middle western products.

These questions also involve depressing readjustments in our insular possessions, unable to compete with Cuba on a free-trade basis; in Louisiana, the victim of recent floods; and in the arid and semiarid West, whose sugar, costing about as much in the beet as Cuba's raw sugar delivered at New York and New Orleans, has to pass through an expensive factory process and to suffer transportation at high rates before it can reach the centers of population, which Cuban sugar reaches after a cheap cleansing or refining process and at trifling rates for transportation.

The questions involved include also the possible monopoly of the sugar refineries, which, standing like sentinels upon our seaboard, absorb the imports of raw sugar and put them through the refining process, and whose interest is to destroy domestic beet-sugar production, which pays them no toll, and to promote external cane production, which pays them toll. They involve also the risk of turning over our sugar industry to Cuba, with its tendency to revolution likely, as heretofore, to interrupt our supply and raise the price. They involve also the wool-growing industry, of which over half belongs to the far West, where it is intimately interwoven with banking, commerce, and transportation. Although wool has had a high tariff duty, which should be materially reduced, the industry has not grown as was anticipated, and it would seem that it would require at least the same period for readjustment at a reduced duty as has been accorded to the cane-sugar industry of Louisiana.

A REFINERS' MONOPOLY.

What shall we do? Shall we pursue a domestic policy that will make the refiners the monopolists of sugar, controlling not only the profitable refining process, but controlling the markets of the country, as they have hitherto done, by most objectionable methods? Or shall we, obedient to Democratic policies, reduce the high protective duties which have unduly restricted the competition of foreign sugars and move gradually toward a revenue basis which will at least permit domestic industries to survive and struggle with foreign sugar and trust-produced sugar for the supremacy or, at least, the partial control of our markets?

Have we realized what monopoly means? What is it that has brought so much discredit to the very name of sugar? Has it been the action of the beet growers of the West? No; it has been the iniquities of the sugar refiners, commonly known as the Sugar Trust, who are now openly conducting an agitation for the promotion of foreign cane sugar and the suppression of domestic beet sugar.

Why shall we give the refiners a monopoly? How have they exercised it before? A shortage in the world's market during the year 1911 of only 1,000,000 tons out of 18,000,000 tons of the world's production gave our sugar refiners an opportunity to mark up the price from 5 cents a pound to 7½ cents a pound within two or three months, and that monopolistic price was only beaten down when the beet sugar of the West came into the fall markets and met the cane sugar in competition on the banks of the Missouri and the Mississippi and in New York and Boston itself, forcing down a reduction from 7½ cents to less than 5 cents a pound.

Mr. President, I have no fault to find with the general policies of our distinguished President. I believe that the humane action which he took in prolonging the life of the cane-sugar industry of Louisiana three years by his interposition, demonstrates that he is prepared to act with a calm, an equal, and a just mind regarding every industry in the country.

It is not to be wondered at that out of 4,000 items in the tariff, involving every complexity of production and marketing, no one man should be able to master the intricacies of every industry; and whilst I have no doubt he is sincere in his belief that these two industries can be rapidly drifted to free trade without injury to the country or without injury to the industries, I will expect, and the American people will expect, him to yield to the facts when presented in clear and orderly and convincing fashion.

We have as yet organized no tribunal to make this inquiry. We have been conducting it through the scattered energies of about 300 Democrats in the House and Senate, all of them pressed by multifarious duties and driven, through their special committees, into the swift and immediate consideration of economic questions of the highest importance.

Is it to be expected that under these conditions we can act with the calmness and deliberation with which the Brussels conference acted? Is it to be expected that we will pursue the inquiry with the certainty and the accuracy with which the English royal commission proceeds? Is it not now time for us to pause and to organize some kind of a commission, composed of such officials as I have referred to, the Secretary of War, the Secretary of the Interior, and the Secretary of Agriculture, who, with the aid of their subordinates and their experts, easily accessible, will bring in a report that will either establish the confidence of the Democratic Party in the course which it has outlined for itself in the House or inspire caution, a report contributing either way to the peace of mind of the people engaged in these industries and assuring them that the final action of the Democratic Party would not result in their injury.

Can we not proceed in this course, holding in view all the time the ultimate purpose of Democratic achievement, a low-revenue tariff, planting in this very bill the seed that will bring ultimate achievement through a sliding scale, and thus fixing the will of the Democratic Party almost immutably in the pending measure, not to be varied by the changes of politics, not to be varied by the loss of the Senate next year or the loss of the House or the Presidency two years later, but immutable, or almost immutable, because it will require a change in the House and the Senate and the Presidency to alter the decree of the law?

I submit that this is the wise, the prudent, and the courageous way of meeting great economic conditions. It is wise because it will satisfy the country. No party will outstrip us in zeal in lowering the tariff. The party that will beat us will be the party that will come into power not because we have done too little but because we have done too much. Let the protective forces of the country marshal themselves under one leader two years hence under conditions of disaster brought about by violent economic readjustments and no one can predict with certainty Democratic success.

APPENDIX.

A TENTATIVE PROPOSAL FOR A NATIONAL DEMOCRATIC PLATFORM, SUGGESTED TO THE BALTIMORE CONVENTION BY SENATOR NEWLANDS, OF NEVADA.

First. We, the representatives of the national Democracy in convention assembled, reaffirm our belief in an indestructible Union of indestructible States and in the exercise of all powers of popular sovereignty, both National and State, for the common good.

Second. Whilst reaffirming our faith in home rule and in keeping the powers of government as far as practicable in the hands of the people in the municipalities and States, we also believe in the full exercise of the granted powers to the Nation and in the cooperation of the Nation with the States, within their respective jurisdictions, in the promotion of the general welfare.

Third. We declare that the Republican Party has drifted from the teachings of Lincoln and has become during long years of power the protector of privilege and abuse, whilst the Democratic Party still stands true to the doctrines declared by Jefferson of equal rights to all and special privilege to none.

THE TARIFF.

Fourth. The protective tariff is one of the chief sources of high prices. Whilst refusing to indorse the principle of protection, we recognize the fact of protection and that under a protective policy industries have been stimulated which it would be unwise violently to disturb. We therefore favor the gradual reduction of tariff duties toward a revenue basis, so accomplished as to disarm the charge that reduction of excessive duties will cause a flood of importations which will displace American labor and impair American industries. We declare our purpose to feel our way prudently and with a due regard to American wages and industry toward a revenue basis.

THE TRUSTS.

Fifth. We declare that private monopoly is indefensible and that combinations of plants and of capital having such monopoly in view should be restrained and broken up.

We declare against any modification of the Sherman Antitrust Act, but we favor supplementing it by the organization of a nonpartisan independent interstate trade commission possessing powers of investigation, publicity, and recommendation regarding interstate trade similar to those possessed by the Interstate Commerce Commission regarding interstate transportation and giving such commission the power to aid the courts in the disintegration of monopolistic combinations and to act independently upon complaint, or its own initiative, in investigations, with a view to bringing such combinations to justice where they fail to conform with the law.

We declare that the system of enforcing the Sherman law regarding monopolies in interstate trade through the Attorney General's office, with its shifting incumbencies and varying policies, has not been satisfactory, as compared with that of the Interstate Commerce Commission in enforcing the laws regarding interstate transportation, and that this experience constitutes a controlling reason for organizing an independent interstate trade commission, which, regardless of political exigencies or executive or political influence, will insure the steady and continuous enforcement of the laws relating to trusts and monopolies.

We also favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including among others the prevention of holding companies, of interlocking directors, of stock watering, and the control by any one corporation of so large a proportion of any industry as to make it a menace to competitive conditions.

BANKING AND FINANCE.

Sixth. Whilst opposing the Aldrich plan for the organization of a central banking and reserve association, we favor the union, under national law, of both National and State banks within the boundaries of each State in reserve associations analogous to existing clearing-house associations, for the purpose of perfecting their reserves and cooperating in the prevention of bank panics, the membership of the State banks in such reserve associations to be made dependent upon their complying with the requirements of the national banking act regarding capital and reserves and upon their submitting to such examination as the national banks are subjected to.

We also favor federating under national law such reserve associations of the respective States by the organization of a central reserve commission, composed of nine members, to be selected by the various State reserve associations, one member thereof from each judicial circuit, such commission to have such powers in bringing the various State reserve associations into cooperation as Congress may determine and to be advisory to Congress and to the executive department.

We also favor the merger of the comptroller's office, with all its officials, funds, powers, and duties, in a nonpartisan national banking commission, to be appointed by the President, of which commission the Secretary of the Treasury shall be the chairman and the Comptroller of the Currency the secretary, such commission to have powers of investigation, correction, and publicity over banks engaged in interstate exchange analogous, so far as practicable, to those now exercised by the Interstate Commerce Commission over carriers engaged in interstate transportation.

We favor a law which will bring such banking commission into cooperation with similar commissions organized by the respective States.

We also favor legislation which will gradually do away with the existing pernicious practice of allowing a large proportion of the reserves of the country banks to be deposited in reserve city and central reserve city banks, to be used there for purposes of speculation instead of exchange.

CONSTRUCTIVE POLICIES.

Seventh. We favor constructive policies under which at least one-fifth of the total revenue of the Government will be expended in constructive work of a durable character, and to this end we favor the expenditure of at least $50,000,000 annually in the regulation of our rivers for navigation and in supplementing bank and levee protection below by the diversion and storage of flood waters above in aid of the reclamation of swamp and arid lands and of water-power development; such work to be accomplished under the direction of a board of experts appointed by the President, of which board the Chief of Engineers of the Army shall be the chairman, to act, with the approval of Congress, in cooperation with the States in plans and works intended to accomplish the full development of our rivers for every useful purpose under the respective powers and jurisdictions of the Nation and the States. The recent devastation of the lower Mississippi Valley accentuates this movement and necessitates not only additional bank and levee protection below, but the control of the headwaters above.

We favor the expenditure of $25,000,000 annually in the construction of model interstate roads, such work to be conducted under a system of cooperation with the States, approved by Congress.

We favor also the appropriation of at least $30,000,000 annually for public buildings, the construction of which shall be conducted under a board of architecture and arts composed of experts in architecture, construction, and art, such work to be taken out of the spoils system and put upon the basis of adaptability to locality and use based upon public necessity.

We also favor the expenditure of at least $30,000,000 annually in the construction of a proportionate Navy, consisting of fighting and auxiliary ships, the latter to be used in time of war in aid of the fighting ships and in time of peace, so far as practicable, as training schools for the Naval Reserve and in opening up new routes of foreign commerce under lease to shipping companies.

We also favor the expenditure of at least $10,000,000 annually in the construction of fortifications and the expenditure of at least $10,000,000 annually in securing the national control and ownership of deforested areas within the watersheds of navigable rivers.

We insist that all the foregoing works shall be conducted continuously through the creation of funds in the Treasury for that purpose and without the breaks hitherto experienced through political change and exigency.

THE MILITARY DEFENSE.

Eighth. We favor high efficiency in our military expenditure by regarding the military defense as a unit and by uniting the Navy and the Army in cooperation, through a board of military defense, consisting of distinguished Army and naval officers, which board shall be advisory to the President and to Congress. We also favor the cooperation of our Army with the militia of the various States in securing discipline and drill that will result in a citizen soldiery able at any time to respond to the demands of war.

Realizing the importance of having officers trained in drill, sanitation, and care of troops to take charge of the citizen soldiery in case of war, we favor an increase in the military school at West Point, with a view to meeting such requirements.

RENEWAL OF PLEDGES.

Ninth. We renew the declaration made in our last platform relating to the neutralization of the Philippines, the development of waterways, the conservation of natural resources, the imposition of an income tax, the enforcement of the civil-service law, a generous pension policy, the organization of a Health Bureau, and the extension of agricultural, mechanical, and industrial education. We also favor cooperation with the States in the establishment of vocational schools which will serve as models for vocational training.

MERIT IN WORKS AND PROJECTS.

Tenth. We favor the abolition of the spoils system in projects and works as well as offices. We condemn the practices under which the apportionment of river and harbor improvements and public buildings are made dependent upon log-rolling rather than on merit. We favor the construction of all public works under the direction of a board of experts, to be organized by law, which will bring into coordination with it the various bureaus and services affected. And we favor the enlargement of the Engineer Corps of the Army with a view to increasing their employment in such public projects and works. We favor the enlargement of the functions of the National Art Commission, so that it may embrace all matters of art and architecture in national works and include cooperation with similar commissions organized by States and municipalities.

BUDGET COMMITTEE.

Eleventh. We favor the organization of a budget committee in each House of Congress, such committees to act in cooperation with the executive department in matters relating to efficiency and economy and to recommend the apportionment of revenue between the different departments and offices of the Government.

INCOME, OCCUPATION, AND INHERITANCE TAXES.

Twelfth. In addition to the income tax, we favor an extension of the occupation tax imposed on corporations to all individuals, firms, and persons, and also a graduated inheritance tax under which a deduction not exceeding one-half may be made in States now deriving a portion of their revenue from inheritance taxes, such taxes to make up any deficit in revenue caused by a reduction of customs duties and also to be applied to the constructive work herein demanded regarding river regulation, public buildings, and other public works.

LABOR AND INJUNCTIONS.

Thirteenth. We renew the declarations made in our last platform regarding labor and injunctions. We favor a workingmen's compensation act applied to common carriers engaged in interstate commerce. We favor the frank imposition of the expenditures under such an act of interstate commerce as a part of the transportation charge and as a compensation for the hazard of the occupation.

THE PUBLIC DOMAIN.

Fourteenth. We declare that the Nation has always regarded itself, and should now regard itself, as the trustee of the public domain, holding the great natural resources in land, water, timber, and minerals included in such domain as trustee for the interest of settlers of the West, both those who are there now and those who are to come; and whilst it is the duty of the Nation to guard these natural resources against combination and monopoly, it is also its duty to see that they are not unduly withheld from development or from the taxing powers of the States within which they are situated.

We therefore favor the passage of laws that will break the existing deadlock and which will secure the full development of western resources, at the same time guarding against monopolistic control.

The rapidly approaching exhaustion of the public domain and the increasing difficulty which would-be settlers on the land find in securing homes have created a condition which makes it the duty of the Nation to take charge of the settlement of the people on such lands. We favor the establishment of a homestead service with appropriate officials and machinery for aiding settlers in finding homes on the land, instructing them how to make a living from it, and making the remainder of the national domain available to the people on conditions favorable to successful settlement and cultivation.

The following plank is also presented for consideration:

THE RACE QUESTION.

Fifteenth. History shows that wherever two races differing in color have coexisted upon the same soil the result has been either amalgamation or the subordination of one to the other. Both are undesirable—the one resulting in the impairment of race integrity, the other in conditions that are incompatible with the maintenance of true democracy.

Experience has demonstrated that the granting of the franchise to the blacks under the belief that it was necessary for their protection was a mistake, and that it has led, and can lead, to nothing but their injury.

We declare that our whole policy regarding the blacks since the war has been a mistaken one; that their sudden elevation from a condition of slavery to that of political sovereignty was a cruel injury both to them and to the white race; and that the blacks should have been regarded as an infant race, wards of the Nation, entitled to vocational training and to intelligent and humane assistance in emigration from this country to the land of their origin under the plan proposed by Lincoln in 1862, and so gradually conducted, without injury to the industrial development of the South, as to result in the colonization of the blacks on African soil under such conditions of territorial control as would secure their advancement and progress.

Our country is peculiarly subject to race complications by reason of the residence of 12,000,000 blacks within our borders, whose constantly increasing numbers threaten our race integrity and our institutions. Confronting us on the Pacific are nearly 700,000,000 people who look upon the United States as the promised land of opportunity. Experience on the Pacific coast has demonstrated the danger of race complications and of race war resulting from their unrestricted immigration to this country.

Entertaining nothing but the most humane and helpful purposes regarding the blacks in our midst and the most friendly disposition to races differing in color and confronting us on the Pacific, we declare our purpose to maintain this as a white man's country, and to that end we favor a constitutional amendment confining the privilege of voting to the white race and legislation prohibiting the immigration to this country of all peoples other than those of the white race, except for such temporary purposes of education, travel, or commerce as comity between friendly nations may require.

New Nationalism—Presenting Addresses of Gov. William Spry, of Utah, and Gov. Elias M. Ammons, of Colorado.

EXTENSION OF REMARKS
OF
HON. EDWARD T. TAYLOR,
OF COLORADO,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, July 29, 1913.

Mr. TAYLOR of Colorado. Mr. Speaker, at the conference of western governors at Salt Lake City on the 6th of last month, the rights and needs of the West for the proper settlement and development of that portion of our country were discussed at length by the governors and other public-spirited citizens, and a set of resolutions in the nature of a memorial to Congress was adopted, and I introduced that memorial in the RECORD on June 17, 1913, page 2340. In addition to the memorial, a number of prominent men delivered speeches that should be preserved in some permanent form. While I will not ask space in the RECORD for all of them, I do feel that the formal addresses delivered by Gov. William Spry, of Utah, and Gov. Elias M. Ammons, of Colorado, ought to be inserted in the RECORD as a fair and patriotic statement upon the subject of new nationalism as it is being practiced upon the West at the present time. I therefore ask leave to extend my remarks in the RECORD by inserting those two addresses, and I earnestly request all fair-minded people to carefully consider them.

CONSERVATION—THEORETICAL AND PRACTICAL.

[By Hon. William Spry, governor of Utah.]

Conservation as developed under the Roosevelt administration is a beautiful theory. Gov. Spry tells in this article why it is impractical as administered in the West and points out what true conservation means and how to accomplish it. As the governor of Utah, Mr. Spry has had exceptional opportunity to see the new theory in practical operation. His argument is commended to those who have favored the new nationalism. This article was delivered as an address before the conference of western governors in Salt Lake City on June 6 and was approved as representing the sentiment of the Western States.

"The movement for the conservation of the natural resources of the Nation, which has been widely heralded and freely discussed, has raised a vital question of deepest importance to the people of the West—the most serious question, in my opinion, that has presented itself in the history of the West—the public-land question. The most important point in connection with the national conservation policy is the handling of the public lands. Our public domain is the corner stone of every policy of conservation that may be launched in the United States, and to a great extent every theory that has been given the dignity of a try out has involved primarily the handling of the public domain. Our public domain contains the agricultural, mineral, timber, coal, and hydrocarbon lands which are the chief national resources susceptible to the application of principles of conservation of these lands in the so-called public-land States and are largely in Government title.

"It is a striking fact that the application of this modern theory of conservation tends to upset a precedent in the disposition of the public lands, the strict adherence to which has been deviated from only in rare and, I may add parenthetically, unfortunate circumstances. The experiments thus far conducted with this conservation policy do violence not alone to the traditional use of the public domain; they violate the conditions of a sacred compact entered into between the original 13 States and work an injustice upon the younger States so patent as almost to prohibit a word of defense. The story of the formation of our Union is one familiar to every schoolboy. It need not here be rehearsed. It is sufficient to remind you of the wide differences and serious difficulties which arose in determining the relative power and strength, to be exercised in the confederation which was being formed, by the then colonies possessing great land grants and those which were to come in with land holdings equal only to the area within their respective boundaries. It is a historical fact that in a spirit of magnanimity the landed colonies eventually founded and cemented the Union through granting to the common fund the great tracts which they had acquired, with the express understanding that as population increased in the remote territory new States should be formed and admitted to the Union on terms of equality.

"The pages of history record that America's early statesmen were, above all else, believers in, if not children of, the soil. No man raised his voice in prophecy concerning the future of the Republic but predicated his faith in the strength, the power, the stability, and the endurance of the Union on the reclamation of the soil and the placing of title to a part of the public domain in the men and women who were to conquer the land. Vested ownership with a joint interest and with widely scattered individual responsibility was the rock upon which we builded. None, however, even dreamed of the richness and extent of the existing territory and that which was later to be acquired.

"The tide of immigration from foreign countries was received with favor, was even encouraged, if, indeed, it was not actually solicited; and the policy of those who were directing the affairs of government was always to locate the people upon the land. Thus it developed that instead of reserving the public lands to be used as security for the debts of the Nation or of disposing of them to meet the Government obligations the public domain came to be looked upon as the heritage of every man who would lend allegiance to his Government by cultivating the soil. The policy of disposing of these lands at a nominal figure to bona fide home seekers was encouraged and followed without material deviation, except in such grants as were made to the railroads, those made for the promotion of education, and the disastrous swamp-land grants which were made to certain individual States, the proceeds of the sale of which were intended to be used for the purpose of internal development.

"Under that benevolent policy the great East was built up; through the liberal homestead laws the South was settled and the North developed, and there was attracted to the Middle West a tide of immigration which brought that territory under cultivation. Meanwhile the revenues of the Nation increased by leaps and bounds, the credit of the United States, instead of being impaired, was strengthened, the products of the soil increased in volume, and the country generally was in a prosperous condition.

"As population increased in the Eastern States the public lands became more scarce and the adventurous began to push toward the West. With them came those who had speculated in land scrip and who had been largely instrumental in securing the passage of laws providing for lieu selections. Not content to satisfy their claims against the Government in the acceptance of the lands remaining in the East, they invaded the rich western portions of the country and exercised their lieu rights in the selection of the very choicest timber and other highly valuable lands. The forerunner of the bona fide western homesteader was the 'lieu-land scrip shark,' who had purchased these certificates at very small figure and, gathering them together, made blanket filings on the choice timberlands of the West. But the lumber camp was a small factor in the development of the West. The West needed substantial, permanent improvement. It needed the home seeker, and to secure the settler depended on a continuation of the Government's liberal policy of disposing of its unoccupied public lands.

"Recognizing a disposition on the part of certain great corporations to gobble up the timberlands, the National Government inaugurated the policy of withdrawing from public entry certain timber areas and setting them apart as forest reserves. It became strikingly apparent that some of the very choicest lands in the public-land States had been and were being secured and held by corporate interests under Federal sanction and that the resources were being exhausted; and there shortly developed a well-defined feeling that steps should be taken to at least prevent the waste of these resources.

"Personally I believe that the motive that inspired the conservation movement, which was more or less crystallized in the first conference of governors, held at Washington during President Roosevelt's incumbency, was an unselfish one. I believe that its true aim was to preserve as far as possible the public resources from waste and destruction.

"A perusal of the addresses which were given at this conference indicates that the men who gathered there were actuated by the highest motives and the sincerest desires on behalf of the Nation. But in the light of subsequent developments it is apparent that the participants were not impressed with any uniform and well-defined method of correcting a recognized evil. So far as my information discloses, the moral support afforded by the men who took part in that conference was seized upon by the promoters of the gathering and utilized in putting into operation, under national direction, certain theories without that calm and careful consideration that should enter into questions of so great concern. And in the meantime little has been accomplished by the individual States in the way of effective measures for saving the resources. What has been accomplished by the National Government has been accomplished at the cost of the development of the States and at the increasing expense of that cordial and close relationship that should exist between the States and the Federal Government.

"We have progressed far enough with the problem to determine that the intelligent discussion and application of principles of conservation involve the discard of elaborate theories and popular fads and the resort to good, sound, wholesome, old-fashioned first principles. The past is altogether too filled with experience to permit of radical changes, and the future is altogether too full of promise to justify revolutionary experiments with an administrative policy which is fundamental.

"In the light of experience and on the record of the past no one can honestly question that theoretically, and in most cases, practically speaking, our attitude toward the public domain has been right. Our conservation policy as enunciated and urged by the enthusiastic conservationist has grown into a high-sounding theory that is riding and would continue to ride to death one of the basic principles and best policies of our National Government.

"If we can not utilize our resources to produce valuable results, then we are poor, since poverty is the lack of property and the adequate means of support. In government the profit is what is really good, helpful, and valuable.

"Of what value to a State, present or future, is a tract of land dedicated and set apart as a forest reserve, whose meandering boundary lines, aside from incorporating within their limits a small stand of timber, include agricultural lands upon which the evidences of former timber growth are entirely lacking and upon which the hope of the forest culture is an idle dream and reforestation a misnomer? In all sincerity I assert that you can be taken to forest reserves in Utah through which you can be piloted for days without encountering trees in profusion sufficient to afford adequate shade to shelter you from the burning sun during the noonday meal. And searching through the rank growth of sagebrush—that is the principal product of some of our forest reserves—I venture to assure you that I will locate for you cedar posts, transported thither over many weary miles, and planted by the hand of man, alone, forsaken, in strange company, sentinels marking the boundary line of some United States forest reserve. From the top of these posts you will find the customary warning to beware of forest fires, etc.

"Picture, if you will, no less a distinguished person than the Chief Justice of our Supreme Court, halted in the waste between the railroad and St. George under the burning August sun with a disabled automobile that had been laboriously threading the dusty road cut through sagebrush and magnanimously extracted from the forest reserve to afford a trailing way for cattle and sheep—picture him in the scorching sun, reading through the shimmering light the warning not to trespass upon Uncle Sam's forest reserve; his longing search of the conservation forest landscape for a tree to shelter him from the burning rays; his discovery in the distant vista of either a scrub cedar or an overgrown sage, and his desire to avail himself of the protection it afforded. Imagine the judicial weighing of the necessities to make the spot and questions of endurance and physical ability to do so—literally torn between suffering and doubt and the forest warning to remind him of the theories of the office conservationist. Had you been present on that occasion you would have learned more of conservation in forcible language than you ever heard before.

"I am unable to reconcile the high-sounding objects of the withdrawal of timberlands with the cold fact that in Utah the forestry department stands ready to release for sale certain timber if the people will pay the price it demands, which price the dealers feel is a dollar a thousand too high and which price constitutes a dollars-and-cents proposition standing between the timber supply of our children and the Treasury of the Government.

"I grant you that wise foresight has not characterized the handling of the lands at the headwaters of the Mississippi, for instance. The denudation of the ranges at the tributaries of this mighty river has resulted in erosion, and the precipitous run-off of snow deposits and rainfall, to the disadvantage, the disaster, and the untold expense of those living in the lower Mississippi Valley. But what has occurred in the Mississippi Valley can not occur in Utah, as, indeed, it can not be repeated in many of the public-land States. In the first place, our high mountains afford cool depositories for the snows; in the second place, our precipitation is light as compared with eastern sections; in the third place, our rivers are small and the topography of the country is such that we have no such vast areas that find their drainage into one channel as are found in the East.

"It is none the less true that we are deeply interested and vitally concerned in the adequate protection of our watersheds, all of which can be accomplished by reasonable regulation and supervision, which I hold can be administered quite as effectively by local authorities as by agents of the Government, and which I am convinced can be handled more sensibly and economically by the States than by the departments at Washington.

"Note, if you will, how easily and jauntily the conservationist in his enthusiasm fell into the advocacy of a system of leasing the mineral, coal, hydrocarbon, and oil lands, and even the agricultural lands—a practice at once so repugnant to the American spirit as to warrant the assertion that if adopted it would find support only from the ignorant immigrant. Every ideal of our citizenship is outraged by the suggestion that our people shall in this country of liberty and independence be thrown back as serfs under a system of landlordism and tenantry such as has been the curse of certain of the older European countries.

"Do I believe in conservation? I certainly do. But it appears there are two distinct views of the question—the one which, unfortunately, has been the official view—narrow, selfish, looking altogether to the welfare of generations yet unborn, totally ignoring obligations of trusteeship, and brushing precedent aside so ruthlessly as to render experience an invaluable thing, and calculated to enrich the General Treasury at the expense of the younger and financially weaker States. The other, the view of those who recognize a tendency toward extravagance in the improvident drafts on the national resources, who see a disposition to waste those resources, and who, recognizing the evils, have a sincere desire and determination to adopt means to avoid waste. I prefer to ally myself with the latter class, and from the viewpoint of one of this class permit me to explain my understanding of true conservation.

"In the beginning, we are informed by Holy Writ, after creating the heavens and the earth and all that in them is, God created man and gave him dominion over the fishes of the sea, the fowls of the air, and the beast of the field, and bade him use all things created. That dominion man has always held and exercised, and in holding and exercising it he has been compelled to draw upon the resources largely in accordance with the demands of the day and generation in which he lived. Up through the various stages of civilization man has been compelled to gain his living by the use of those things over which God gave him dominion, and so long as civilization endures, so long, indeed, as humanity remains, man must continue to live through some method of utilizing the resources about him, and the success of his struggle for survival will be measured by his ability to understand and make those resources useful to his purpose with least extravagance and loss.

"The one important consideration in connection with the handling of our resources overlooked by the conservationist is the fact that primitive man made but primitive drafts on the resources which he found most easily available, and just so long as those drafts were primitive man remained primitive; when modern man made modern requisition on the natural resources civilization had attained its highest perfection.

"When men lived in mounds and caves the forests were but slightly disturbed and civilization was not very far advanced; when men rubbed sticks to make a fire sulphur was not being exhausted; when men paddled in canoes and traveled overland by horseback our steel deposits were aging in the everlasting hills; when men went whaling for blubber with which to make candles electricity was unknown, and this powerful and subtle force was a mystery of the elements; when men gathered a few sticks of driftwood to cook their meals the coal deposits were unmolested; when scribes were a rarity, if not a novelty, and historians carved hieroglyphics in stone, wood pulp was not even in demand; and when men were content to merely exist, the demands that manufacture, trade, and commerce have made upon our natural resources were not even dreamed of.

"Look conservation squarely in the face and answer: Would you exchange the modern home with its accessories and comforts, made possible through the use of the natural resources, for the dugout of the man who made his home in the mound or the habitation of the cliff dweller? Would you exchange the sulphur match for the wooden stick or flint of days gone by?

"Would you barter your electric lamp for the candle made from the blubber of whale? Would you give up your modern sea vessel, your twentieth century steel train, your automobile for the canoe of your forefathers, the horse of the mail carrier, or the one-horse shay of your ancestors? Would you give up your newspapers, your magazines, your libraries, your textbooks for the tablets of stone? Would you silence the busy machinery of manufacture, would you stop the wheels of commerce, to go back to the life of a century ago? Would you exchange all or

any of these accessories of modern civilization for every atom of natural resources that entered into their making?

"Would any one of you—having at heart first, the true interests of your country; second, the welfare of the State you represent; and, third, the well-being of your fellow men—exchange 100 men, with their wives and families, who were willing to forego the comforts of life and locate on the public domain for the sacred purpose of home building; would you exchange those families, who would uproot the sage and greasewood, who would drive the plow into the parched earth, would conserve the sunshine, who would conserve the rain, the snow, the moisture, who would make the land fruitful and pleasing to look upon where before it was a barren and dreary waste, who would drive the lean and hungry coyote one ridge farther back toward the fastness of the mountains; would you exchange these 100 State builders for a forest reserve, with a small stand of timber, a vast area of sagebrush, and a forlorn hope that seeds from Germany will produce timber for the use of generations yet unborn? What loyal man of the sparsely settled public-land State of the West will support the withdrawal and leasing system being worked out by the conservationist and discard the system that has been followed with signal success since the formation of the Union?

"In his message to Congress, December 4, 1832, President Andrew Jackson said:

"It can not be doubted that the speedy settlement of these public lands constitutes the true and best interest of the Republic. The wealth and strength of the country are its population, and the best part of the population are the cultivators of the soil. Independent farmers are everywhere the basis of society and true friends of liberty.

"In addition to those considerations questions have already arisen and may be expected hereafter to grow out of the public lands which involve the rights of the new States and the powers of the General Government, and unless a liberal policy be now adopted there is danger that these questions may speedily assume importance not now generally anticipated. The influence of a great sectional interest when brought into full action will be more dangerous to the harmony and unison of the States than any other cause of discontent, and it is the part of wisdom and sound policy to foresee its approaches and endeavor, if possible, to counteract them.

"It seems to me to be our true policy that the public lands shall cease as soon as practicable to be a source of revenue and that they be sold to settlers in limited parcels at a price barely sufficient to reimburse the United States the expense of the present system and costs arising in our Indian compacts. The advantages of accurate surveys and undoubted titles now secured to purchasers seem to forbid the abolition of the present system, because none can be substituted which will more perfectly accomplish these important ends. It is desirable, however, that in time this machinery be withdrawn from the States and the right of sale and the future disposition of it surrendered to the States, respectively, in which it lies.

"The adventurous and hardy population of the West, besides contributing their equal share of taxation under our impost system, have in the progress of our Government for the lands they occupy paid into the Treasury a large proportion of $40,000,000, and of the revenue received therefrom but a small part has been expended among them. When to the disadvantage of their situation in this respect we add the consideration that it is their labor alone which gives us real value to the lands and that the proceeds arising from their sale are distributed generally among States which had not originally any claim to them and which have enjoyed the undivided emoluments arising from the sale of their own lands, it can not be expected that the new States will remain longer contented with the present policy for the payment of the public debt. To avert the consequences which may be apprehended from this cause, to put an end forever to all partial and interested legislation on the subject, and to afford to every American citizen of enterprise the opportunity of securing an independent freehold, it seems to me therefore best to abandon the idea of raising the future revenue out of the public lands.

"The need that the public lands of the West shall go to the bona fide homeseeker under liberal terms is a great need. That need was forcibly set forth by President Jackson 76 years ago. His message to Congress in that particular needs no revision, and other Presidents, including Van Buren, Buchanan, Polk, and Grant, have urged as did President Jackson.

"Compare, if you will, the broad-minded, far-seeing policy of President Jackson with the present attitude of special prosecutors of the Department of Justice in harassing the homesteader on technicalities and urging special agents of the land department to stir up cases against applicants for the public lands, so that their activities in prosecutions will save their precious scalps in official positions.

"True conservation of the natural resources is the management and handling of those resources with that same degree of judgment and efficiency that characterizes the successful head of a family or an institution, or that is typical of any business administration that combines development and growth with the economical utilization of such resources as are at hand to conduct such business.

"Conservation of the natural resources involves the same questions with which one must grapple in conserving human energy or company finances.

"As in the ordinary affairs of life every man knows that waste means poverty, that nonuse means stagnation, and that intelligent use and application means growth and development, so in the conservation of our natural resources we must remember that first and above all else we must grow and develop, and that any policy that tends to curtail or destroy the opportunities for such advancement is unprogressive and illy calculated to bring to fruition the dreams of the founders of our Republic.

"While this article has been devoted largely to conservation as it relates to the forest policy, I have discussed this phase of the question particularly because forest withdrawals have in such large measure interfered with the settlement of our public lands and forest regulations have, in many instances, worked distinct hardships on the people of the West. The forest-reserve policy in principle is unquestionably a good one, but in practical operation it must be administered, as I have outlined above, with a proper regard for rights and with due consideration of local conditions and circumstances.

"With the cry that our mineral, coal, hydrocarbon, oil, and water-power resources are in such danger of exhaustion as to warrant their entire withdrawal from public entry I have no sympathy whatever, and I am absolutely opposed to the leasing of such resources, or rather the leasing of the public lands for the purpose of developing such resources. The blanket withdrawals of lands supposed to contain oil have already defeated several reclamation projects in Utah, and the net result of our national conservation policy leads me to believe that it is aimed more at securing for the National Government a permanent income from the West than it is operating for the preservation of the natural resources.

"Assuming for the sake of argument that the natural resources may be exhausted, if we must choose between the exhaustion of our resources and the return to the civilization that existed 100 years ago, every intelligent man and woman in the world will say exhaust the resources, and every intelligent man and woman in the world will turn his face to the future in confidence that the succeeding generation will find a means of using the heretofore untried elements of nature and making them serve the same purposes which were served by those that are lost. And that confidence will not be misplaced.

"Basing our hopes of the future on the experience of the past, is it not reasonable to believe that conservation will find its most efficient and effective supporters in the ranks of the men of science and among the investors who are harnessing the elements and finding new and beneficial uses for our natural resources?

"Nature and science coupled with economy and frugality on the part of the people will insure this and future generations against suffering for the want of natural resources."

—

WHO OWNS THE PUBLIC LANDS?

(By Hon. E. M. Ammons, governor of Colorado.)

The new States of the West having large areas of unappropriated public lands are commencing to wonder where they are at under the new conservation policy of Uncle Sam under which the United States has withdrawn vast areas from entry and apparently is arranging to maintain a permanent tenure. Gov. Ammons points out how this is a direct violation of the contract between the original States and the United States when the first States ceded their lands.

"The forcing of the so-called 'conservation' policy upon the public-land States of the West has brought up the subject of the rights of the States and the relationship of the new States to the public domain. To most of the present generation this is an entirely new subject. They have always understood that the United States 'owned' the public lands, and the popular idea is that the ownership is exactly the same as an individual proprietorship would be. But there is a vast difference, and it is in that very difference that the foundation of this Republic lies.

"It was upon this question of the ownership of the public domain that the Confederation of the States was almost wrecked in the formation of the Government. The Declaration of Independence was signed in 1776, and almost immediately steps were taken to form the new Government, and the original States got together and formed the Articles of Confederation, which was the first Coustitution. While these articles placed supreme authority in Congress, they contained this clause:

"*Provided also*, That no State shall be deprived of territory for the benefit of the United States.

"Nearly all of the original States had claims to lands outside of their borders. In fact, few of them were very certain as to just where their borders were, and all were extremely jealous over their land claims. Each was afraid that some of the other States might secure more territory than they were entitled to, and each was on guard against any combination that might give some of the other States an advantage.

"New Hampshire, Rhode Island, New York, Pennsylvania, Delaware, and Maryland contained unoccupied former Crown lands to which they had secured title by the treaty with Great Britain. Pennsylvania paid Penn heirs for their title; Connecticut had no Crown lands within its recognized boundaries, but it had extensive claims, based upon an old colonial charter, to the Wyoming lands in the territory claimed by Pennsylvania and to unoccupied land extending west to the Mississippi River.

"Massachusetts, New York, Virginia, North Carolina, South Carolina, and Georgia had considerable unoccupied Crown lands and colonial proprietory lands and also large claims to unoccupied western lands.

"Many of these claims in the western lands overlapped and were conflicting. New York's claim was based upon treaties with the Indians, and the remaining titles rested upon charters by the English Crown. For instance, Virginia had a charter for a strip of land 400 miles wide extending from 'sea to sea,' which was interpreted to mean from the Atlantic to the Pacific. All of the claims were indefinite, and the territory claimed was still unmapped and imperfectly known.

"From 1778 until 1784 there was a constant wrangle between the States and in Congress over the public lands. It was generally agreed that these vast areas outside of the original States should be settled in some way and made into additional States, but the question was, Should it be done by Congress or by the States owning the lands? But for the fact that there were so many conflicting claims for the same lands, the matter might have been determined by each State handling its own lands, but because of the inability to agree on these claims there gradually grew up a sentiment in favor of turning all of the lands into a common fund to be disposed of by Congress to settlers so that new States could be created.

"The matter was finally brought to an issue by Virginia. Within the western territory claimed by Virginia the Vandalia Co. had planned to erect a colony. There were also the Indiana, Illinois, and Wabash companies claiming to have title to some of the lands from the Indians, and they also wanted to start settlement, and they sought confirmation of their titles by Congress. Virginia had passed a law to prevent settlement in her territory until the question of titles could be adjusted, and when Congress consented to consider the claims of these aggressive colonization companies Virginia adopted and presented to Congress a solemn protest, in which it took the position that if Congress should arrogate to themselves a right of adjudication unwarranted by and expressly contrary to the fundamental principles of the confederation, superseding or controlling the internal policy, civil regulations, and municipal laws of Virginia or any State, it would be a violation of public faith and of the sovereignty of such State. It claimed that the United States held no territory except in the right of some individual State. When Virginia acceded to Union, her sovereignty and jurisdiction within her own territory were reserved and secured to her, and could not be altered or infringed without her consent.

"This remonstrance was passed by Virginia in December, 1779, and brought matters to an issue. In the following April New York expressed a willingness to give up her lands to the United States, either with the jurisdiction and right of preemption of the soil or with the right of preemption only 'for the use and benefit of such of the United States as shall become members of the Federal alliance and for no other use or purpose whatever,' said lands to be disposed of in such manner as Congress shall direct.

"In September, 1780, Congress finally determined to dodge the question, deciding that the problem involved questions that were declined on mature consideration when the Articles of Confederation were debated, and thought the questions could not be revived with any prospect of conciliation:

"It appears more advisable to press on the States which can remove the embarrassments respecting the western country a liberal surrender of a portion of their territorial claims, since they can not be preserved entire without endangering the stability of the general confederacy—

"the report continues.

"That this report be transmitted to the legislatures of the several States with the earnest recommendation that the States claiming western territory pass such laws and give their delegates in Congress such powers as may effectually remove the only obstacle to a final ratification of the Articles of Confederation.

"This appeal to the patriotism of the people was generally well received. It was becoming evident that the new Government was drifting upon rocks that would wreck it; and to make the intent of Congress clearer, in October, 1780, a month after the report above referred to, Congress adopted a resolution providing that lands which may be ceded to the United States by any particular State pursuant to the recommendation of September 6—

"shall be disposed of for the common benefit of the United States and be settled and formed into distinct republican States, which shall become members of the Federal Union and have the same rights to sovereignty, freedom, and independence as the other States. That the reasonable war expenses of any State shall be reimbursed. That the said lands shall be granted or settled at such times and under such regulations as shall hereafter be agreed upon by the United States in Congress assembled, or any nine or more of them.

"The discussion had now reached the point where the ratification of the Articles of Confederation depended upon the proper settlement of the land question. The resolution of Congress, together with the report, met with much favor; Virginia, having the largest claims in the back lands, was opposed vigorously by Maryland and other States, and such pressure was brought to bear that in January, 1781, the General Assembly of Virginia passed an act offering to cede her lands to the United States upon the general conditions set out in the resolution of Congress, but providing for various dispositions and declaring the cession void unless all the States ratified the Articles of Confederation and ceded their lands also.

"March 1, 1781, New York, preparing to deed her western lands to the United States, declared that in view of the condition set up by the Legislature of Virginia that the United States should guarantee her boundaries, New York would also make the same requirement.

"In the meanwhile the land companies were keeping up a vigorous fight in Congress for recognition and consideration, and Virginia was worried for fear that enough of the States would combine to recognize these titles and give these companies a right to settle and claim lands. All this time Maryland, having no special title to any of the western lands, was insisting that the lands should belong to all of the States, and that no extensive claim of any State to the soil or jurisdiction over the back lands should be guaranteed.

"September 6, 1781, after continued debate in Congress over the conflicting claims, Congress adopted the following resolution:

"If the States claiming exclusive property in the western lands will make cession to the United States agreeable to the recommendations of Congress September 6 and October 10, 1780, it would be an important fund for the discharge of the national debt. That the cessions of States conforming to these recommendations be accepted. That the States making cessions not conforming to these recommendations be recommended to reconsider and resubmit them to Congress. If this recommendation is complied with, Congress will not interfere with the determinations of particular States regarding private property in property in lands within these cessions.

"Virginia finally decided to cede her lands, and on March 1, 1784, the deed was presented in Congress and accepted. The deed provided that the territory ceded should be laid out and formed into States containing a suitable extent of territory, not less than 100 nor more than 150 miles square, or as near thereto as circumstances will admit—

"and that the States so formed shall be distinct republican States and admitted members of the Federal Union, having the same rights of sovereignty, freedom, and independence as the other States. That all the lands within the territory so ceded to the United States shall be faithfully and bona fide disposed of for that purpose and for no other use or purpose whatever.

"The transfer of the Virginia western lands ended the long, bitter, and dangerous controversy, which nearly destroyed the Union at its birth. The fundamental thought which controlled these long negotiations was that in order to erect new and sovereign States the ownership of the soil must pass to the new State. The idea was that the United States were not to hold the lands as a sovereign nor as a proprietor, but in trust for the new States that were to be created out of the territory acquired. The States were just escaping from one central government and were determined to insure the right of local self-government, and as they could not be sure of this unless they were guaranteed the ownership of the soil, they were exceedingly careful to retain sovereignty over the lands within their borders and provide that the United States must dispose of the lands ceded so that they would ultimately become States having the same rights as the original States in every respect.

"All of the remaining States, one ofter the other, followed the lead of Virginia and turned over their lands, and all contained the clause that—

"All lands ceded shall be considered as a common fund for the use and benefit of the United States and shall be faithfully disposed of for that purpose and for no other use or purpose whatever.

"As soon as Congress accepted the deed of Virginia it began the consideration of rules and regulations for the disposition of the lands. Mr. Jefferson, of Virginia, formulated the first act, which was passed April 23, 1784. This first act is interesting as indicating very clearly the understanding Congress had as to its powers. It provided that the lands should be offered for sale and divided into distinct States, in which the

settlers should provide a temporary government, and when 20,000 inhabitants was reached it could erect a permanent State. It provided that these new States should be permanent members of the Union, subject to the Articles of Confederation the same as original States and to the acts and ordinances of the United States. They should in no case interfere with the primary disposal of the soil by the United States nor with the ordinances and regulations which Congress might find necessary for securing title to bona fide purchasers. They should bear their share of the public debt; should impose no tax upon lands the property of the United States; should be republican in form; lands of nonresidents not to be taxed higher than those of residents.

"This ordinance was repealed in 1787, but was reenacted in a somewhat different form, but in greater detail in embodying all of the provisions of the act of 1784, and all of the States have been admitted under the provisions of this ordinance. While this last ordinance was being debated in Congress the Constitutional Convention met and prepared the new Constitution which was to take the place of the Articles of Confederation and which was to be the basic law of the Republic. This convention apparently had but one idea regarding the clause in relation to the public lands, and that was that they were to be disposed of by Congress so that new States could be created that would be equal to the other States in every respect. The development of this clause was as follows:

"Mr. Madison, of Virginia, submitted for the committee of detail the following powers as proper to be added to those of Congress:

"'To dispose of the unappropriated lands of the United States. To institute temporary government for new States arising therein.

"This was referred to the committee, and shortly thereafter Mr. Carrol moved that—

"'Nothing in this Constitution shall be construed to alter the claims of the United States or of the individual States to the western territory, but all such claims be examined into and decided upon by the Supreme Court of the United States.

"Mr. Morris moved to postpone this to take up the following:

"'The Legislature shall have the power to dispose of and make all needful rules and regulations respecting the territory and other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular State.

"This construction was finally agreed to and became the law of the land. At that time there was no question in the mind of anyone as to the position of the General Government in regard to the public lands. They were simply being held in trust 'to be disposed of' by Congress in whatever manner might be determined so that additional States could be made out of them. As the new States must be equal 'in every respect,' with the original States, Congress could have no power over the lands within the borders of any State except to dispose of them.

"In 1845 the Supreme Court passed upon this matter in a case brought from Alabama in relation to the title to some tide lands. The court declared that the transaction between the United States and Virginia and Georgia and the Louisiana Purchase constituted a contract and created a trust, under which the United States secured control of the public lands to pay the public debts—

"'by bona fide disposing of them in order that new States might be erected which should be equal in every respect to the original States; that the United States holds the public lands for temporary purposes only, and in trust for the States where they lie; that until the lands were disposed of by the United States the new State was not on a footing of equality with the original States.

"The right of Congress to make reservations of lands in States for military purposes was never questioned, but even in these cases the consent of the State legislature was secured to give the United States sovereignty over such reservations.

"The first departure from the old idea came in Cleveland's administration, when Congress permitted the insertion of a clause in an appropriation bill providing for forest reserves. The only idea then was to provide protection to the forested lands at the head of streams, but no attention was paid to the matter until during the Roosevelt administration, when the power granted under this act was taken advantage of in a wholesale manner, and then grew up the conservation idea and almost before the public-land States were aware of what was happening vast areas were reserved and withdrawn from entry.

"'Pinchotism' was a natural outgrowth of the conservation idea. Gifford Pinchot, then Chief Forester, conceived the idea of popularizing the forest reserves by making them produce revenue for the General Government. He figured out the capitalized value of all of the natural resources, not only on the forest reserves, but on the public domain, and showed where it would be possible to make them produce a great revenue for the Government. The fact that by this plan one section of the country would be taxed for the support of another section and that the public-land States would not be upon an equality with the other and original States did not seem to bother Mr. Pinchot. Plans were made to lease the lands and resources and preparations were made for the Government to go into business. Wherever any lands were found to contain natural resources, or even only suspected of having valuable resources, such lands were withdrawn from entry, and Congress was finally induced to give the President power to withdraw any lands upon his own motion by simply making proclamation.

"At first many people in the West thought the new plan might work out all right, but gradually it became evident that this departure from the original plan of the Government was actually leading to a new system of government, a new political structure. Instead of 'disposing' of the lands, Federal bureaus were administering them under rules and regulations, having all the effect of law, and all looking toward a permanent tenure over these lands. Western States found their development and growth suddenly stopped. Government agents swarmed over the Western States and the very thing Virginia feared, a division of sovereignty, has come to pass in the West. The States are denied all control of the soil; the Federal courts hold jurisdiction; the police power is exercised by Federal officers; the eminent domain of the State is denied; and the State can levy no tax upon this land, even though the right of taxation is so fundamental that a sovereign State can not exist without it.

"The new policy is based upon the theory that the United States 'owns' the public lands in the same manner that a proprietor could own land. If this theory was true, the United States would have had the right to retain permanently all of the lands in the West as it is now trying to retain permanently as much as a third of the area of some of the new States in the West. But the exercise of such a power, in the beginning, would have prevented the formation of new States, and that was the vital basis of the contract made by the United States when the lands were ceded by the original States, that the lands 'should be faithfully disposed of' and that 'the territory so ceded shall be laid out and formed into States,' which should have 'the same rights of sovereignty and be equal in every respect to the original States.'

"At last the Western States are aroused to the situation and steps are being taken to awaken the country to the danger that threatens. They are going to demand the equality promised them under the Constitution and which can not exist if the Government is to retain permanent tenure of the land. It is a 'State-rights' question that reaches to the very basis of the Government and if persisted in can mean but one thing, unequal States and a centralized Government at Washington.

"In the Constitutional Convention held in Philadelphia in 1787, Mr. Randolph, of Virginia, declared that 'Congress has pledged the public faith to the new States, that they shall be admitted on equal terms. They never would or ought to accede on any other.' This declaration met with no dissent in the convention. It was the basic idea of the federation and the withdrawal of this right of equality must inevitably lead to a revolution in the form of government which has built the greatest Nation the world has ever seen."

The above addresses were published in this month's issue of the Farmer's Life, a periodical published in Denver, Colo., and in the same issue I notice what evidently appears to the average western farmer as a suitable collection of synonyms for "conservation," which, as regards practical results, are not inappropriate:

CONSERVATION DELINEATION.

Origination: Determination elimination.
Forestration: Conflagration abomination.
Convocation: Determination instigation.
Administration: Formulation legislation.
Regulation: Reservation confiscation.
Nutification: Adjudication federation.
Operation: Ranger station multiplication.
Innovation: Abrogation complication.
Realization: Civilization retardation.
Population: Irritation aggravation.
Expostulation: Indignation disputation.
Publication: Allegation imputation.
Emigration: Extermination cultivation.
Indication: Inequation in the Nation.
Consummation: No taxation, much stagnation.
Conservation: Exclamation, "Oh, damnation!"

The Grape Industry of California.

EXTENSION OF REMARKS
OF
HON. JOHN E. RAKER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, July 29, 1913.

Mr. RAKER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a protest and brief of the grape growers and wine makers of the State of California against proposed tax upon grape spirits used in fortifying pure sweet wines, as contained in Senate committee amendment (section 254½) to the pending tariff bill, H. R. 3321, Sixty-third Congress, first session.

The protest and brief is as follows:

THE GRAPE INDUSTRY OF CALIFORNIA.

Acreage.

	Acres.
Wine grapes, exclusively	168,500
Raisin grapes	110,500
Table grapes	61,000
Total	340,000

About one-third of the raisin and table grapes go to the wineries and distilleries. This affords a market to the growers of raisin and table grapes for their by-products, the pure grape brandies obtained therefrom being afterwards used in the fortification of pure sweet wines. The average vineyard contains less than 25 acres.

Production, 1912.

	Gallons.
Pure dry wines	24,000,000
Pure sweet wines	17,797,718
Pure commercial grape brandy	1,700,000
Total	43,497,718

Amount grape brandy used in making pure sweet wines, 4,648,842 gallons.

DIFFERENCE BETWEEN DRY AND SWEET WINES.

Pure dry wines are made by allowing all of the sugar in the pure grape juice to ferment into alcohol, 2 degrees of sugar making 1 degree of alcohol.

Pure sweet wines are made by arresting the fermentation through the addition of pure grape brandy, which acts also as a preservative. No pure sweet wine can be made any other way, for the simple reason that pure sweet wine contains nothing but the pure juice of the grape.

Total investment in vineyards and wineries	$150,000,000
Number of families engaged in grape growing	15,000
Cost of producing 1 acre bearing vines	$300
Total production sweet wines, United States, 1912	18,547,718 gallons.
Total production sweet wines, California, 1912	17,797,718 do
Produced outside of California, 1912	750,000 do
Production pure sweet wines in California, 1890	1,083,274 do
Production pure sweet wines in California, 1912	17,797,718 do
Increase under operation 1890 sweet-wine law	16,714,444 do

This tremendous increase in the production of pure sweet wines in California was due to the 1890 law permitting the use of pure grape spirits free; since 1906 a payment of 3 cents per proof gallon has been paid on the brandy so used to reimburse the Government for the cost of supervision in the making of pure sweet wine.

THIS 3-CENT CHARGE HAS NEVER BEEN REGARDED AS A TAX.

Under the provisions of the act of 1890 these pure sweet wines can not contain more than 24 per cent alcohol, which is the dividing line between wines and spirits according to our tariff laws as well as the act of 1890. It logically follows that inasmuch as these pure sweet wines can not be classified as spirits the wine maker is not enjoying any special privilege, but to the contrary he is working in harmony with the wise governmental policy that encourages the cultivation of the soil in small holdings and the production of a pure-food product. Nor can it be claimed that favoritism has been shown to the California wine makers, for the provisions of the 1890 law are equally open to all wine growers in the United States.

The pure wine law of 1890 was the first pure-food legislation in America and its fruits have more than justified the hopes of its advocates. In 23 years there has never been a criticism of this law nor any material changes proposed; furthermore it has served as a model for other pure-food enactments. Once annul or interrupt the good effects of this law and the distinct line between pure wines and counterfeit wines in this country will be wiped out to the irreparable damage of the grape growers and producers of sweet wines and to the certain injury of the consumers of wines.

COST OF PRODUCTION, ETC.

Average cost of producing 1 gallon pure sweet wine, 20 cents; this includes payment to grower of an average of $11 per ton for his grapes. Average selling price in bulk per gallon, 29½ cents; increase in cost of producing 1 gallon pure sweet wine under present methods, which are the best, should a $1.10 tax on grape spirits be imposed, 30 cents, bringing the original cost of producing a gallon of pure sweet wine to 50 cents.

As an example of how the proposed tax will operate we submit the following instance, which applies in the same ratio to every other producer of pure sweet wines in California: In 1912 the Bradford Winery, in Sacramento County, an independent concern owned and operated by the Bradford Bros., who buy 10,000 tons of grapes annually from neighboring farms, used 150,000 gallons of grape spirits in the fortification of pure sweet wines, paying 3 cents per gallon to the Government, or $4,500. Figured at $1.10 per proof gallon this one firm would be taxed $165,000.

It thus appears that if the $1.10 tax be imposed the cost of production will be increased 150 per cent and the selling price 100 per cent. It is the common people that are now consuming the California pure sweet wines, because the present price is within their reach; but they can not afford to buy it at any material increase. An increased tax means a decrease in the use of pure wines. The market can just about take care of the present production of grapes in California, and a diminished market simply means that the grape growers will not be able to sell their crops, either for wine or brandy purposes. The grapes will be left to rot on the vine for a season, until the farmer has time to pull up his vines, which pulling up will impose a cost of some $15 per acre.

REVENUE.

Those who figure that the revenue received from the imposition of a $1.10 tax upon grape brandies used in the fortification of pure sweet wines will yield many millions of dollars are laboring under a serious misapprehension. If we assume that the same amount of pure sweet wines will be made and marketed, and then further assume that the same amount of grape spirits will be so used, then of course it resolves itself into a matter of simple multiplication; but unfortunately for any sound fiscal calculations there are too many "assumptions" here. In the first place, the sale of pure sweet wine will fall off tremendously, nobody can say exactly how much, but certainly it will not amount to one-fourth of the present consumption. The present steady market that has been created for pure California wines by years of education and hard work will certainly become badly demoralized, and that condition will surely be further demoralized by the undoubted production of sweet wines (?) preserved by neutral spirits, chemicals, and what not. Secondly, the man who makes a sweet wine, if compelled to pay a tax on his spirits, is certainly going to do two things, i. e., use as little alcohol as possible and buy that alcohol as cheaply as he can. In doing this he can not be criticized, for the prudent, economical management of his business will demand it. Let us now see how this will work out. Instead of arresting fermentation at a point of high saccharine strength, he will let the fermentation proceed until nearly all the natural grape sugar has been converted into alcohol, for every degree of alcohol that he can obtain through the natural fermentation of the grape juice will save him just so much money in the purchase of taxed spirits. For example, the average amount of sugar in sweet wine grapes is 26 degrees, which is equivalent to 13 degrees of alcohol, if the juice be fermented dry.

The amount of alcohol in ports and other types of sweet wines ranges from 20° to 23°. Under present methods the sweet wines are fermented until about 7½° alcohol is shown. To this wine is then added about 12½° grape spirits. Taking advantage of the provisions of the pending Pomerene amendment, the wine maker may add 20° sugar, and thus be able to produce 15° of alcohol through natural fermentation, leaving 16 per cent of sugar for the taste of the consumer. He can then rest content with his 15° of alcohol and market his wine under the claim that it is a pure sweet wine without adding a single drop of taxed alcohol, substituting as a preservative benzoate of soda or other permitted chemicals. But suppose he does wish to raise the alcoholic strength of his sweet wines to 20°. This will require him to add only 5°, of taxed alcohol, where he now uses 12½° of grape brandy, thus cutting down the amount of alcohol or brandy used 60 per cent. It follows that even if the total amount of sweet wines consumed can be maintained at the present volume the above change of methods alone will reduce the amount of spirits used 60 per cent, and therefore three-fifths of the contemplated revenue must be deducted for this reason. If the wine maker is required to pay a tax on his alcohol, he will naturally buy that which is cheapest. The use of neutral alcohol is permitted by the pending measure. This kind of alcohol can be made from "black strap," cannery refuse, pineapple refuse from the Hawaiian Islands, potatoes, and even from sawdust and shavings, and will be obtainable by the California wine maker at the cost of from 8 to 10 cents per proof gallon. Pure grape brandy costs about 40 cents per proof gallon when grapes are selling at $11 per ton. The use of cheaper spirits will spell the destruction of five-sixths of the brandy making in California, thereby destroying the market for 137,500 tons of grapes annually. The use of untaxed preservatives will be resorted to in preference to the use of taxed spirits, which further renders it problematical whether the Government will obtain any considerable revenue from tax upon grape spirits used in the making of pure sweet wines; but whether the revenue be large or small, it can not possibly justify the wholesale destruction of the grape-growing industry that is bound to follow the levy of any tax upon the grape spirits so used.

SUMMARY.

1. The imposition of a tax on grape spirits used in fortifying pure sweet wines will utterly destroy millions of dollars' worth of property that is now devoted wholly to viticultural purposes in California.

2. The small grape grower will be hurt the most, for he and his family are entirely dependent upon the annual crop of his vineyard, and if the wineries and distilleries can not take his grapes he will be deprived of the sole market for his product.

3. It is the custom of the grape growers and the wine makers to enter into contracts for a term of years at fixed prices for grapes, and the contracts now in force invariably provide that in the event of adverse legislation the wine maker, at his option, may cancel his contract.

4. The imposition of a tax upon a pure sweet wine is in contravention of the announced policy of our Government, backed by strong public sentiment, in favor of purity in foods, drugs, and beverages of all kinds.

5. The imposition of such a tax will inevitably lead to the breaking down of the barriers between pure wine and its many imitations, causing confusion and difficulty in securing a pure article and leading to temptations to market cheaper, adulterated brands in the place of genuine wines, thereby undermining the public health through concealment and fraud practiced upon the consumer.

6. The imposition of the proposed tax will not produce any material increase of revenue. The claims of its proponents will not be realized, but, worse than this, the attempt to raise additional revenues in this manner will bring disaster to thousands of men and women of high character and good citizenship, thrifty, patriotic, and temperate, who are now engaged in various branches of the grape industry.

7. It is contrary to our avowed policy of encouraging the intensive cultivation of the soil in small holdings and rendering the pursuits of the soil profitable and inviting.

8. California's vineyards are of imported stocks, and that State alone is able to give the people of this country a pure, delectable wine in competition with the imported brands.

9. A curtailment of the market for sweet wines will result in an overproduction of dry wines, and such overproduction means that tens of thousands of tons of grapes will not be worth marketing.

10. California's present viticulture is the result of a hundred years of experimentation and development, and the work of a century should not be nullified by the imposition of the proposed tax. It is the traditional policy of all Governments to foster and upbuild this industry.

11. A ton of grapes being used for making the brandy that is now required to fortify the juice of a ton of sweet-wine grapes, it is apparent that a tax on such grape brandy will destroy the market for five-sixths of the grapes that now go to the distilleries.

12. The 15,000 heads of families who are now engaged in grape culture and wine making in California earnestly protest against taxing any of the interrelated branches of the grape industry.

Respectfully submitted.

The Arbitration Law.

SPEECH

OF

HON. LAWRENCE B. STRINGER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 15, 1913,

On the bill (S. 2517) providing for mediation, conciliation, and arbitration in controversies between certain employers and their employees.

Mr. STRINGER. Mr. Speaker, the speedy passage of the pending bill will add force and strength to the inherent qualities of our institutions.

It is a cause for national congratulation, it seems to me, that it has at last become possible in this country of ours to secure unity and commonality of action in the method of procedure to be observed in the settlement of disputes arising between the managers of mighty corporations and their employees.

The time was, and it is not very long ago, when disputes between capital and labor often meant scenes of violence, riot, and bloodshed. It is not very long ago when labor troubles brought widespread disaster and suffering, not only to those directly interested but to the entire business and industrial energies of the whole Nation as well.

The time was, and it is within recent memory, when disputes between capital and labor meant relentless war, with no capitulation, no quarter, no flag of truce, no effort to meet on common ground—only a determined, heartless purpose to coerce or exterminate, to compel or destroy.

The circumstances surrounding the present effort to speedily enact this bill into law marks a new era in our industrial life, and that regardless of what the immediate effect of this measure may be upon the strained situation which now confronts us.

A dispute as to wages has arisen between railroad managers and their employees. A general strike seems imminent, which in its results will lock every locomotive wheel on every mile of railroad east of the Mississippi and north of the Potomac Rivers, bringing in its wake direful and dreadful results to great cities, populous Commonwealths, and thousands of industries.

The President of the United States, patriot and statesman as he is, with a mind ever alert to the needs of the millions of people whose interests have been intrusted to his care, has acted with his accustomed promptness and vigor in an effort to hold back the disaster which seems imminent.

Well has the gentleman from Kansas [Mr. MURDOCK], leader of the Progressive Party in this House, said:

I think that nearly all men will commend the dispatch and the determination in the conduct of this measure which has characterized President Wilson's course.

Rarely in our industrial history has such a scene been enacted as that which occurred at the White House on yesterday. There the President of the United States, keen and alert to the urgencies of the situation; there the presidents of mighty railroad systems, representing investments of millions of wealth; there the heads of five great brotherhoods of railroad employees, representing the muscle, the brawn, the keenness of brain and sense which sends the traffic of a continent over the steel highways of trade; and there the representatives of both branches of the greatest legislative body of the world.

And these great leaders of industrial thought and action had met there, with their varying and antagonistic ideas and interests, to counsel, consult, and, if possible, agree upon peaceful ways and means and fair methods of procedure in having their dispute and controversies settled, without coercion, violence, or force, but by the sane and beneficent system of arbitration.

The conferees represented all parties interested in the dispute. Not alone the railroad managers and their employees but the people themselves were there in the person of their chosen Executive and their chosen representatives, for, after all, whatever the interest be of those directly involved in labor disputes, the whole people are vitally affected in every branch of industry and in every calling of life, and it is right and proper that their interests should likewise be considered and conserved.

The pending measure, Mr. Speaker, is the concrete expression of the combined wisdom and fairness of those who comprised that conference. It represents the unanimous consensus of opinion of all parties as to the matters involved. It is a healthful, progressive, satisfactory piece of proposed legislation, and the promptness with which it is about to be enacted into law is not only commendable but worthy of emulation by both branches of this body in the disposition of other important and needed legislation now pending upon the calendars.

The Erdman law, upon which the pending measure is based, was passed in 1898, and was a step in the right direction, but for nearly a decade it lay dormant upon the statute books, inoperative and unused.

The pending measure revivifies, reconstructs, and reorganizes that law, readjusts it to meet new conditions, and recognizes important principles which were omitted and ignored in the original law.

As the Erdman law was a step in the right direction, so is this law a further step toward the desired end. As the Erdman law was not a finality, so this law is not as comprehensive as it might or should be, or as, in my judgment, it will be in the very near future.

The pending measure has been passed to meet an urgent and imminent situation, and it should be enacted into law without delay. But desirable as its passage now is, it will not be complete, not have reached the possibilities of its usefulness until it has been so amended and so extended and amplified in its provisions and scope as to furnish a basis for voluntary arbitration, not to certain lines of employment in a single industry alone, but to every line of employment in every industry in which labor is employed.

The pending measure should be hailed with satisfaction by every wageworker in the land on account of the national recognition therein of the principle of absolute individual liberty of action vouchsafed to him in the provision that—

nothing in this act contained shall be construed to require an employee to render personal service without his consent, and no injunction or other legal process shall be issued which shall compel the performance by any employee against his will of a contract for personal labor or service.

More significant still is the fact that this measure enacts into the organic law of the land the recognition of the right of individual laborers to organize into associations and unions for their own protection and benefit and gives legal sanction and approval to such organization on their part.

The pending measure is operative upon the theory that the parties to the arbitration, numerous though they may be, shall select those who represent them on the arbitration board through the channels of their regular organizations.

So clearly does the act contemplate action of this kind that it makes special provision to cover labor disputes where those interested "are not members of a labor organization."

The principle of arbitration throughout the history of the world has been considered the fair, sane, and effective method of settling all disputes and controversies.

Yet when controversies are to be settled between corporations on the one side and vast numbers of employees on the other, arbitration is practically impossible unless both parties to the dispute are thoroughly organized in such a manner that they may choose officials to represent them, with full power and authority to do the same.

The laborers as individuals, each man for himself, could no more successfully participate in such an arbitration than could the stockholders of the railroad themselves. Both stockholders and employees must act through regularly accredited officials.

Arbitration has for all time been utilized in disputes between a few individuals, but the principle of arbitration was never successfully used in the settlement of industrial disputes until labor had effected successful organization; and labor organizations have always advocated and they have made possible the application of the principle of arbitration to modern conditions in our industrial life.

We live in a day and an age of organization. It is the law of civilized society. It is the natural and inevitable outgrowth of our industrial, commercial, and social life.

The man whose philosophy is so narrow that he concedes to capital the right to organize and combine, but at the same time refuses to labor the same right, places himself beyond the pale of reason and in the category of those who are blind because they refuse to see.

No fact is more patent in our industrial life than the one that the happier and better condition of the workingmen of America to-day over those in other lands is due not to any legislative legerdemain, but to the energy and the efforts of their organizations.

I know not what the effect of the pending measure may be upon the situation now so imminent. I know not whether some unforeseen obstacle may arise which will thwart the purpose and objects of this bill. But I do know that the manner of its origination, the method by which it was brought about, the vigor and wisdom shown by the President of the United States in endeavoring to avert disaster, as well as the promptness with which Congress has risen to the emergency, will mark a milestone on the highway of industrial progress for many years to come.

Mr. Speaker, I regard it as a special privilege to be given the opportunity of supporting this bill.

Mediation, Conciliation, and Arbitration.

SPEECH

OF

HON. JOSEPH TAGGART,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 15, 1913,

On the bill (S. 2517) providing for mediation, conciliation, and arbitration in controversies between certain employers and their employees.

Mr. TAGGART. Mr. Speaker, the time has come in the history of legislation when the immediate requirements of the public are a controlling factor. Acts have been passed by Congress which were preceded by long speeches, campaigns full of excitement, and sensational newspaper articles, and in the end the legislation was not of any practical value. Now we have quietly and without ostentation or display brought before us a piece of legislation that is of vital importance to millions of people. Employees of railway companies engaged in train service have determined to demand a higher rate of wages or cease their employment in a body. It will be impossible to estimate the result of such a course as this. These men have not arrived at this determination simply because they wish to make trouble, but because they believe that in their judgment they are not receiving what their services are worth, and because they further believe that railway companies have an income that would warrant them in paying a higher rate of wages. The Government has no adequate law whereby it may take part in properly adjusting such a controversy. We have an act on the statutes which was approved June 1, 1908, known as the Erdman Act. It provides that when a controversy shall arise between a carrier engaged in interstate commerce and its employees that it may be submitted to the arbitration of a board of three persons, one named by the carrier—the employer directly interested—the other by the labor organization, or where there is more than one organization involved, by the several labor organizations, and that the two thus chosen shall select the third commissioner of arbitration. This has proved unsatisfactory in many cases. Each of the arbitrators appointed by the interested persons in many instances have used their efforts to control the third member that each of them took part in selecting, with the result that it amounts to nothing more than an arbitration submitted to one man.

Under the amendment which has passed the Senate and which we are now considering, whenever a controversy concerning the wages, hours, labor, or conditions of employment shall arise between employer and employees engaged in transportation of passengers or freight wholly by railroad, or partly by railroad and partly by water, either party to such controversy may apply to the board of mediation and conciliation which will be created by this act and invoke its services for the purpose of bringing about an amicable adjustment of the controversy.

Under this amendment a board of arbitration consisting of six is authorized, each party naming two arbitrators, and the four, by a majority vote, may select the two remaining arbitrators; or should they fail to do so within 15 days the board of mediation and conciliation shall name the two remaining members. The agreements shall be filed with the board of mediation and conciliation. Under the former act the award was filed with the clerk's office of the circuit in the district court of the United States in the district in which the controversy arose. Under the amendment it will be filed not only with the clerk of the district court of the United States but with the board of mediation and conciliation. If there is anything in the arbitration that is disagreed to or not understood, this board of mediation will have the power to reconvene the arbitrators and adjust the matter. If the award filed in the clerk's office of the district court of the United States is not appealed from in 10 days, it will become final and conclusive and binding upon the parties the same as a judgment in equity. If it is appealed from by either party, the judgment of the circuit court of appeals on matters of law will be final. The leading feature of the amendment is the creation of this new board of mediation and conciliation. Under the new act it will consist of a commissioner appointed by the President with the consent of the Senate, to hold his office for seven years.

The other two members shall consist of other officers of the Government who have been appointed by and with the consent and advice of the Senate, and the three shall constitute the board. Another feature is that this board will not be responsible to any department of the Government. It shall not be their duty to report to any department. No Cabinet officer or any other officer of the United States shall have any control whatsoever over this board of mediation.

This bill was thoroughly discussed in the office of the President of the United States. A meeting was held at the White House, consisting of the representatives of the various organizations of the men engaged in the interstate commerce as employees and the representatives of the leading railroads of the United States.

While this bill is imperfect, perhaps, and does not include all the classes of employees that might be included, it was unanimously agreed upon by the representatives of the railroads and of the employees, and has the approval of the President. It is intended to furnish a means whereby a great threatened controversy may be peacefully adjusted. The bill passed the Senate without a roll call and apparently without a dissenting voice. The leaders of all three parties in the House have been consulted with reference to the measure and have recommended its passage. There can be no doubt that it will receive the unanimous vote of this body.

Mr. Speaker, it will not be long until we will regard strikes as the crudest method of adjusting labor controversies. Strikes have been justified in nearly every instance in the absence of any other way of securing better terms for labor. If we could sum up the loss, the suffering and privation, the ruin and destruction of property, and what is worse than all, the disturbed condition of the public mind in which the passions of men are wrought up and a sense of injustice comes into the hearts of those who labor, we will fully realize the terrible meaning of a great controversy between employers and employees.

The American people are sufficiently intelligent to provide a way of adjusting these matters. Those who labor, and especially that great intelligent class of men who are engaged in interstate commerce, are not unreasonable. It is a fact, and they know it to be a fact, that the great mass of the American people desire that those who work at hard labor for a living should be well paid. As a striking evidence of it we are all agreed that we should furnish additional machinery whereby such controversies should be settled and whereby employees may be awarded better terms. This board of mediation should have been created long ago. This is only a beginning. This act will need many amendments in the future. Its scope will have to be widened so as to include every person whose work has any share in conducting interstate commerce. Shopmen and those engaged in mining coal in mines owned exclusively by railroad companies for railroad purposes, and many others, will be included. As a member of the Judiciary Committee it will give me pleasure to help recommend the broadening of this act so as to include all of those who take part in conducting interstate commerce. I believe that this board of conciliation will be increased in the future, and it would give me pleasure to add to its power. It should be, and it will be, composed of level-headed men who will represent the whole people of the United States, and whose judgment, when intelligently delivered in good faith, will, I hope, represent the united judgment of a hundred millions of people. The members of this board should be well paid and be made absolutely independent.

Mr. Speaker, let it be hoped that we are beginning a course that will finally bring about complete peace and confidence be-

tween employer and employee in this country. The most impressive sentence ever uttered on this continent is cut in stone on the tomb of Gen. Grant—"Let us have peace." These words were spoken in his first inaugural address, March 4, 1869.

Those who own railroad stock and who are employed to manage and conduct railroads love peace as well as everyone else. Those who are engaged in conducting and operating lines of railway are also lovers of peace. I hope and believe that we are now inaugurating a system whereby all controversies may be adjusted with dignity and impartiality, and without the awful consequences of the loss of time, the loss of confidence and peace of mind, and even the loss of homes, that have characterized the crude methods whereby these controversies have been adjusted in the past.

United—The Blue and the Gray.

EXTENSION OF REMARKS
OF
HON. RICHARD W. AUSTIN,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 29, 1913.

Mr. AUSTIN. Mr. Speaker, under leave granted I extend my remarks in the RECORD by inserting an address delivered by our colleague, the Hon. J. HAMPTON MOORE, of Pennsylvania, at the "Bloody Angle," Gettysburg, on the fiftieth anniversary of the battle, July 3, 1913. On behalf of the Seventy-first Regiment, Philadelphia Brigade (Union Army), Mr. MOORE presented a silk flag to the survivors of Pickett's division, Longstreet's corps (Confederate Army).

Mr. MOORE said:

"Veterans of the blue and the gray, our Nation and the sovereign States from which you come were poor, indeed, had they not embraced this anniversary occasion to bring together you, the citizen soldiers of the North and the South, upon this, the greatest of American battle fields. Here where you contended in mortal combat half a century ago you meet to-day to clasp each other's hands in warm embrace and to extol the virtues in each other found. Our country will be the richer and her fame the greater for this unique visitation. It is an incident, nay, an epoch, unparalleled in martial history.

"And while you have come from the South and the North bearing the tattered colors that once distinguished you as enemies, wearing the blue and the gray as you gallantly wore them through the tumult of battle, you meet again here at the 'Bloody Angle,' the very zenith of the mighty current of the war, not as furious, fighting champions of State or section, but as messengers of peace; as men and brothers, loyal to a common country, united under one flag—the Stars and Stripes. In thus assembling, mindful of your past differences only as thrilling reminiscences in the story of your lives, you are manifesting the highest, the truest qualities of patriotism.

"Wide, indeed, was the breach that put you asunder, and long were the years of bitterness and misunderstanding that ensued; but you have outlived them all. The elements of discord have spent their force, and now you know each other better; you appreciate each other more. You who wore the gray well knew the ilie of life or death was cast in that fierce charge you made through yonder field in 1863. Now you have come again, not in obedience to the command of those you followed even to the death, but at the call of those who clubbed their guns and turned you back—the boys who wore the blue.

"With shot for shot and bayonet for bayonet you met each other then; now, when the musket and the saber rest amongst the treasured trophies of the war, you look into each other's eyes, you swap again your countless tales of perilous adventure, knowing, each of you, on either side, what all the world concedes, that those with whom you here contended were 'foemen worthy of your steel.'

"The sutler and the camp follower may not exult over such a reunion as this, but the fighting man best knows the worth of him with whom he broke his lance. You hallow this ground to-day by standing square in peace with all the bravery you displayed in war.

"You have talked of Armisted, the Confederate, who, cap on sword, cheering his men with 'Give them the cold steel, boys,' carried the charge to this angle of stones only to meet a soldier's death; and we have talked of Cushing, the gallant lieutenant, who, thrice wounded, fell by his gun, striving to give you 'one more shot.' Your great Confederate leaders have passed in review with our Meade and our Hancock and Gregg. The soldierly fortitude and the Christian character of Lee have been calmly contrasted with the high purposes and devoted determination of the generals who overwhelmed him. A wholesome reunion of sentiment has pervaded this fraternizing of veterans.

"No more the earth trembles with the impact of heavy guns; the mad tramping of the wounded chargers is over; the shouts of the marching legions have died away. You were a part of it all, proud of your part in it all. Then what does it mean that you should be sounding each other's praises, you who were 'Yank' and you who were 'Johnny Reb'? It means that civil strife shall be no more; that backed by the sturdy generations that have sprung from your loins, building our country upon the foundations of loyalty and industry, we need have no fear of any power on earth. Here is a lesson for the rising generation—yea for the statesmen of our country who would ever again bestir the enmities or arouse the passions incident to the great conflict.

"Your battle of half a century ago was fought in Pennsylvania. We are proud of the Keystone State; proud of Virginia; proud of Alabama, of Texas, of Louisiana, of North Carolina. Each of them, all of them below the imaginary line that once divided us, are stars in the brotherhood of the Union that can not be effaced. But 50 years ago to this very hour it was the duty of Pennsylvanians, of the Philadelphia Brigade, to resist at this stone wall the highest tide of Lee's invasion, the memorable charge of the dashing Pickett. It was the most terrific hand-to-hand encounter of the war, a titanic test of human courage. Unionist or Confederate, the honor of this day rests with those who stood on either side, rests with those who fought and passed unscathed, with those who carry yet the wounds they then sustained, with the memory of those, your comrades, who sacrificed their lives upon this field.

"Three regiments of Philadelphians, under the heroic Webb, stood at this point. They were the fighting Sixty-ninth, the Seventy-first, and the Seventy-second, together with certain companies of Morehead's One hundred and sixth. The Seventy-first had been organized by Col. E. D. Baker, of Oregon, who left the United States Senate to don the uniform. It was known as the "California Regiment," and was the first three-years regiment to complete its organization. It was baptized in blood at Balls Bluff, where Baker was killed; but from that time on it served heroically and with heavy losses throughout the war. Evincing the spirit of the Philadelphia Brigade and of the Grand Army of the Republic, the survivors of this old command have commissioned me to turn over to you of the gray, their erstwhile foemen, whom they learned so dearly to respect on this day 50 years ago, the simplest and best token of their patriotic affection.

"Since the days of Betsy Ross, whose deft fingers first fashioned its now familiar folds, the Stars and Stripes have been the emblem of this Nation. It was your flag and our flag in the closing days of the Revolution. We had no quarrel then, for we stood side by side in grim and successful resistance to our common oppressors. It was your flag and our flag when we marched upon the Mexican capital. Grant and Lee supported it then. It was our flag when you raised the Stars and Bars; but we continued to hold and to cherish it, not alone for ourselves, but for you. Then came the War with Spain. Again it was your flag and our flag, the flag of Dewey and the flag of Wheeler, fighting together as patriots and countrymen. And now, when we boast of a reunited country, more rich and powerful in men and wealth than any nation on the face of the globe, it is still your flag, as it is still our flag—the glorious emblem of a peaceful and a prosperous people. This, veterans of the gray, survivors of Pickett's charge against "the bloody angle," is the token that your quondam adversaries of the Seventy-first Pennsylvania desire me to present to you. It is their expression of loyalty, friendship, and good will.

"And, soldiers, in performing this pleasant service, may I add one thought—more important than all, more satisfying than all. By your own acts this day it is ordained that you shall not depart in rancor nor in malice; that you shall not carry with you at the parting the bitterness resulting from your mighty struggle. You have truly made this ground more sacred by uniting upon it in bonds of amity and fellowship. The God of Peace now reigns above the scene of carnage, and you who trod these dusty roads to wage a deadly war may now return to your homes to await the last muster, conscious when the final summons comes that you can face eternity with the mantle of charity and kindness covering the last vestige of enmity that may have found a lurking place in your hearts."

The Progressive-Republican Merger.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 5, 1913.

Mr. BRYAN. Under the leave granted to me to extend my remarks in the RECORD I include an article from the Saturday Evening Post, of Philadelphia, June 28, 1913.

The article is as follows:

THE PROGRESSIVE-REPUBLICAN MERGER.
[By Albert J. Beveridge.]

After its first defeat and before its second victorious campaign earnest proposals were made to the new party of Lincoln to merge with all other elements opposed to the Democratic Party of that day. The new party had suffered some local reverses; and it seemed clear that if all elements of the Whig Party would get together again that party could win. It appeared equally certain that if this was not done success was impossible. Yet Lincoln strongly opposed this plan.

"Rational men," said Lincoln, "can only entertain it in the strange belief that Republicans are not in earnest for their principles. This mistake must be dispelled. For the sake of their principles, forming their party, they broke and sacrificed the strongest mere party ties and advantages which can exist. There can be no letting down. * * * 'He who is not for us is against us; and he who gathereth not with us scattereth.'"

So the merger plan was rejected, and at the next election the people placed the new party in charge of the Government.

The people felt that a new party was needed in Lincoln's day just as the people had felt the same thing four times before Lincoln's day. There had been the Federalist Party of Washington and Hamilton, the Republican Party of Jefferson and Madison, the Whig Party of Webster and Clay, the Democratic Party of Jackson and Van Buren; and then came the new party of Seward and Lincoln. Looking back over our history all of us now see how good a thing it was for the country that these parties rose and fell. We now see that each of them did a needed work which the others could not do, and then gave place to a new party that better stood for the spirit of the times.

The average life of American political parties has been about 30 years. Jefferson thought even that too long. The only exception was made by the Civil War, which practically dissolved the Democratic Party for many years and gave the Republican Party an unnatural lease of life. History then, as well as present conditions, shows that the time is overripe for a new party now.

Recently a few gentlemen calling themselves Progressive Republicans met in Chicago to arrange for a merger of the Progressive and Republican Parties. The day before they met Senator GALLINGER, the Republican dean of the Senate, declared in the public press that "when the time comes to reorganize the Republican Party we must follow the men who helped build the party and not those who helped to wreck it." And the newspapers added "Senator SMOOT and other regulars expressed similar sentiments." The following day the same newspapers that described the meeting of these Progressive Republicans in Chicago carried a dispatch from New Haven, quoting Mr. Taft, the last Republican President, as saying in his Yale lecture that progressive reforms are "hair-trigger" affairs "leading to anarchy and despotism by the majority." And the day after the meeting Mr. Cannon, the last Republican Speaker, wanted Senator CUMMINS, leader of the Progressive-Republican Chicago conference, to tell why Senator CUMMINS four years ago had not supported the very plan to reduce southern representation in Republican national conventions that Senator CUMMINS now favors. Still the promoters of the merger went merrily ahead.

Even if these well-meaning gentlemen had composed these radical differences among those who still call themselves Republicans they still would be up against the impossible in trying to unite the Progressive Party with the Republican Party. They start out with three fundamental errors, all fatal to their plan:

Their first mistake is that the Progressive Party is only a faction of the Republican Party. But one plain fact knocks this theory in the head—the fact that more than a million of those who joined the Progressive Party and voted the Progressive ticket last year were men who had been Democrats. Long before the election Mr. PENROSE said publicly that more than a hundred thousand of his followers in Pennsylvania would vote for Mr. Wilson; and in his first formal speech in New York after the election Mr. Taft said that more than a million Republicans had voted the Democratic ticket. That was true, and it is also true that a good many more than this number of Democrats voted the Progressive ticket.

More than this, men who had been lifelong Democrats were and are among the most active, vigorous, and efficient of the workers and committeemen of the Progressive Party. Many of these were prominent men whose solid qualities gave them an influence extending beyond their own States, as, for example, John M. Parker, of New Orleans, who became and now is a vice chairman of the national committee of the Progressive Party. Hundreds of county committees of the Progressive Party were made up of former Democrats and Republicans alike. Almost every county committee of the Progressive Party had and has one or more members who had been lifelong Democrats. And in almost every case these former Democrats are men of substance and weight in their own communities. As I write I can think of many such men whom I personally know—farmers, merchants, workingmen, secretaries of commercial clubs, doctors, and teachers. And these workers of the Progressive Party, who formerly were Democrats, are as able, determined, and enthusiastic as any of their fellow Progressive Party workers who formerly were Republicans.

Also, many Progressive candidates for Congress were former Democrats, and this was true of our candidates on Progressive county tickets. Mark well the fact, too, that these candidates on county, State, and congressional tickets of the Progressive Party were mostly men who had never run for office before. Very seldom could they be accused of being disappointed office seekers. Also most candidates of the Progressive Party became such knowing that they could not be elected, for from our great leader down nearly all Progressive candidates for office in 1912 were willing to make the fight without any notion of succeeding at that election. One of the many fine things about the campaign the Progressive Party made last year was this very fact that it was made for principle and not for spoils.

All this proves that the promoters of the proposed political merger of the Republican and Progressive Parties are wrong in their major premise. How do they propose to amalgamate this great host of Progressive voters, who formerly were Democrats, with the Republican party? And the fact that the Republican Party cast a great many hundreds of thousands of votes less than the Progressive Party cast will not help the merger promoters to answer that question. How are they going to merge men like Parker, of Louisiana; and Wannamaker of South Carolina; and Harris, of Georgia, with ROOT, of New York; LODGE, of Massachusetts; and SMOOT, of Utah? For the matter of that, how do these gentlemen propose to make an amalgam out of such materials as Mr. LA FOLLETTE and Mr. Cannon, or Mr. CUMMINS and Mr. PENROSE, all of whom still label themselves Republicans? Do they think that such a mixture would be attractive to American citizens? Do they think that anybody would believe in the sincerity of such a political gentlemen's agreement?

The second fundamental mistake that our promoter friends are making in trying to get up a merger between the Progressive and Republican Parties is that the Progressive Party is merely a protest against certain purely party methods and laws, which became more plain and clear than usual in the Republican convention last year in Chicago. They think that the party law governing the election of national committeemen and the party rule by which Republican delegations from the Southern States are given great power in national conventions are what caused more than 4,000,000 American citizens, both Democrats and Republicans, to leave the two old parties and form the Progressive Party. Does not the mere statement of this show how deeply mistaken the amalgamationists are?

Men and women do not leave their parties to which they have belonged all their lives and openly join a new party for any such surface reasons. Such things may cause them silently to vote for the opposition party in order to register their resentment; but men do not publicly and irrevocably cut lifelong party ties and formally become members of a new party for such feeble reasons.

They did this, too, with hardly any party organization, and everybody knows how necessary organization is if a party's full strength is to be registered at the polls. Last year our Progressive Party committees were formed almost at the polls; literally they were minutemen. By far the larger number of the members of our county, State, and even national committees were totally unacquainted with political work or management; by far the greater majority of them were merely earnest and thoughtful men and women who sincerely believed in the principles and program of the Progressive Party. They were

like undrilled volunteers meeting seasoned and veteran regulars. Yet, even with these beginnings of an organization, the Progressive Party became the second party in the Nation.

Now, however, the Progressive Party is perfecting its organization everywhere. In those States where we have no organization at all one is being built. In States where our organization was poor—and they were many—our committees are being strengthened.

Within two weeks after the election great Progressive meetings began to be held in various States and sections, precisely what happened after the first defeat of Lincoln's new party. Within two months these meetings developed into party conferences. And this remarkable phenomenon has continued up to the present time and is going on right now. Every one of these Progressive Party conferences is a notable affair in the number, character, and enthusiasm of those who attend them. This is admitted even by the old party newspapers at the places where these extraordinary gatherings are held.

The fact is that at the present moment more party work is being done by the Progressive Party than by both of the old parties put together. For example, Progressive Party clubs are being formed in many States. Over 5,000 such clubs have been organized during the present year. And this work is being pushed into other States as rapidly as they can be reached. It is an understatement of the truth to say that more Progressive Party clubs are now being formed than Republican and Democratic clubs put together. As a department of our national committee, we have a progressive service that is a new thing in party politics and characteristic of the Progressive Party's purposes. This service is sowing Progressive Party literature and spreading the Progressive Party propaganda throughout the Nation. Next year the Progressive Party will have full county tickets in most of the States and a Progressive Party candidate for Congress in practically all the congressional districts of the Nation. Last year we had very few such tickets in the field. Also in 1914 the Progressive Party will have its own candidate for United States Senator—a straight-out Progressive Party man—in every State where a Senator is to be chosen. A gloomy prospect for the merger promoters, is it not?

It is when one gets to the heart of the present situation, however, that one sees how impossible is the proposal to Progressive voters to leave the Progressive Party and go back again to either of the two old parties; in fact, Progressives could well say to both the old parties, "Physician, heal thyself!" before such a proposal from either of the old parties could become understandable.

Take, for example, the Republican Party at the present moment: Its leaders are not agreed on a single principle or policy for which the party can stand throughout the Nation. On the contrary, they are at unrelenting war with one another, to which there can be no end or even a temporary truce without a yielding of basic convictions. For example, Mr. CUMMINS believes in Republican voters nominating their candidate for President by a nation-wide primary; but only the other day, in a carefully prepared lecture, Mr. Taft was hard put to it to find words strong enough to denounce that very thing. Mr. LA FOLLETTE believes in the initiative and referendum; yet Mr. Cannon, in a very able, reactionary article in this magazine, called this "the dynamite theory," which would "blow up the foundations of the Government."

Compare what the Republican Party stands for in Rhode Island with what it stands for in Nebraska. A Republican of Iowa is a good deal more of a stranger among Republicans of Massachusetts than among Democrats of Oklahoma. The Republicans of Utah and New Hampshire announce the same beliefs; but put the beliefs of New Hampshire and Utah Republicans in parallel columns with those announced by Republicans of North Dakota and Wisconsin!

It is just as bad, or even worse, with the Democratic Party. The governor of Connecticut says he is a Democrat; and we must believe him, for he is a very learned, honorable, and able man; but the governor of Washington also says that he is a Democrat, and he, too, is an honorable, able, and informed man. Yet Jefferson and Adams did not hold each other's views in greater detestation in 1800 than the Democratic governors of Connecticut and Washington do in 1913. Mr. Sullivan, boss of the Chicago Tammany Hall, calls himself a Democrat, is consulted and deferred to by Mr. Wilson, and is the strongest single factor in the Democratic Party of Illinois. Yet Mr. Sullivan is opposed to everything for which Mr. Bryan stands, on the one hand, and Mr. Bryan is opposed to those things for which Mr. Sullivan stands. If a foreign student of our politics were to read the New York Times, published in New York, and the Rocky Mountain News, published in Denver, he would think that those two papers were printed in the interest not only of opposing political parties but of frantically hostile political parties; yet each of these papers declares that it truly states the principles and purposes of the Democratic Party.

So we see that neither of the old parties has any principle or even any policy on which the respective parties agree or can agree throughout the whole country. Both have come to be merely crazy quilts of glaringly opposite beliefs.

One of the moving causes that for many years have been forming a new party was to put an end to just this confusion—a confusion that prevented either party from standing for clear-cut principles and plainly understood programs which would be carried out in the event of party success, and permitted evil and nonpublic interests to work out their will, no matter which party won an election. For be it remembered that the more the people are confused by these party jumbles of conviction and party catchwords of expediency, the clearer the antipublic forces see their way. These forces never are confused; they know exactly what they want, are always ably generaled, and so perfectly disciplined that they act as a unit. That is why they want the two old parties to stay as they are and are bringing all their power to bear against the Progressive Party.

For a long time millions of thoughtful citizens were impatient of this party condition; and their impatience finally grew to despair. It was inevitable, then, was it not, that there should be a new, intelligent, and honorable party alignment? We need a frankly liberal party, with plainly understood liberal principles and clearly stated liberal policies, to which all citizens who believe in them can belong; and a frankly conservative party, with plainly understood conservative principles and clearly stated conservative policies, to which all citizens who believe in them can belong.

With such a party alignment citizens can know exactly what they are voting for and be sure they will get what they voted for if their party succeeds. It was this deep and fundamental necessity that created the Progressive Party. It is the liberal party of America, to which all who believe in its principles and policies will come in the end; and its very existence will compel all those who believe in opposite principles and policies to get together in an opposition party in the end. Thus, and only thus, can we have honest politics in America.

The third mistake the promoters of amalgamation make is the assertion that the Progressive and Republican Parties want the same things. But this is not true. It is the worst mistake of all. For example, take the subject this moment most before the public—the business question. The Progressive Party is as far apart from both the Republican and Democratic Parties on this subject as were the Whig and Democratic Parties on the subject of internal improvements.

The whole country needs business peace. Yet here we are in the midst of a tariff upheaval, which has in it the seeds of still another tariff upheaval. And this will go on just so long as this great business question is handled by the two old parties. Both the Democratic and Republic methods of building a tariff are exactly the same, and must and do produce equally unsatisfactory results. The country was promised great things from the last Democratic revision of the tariff under Cleveland; it was promised great things from the last Republican tariff revision under Taft; and it was equally deceived and disappointed by both. And now again we are told that the needs of the country will be met by the Democratic tariff revision at present under way. The Democratic leaders have formally and in terms told the country that the tariff bill now making will put an end to the high cost of living, on the one hand, and increase wages, on the other hand; that it will improve business at home and enlarge our foreign trade; and that this miraculous new law will also take away the power of the trusts by taking away the special tariff privileges they now enjoy.

TARIFF MAKING IN FEW HANDS.

Yet certain stern facts already loom up clear and large. Strange, is it not, that though we are told that the trusts are to be punished by this new Democratic tariff law the great interests do not appear to be more worried by this bill? Perhaps time will clear up this mystery.

Of course hardly anybody knows what is in the bill. It was framed in exactly the same way that the Payne-Aldrich bill was framed. Not more than a dozen men all told had any part in its making. There are not 20 Members out of more than 500 Members of House and Senate who at this moment can explain its provisions. And it is being rushed through by the same autocratic methods that were used to jam through the Payne-Aldrich bill, with those autocratic methods raised to the *n*th power.

Just how the bill is to do away with the high cost of living, raise wages, improve business, and extend foreign trade is not explained; but we are told that the new law will do all these things, and the country is taking this statement on faith. Of course all of us hope these things may happen. All of us hope that the high cost of living will be lowered; that wages will be raised, business improved, profits increased. But suppose these things do not come to pass. Suppose we find ourselves next year paying as much as we do now to keep ourselves fed, sheltered, and clothed. Suppose wages are not raised—I do not ask you to suppose the terrible possibility that wages actually may be lowered. Suppose business does not become better—I do not ask you even to suppose that business may become poorer. Suppose any or all these things. What then? Does anybody imagine that people who have thus been so fooled and wronged will not strike down the party which has promised all this and not made good? Of course they will.

What will the people then do? If they turn to the Republican Party, that party will say that at last the people have indorsed the Payne-Aldrich tariff bill; at last Mr. Taft's statement at Winona that the Payne-Aldrich bill was the best ever passed has been proved to be true. That is what the Republican Party will say, and that party will have a right to say just those things. Its leaders are saying just those things right now by way of prophecy. So if the people in their disappointment and despair turn to the Republicans, the latter will give us another dose out of the same bottle from which they dosed us with the Payne-Aldrich tariff bill. We should have again the same one-sided and worthless hearings; the same star-chamber caucus methods; the same framing of a bill by a few men, with the unjustly favored interests in the background; the same slugging of the bill through Congress; the same outrages and injustices in the end. The only difference would be that the Republican Party will feel licensed to be more extreme than ever, for it will reason that the people, tired and exhausted with this endless tearing down and building up of tariffs, will stand for anything rather than see it continue.

Very soon, however, the people will rebel against that unjust tariff, just as they rebelled against the Payne-Aldrich tariff, and the country will find itself once more up against another tariff revision. The country will at the end of all this turmoil be just exactly where it is to-day. And this process will go on just so long as the country tolerates the method of handling the tariff that both old parties alike employ. So we see that business peace—a settlement of the tariff question—is not possible through either of the old parties.

The Progressive Party is absolutely and utterly against this method of tariff making that both old parties employ. The Progressive Party believes that the tariff should be taken out of politics and handled as a purely business question, which it is, instead of as a political question, which it is not. The Progressive Party believes that our tariff should be built on exact facts as nearly as those facts can be gotten; and that it should be changed schedule by schedule, section by section—or even item by item—when the facts make such change necessary. This is the way in which prudent and farseeing business men manage their business affairs.

It is the way that Germany, France, Japan, and other protective-tariff countries handle their tariffs. Tariff changes in those rival countries do not upset the business of those countries but strengthen it. They are made almost automatically. Can anybody recall when France was plagued with a tariff upheaval? Of course France or Germany or any other rival country could not stand the upsetting of business by the wholesale tariff revisions we Americans permit the two old parties to impose upon us. The reason why rival nations have better tariff methods than we do is not because their statesmen are abler or their people more intelligent than ours, but because those countries are so crowded and their resources are so small that they can not afford such haphazard, unbusinesslike, and wasteful tariff methods as we Americans employ.

DARK-LANTERN METHODS.

You see, Americans are the only people on earth who can afford a government by politicians. We are so few in numbers and so wealthy in resources that we can manage to get along with politician-made tariffs and dark-lantern tariff methods. But ought we go on with such tariffs and such methods just because our wealth is so great and our numbers so few that we still can live in spite of such tariffs and such methods? The Progressive Party believes that we ought not. If Germany and France and other rival nations, with many more times our population to the square mile and with very little natural wealth compared with us, can equal us in domestic prosperity, beat us badly in steadiness and security of domestic business, and, comparatively speaking, make us take their dust in foreign trade just by using common-sense business methods, what could we not do with our few numbers and great resources if we also used common-sense business methods?

All of us have heard the bombast of the political stump speaker about our having the greatest prosperity the world has ever known until we are sick and tired of it; for though in sums total our business transactions and growth in resources are very great, still statistics show that our prosperity is not nearly so great, comparatively speaking, as that of rival countries packed with people and without any of our advantages. The plain truth is that we Americans are allowed to realize only a part of the prosperity we ought to have. Our politician methods of lawmaking, especially in our business laws, keep us from making ourselves as prosperous as our scanty numbers and unrivaled advantages justify. And what prosperity we do have is not fairly distributed. The business policy of the Progressive Party is to make our business laws by common-sense business methods and fit those laws to actual conditions, as less favored but more successful nations do. The Progressive Party believes that we should do this in order to give us that greater prosperity which we ought to have and in order to pass that prosperity around.

So the Progressive Party would make a thoroughgoing tariff commission of experts, as permanent and able as our Interstate Commerce Commission. The Progressive Party would make this tariff commission as nonpartisan and independent as the Interstate Commerce Commission; and we would give this tariff commission all the powers needful to discharge its duties. We would have that commission prescribe a uniform system of accounting for protected industries. We would have it gather facts concerning the tariff even fuller and more detailed than the facts the Interstate Commerce Commission gathers concerning the railroads, because the gathering of these facts would be the basic work of the tariff commission. And we would have the benefits in any protected industries go to the workingmen employed in that industry, for the Progressive Party holds to the protective-tariff doctrine of Abraham Lincoln—that the purpose of a protective tariff is to protect American workingmen from competition with workingmen elsewhere who are paid less than American workingmen can live upon by our American standard of living. The Progressive Party believes that this standard of living is the vital problem of American statesmanship.

THE FIGHT FOR A TARIFF BOARD.

And we are at relentless war with the present-day Republican doctrine of a guaranty of profit to manufacturers. Such an idea never was heard of before the Taft-Aldrich-Root-Lodge combine forced it into the Republican platform. Why not guarantee profits to farmers and barbers and doctors and lawyers?

Neither of the old parties believes in the Progressive Party method of handling our tariffs. The Democratic Party frankly says that it does not; and, though some Republican politicians have been driven by the terror of their situation to appear to favor a tariff commission, yet the Republican Party as such is estopped from taking that position. The Republican Party can not be heard now to say that it favors a tariff commission. Not only did its leaders attack the tariff-commission bill when it was introduced some years ago in terms hardly fit to print, not only did certain prominent Republican leaders who now pretend to favor a tariff commission do all they could against it; not only do they admit in private conversation that they take no stock in it now, but it is a matter of public record that three times within the last five years the Republican Party, having full power, had a chance to fix a genuine, permanent, nonpartisan, and powerful tariff commission in our laws as firmly as the Interstate Commerce Commission is fixed, and neglected and refused to do so. Of course everybody knows that Mr. Taft's so-called tariff board was feeble and worthless.

The fact that a very few prominent men now in public life, who illogically have chosen for a while longer to remain in the Republican Party, do sincerely favor a tariff commission and the Progressive Party's method of handling the tariff question does not relieve the Republican situation. The fact only makes it worse. For here again we see the fatal division of the Republican Party within itself. The other day Mr. PENROSE, the Republican leader of the Senate, prepared a careful article for the public press in answer to Mr. Wilson. Mr. PENROSE said about everything anybody could think of in attacking the present Democratic tariff bill and in defense of the policy of protection, but not one word about a tariff commission, not one word about condemning methods of tariff building employed by both old parties. On the contrary, this Republican leader of the Senate made a two-handed defense of those very methods. Mr. Cannon, in his strong but medieval article in this weekly, took the same ground that Mr. PENROSE takes.

You have only to read the CONGRESSIONAL RECORD of three, four, or five years ago to find out what the Republican leaders really think of a tariff commission. Of course they now are willing to put a tariff-commission plank in their platform; but then putting a thing in a platform before election and carrying it out after election are two very different things. It is the men behind the platform that count. And, besides, all of us know that the Republican Party is willing to put nearly anything in its platform just now. It is the old case of a drowning man catching at a straw.

So, then, on the tariff question how are you going to merge the Progressive Party, whose members all believe in the Progressive Party method of handling the tariff, with either of the old parties, both of which have fought that method as hard as they could and are against it now? The only sensible thing for those who have remained in the Republican and Democratic Parties, but who believe in the Progressive Party's method of handling the tariff, to do is to become members of the Progressive Party; for what these men want is the fruitful success of policies and principles in which they believe, instead of the barren success of a mere party name, with which they have been labeled—is it not?

Or take that other great division of our business problem—the question of the trusts. Here again the Progressive Party policy is at war with that of both old parties. Briefly stated, both the Democratic and Republican Parties propose to go on with that series of actions to break up the trusts which the country has witnessed for 25 years. Of course these useless lawsuits under the Sherman law amount to nothing so far as any benefit to the people is concerned. All they amount to is to badger business, on the one hand, and to give to such great interests as can afford to go through the courts a decree to go on doing everything that really hurts the people, on the other hand. Witness the so-called dissolution suits of the Standard Oil Co. and the Tobacco Trust. Did either of these lawsuits reduce the cost of oil or tobacco? No; the cost of tobacco has not changed and the cost of oil has been increased; the price of gasoline has been raised seven times. Did they prevent the watering of stocks? No; the trusts can go on doing that as much as they like; one former component of the Standard Oil Co. made a stock dividend of $29,000,000 within a few months after the decree. Did they prevent the manipulation of prices and unfair methods of competition? If so, point out where those practices have ceased.

So where do the people get any relief? Nowhere. On the other hand, all legitimate business is utterly confused. No matter how honest, American business men to-day can not get for any fee from a reputable lawyer an opinion as to whether in many important, necessary, and wholly honorable transactions they are lawbreakers or not. A great number of indispensable business arrangements now are being carried on, though those who carry them on are criminals under the law. Yet they must go ahead, because they can not do business under modern conditions in any other way.

FOREIGN TRUST REGULATION.

This intolerable trust condition and the politician-like treatment of it by both the old parties do even more to hamper American prosperity than the old party methods of handling our tariff. Here once more the policy of the Progressive Party is different in its very nature and theory from the shifty and shifting policy to which the two old parties equally hold. The Progressive Party takes the ground marked out by every great authority on modern economics. We hold with these standard economic authorities that great organizations of capital engaged in industry are not only inevitable but necessary; that they are caused by railroads, telegraphs, telephones, and all modern agencies of communication which bring scores of millions of people into direct touch with one another, which make a modern nation a single industrial family.

These mighty organizations of industry called trusts are found in free-trade England and in protected Germany, as well as in the United States; they are even greater and stronger, considering comparative wealth and numbers, in those countries than they are with us. And instead of trying to break them up those foreign Governments encourage them. For example, last year a German cartel, or trust agreement, expired. The big concerns that were parties to this trust agreement each wanted more of the future profits of the trust than the others would agree to, and so they would not sign the new trust agreement. But this concerned German business and especially German foreign trade, so the German Government promptly notified these firms that if they did not at once renew their trust agreement the Government would increase railroad rates on the products of each member of the expired trust. Of course that was going too far in the other direction, and we would tolerate no such governmental practice here. I cite it only to show how other nations, which can not afford waste of any kind, deal with this profound subject.

But while these foreign Governments encourage trusts, they control them—sternly and effectively control them. That is just what we ought to do here. So the Progressive Party would stop the policy of badgering business through sham battles against the trusts, which is the only plan the two old parties have with which to deal with this question, and, instead, control them, so that they can not hurt but only serve the people.

The Progressive Party recognizes that the organizations of business can not be and ought not to be destroyed, on the one hand; but we say that they can and must be bridled and directed, on the other hand. The greatest business concerns can be made the greatest servants of all the people.

Just this is what the Progressive Party would do. We would make these vast industrial concerns do the people's work instead of letting them exploit the people. We would pass a business law plainly stating what business practices are unlawful, punishing its violation by prison sentences instead of money fines; and we would create an independent arm of the General Government to control and regulate these giant business agencies in the interest of the public. If the Interstate Commerce Commission is a good thing to regulate and control the railroads of the country, will anybody tell us why an interstate trust commission would not be an equally good or better thing to control and regulate the trusts, whose products the railroads carry?

THE FOUNDATIONS OF THE PARTY.

Thus, and only thus, will there be an end put to the watering of stocks, which taxes the whole consuming public as the Government itself does not tax it; an end to the arbitrary, unjust, and wicked raising of prices, which makes life a burden to the masses of our people; an end put to those crushing and criminal manipulations that have so choked legitimate business. Yes; and an end put to that business uncertainty which chills the energies of American business men and to that confusion which blinds the vision of the clearest business eye. In short, the Progressive Party would establish business peace on the firm foundations of fact and justice.

Yet against this plain, simple, common-sense statesmanship of the Progressive Party, both old parties and also the great and evil interests that have worked their will upon the American people are united. Thus we see that on the business question—the tariff and the trusts—there is no common ground upon which the Progressive Party and either of the old parties can get together.

I have enlarged upon the Progressive Party's business program and the common hostility of the two old parties to that program, because the business question is the one now biggest in the public eye; but when one comes to the underlying principles of the Progressive Party one sees even more clearly why any kind of merger with either of the old parties is impossible. There are three fundamental principles on which the Progressive Party is founded and from which its policies flow. Let us state these three principles and give an illustration of each.

First, the Progressive Party stands for a broader, more logical, and more helpful nationality. Most of the problems that bear down upon the American people to-day are national in character and can be dealt with only by the people of the Nation acting as a unit. So the Progressive Party searches our National Constitution to find power for the Nation to do those things the welfare of the whole people demands; the two old parties, on the other hand, search the Nation's Constitution not to find such power but to find limitations upon such power. The Progressive Party believes that the master words of the Constitution are the very first words in that great charter: "We, the people * * * in order to * * * promote the general welfare, * * * do ordain and establish this Constitution." And we Progressives read our fundamental law by the light of those master words. On the contrary, the two old parties say that these guiding words of the Constitution have no real meaning.

The result is that the two old parties think the States should handle every problem, no matter how national in character, that the Constitution does not expressly command the Nation to handle; whereas we Progressives believe that the Nation should handle all national questions that the Constitution does not expressly forbid the Nation to handle. This principle of the Progressive Party was better stated by Abraham Lincoln than by anybody else. Lincoln said: "The Nation should control what concerns it; a State or any minor political community should control what exclusively concerns it; an individual should control what exclusively concerns him."

Take one of many illustrations of this principle of the Progressive Party—the subject of child labor. For every possible reason this is a national question, and everybody who has studied it knows that it can be handled wisely only by national law. The Progressive Party favors a national law on this vital subject. The two old parties say that the Nation has no power to deal with child labor at all, but that the subject must be left to the States. Yet if left to the States, not only can child labor not be ended; not only will the ruin of American citizens in the making go on in the various States that fail to stop it; not only will labor disturbances in States with good child-labor laws continue to be caused by the employment of children in other States, but also the most serious business inequality is set up all over the Republic. For manufacturers in States which do not permit the employment of children must make their goods with manhood labor, paid manhood wages—and yet sell those goods in the open market in direct competition with business men in other States who are allowed to make their goods by childhood labor, paid childhood wages. I personally know manufacturers who employ children and who would be glad to stop it, but can not, because other manufacturers next door to them go on employing children.

How, then, can the Progressive Party, which has this concept of nationality as one of its basic principles, be merged with another party which denies that principle? Will the Republican Party put a national child-labor plank in its platform? Let the merger promoters try it.

HOW TO STRENGTHEN LIBERTY.

The second principle on which the Progressive Party is founded is a broader, purer Democracy. We believe that liberty can be strengthened best by strengthening the foundations of liberty. So the Progressive Party believes that women should have the right to vote precisely the same as men. We see no sense in allowing some of us to vote because we happen to be men and not allowing others to vote because they happen to be women. And especially the Progressive Party believes in making the people's laws and public servants subject to the people's will all the time.

We think that no harm, but only good, can come from giving the people power over the people's laws under which the people must live, and over the people's servants who make those laws and conduct the people's Government. That is what every individual does in his own affairs; why should not the people do it in their affairs? The initiative, referendum, and recall strengthen our representative Government by making it certain that it will really represent the people whose Government it is, and not the special interests whose Government it is not. Everybody knows that our representative Government has fallen under the influence of antipublic forces.

Yet we find the two old parties, as parties, standing together against the Progressive Party's principle of a stronger and more vital popular Government.

True, some Republicans and some Democrats favor this Progressive Party principle; but the majority of both Democratic and Republican leaders are against it. Mr. LA FOLLETTE is for it and Mr. LODGE so unalterably opposed to it that he gave this as his excuse for deserting his personal friend and greatest benefactor, Col. Roosevelt. Mr. CUMMINS is for it, but Senator Root thinks it will break down our Government.

The Democrats are in exactly the same case. Mr. Bryan favors this Progressive Party principle, but did not write it into the Democratic platform, while Mr. UNDERWOOD frankly and boldly opposes it. A few western Democrats stand for this Progressive Party principle, but eastern Democrats are against it to a man. For example, Gov. Baldwin, of Connecticut, a Democrat, is quite as sure that this Progressive Party principle would blast out the foundations of the Republic as is Senator Root, a Republican.

So we see there can be no getting together of the Progressive Party with any other party on this second vital principle upon which the Progressive Party is founded. Neither of the old parties, as parties, stands for it—both of the old parties, as parties, are against it—and the only reasonable and sincere thing that those who believe in this underlying principle of the Progressive Party can do is to join the Progressive Party, which, as a party, is pledged to this principle.

The third principle upon which the Progressive Party is founded is that of humanity in legislation. I do not mean that we Progressives are kinder or better than members of other parties; but I do mean that, as a party, we Progressives insist on making our laws from the human point of view rather than from the purely commercial point of view. For example, the Progressive Party rejects the savage economic doctrine of the obsolete Manchester School that labor is nothing but a commodity, to be bought at the lowest possible price, used until efficiency is exhausted, like a shovel, or a machine, or a bucket of coal, or a bushel of wheat. We insist that the man whom the accident of birth or fortune makes a laborer is a human being, with all the feelings and aspirations, all the capacities for joy and sorrow, for pleasure and for suffering, possessed by the other man whom birth or fortune places in a more happy plane of life.

The Progressive Party, therefore, would draw its labor laws according to this fundamental principle of economics.

We think it a great deal more important that men and women engaged in any industry should not have their health ruined or their lives destroyed than it is that the manufacturer should make abnormal dividends. We Progressives believe it is of far greater consequence that children shall grow into normal human beings, with an equal chance with other human beings, so far as health and strength are concerned, than that the industries which employ these children should make larger profits because of their employment. We think that the industrial order, which, notwithstanding the enormously increased productivity of machinery, nevertheless drives human beings to such hard and excessive hours of labor that their usefulness is sucked out of them by middle life, is utterly wrong; and so, under the head of social and industrial justice, the Progressive Party platform proposes a program of comprehensive, systematic, and practical reforms to carry out this third great principle on which our party is founded.

Nobody has yet been willing to say that these human reforms are not desirable; but the two old parties say they are not practicable. The answer to this, of course, is that every one of them has been tried and found to work well in other less favored countries than our own. But the two old parties are against the social and industrial justice section of the Progressive Party's platform—some of the old party leaders are quite violent in their opposition; but with Progressives these human reforms are the expression of a principle in which they earnestly believe. So how is a merger of such strong and hostile convictions possible? How is it even thinkable?

So we see that the broad and deep-lying principles which created the Progressive Party and which give it its life and strength are not accepted, but opposed, by both of the old parties. The same is true of the Progressive Party's policies. Here and there you will find numbers of Republicans and Democrats who, in this locality and that, favor both the principles and policies of the Progressive Party; but neither the Democratic Party, as a party, nor the Republican Party, as a party, can be made to stand for any of the Progressive Party's principles or policies throughout the whole Nation.

On the contrary, the Democratic Party, as a party, and the Republican Party, as a party, stand against these Progressive Party policies and principles as national propositions. Yet a political party must have principles and policies as broad as the country.

The Progressive Party, however, as a party, stands for its principles and policies throughout the whole Republic. What we fight for in Oregon we fight for in Florida. What we preach in Kansas we preach in Rhode Island. What we stand for in Wisconsin we stand for in New York. Whereas fragments of the two old parties are willing to stand for some Progressive policies in localities where those policies happen to be popular and yet fight those very policies where they happen to be unpopular, the Progressive Party fights for those policies and principles a little bit harder in the localities where they are unpopular than it does in the localities where they are popular. For the Progressive Party fights for political convictions; the two old parties merely maneuver for expediency.

If this sounds harsh, ask yourself whether it is not true. If it is not true, then explain the difference between the Democratic platform of Oklahoma and the Democratic platform of Connecticut; between the Republican platform of Nebraska and the Republican platform of Rhode Island. Explain the sudden about-face of the Republican manipulators in Michigan and the stonewall standing fast of the Republican bosses of New York.

It is plain, then, that our merger-promoting friends have undertaken an impossible task. And why, after all, should there be any amalgamation of parties believing in different things? Certainly not for the purpose of carrying out clearly stated principles and well-understood policies; for there is no agreement on those principles and policies but, on the other hand, utter disagreement.

To what end, then, is this proposed merger? "To win," answer the merger promoters. Quite so. But to win what? To win offices and power. When you get at the bottom of it, will anyone point out what else there is to come from this proposed merger and amalgamation? And is that result attractive to any sincere and thoughtful man?

The Currency.

EXTENSION OF REMARKS
OF

HON. JEFFERSON M. LEVY,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 5, 1913.

Mr. LEVY. Mr. Speaker, some time ago I publicly stated that the 2 per cent bonds could not fail to go below par if their circulation privilege was not sustained, and also that the 3 per cents would go below par if they did not receive the right of circulation. Common sense will convince anyone that the value of 2 and 3 per cent bonds has only been sustained on account of the privilege of issuing circulation against them. The premier security of England—Consuls, 2½ per cent—are only quoted at 73; the 3 per cent bonds of Germany are only quoted at 73; and the 3 per cent rentes of France are only quoted at 85. In the face of all this how can we expect either the 3 per cent or 2 per cent to be sustained above par if the circulation privilege is not allowed them?

I most heartily approve the action of the Secretary of the Treasury in giving notice at this particular time that he proposes to use the great resources of the country for the purpose of facilitating the movement of the crops. Under our defective banking system there is no method of increasing the circulating medium at the present time except by the deposit with the banks of redundant funds in the Treasury. What we need for moving the crops is currency. A deposit by the Government is equivalent to an increase in the circulation.

I can not too highly commend the rare good judgment and foresight of the Secretary of the Treasury and his exercise thereof at the proper psychological moment. Last year I urged the deposit of redundant funds on the Republican administration, and introduced a resolution to that effect, but failed to get any response from the then Secretary of the Treasury. He refused to place a dollar in the banks of the country during the crop season.

CURRENCY.

The bill proposed by the respective chairmen of the Senate and House Banking and Currency Committees is, in my opinion, put forward only as a tentative measure or working basis for discussion and consideration. Its main underlying purpose is unanimously approved, and if there are any grave defects they should be ascertained by a careful and dispassionate consideration of the bill on its merits, prompted by the wish that this meritorious effort at needed legislation may not be wrecked.

I do not believe in the tendency to consider financial legislation esoteric in its nature, for I think there are certain well-defined principles which are easily understood when explained, and which *must be followed* if we would not risk the consequences of unsound experiments in finance.

In my remarks before the Glass committee, as published in the CONGRESSIONAL RECORD of June 23, I stated what I consider to be the correct principles which must be followed in any banking and currency legislation.

These principles were embodied in bills which I have introduced, and these principles *are followed* in the Glass-Owen bill; the differences between the two bills consist in the form of the application of the principles or the method of applying remedies to existing defects. I propose in a general way now to consider some of these differences, and when the committee reports I purpose to discuss them more in detail.

At the time referred to I then stated *the problem* which confronts us in these words:

To legislate whereby the debts of the banks may be safely substituted by the people for coin in their daily interchange of property and service with a reasonable profit to the banks.

I explained that the bank debts referred to are the "deposits" and "circulating notes" which constitute the great mass of the "circulating medium" of the country and are the "substitutes for coin" used in the daily exchanges of human wants.

To solve this problem these are the three *essential requisites*, as then stated:

1. To restore the bank function of note issue.
2. To remove from our statutes the evidences of fruitless efforts to create values by legislation.
3. To provide some reserve source of credit.

FIRST REQUISITE.

To meet the *first* requisite the Levy bill provides as follows:

(a) To allow the present national banks to issue currency not exceeding capital stock against a 50 per cent gold reserve and current assets, the notes to be printed and controlled by the Government, as now—all to be redeemable at the Treasury on presentation in gold to be provided by the banks as a part of their 50 per cent gold reserve.

(b) To retire the present bond-secured currency at the option of the banks, by allowing the present 2 per cent bonds to be exchanged for currency certificates which shall represent the bonds, allowing such certificates to be reexchanged into the same bonds at the option of the holder, thus giving elasticity to the present volume of bank currency and enabling the Government to carry the debt represented by the bonds, at a less rate of interest than 2 per cent, to the extent that bond certificates are used.

To meet the first requisite the Glass-Owen bill provides as follows:

(a) The organization of other banks called Federal reserve banks, for which the present banks must contribute the capital. The issuance of *Government obligations* by such reserve banks, against which they must furnish a gold reserve of 33⅓ per cent and deposit of their assets in commercial paper with the Government, 100 per cent of such issuance.

(b) The retirement of the present bond-secured currency, to extend through a period of 20 years, by the substitution of 3 per cent bonds for the present collateral bonds, such currency to be replaced by Government obligations to be deposited with the newly organized reserve banks.

In comparing the merits of these different remedies to attain the same end the fact that the Glass-Owen bill provides *in form* Treasury notes instead of bank notes must not lead us into the error that these Treasury notes, under the conditions which they are issued, are *Government currency* or that they are the same thing as the existing greenbacks without the legal-tender feature. The two are entirely different in nature, in origin, and in effect. In point of fact the Treasury notes proposed under the Glass-Owen bill are a *bank currency*, as a little reflection will confirm, and *this fact* is the redeeming feature of this provision. If it were not so, we should have "greenbacks" pure and simple, and the benefits which we are now reaping from the fight for sound money, made some years ago, would be lost. Pray observe! These notes, though the nominal obligation of the Government, are not to be paid by the Government; the Government receives no value in exchange when it parts with them, and the notes have no existence as an obligation until they are issued, i. e., delivered by a bank for value. They can not be issued by the Government for its own purposes nor even in exchange for an equal amount of gold. They are in law similar to what an accommodation note is when offered for discount to a bank—"stillborn" until value is paid.

As the bank is required to acknowledge the note *as its own debt*, by crediting the face amount thereof to the Government (when it receives value, or issues it), as it must furnish the gold reserve to be held for its payment on presentation, and must pay from its own assets when so presented, there is absolutely no difference in treatment between this Treasury note and its own circulating note, except that the latter when issued would be credited to the account called "circulation."

The present bond-secured bank currency represents the debt of the Government, indorsed or guaranteed by the banks; the proposed Treasury-reserve-note currency represents the debt of the banks, indorsed or guaranteed by the Government.

I do not understand why those in charge of the needed remedial legislation considered that in order to restore the function of note issue to the banks and to have an elastic bank currency it was necessary to have the notes *in form* the obligation of the Government, but having decided upon this, it followed necessarily that the Government should assume control not only of the method of issue as now practiced, but also the control of the *bank function* of note issue, and hence the organization of the Federal Reserve Board. This organization, I concede, should consist of Government officials, if we must have the obligation of the Government as the bank currency.

The Levy bill contemplates the continuance of the national banking system by restoring the bank function of note issue *to the individual banks*, they being in direct contact with the necessities of the people, requiring 50 per cent gold reserve, not only for the security it affords, but also to prevent any profit from note issue "per se" acting as an incentive to inflation. Contraction is secured by having the United States Treasury as one place of redemption for all bank notes, so that each bank maintains its gold reserve there by sending in other bank notes for redemption.

The necessity for doing away with the present bond-secured currency as being incompatible with the needed elasticity of the currency is conceded by the provisions of both bills.

The provision of the Glass-Owen bill to fund the present 2 per cent bonds into 3 per cent bonds follows the suggestion of the Aldrich plan; except that it limits the process to 5 per cent per annum, thus requiring 20 years to complete the operation. The plan in itself is open to the objection that it entails an additional interest charge upon the Government of about $7,500,000 per annum and with the limitations placed upon funding will probably force the price of the 2 per cent bonds much below par; cases will arise where the 2 per cent bonds must be sold at times when the annual limit of funding has been reached; the prices will be then fixed by the investment value, and these forced sales will thus make the market price.

The plan suggested by the Levy bill of making these 2 per cent bonds interconvertible with currency certificates removes the objections named, and besides gives many advantages not possessed by any plan heretofore suggested.

It leaves the Government debt, where it now is, carried by the people, but without the intervention of the banks.

It carries this debt at the maximum rate of 2 per cent, reduced by whatever amount the certificates may be demanded by the people in proportion to the whole debt. If the whole of the present bank currency should be converted into these certificates, the saving to the Government on the present basis of interest would be $14,720,000 per annum. On the basis of interest, as proposed by the Aldrich plan or pro rata by the Glass-Owen plan, the saving would be over $22,000,000 per annum.

It furnishes an elastic Government currency to replace the present inelastic bank currency. It allows the banks to make this exchange without loss and without limit as to time or amount. It provides the method of such exchange without increasing or decreasing the volume of the circulating medium. It broadens and enlarges the demands for 2 per cent bonds and gives to all State banks and trust companies and other corporations or individuals a form of quick assets which will always command currency, irrespective of commercial crises or financial panics.

SECOND REQUISITE.

As to the second requisite—"to remove from our statutes the evidences of fruitless efforts to create values by legislation"—the two bills are in accord, as far as the Glass-Owen bill goes.

The Levy bill does away entirely with the fiction of counting the debt represented by the item "Due from reserve agents" as a part of the required legal reserve of country banks.

I maintain that the only proper reserve money is gold and that no amount of legislation can convert any debt whatsoever into the equivalent of gold. I maintain further and prove by figures that the provision of the law allowing this debt to be counted as reserve money eliminates from the actual reserve money of the country three-fifths of the amount which the law provides country banks shall keep against the deposits therein.

The Glass-Owen bill acknowledges the principle involved, but allows 5 per cent or one-third of the country banks' required reserve to continue as a debt from reserve agents, at the discretion of the Federal reserve board.

The Levy bill gives the holders of greenbacks the option to exchange them into 2 per cent convertible bonds. The Glass-Owen bill makes no provision for this Government debt other than allowing its continuance with the present gold reserve held in trust to maintain its parity with gold.

I contend that the present greenback represents the only fiat money we have; that the creation of the debt in this form was a war necessity; and that its continuance is no longer necessary; that under Gresham's law it has driven an equal amount of gold from the country, part of which we were compelled to restore as a reserve fund; and that by giving the holders an opportunity to fund it into interest-bearing debt we are doing what commercial honor demands. In my opinion, we are performing a yet greater service for the welfare of our country, for we are thus removing the dangerous fallacy which now exists in the minds of many men that this greenback debt is money.

THIRD REQUISITE.

As to the third requisite "to provide some reserve source of credit." It is a well-known banking principle that in times of financial panic some source must exist from which undoubted credit may issue, which means that the ability to create a debt, which will be accepted by the people as a substitute for coin, must be provided or else the whole industrial and commercial fabric will fall to pieces. The Levy bill provides this source through the extension of the act of May 30, 1908, by amending that law so as to remove the prohibitory tax on emergency circulation therein provided repealing the requirement for a bank to have outstanding 40 per cent of its capital in bond-secured currency before being allowed its privileges, and also admitting State banks and trust companies to its benefits. This provision of the Levy bill continues in existence the present organized National Currency Association having an aggregate capital and surplus of about $575,000,000.

The act of May 30, 1908, is further amended so as to allow these currency associations—prior to, subsequent, or simultaneously with the issue of emergency notes—to issue certificates of indebtedness available among themselves and their constituent members for the payment of clearing-house debit balances; the purpose being to allow a combination of assets among the banks, thus applying legally the effective remedy heretofore adopted by clearing-house associations in times of panic.

My belief is that under these amendments an undoubted and tried method of relief from any financial stress is provided, even without the use of the emergency notes by the public, as contemplated in that act; the latter provision being retained only out of abundant caution.

The Glass-Owen bill in providing this source of reserve credit goes at once to the fountain of all credit and provides that Federal Treasury reserve notes shall be issued by the reserve banks. It makes no distinction between banking facilities, which may be needed in the daily and ordinary requirements of business, and in facilities which may be necessary under abnormal and extraordinary conditions; on the theory, doubtless, that the Federal reserve banks, backed by the Government, would be equal to all emergencies under the guidance of the governmental Federal reserve board.

MINOR PROVISIONS.

These essential requisites as stated having been compared, there are other minor provisions in which both bills agree as to results to be accomplished, such as to deposit with the banks until needed any redundant funds of the Treasury so as to prevent reduction of the volume of the currency through the collection of the revenue; provision for branches in foreign countries to facilitate foreign trade; limited loans on real estate security to satisfy banks in agricultural communities; circulation of all checks at par through clearing-house facilities by the regional banks, and so forth.

FUNDAMENTAL VARIATIONS.

The fundamental variation of the bills is in the mandatory character of the Glass-Owen bill, practically uprooting the present system and assuming Government control of the bank function of note issue, which I anticipate will incur violent opposition and dissatisfaction unless materially changed. It does not meet my ideas of right, that the law should require one party to contribute the capital for an investment and give some one else not only control of it but the whole profit thereon beyond a small percentage which is less than the capital now yields.

The Levy bill, through voluntary action on the part of the banks, preserves their individuality, and with no violent changes restores to them all the normal functions of banking, providing at the same time the method whereby in times of commercial crises they may combine for mutual protection of themselves and the community.

Among many letters received by me concerning the Levy bill I append one written by a leading merchant of Providence, R. I., which clearly and forcibly expresses how the matter is viewed by the business interests:

I have read your bill amending national banking laws and your argument in support thereof.

I do not claim to be skilled in banking matters, but I do claim to understand a plain business proposition when I see it.

It seems to me that in drawing the distinction between actual money and bank debts which are used as money you divest the whole subject of banking of much of its mystery and put your remedies for our financial ills as a plain business proposition which everybody can understand. I think your suggestion of an interconvertible bond a much better method of getting rid of the present bond-secured currency than the plan suggested by Mr. Aldrich to issue 3 per cent bonds and thus put the country to an additional interest expense of more than $7,000,000 per annum.

I think it is much better to preserve the separable individual units of our banking system, giving them the power to exercise all the normal functions of banking, rather than to concentrate the functions of note issue, which is the most important to the industrial and agricultural interests of the country, in one central institution.

I think it is most desirable to have the paper representatives of coin, which we use as and call money, to be based on a gold reserve in preference to any paper promise to pay, though it may be issued by the Government; or the promise of any bank, though located in places designated "reserve cities."

I think the fixing of a maximum limit for the "working balance" of the Treasury will prevent the interference with the industrial interests of the country as now is the case, through the withdrawal of currency in the collection of temporary excessive revenue; and that the deposit of such excess in the banks with adequate security keeps the revenue always available, while it allows the public the benefit thereof until needed for Government purposes.

I think one great advantage of your plan is that there is so little that is mandatory about it. Nearly all the provisions are to be availed of voluntarily. You give the banks the opportunity to avail of the benefits, removing restrictions which have heretofore hampered them in the exercise of their normal functions, but leave them free to take advantage thereof or not, and in this way there can be no shock to business or violent change to impede our progress.

I trust you will be successful in having your bill enacted into law.

Mediation, Conciliation, and Arbitration.

SPEECH

OF

HON. S. KIRKPATRICK,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 15, 1913,

On the bill (S. 2517) providing for mediation, conciliation, and arbitration in controversies between certain employers and their employees.

Mr. KIRKPATRICK. Mr. Speaker, the reenactment of the Erdman Act, together with certain amendments thereto at this particular time, in my judgment is more important to all our people than all the tariff and currency legislation that could be strung on the calendar of this House for any considerable time. Incomplete as it seems to me, I will cheerfully support the measure with unstinted approval, still I desire to point out some apparent defects in the bill. The measure comes from the Judiciary Committee, and the House seems to have agreed to its consideration with the privilege of two amendments, and these can only originate with the committee. The object sought in the speedy passage of this act being to apply in an emergency when there is thundering at our doors a contest between labor and capital, the magnitude of which the world has never experienced, then why not make it possible for this arbitration board to agree by the selection of five, seven, or nine members, instead of six, as provided in the bill, thus rendering it possible, and I might say probable, for the board to divide in halves with no practical results? I would increase the number of the board to nine members, as this would give a wider range of hearing and representation on said board.

Some have said that arbitration would curtail litigation in the trend of its influence. However, be this as it may, men of legal attainments are patriotic and have high ideals of industrial progress and prosperity. At no time in the history of industrial developments has there ever been an epoch such as now exists, where labor and capital were so nearly agreed to arbitrate their differences. As for myself, in dealing with these industrial elements I would guard as sacredly the legitimate interests of capital as I would that of the man who occupies a cottage or a hovel. I might, however, discriminate between the two, as did Judge Gresham, where, under an order of the court, the Wabash Railroad went into the hands of a receiver. The following day the officials of that road appeared and demanded their pay. "Stand back," said the judge, "I am going to pay off the tin-bucket brigade first."

Mr. Speaker, I use the word labor in advance of capital because of the fact that labor creates all wealth and should be entitled to the first and highest consideration. Senator Wade once stood up in the United States Senate and said, "I am for the laboring portion of our people. The rich can take care of themselves."

Alas, there are too many of us who do not consider or contemplate the gravity of existing conditions. Two years ago, when the downward stroke of public demand was made for a reduction in rates to be applied to all carriers, I said, "Do not allow the pendulum of public opinion to swing too far, because of the fact that at that particular time the cost of building and equipment had advanced beyond all previous records, and that too great a reduction would not profit the labor world." And now after 40 years as a laborer among laborers I am about to witness the consummation of a principle so long and devoutly wished for—that under an agreement of arbitration all our people will realize that all have common interests in the growth and development of all legitimate industry.

Then, in conclusion, permit me to say, in the language of one of our great captains, "Let us have peace."

Government for the People.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 1, 1913.

Mr. CULLOP. Mr. Speaker, I desire to call the attention of the country to the significant statement in the following article, which appeared in the Washington Times of July 31, 1913:

THE BAROMETER GOES UP.

The United States Steel Corporation reports earnings for the quarter ended June 30 as $41,219,813, with one exception the largest for this period in the company's history.

The steel market is looked upon as the barometer of business conditions. Under any circumstances at all, therefore, the publication of such figures could be accepted as gratifying. Still more pleasing is it at a time when the industry is facing a very material reduction of the tariff on its products. The earnings show not only that impending changes have led to no cessation in the steel industry, but that consumers and producers in general have no fear of such a disturbance of business that they must make early preparations to meet it.

The report conveys one other suggestion. If the notable cut in the tariff on steel products promises lower prices, why have purchasers continued to buy heavily? Surely sales in this period have not been only of material for immediate use.

This editorial states the facts as given by the statistics furnished by this great industrial institution, the greatest in the country. It is most encouraging and is a fair representation of the real situation existing in every industrial department of our great country. The condition of the iron and steel business in this country has long been taken as the correct barometer of the true business situation. This report clearly and conclusively shows there is no basis for alarm or stringent times. It is calculated to and will stimulate business activity and accelerate the prosperous conditions now attending all our industrial operations. This splendid showing should forever still the voice of the "calamity howler," who goes over the country talking about panic. To his great sorrow his vocation is gone, and around and about him are abundant evidences for the refutation of his preposterous declarations. The conditions are most marvelous, and the like has never been witnessed before in the history of this country under similar circumstances. We are radically changing the fiscal policies of the greatest country on earth, changing the revenue system from a protection to a revenue basis, revolutionizing the whole system. The policy of a protective tariff has been our fiscal policy for a half century, and it is being transformed into a revenue policy, reduced on an average about 50 per cent, and yet while this radical change of policy is being made the business conditions of the country are being adjusted to it without interfering or even checking its wonderful and most prosperous progress.

Search will be made in vain to find a parallel. There must be a reason for this happy condition. Sir, the reason for it is found in the fact that the people throughout the country have confidence in the executive and the legislative departments of this Government. They believe in the fearless, honest, high-minded man who presides over the destinies of this great Nation, Woodrow Wilson; they believe in the militant Democrats composing a majority of both branches of the National Congress; they believe in the principles of the Democratic Party as enunciated in the Baltimore platform and the determination of their high officials to carry them into execution, both in spirit and in letter. With these policies crystallized into legislation, the business of the country is safe, the rights of every citizen guaranteed under the law, and prosperity, which may shower its blessings on all alike, is assured. The people understand now the Government is administered for all and not alone for a favored few, as has been the case under Republican administrations. They understand it is the purpose to open the door of opportunity to all and not close it in the face of the many, in order that a favored few may reap golden rewards as the pampered beneficiaries of special privilege, as has heretofore been too frequently done. This understanding inspires confidence, encourages business, quickens industry, stimulates prosperity, and produces the healthy conditions existing at the present time.

The iron and steel business is not the only business in a highly prosperous state—the best ever witnessed in its history—but every other industry is enjoying similar conditions.

The merchant is enjoying the greatest trade he has ever known, the traveling salesman is making more sales than it has ever been his good fortune to make heretofore, and all mercantile pursuits are thriving to a degree hitherto unknown.

Farm products are commanding top prices everywhere. Wheat at harvest time, with a most bountiful yield, is bringing 85 to 90 cents per bushel; corn, with the largest acreage in cultivation ever known, promising a bumper crop of 3,000,000,000 bushels, is bringing to-day 65 to 70 cents per bushel; timothy is selling in the field at from $16 to $18 per ton, and clover hay at from $12 to $14 per ton; horses and mules never sold higher than now; for wool and sheep the farmer is realizing splendid prices; cattle bring from 9½ to 10 cents per pound; hogs sell from 8½ to 9 cents per pound. Better prices for farm products were never realized. These products will never be cheap again, for the reason the difference between the amount produced and consumed is no longer large. The farmer never received better prices in the history of his vocation.

The manufacturers of this country this year have more and larger orders than ever known in their business. They are taxed to their utmost capacity, and many of them all over the country are enlarging their plants to meet the increased demands for their production. This is an era of prosperity under the inauguration of Democratic policies, with Democratic officials in office determined to carry out faithfully the Democratic doctrines which the people have approved and which the country supported.

There is nothing in the signs of the times which presages adversity or stringency, but everything indicates a prosperous era and a successful career in all lines of business. The people expect the policies heretofore outlined by the President to be carried into execution and the promises of the Democratic Party faithfully kept in order that the country may profit therefrom and in reality have a Government for the people and not alone for the special interests. The splendid conditions existing all over the country, the great activity in all branches of business, the growing demand for all productions, the universal employment of labor at remunerative wages, the contentment of the producers in every department of our great and diversified industrial pursuits, assure the people of a continuance of these healthful and happy surroundings.

It is an indorsement of the wise and frugal policies already outlined by the Democratic Party. Supported with the belief of a great majority of the people, they will be enacted into laws and executed. It is the assurance of the confidence of the country that it has faith in the wisdom of its policies.

Under the policy of a tariff for revenue the natural law of supply and demand regulates prices and eliminates the artificial character in values, regulates markets on a natural and stable basis, destroys monopoly, and stimulates real prosperity, founded upon a wholesome basis. Business activity under such conditions is healthy, genuine, and lasting. It is not dependent merely on legislative dictum for its stability. If prices of commodities are high under such conditions, it is because of the demand and not because of legislative action increasing the prices. This produces real and not artificial conditions in our commerce.

The wise and splendid administration of President Wilson has set a new and wholesome example in the distribution of the public funds in the Treasury by depositing the same in the country banks, where they may be employed in assisting the legitimate industries of the country.

This policy can not be too highly commended. It is much better to have placed the idle money in the country banks, distributed over the agricultural sections, so it can be employed in moving the bountiful crops now being harvested, so as to assist legitimate business, than to have deposited it in the banks of Wall Street, for them to loan at a high rate of interest to stock speculators to buy and sell watered stocks and fleece the unsuspecting public. This action on his part deserves the approval of the American people and demonstrates his intention of giving the country an administration in the interests of the whole people and for the promotion of the general welfare of the entire country. It is a welcome assurance that he is determined to make this, as its founders intended it should be, a Government for the people, a Government for the benefit of the many, a Government the blessings of which, "like the gentle dews of a generous heaven, shall fall on all alike."

Hetch Hetchy Bill.

EXTENSION OF REMARKS

OF

HON. JOHN I. NOLAN,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 12, 1913.

Mr. J. I. NOLAN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following circular letter signed by the 11 members of the California delegation bearing upon the Hetch Hetchy bill now pending before the House.

WASHINGTON, D. C., *August 1, 1913.*

DEAR SIR: The Public Lands Committee of the House, after two months' painstaking investigation, unanimously reports in favor of the use of the Hetch Hetchy Valley in the Yosemite National Park as a reservoir site for San Francisco.

The use of this valley is also approved by the Secretary of the Interior, the Secretary of Agriculture, the Secretary of War, the Chief of the Reclamation Service, the Chief of the Geological Survey, the Chief Forester, and by Gifford Pinchot, former Chief Forester.

The irrigationists who have prior rights on the Tuolumne River also desire this bill passed, as they are assured water, which they would not otherwise obtain.

The Hetch Hetchy Valley is an inaccessible canyon, 30 miles from the Yosemite Valley proper. The San Francisco project proposes to make this an accessible mountain lake, with roads and trails leading to the high Sierras.

The only opposition to this project comes from a small number of well-intentioned persons who wish to have the valley remain in the state of nature. You no doubt will receive protests from these people. Members of the California delegation in the House earnestly request you to not prejudge this proposition in favor of the nature advocates, and earnestly request you to read the hearings before the Public Lands Committee and the committee report which will accompany the bill. We feel that with the full facts before you San Francisco's request will be granted. The city needs this water supply and the completed project would be of inestimable benefit to one-fourth of the population of the State of California.

Sincerely, yours,

JOHN E. RAKER,
DENVER S. CHURCH,
JULIUS KAHN,
JOHN I. NOLAN,
WILLIAM KENT,
CHAS. W. BELL,
J. R. KNOWLAND,
WILLIAM KETTNER,
WM. D. STEPHENS,
C. F. CURRY,
E. A. HAYES,

Representatives from California.

Why I Attend Church.

EXTENSION OF REMARKS

OF

HON. SCOTT FERRIS,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 8, 1913.

Mr. FERRIS. Mr. Speaker, I have just read in Leslie's Illustrated Weekly of August 7 an article by my colleague in Congress from Oklahoma, Hon. CLAUDE WEAVER, which is well worthy of space in the CONGRESSIONAL RECORD of this Congress.

The article teems with brilliancy, pathos, and a devotion to the church of God. It deserves to be read and referred to in every church and Sunday school in the United States.

I ask unanimous consent, Mr. Speaker, to incorporate it in the CONGRESSIONAL RECORD that it may there be preserved for those who come after us.

The article is as follows:

[From Leslie's Illustrated Weekly of Aug. 7, 1913.]

WHY I ATTEND CHURCH.

(By Hon. CLAUDE WEAVER, Congressman from Oklahoma.)

It is sweet on a summer's morning, when the air is aquiver with the love songs of the birds and fragrant with the odor of roses blown, to hear the music of the churchgoing bells, an invitation to the world-wearied to enter God's temple and find peace, because the instinct of worship is in the heart of man and the church is the temple of the living God.

I go to church because I find peace there, that peace which De Quincy described as a resting from human labors, a Sabbath of repose, a respite granted from the secret burdens of the heart, as if I stood at a distance and aloof from the uproar of life; as if the tumult and fever and strife were suspended; as if there brooded over me a dovelike and halcyon calm.

I go to church because I love the music that I hear there, the mighty roll of the great organ, mingled with the marvelous symphonies of that divine stringed instrument, the human voice, untwisting all the chains that tie the hidden soul of harmony.

I go to church because I delight to hear the teachings of the preacher, whose soul is dedicated to God, whose field is as wide as God's universe, whose theme is the destiny of man, and whose words are the oracles of Fate. Marvelous is the spell of the preacher to whom God has given genius and consecration and the power of illustration drawn from the old, sacred, immortal Book, and from the miracles of nature, no less revealed in the crimson-tipped flower turned up by the plowshare of Robert Burns upon the soil of Ayr than in the long reaches of the star-girt skies.

I go to church because "the way is dark and I am far from home," and because the church is the polar star to light my pathway in the rayless night.

I go to church because the church ministers not only to the spiritual but also to the material needs of life, and because it is there that the charities that soothe and heal and bless are scattered at the feet of man like flowers.

I go to church because in that atmosphere vice and crime wither and die.

I go to church because I hear the teachings of the philosophy of Jesus, the incomparable man; and if you say his teaching is philosophy and not religion and that he was a man and not a god, then the philosophy of that man has redeemed the world from savagery and blessed mankind with Christian civilization, and, to my mind, it is a thing worth while to hear.

I go to church because I find there consolation and hope; because I see there the dawn and not the sunset; and it is better for man, if the hope is baseless and the vision but an elusive phantom, to cherish a dream so glorious and beautiful than to be weighted down and crushed with the quarried mountains of a world without hope and without God.

Additional Judge, Eastern District of Pennsylvania.

EXTENSION OF REMARKS

OF

HON. JAMES W. BRYAN,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 15, 1913.

Mr. BRYAN. Mr. Speaker, our judicial system is wrong in many essential particulars. That can be well illustrated from the facts of this case. The eastern district of Pennsylvania has two Federal judges, Judge Holland and Judge Thompson. Each of these judges holds office during good behavior, which is generally interpreted for life. There is a great deal of business to be done, and one of the judges, Judge Holland, is entirely unable to perform the duties of his office. He is sick and is searching for health. The gentleman from Pennsylvania [Mr. PALMER] has said here in this debate that Judge Holland "is now in such physical condition as to hold out absolutely no hope that he will ever be able to return to the bench." Judge Holland has served as Federal judge for nine years.

The judge's salary is $7,000 per annum. This money theoretically is paid him for services performed. Our system does not provide for a pension to this judicial officer. It necessarily follows that Judge Holla d is drawing down his salary absolutely without right, since he is not rendering the required equivalent service therefor. In contemplation of law he is paid for performing the many and delicate duties of that office, but in fact he has become a national charge. The taxpayers of the country are to pay him $7,000 a year so long as he lives.

A THIRD JUDGE TO BE NAMED.

But that is not all. Congress is now called upon to name another judge to perform the duties of Judge Holland at $7,000 per year so long as Judge Holland lives. The President is to appoint another lawyer who has done well in his profession and presents the proper Pennsylvania indorsements, and place him on the pay roll for life. For better, for worse; in sickness, in health; in poverty, in wealth—till death do them part, this judge and the pay roll will be joined in holy bonds. No divorce here, no separation possible. He is as safe as a drunken husband married to a rich widow in South Carolina. To get "unmarried" is impossible. "Once married" to the Federal pay roll as a Federal judge, "always married."

The venerable Senator from South Carolina [Mr. TILLMAN], on the Senate floor a few days ago, in describing the legal status of husband and wife in South Carolina, gave, it seems to me, the nearest likeness I have read of the union that exists between a Federal judge and the pay roll. The Senator said:

It is true that, if life together becomes unbearable, a man and wife may separate and live apart, but even then the bonds that bind them are only stretched, not legally broken. In South Carolina we tie a matrimonial knot that baffles alike the skill of legal logic, the dexterity of sophistry, the nimble fingers of a false expediency, and the brute strength of a statute. The knot we tie holds faster than the fabled "Gordian knot" of antiquity. Ingenuity can not unfasten nor force destroy it. The skeleton fingers of death alone can loose it.

The male chivalry of South Carolina cavaliers has so enacted that a husband, though a drunkard, a sufferer from a loathsome disease, a wife beater, or a vagabond, when once joined with a woman, howsoever pure, intelligent, and lovable, is fixed for life.

"THERE SHALL BE NO PARTING THERE."

It is not the intention of this reference to challenge the Senator's position in lauding this view of the marriage relation. The Senator considers it an argument for exclusive male suffrage and against the equal suffrage for both sexes. I am not to discuss that feature in these remarks, but surely the South Carolina status of a woman who gets the worst of a marriage obligation—and there are a hundred women who get stung in that transaction to one man—is almost identical with the status of the people who get stung by the appointment by a Taft or a Hanna or even by an Attorney General, as is now the plan, of an unworthy judge. The judge may become old, cross, deaf, blind, mean, notionate, cynical, arbitrary, partial, and even corrupt and indecent, but he is judge for life. Impeach him if you can. It is true that there is such a thing as impeachment, but the general rule is that once tied to the Federal pay roll as a Federal judge "the knot holds faster than the fabled 'Gordian knot' of antiquity. Ingenuity can not unfasten nor force destroy it. The skeleton fingers of death alone can loose it."

LIFE TENURE BRINGS COURTS INTO DISREPUTE.

I hold in high esteem the judiciary of our country, but I am utterly opposed to life tenure of Federal judges. The life-tenure practice is doing much to bring the courts into disrepute. The people demand reforms. After much agitation, education, and labor the demand ripens into a live issue and the legislative branch of the Government is so impressed that it must and does yield. The Executive is ready to act, and does act, but the enemies of this particular reform find some judge who by the very nature of his surroundings is bound with bands of steel to the past, whose vision is not of the present or the future, who is probably old and feeble, may be cross and garrulous, likely overworked and in need of mineral baths, who often sits half asleep during long, tiresome days of evidence, and after hearing shrewd lawyers sum up the case decides what is the common welfare, and his opinion of the common welfare becomes the law of the land—indeed, a part of the very Constitution itself.

"Unconstitutional," says the judge. All the work of education and agitation and toil is gone. The people are told that they were about to touch the ark of the covenant—that sacred document, the Constitution. If you want that law passed you must first have the Federal Constitution amended.

Then again, in some other State the same proposition is submitted to a judge whose training was different, who had more human kindness in his nature, knew more of mankind and how the other half lived, was perhaps younger and of happier disposition, and he decides it is constitutional. At this time I only mention this practice which permits conflicting opinions and conflicting decisions as to constitutional provisions.

JUDGES SHOULD COME FROM THE PEOPLE DIRECT.

If the courts of the country are to retain their power to supervise congressional and legislative enactments, granting them life when they approve and as certain death when they disapprove, then these judges ought surely to come from the people direct. They ought to be elected and at the end of their terms of a few years—not more than six—they ought to surrender their commissions. A retirement pension to a Federal judge whom the people had reelected for three or more terms would meet with th approval of many, but I can not condone or encourage unconditional pensions for life without regard to statute, to public approval, or to length of service.

In the present case, Judge Holland has been on the bench for nine years. Why should a public servant in any department be granted a pension of $7,000 a year during the remainder of his life after nine years' service, much of which, no doubt, has been inefficient on account of his deplorable malady? It may be answered, and very correctly, too, that no such pension or gratuity is allowed by any law on the statute books. Then why do judges (for Judge Holland is only one of a large number) take this money without rendering equivalent service therefor? Here is the oath Judge Holland took:

I do solemnly swear that I will administer justice without respect to persons and do equal right to the poor and the rich, and that I will faithfully and impartially discharge and perform all the duties incumbent on me as United States district judge, according to the best of my abilities and understanding, agreeably to the Constitution and the laws of the United States; and that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God.

It is life tenure that breeds this kind of practice. Let the Federal judges know that they must render account of their stewardship to the people who pay them for their service and you will find a better standard of efficiency than is established in many cases.

If it was only a question of revenue, it would not be so bad. The salary drawn down by inefficient judges for whom substitutes are named at public expense is but a small part of the loss. Life tenure and autocratic power must be protected, and weak judges are all too ready to nestle up to powerful men and to intrenched interests to protect them in their position. They are not so poorly informed as to believe that the rank and file

of the people will protect them against the democratic tendencies of all times. Under such conditions it is as natural and necessary that many decisions be influenced against the poor man and in favor of the rich man as it is natural and necessary for sparks to fly upward or for the unrestrained bowlder to crash down the mountain's side. We have always the contest between labor and capital. The representatives of labor claim that their people do not fare as well at the hands of the courts as do the men of great wealth.

MANY LABOR LAWS DECLARED UNCONSTITUTIONAL.

According to a statement of Mr. James Boyle, former private secretary to Gov. McKinley and former consul of the United States at Liverpool, England, published in the Forum in the month of December, 1909, the Supreme Court of the United States has within a recent period declared unconstitutional the following labor laws, which had appeared so humane and fair as to have passed the gamut of popular discussion, legislative enactment, and Executive approval:

That the Constitution be made amendable by majority vote.
The law of the State of New York (passed by the State legislature) limiting the hours of workmen in bakeshops to 10 per day.
The law prohibiting "common carriers" engaged in interstate commerce from discharging employees because of membership in a labor organization, or from discharging them for any reason.
The laws limiting the hours of telegraphers and other railway employees of common carriers engaged in interstate commerce.
The eight-hour law so far as it applies to dredgemen in Government employ.
Federal courts other than the Supreme Court have also declared unconstitutional the law passed by Congress prescribing the hours for telegraphers and other railway employees; and also the congressional law providing for the liability of common carriers engaged in interstate commerce for accidents to their employees.

By the same authority:

There have been a multitude of similar decisions by the State courts, and as they have not been negatived by a higher court or by legislation they must be considered the law of the land.
Maliciously inciting the employees of a railroad which is being operated by a receiver of the court to strike is contempt of court, and punishable.
Combinations of employees to compel railroads to cease using certain cars (because of a strike against the owners or makers) is a boycott, and is an unlawful combination.
An employer is under no legal obligation to give a discharged employee a statement of his service.
The "black list" has been declared lawful.
In the noted case of the Buck Stove & Range Co. *v.* The American Federation of Labor the latter was enjoined from declaring, threatening, or maintaining a boycott.
Combinations to compel a manufacturer whose goods are sold in other States to "unionize" his shop is in "restraint of trade" within the meaning of the antitrust act, and is therefore illegal.
Contracts of public bodies limiting the work to union labor are void.
A law prohibiting an employer from making a condition of employment the withdrawal from a trade union on the part of the employee is unconstitutional.
The "unfair list," when its object is to induce a boycott, is declared unlawful.
A labor organization which compels an employer to discharge nonunion men by threats to notify all labor organizations that the employer is a nonunion one, is liable to action for damages by a nonunion employee as an aggrieved party.
A demand by workmen for a "closed shop" is contrary to "public policy."
A statute compelling corporations to assign reasons for discharging an employee is unconstitutional.
A statute prohibiting "blacklisting" by employers is unconstitutional.
"Picketing" for the purpose of annoying nonunion men is unlawful.

This statement was made in 1909. There have been a large number of similar decisions since that date.

THE CASE AGAINST GOMPERS, MORRISON, AND MITCHELL.

The decision of the Supreme Court of the District of Columbia in Buck Stove & Range Co. *v.* American Federation of Labor (33 App. Cases, D. C., 83) is one of far reaching import. As an outcome of a violation of the "inherent right" of the court to punish for contempt, the head of the American Federation of Labor stands condemned to serve a term in a Federal prison. I shall not attempt to discuss this case except to cite it as one of unusual significance. Mr. J. W. Van Cleave was the principal owner of the Buck Stove & Range Co., of St. Louis. He was also the president of the National Manufacturers' Association, whose manipulations as a corruptionist and insidious lobbyist, with its Mulhall and its millions, constitute the leading sensation of the present day. The Buck Stove & Range Co. employed union and nonunion men. Thirty-five union men in one branch of the company's service got into a dispute with their employer over matters pertaining to hours of work. The difficulty was not satisfactorily adjusted and a strike ensued. The American Federation of Labor indorsed the action of the men, ordered a boycott of the products of the company, and placed its name upon the federation's "We don't patronize" list. The company applied to the Supreme Court of the District of Columbia for an injunction to restrain such boycott. On December 18, 1907, the court granted an injunction, pendente lite, restraining the defendants as prayed for in the bill.

The injunction granted pendente lite in this case was in violation of the Constitution, and the appellate court so decided. It was an absurd autocratic order that trampled upon individual freedom, the freedom of the press, and was entirely unjustified. This is established by the majority opinion of the appellate court, by which the absurd injunction was materially modified, but in my judgment the dissenting opinion of Chief Justice Shepherd should have been the conclusion of the majority. The injunction both as originally granted and as modified by the majority opinion of the court prohibited the publication of the "We don't patronize" list in the American Federationist, the journal of the labor organizations.

The people of this country are not going to permanently stand for such power as permits a life-tenure judge to order an editor in advance of a trial on an ex parte hearing not to publish this or to publish that. Surely if the judge can say what the editor can not publish, by the same token he can tell him what he must publish. The term "freedom of the press" becomes a silly and meaningless phrase under such conditions. The learned judge in his dissenting opinion cited Chancellor Kent, as follows:

It has become a constitutional principle in this country that every citizen may freely speak, write, and publish his sentiments on all subjects, being responsible for the abuse of that right, and that no law can rightfully be passed to restrain or abridge the freedom of speech or the press.

Chief Justice Shepherd continues:

The true ground for the denial of jurisdiction to restrain the publication of a libel destructive of property is that the exercise of such jurisdiction would amount to an abridgment of the freedom of the press by establishing a censorship over the press so enjoined. The soundness of this view is demonstrated in an able opinion by Fenner, J., speaking for the Supreme Court of Louisiana, in such a case. (State, ex rel. Liversey, *v.* Civil District Judge, 34 La. Ann., 741, 745.) He says: "There would be no safe course except to take the opinion of the judge beforehand or to abstain entirely from alluding to the plaintiff. What more complete censorship could be established? Under the operation of such a law, with a subservient or corrupt judiciary, the press might be completely muzzled and its just influence upon public opinion entirely paralyzed. Such powers do not exist in courts, and they have been constantly disclaimed by the highest tribunals of England and America. It has passed into a settled rule of jurisprudence that 'courts of equity will not lend their aid to enjoin the publication of libels or works of a libelous nature, even though the libelous publication is calculated to injure the credit, business, or character of the person against whom it is directed.'"

In view, then, of the provision of the first amendment, I can come to no other conclusion than that the only remedy for libelous or otherwise malicious, wrongful, and injurious publications is by civil action for damages and criminal prosecution. There is no power to restrain the publication.

For the reasons given I can not agree to the terms of the decree as modified. In my opinion it should be modified so as to restrain the acts only by which other persons have been or may be coerced into ceasing from business relations with the Buck Stove & Range Co., but so as not to restrain the publication of the name of that company in the "We don't patronize" columns of the American Federationist, no matter what the object of such publication may be suspected or believed to be.

Chief Justice Shepherd believes the attempt to enjoin Gompers, Morrison, and Mitchell from publishing this list in the American Federationist and from talking about the Van Cleave outfit as unfair was an infringement of the Constitution of the United States, and that Gompers, Morrison, and Mitchell had the right to print and talk about the matter and that no court could take that right from them. Is it surprising that Gompers, Morrison, and Mitchell believed the same thing?

THE COURT'S ORDER MUST BE OBEYED, THOUGH UNCONSTITUTIONAL.

The labor leaders at once appealed from the order to the higher court. They put up their bond on appeal, just like the Mulhall employers had put up their bond on obtaining the order. Notwithstanding the appeal, the order remained of full force till reversed. The fact that the appellate court would modify the order and deliver an opinion that it was an outrage on the Constitution could not abate in the slightest its "inherent"—from God descended—power. "What if it does violate the Constitution, this court's order must be obeyed." This is the uniform position taken by all courts as to their injunctions. It does not lie in the mouth of any puny man or labor leader to question a court's order; if it violates the Constitution, reverse it if you can by the regular, tedious, and expensive course of the law's delays, and by the order of a brother judge, but in the meantime, like a South Carolina wife, obey is the word.

It is worthy of note that obedience does not need be granted to a statute of Congress which violates the Constitution. Not for a moment. If Congress violates the Constitution in the enactment of a statute, no attention need be paid to it. Such a statute is void ab initio. Anyone is at liberty to violate it with impunity—the quicker it is violated and wiped off the statute books the better for all concerned. If Congress were to enact into law the principles of the iniquitous injunction issued for Mulhall's overlords by the court, prohibiting certain publications

and ordering people not to talk about the Mulhall crowd being unfair, no newspaper publisher would for a moment attempt to obey the statute. They would fall back on the Constitution and their rights, as they have done hundreds of times, and then the court would say, as it has said hundreds of times: "You did right; you did not need to obey Congress; the law was unconstitutional." And by its later doctrine the court has found that an "unreasonable" statute is absolutely void and need not be obeyed.

Not only are unconstitutional legislative orders void and entirely unworthy of notice or obedience, although solemnly passed by the House and the Senate and duly signed by the President, but Executive orders, presidential proclamations, treaties with foreign countries, and all forms of Executive demands are void and not worth the paper on which they are written if not in accord with the Constitution. All such may be held in contempt or may be totally ignored.

AN EX PARTE INJUNCTION IS PRIVILEGED ABOVE A STATUTE.

Not so when a judge at the behest of the Mulhall crowd orders men at the head of a great movement for the bettering of labor conditions to suspend exercising their constitutional rights. What if the order does violate the Constitution, it is the voice of the court. It is not the puny legislative or executive department that now speaks; it is the department of the judiciary, which rules like the Kings of England once ruled—by "inherent" right.

Gompers, Morrison, and Mitchell knew this, and they did their very best to obey the order. They took the Mulhall concern off the unfair list and tried to edit their paper to the liking of the court. While the order was on appeal, however, these three men were, on motion of an attorney who was a fellow employee of Mulhall, brought before court and ordered to pay heavy fines and to go to Federal prison, there to do hard labor for 12, 9, and 6 months, respectively, for "contempt" alleged to have been committed in the violation of the injunction. No trial by jury; of course not! Jury trials are designed for the other branches of the Government—the legislative and executive. This is the judiciary enforcing its decree. It makes no difference that the order was made ex parte, before trial, and is yet on appeal. In this case the court is acting under powers superior to statute and the Constitution. It is acting under "inherent" rights derived from God Himself under procedure set in motion by Mulhall's associate, as an humble agent in the hands of God to work out His immutable decrees!

FACTS INVOLVING CONTEMPT VERY INDEFINITE.

Gompers had written and published editorials, had appealed for funds, and had advised the members of the federation as to their duty and their rights, and had made references to this suit and to labor's constitutional rights in campaign speeches. Morrison was in contempt because he had allowed old copies of the American Federationist to be circulated that had this "We don't patronize" list in them. They had obeyed the order and allowed the judge to edit their magazine to the extent of eliminating the "We don't patronize" list from all editions after the order was signed. Malefactor Morrison had also sent out printed copies of the printed official proceedings of a prior convention of the American Federation of Labor which contained a record of officers and committee reports of the convention relative to this very controversy. He had also sent out copies of the Federationist. Mitchell had violated the order of the judge against talking or printing by presiding at a convention of the United Mine Workers of America, where a resolution was introduced calling upon the members of the union not to patronize this outfit of lobbyists and stove makers.

There is nothing in the record of this case to show that this National Manufacturers' Association, of which Van Cleave was the president, was, through one of its representatives, just about this time attempting to bribe Gompers to throw down his work for organized labor and pass into a life of ease, in which case, of course, the case would have been dismissed and the contempt of court duly purged. Yet that very fact seems to be one of the things fully confirmed in connection with the recent exposures of Mulhall, Van Cleave's special agent. It is true that this fact has no direct connection with this case, but it may be very profitably considered as an interesting side light.

JUDGES WHO EDIT NEWSPAPERS BY "INHERENT" RIGHT.

Here we have an illustration of the kind of decisions, the kind of judicial proceedings, life tenure breeds. Men who have the audacity to assert "inherent" power to edit newspapers in which they have no interest by judicial decree and to tell men just what they must think and say ought not to be favored by the people with life tenure in office.

If Samuel Gompers, the head of the American Federation of Labor, or either of its officers is ever compelled to serve one day of the sentence thus imposed upon them for exercising their plainest rights under the Constitution, the people will have an object lesson that I hope will hasten the day when they will assert their independence of old judicial forms and, while maintaining due respect for the court, as an institution, they will require the judges to render account of their conduct at stated terms. There should be no delay, no waiting for the consummation of such an incident before this reform is adopted.

The subjection of judges to recall at the end of a definite term or sooner in case of special necessity is wise and essential. Judicial recall is demanded by the people. It is sure to come. It will not bring disrespect for the court, but the very opposite will be the result.

THE RIGHT OF TRIAL BY JURY.

Courts all over the land are usurping the right of trial by jury more and more. They deliberately instruct the jury what kind of a verdict to render or else let the jury have its say and then the judge renders a verdict to suit himself, notwithstanding the verdict of the jury.

Judge Story in Parsons v. Bedford (3 Peters, 433), one of the very early decisions, said:

> The trial by jury is justly dear to the American people. It has always been an object of deep interest and solicitude, and every encroachment upon it has been watched with great jealousy. One of the strongest original objections taken against the Constitution of the United States was the want of an express provision securing the right of trial by jury in civil cases. As soon as the Constitution was adopted this right was secured by the seventh amendment of the Constitution proposed by Congress, and which received an assent of the people so general as to establish its importance as a fundamental guaranty of the rights and liberties of the people.

Yet it is the order of the present day for courts to set up their orders as superior to statutes and the Constitution. Not only do they alter jury decisions, but they write their injunctions and throw men in jail without jury trial for alleged violation of their order made by "inherent" right.

THE IDAHO JUDICIAL OUTRAGE.

Following the lead of the Federal judges our State judges are growing more and more arbitrary. In point is the Idaho judicial outrage of last year. In this case the judges not only ruled that they had "inherent right" to punish for contempt and to violate the right of trial by jury, but they actually asserted and exercised authority to supersede and violate a definite legislative enactment on the subject of contempt. These supreme court judges, a majority of the court anyway, had played favorites between Taft and Roosevelt as candidates for President of the United States, and by twisting the statutes of the State had made it almost impossible fo. an elector to vote for Roosevelt. It was a coarse piece of judicial jobbery, and very naturally the Progressives had to get busy to overcome as nearly as possible the effect of an order depriving the party of representation on the ballot.

Col. Roosevelt sent the following message, extremely remarkable for its mildness under circumstances so provoking to anyone possessing any sense of justice whatever:

CHICAGO, ILL., *October 21, 1912.*

To J. H. GIPSON and PAUL DAVIS,
Chairman and Secretary of the Progressive State Central Committee:

Through you I desire to appeal to the men and women of Idaho not to permit themselves to be disfranchised as the court has sought to disfranchise them. It is impossible to protest too strongly against what is literally the infamy of this decision. Every upholder of law and order and every sincere well-wisher of the cause should take the lead in condemning such utterly reactionary conduct by a reactionary court.

Absolutely without warrant of law and in the interest only of the great apostles of special privileges in politics and industry the reactionaries wish to disfranchise the people whom they recognize in the Progressive Party as the only party which really and in good faith stands for the people.

It is an attempt to beat the cause by trickery and chicanery, because those who inspired the attempt know that they have no chance of success in a fair and open fight before the people themselves.

This action by the court has shifted the issue in Idaho to a square issue as to whether or not the people are to be allowed to express their deliberate judgment. It is an attempt to stifle such expression of deliberate judgment by the people.

It was an infamous thing for the Republican State central committee to bring such an action, and the decision by the reactionary partisan court before which it was brought was against the law, against equity, against justice, and against the whole course of decisions in all our American courts.

THEODORE ROOSEVELT.

C. O. Broxon, editor of the Boise Capital News, published the Roosevelt message and a similar one from United States Senator POINDEXTER. These judges ordered Broxon and R. S. Sheridan and A. R. Curzen, who the judges decreed in advance aided and abetted the editor, to be arrested for contempt of the court's high authority. It is impossible for me to cite all the details of this judicial travesty on personal honor as well as official fidelity. For the present purpose it suffices to say that the court, under exercise of its "inherent" right, fined the

men and sent them to jail. The following is a copy of the order of commitment:

In the Supreme Court of the State of Idaho.

D. C. McDougall, attorney general of the State of Idaho, plaintiff, *v.* R. S. Sheridan, C. O. Broxon, and A. R. Curzen, defendants.

ORDER OF COMMITMENT.

The State of Idaho to the sheriff of the county of Ada, greeting:

Whereas the judgment of this court has upon this day been pronounced and entered in the above-entitled cause, to the effect that said defendants be adjudged guilty of the offense of contempt of said court, a certified copy of which judgment is hereto attached and made a part hereof;

Now therefore this is to command you, the said sheriff of the county of Ada, to take and safely keep and imprison the said defendants, R. S. Sheridan, C. O. Broxon, and A. R. Curzen, in the county jail of the said county of Ada for the period of 10 days, commencing on the 2d day of January, 1913. And these presents shall be your authority for the same.

Witness the Hon. George H. Stewart, chief justice of the Supreme Court of the State of Idaho, this 2d day of January, 1913.

Attest my hand and the seal of said court the day and year last above written

[SEAL.] J. W. HART, *Clerk.*

COURTS SUPERSEDE ALL LAW AND CONSTITUTIONS IN WEST VIRGINIA.

Perhaps the most infamous of all assaults upon the most fundamental human right was the martial-law decision of the Supreme Court of West Virginia in the recent insurrection there. A full copy of the decision of the court and the dissenting opinion referred to may be had by procuring Senate Document No. 43, Sixty-third Congress, first session. The dissenting opinion of Justice Robinson, from which I insert excerpts, sets forth the awful crime of this decision as follows:

> The majority opinion boldly asserts that the sacred guaranties of our State constitution may be set aside and wholly disregarded on the plea of necessity. It had long been supposed that such a doctrine was forever condemned and foreclosed in this State. It was believed that the ringing denouncement against that doctrine in the opening sentences of our constitution was sufficient to bar it from recognition by any citizen, official, or judge. The unmistakable words were supposed to be too clear ever to endanger our people by a disregard of their meaning. Hear them:
>
> "The provisions of the Constitution of the United States and of this State are operative alike in a period of war as in time of peace, and any departure therefrom or violation thereof, under the plea of necessity or any other plea, is subversive of good government and tends to anarchy and despotism." (Art. I, sec. 5.)
>
> How closely akin are these words to those that were uttered by the Supreme Court of the United States shortly prior to the adoption of our Constitution:
>
> "The Constitution of the United States is a law for rulers and people, equally in war and in peace, and covers with the shield of its protection all classes of men at all times and under all circumstances. No doctrine involving more pernicious consequences was ever invented by the wit of man than that any of its provisions can be suspended during any of the great exigencies of government. Such a doctrine leads directly to anarchy or despotism, but the theory of necessity on which it is based is false; for the Government, within the Constitution, has all the powers granted to it which are necessary to preserve its existence." (Ex parte Milligan, 4 Wall., 120; 18 L. Ed., 281.)
>
> A decision based on that which our people have so clearly condemned and inhibited from recognition in our State government, and which the highest tribunal in the land has so plainly declared to be pernicious and to have no place in our form of government, meets my emphatic dissent.
>
> It is not difficult to comprehend why our State constitution contains such a clear and unmistakable protest against the disregard of constitutional guaranties under the plea of necessity. During the decade immediately preceding the making and adoption of that instrument, this doctrine of necessity was a live issue before the American people. Indeed, just at the close of the Civil War and immediately thereafter the doctrine was one of the foremost issues of the times. Events brought it vividly before the Nation. Those who applied the doctrine during the war and its close for the summary trial and execution of noncombatants were met with the accusation of murder from both North and South. Even in one of the counties of this State a citizen was summarily deprived of his life under the plea of military rule and the doctrine that necessity suspended the constitution. Instances of this character, as well as the many instances of imprisonment without civil trial, caused the question to come immediately before the statesmen of the times, and, by the debates upon it, to come directly before all the people. People had become thoroughly familiar with the subject. Great men of the North, foremost among them the illustrious Garfield, had thundered against the doctrine. And at last the great judicial tribunal of the Nation had set its seal of condemnation upon it.
>
> * * * * * * *
>
> Martial law can not rightly be sanctioned in West Virginia in the face of this constitutional declaration. For, as the majority opinion admits, martial law is a departure from the constitution, a plain violation thereof, under the plea of necessity. It substitutes the law of a military commander for the law of the constitution. It is the total abrogation of orderly presentment and trial by jury, so jealously guarded by the constitution. Then, since martial law is such a plain departure from the constitution, that instrument itself brands martial law as subversive to good government and as tending to anarchy.
>
> Having made this general declaration against martial rule, the makers of our constitution went further. They provided that the privilege of the writ of habeas corpus should not be suspended. This was a radical change from the constitution of 1863, and was radically different from the Constitution of the United States. Our constitution of 1863 had provided:
>
> "The privilege of the writ of habeas corpus shall not be suspended except when in time of invasion, insurrection, or other public danger the public safety may require it." (Art. 2, sec. 1.)
>
> The Constitution of the United States provides:
>
> "The privilege of the writ of habeas corpus shall not be suspended unless when in cases of rebellion or invasion the public safety may require it."
>
> But in the making of our present constitution, in dealing with the great writ of freedom, no exception was made. Again unmistakable, imperative words were used:
>
> "The privilege of the writ of habeas corpus shall not be suspended." (Art. 3, sec. 4.)
>
> * * * * * * *
>
> "The military shall be subordinate to the civil power; and no citizen, unless engaged in the military service of the State, shall be tried or punished by any military court for any offense that is cognizable by the civil courts of the State." (Art. 3, sec. 12.)
>
> There is no ambiguity in these words. He who runs may read. They directly strike at martial law; they directly inhibit martial law; for the height of martial law is the supplanting of the civil courts by military courts. But this provision expressly ordains that military courts shall never take the place of the civil courts of the State for the trial of civil offense. No military sentence for a civil offense can rightly stand in the face of these words. Nor can these words rightly be overlooked in order to uphold any such military sentence. To do so is to make the constitution a rope of sand.
>
> The men of the constitutional convention of 1872 had all witnessed the suspension of the privilege of the writ of habeas corpus and the trial and sentence of citizens by military courts. They had learned that departure from the constitution, though dictated by the best of motives, was liable to abuse. Experience admonished them to guard against anything of the kind in the future of their State. They no doubt believed that by the three provisions which we have noticed they had banished all claim for martial law in this State. Determination to do so was plainly dictated to them by the experiences through which they had passed. By those experiences they had come to know the truth of that which Hamilton and written long years before:
>
> "Every breach of the fundamental laws, though dictated by necessity, impairs that sacred reverence which ought to be maintained in the breast of rulers toward the constitution of a country and forms a precedent for other breaches where the same plea of necessity does not exist at all or is less urgent and palpable." (The Federalist, No. 25.)
>
> Can these direct provisions of our constitution be overcome by any implication that the people meant to retain martial law whenever an executive declared it necessary? Is there a presumption, as the majority opinion claims, against intent on the part of the people to abolish martial law? Can any such presumption prevail against the direct declarations which absolutely negative any such presumption? No; the principle of martial law can not be inhereně connected with any constitutional government in which the constitution itself directly declares against the principle, as our constitution does.

Yet this West Virginia court sanctioned the suspension of all the laws and the State and National Constitutions, permitting drumhead courts in the most informal manner to condemn men to hard labor for terms of years. There could have been no reason for the decision except an unjust or corrupt allegiance between the West Virginia court and big business. No habeas corpus, no jury trial, a reign of barbarous brute force was instituted. The investigation of these transactions by a Senate investigating committee was most ably begun, but for some reason has been abandoned, for the present at least, greatly to the disappointment of those who were following the investigation.

REACTIONARY FORCES GENERALLY DICTATE APPOINTMENTS TO FEDERAL BENCH.

The manner in which Federal judges are named tends to render them under obligation to special interests. Chambers of commerce and bar associations generally make the recommendations. If there is any organization more reactionary than the commercial interests themselves, it is an ordinary bar association. Judge Hanford, in the State of Washington, while being investigated after impeachment on the floor of the House, resigned—and it was not because he was tired of his job that he resigned. Within a few hours he attended a meeting of the Washington State Bar Association, in session at Tacoma, Wash. A corporation lawyer had just denounced the recall of judges and of judicial decisions. Tom Dovell, who represented the Taft impostors as delegates to the Chicago convention, was the presiding officer. Beverly Colner, who presided over the State Republican committee that stole the delegates from the people, was in the audience. As Judge Hanford entered the room, Colner mounted a chair and shouted to the lawyers to stand, and they did stand and gave the judge an ovation. The congressional investigating committee had not yet left for the National Capital. The association also passed a vote of confidence in favor of the judge.

The organization members of the association immediately joined with the big interests of the State and prevailed on President Taft to appoint Clint Howard, of Bellingham, a man of known ability, but a corporation lawyer of unusual shrewdness, an ex-president of the association, to succeed Hanford. Confirmation of this appointment was defeated by Senator POINDEXTER. Upon such recommendations a lawyer is appointed to the bench.

THOMAS JEFFERSON WARNED THE PEOPLE AGAINST AN "INDEPENDENT" JUDICIARY.

The gentleman from Georgia [Mr. BARTLETT] on the floor of the House the other day said:

> If you do not want to see judges recalled, if you do not want the socialistic disposition of the time to demand that decisions shall be submitted to the test of a popular vote, then you ought to be careful, aye, you ought to be quick to permit charges made by reputable citizens against the conduct of those who wear the ermine to be investigated.

There is a tendency on the part of both the old parties in this day to censure the Progressive Party in its position, taken generally by its leaders all over the country, for a definite curbing

of the power of the judiciary, yet when Thomas Jefferson, the greatest Democrat of his day, considered the judiciary, here is what he said:

A judiciary independent of a king or an executive alone is a good thing, but independence of the will of the people is a solecism in a republican government. * * *

The judiciary bodies were supposed to be the most helpless and harmless members of the Government. Experience soon showed, however, in what way they were to become the most dangerous; that the insufficiency of the means provided for their removal gave them a free hold and irresponsibility in office; that their decisions, seeming to concern individual suitors only, pass silent and unheeded by the public at large; that these decisions nevertheless become law by precedent, sapping by little and little the foundations of the Constitution and working its change by construction before anyone has perceived that that invisible and helpless worm has been busily employed in consuming its substance.

JUDGES SHOULD BE ELECTED AND SUBJECT TO RECALL.

I not only oppose life tenure, but I oppose this manner of selecting judges. Judges should be elected by the people of the district in which they are to preside and exercise judicial functions. There is no reason why judges should not be responsible to the people and be subject to recall. No man who is not strong enough to do right, whether subject to recall or not, is fit to hold the high and exalted position of judge, either of a State or Federal court.

ANOTHER JUDGE IS NOT THE PROPER REMEDY.

I am opposed to treating the situation as it is treated in the pending measure. Of course, the appointment of another judge will give the people of Philadelphia relief, but Judge Holland, if no longer able to perform the duties of his office, should resign or be removed from office.

Down-East Industries and State of Maine Folks!—Where the Democratic Tariff Bill Hits Everyone of You.

EXTENSION OF REMARKS
OF
HON. AUGUSTUS P. GARDNER,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 24, 1913.

Mr. GARDNER. Mr. Speaker, I submit the following extracts from remarks of Senators and Representatives in Congress on the pending Underwood-Simmons tariff bill:

HON. ASHER HINDS, OF MAINE, IN HOUSE OF REPRESENTATIVES.

NATURE OF WORLD-WIDE COMPETITION.

Mr. HINDS. The watchword of this new administration is competition. It is assumed that the American Nation is getting lazy; that they need an incentive to greater effort. I quote from the address of the President:

The object of the tariff duties henceforth must be effective competition, the whetting of American wits by contest with the wits of the rest of the world.

The words of the President deserve to be weighed always; but I wonder if he and the American people realize what that dire world "competition" is. I once knew an old soldier who served in the Civil War, and for many years also in the campaigns of the West. I asked him if a white soldier was the equal of an Indian in a campaign in the Indian country. His answer was, "A white man can compete with an Indian if he is willing to live as the Indian lives." The American people can compete with the markets of the world, perhaps, if they are willing to live as the people of the competitive nations live. It can not be, however, that the Members of this House have pictured to themselves what this competition means. It can not be that they realize the sordid and mericless conditions of modern competition, which inevitably results in leaving out the labor of men and putting the burden upon the shoulders of women and children.

THE NATIONS WHICH USE WOMEN'S LABOR.

Readers of the Century Magazine for February, 1913, noticed an article on Japan's commercial crisis by Mr. James Davenport Whelpley, who has been one of the commercial agents of the Department of Commerce and Labor, and one of the most discerning observers of financial and economic conditions in the country. In this article he shows that in the industries of Japan there are nearly twice as many women as men on the pay rolls of the country, and it is the testimony of all large employers that women are the industrial backbone of the country. The employment of women and children is the secret of the competitive power of the Japanese textile industries. Reduced to percentages, the proportion of wage-earning women in the great industrial nations is given as follows:

Japan, 50 per cent.
Great Britain, 25 per cent.
Germany, 20 per cent.
United States, 14 per cent.

THE TRAGEDY OF COTTON.

That brief table tells the story of modern competitive life. Let us examine a little further the conditions of this strife which we are invited to enter. As we examine, the cry "Cotton is king," so often heard in the Hall of this House, comes to our ears, for about the cotton industry competition rages most fiercely. It was introduced into modern commercial life by a great tragedy. The home of the industry was in India, where a large part of the men, women, and children were engaged in spinning and weaving on household looms, which produced every grade of material, from the coarsest to that of such marvelous fineness that a lady could draw a robe made from it through a finger ring. But England harnessed the steam engine to the natural labor of the women of Lancashire, denied the help of a tariff to India, and took from her the cotton industry. Deprived of their industry, the people of India had to turn to the land, there to lead a life of penury, varied by recurring famines.

England, possessed of this imperial industry, developed it almost beyond the imagination of man, and in the year 1913 she has not only the world-wide cotton market which feeds so many of her people, but also one of the most unique and distressing social problems which ever afflicted a nation. In England proper 500,000 people are cotton operatives, and 65 per cent of that great number are women and children. This great industrial army of 325,000 women and children labor in the mills of England to hold for Great Britain the cotton market of the world.

AMERICA IN THE WORLD COMPETITION.

To-day the greatest competitor of England is the United States. To-morrow it will be Japan. The cotton operatives of America number 370,000 in round numbers, 50 per cent of whom are men, the other 50 per cent women and children. It is manifest, then, that the cotton industry has forced America to put burdens upon the women and children, but not to the same extent as in England. Yet America still holds out in this fierce competition for the ideal of our race, which has always been manly men who make their way in the competitions of the world and womanly women who make the homes of the Nation. It is not necessary to review the cotton industry of Germany and Japan. It is worthy of note, however, that among the operatives of the cotton mills of Japan there are five women for every man, showing that this industry which is commercially most promising is being built up almost entirely by the labor of women. Not only this, in the recent report of the American minister we are informed that the new Japanese factory law provides that no children under 10 years are to be employed, and no children under 15 or women are to be employed more than 12 hours a day. But the provision in regard to children applies only to new help, and children of 10 years may be continued if they are already in the factory. But the Government may extend the working time of women and children to 14 hours for a period of not more than 15 years after this law goes into effect. In the cotton industry, then, it seems that the pleasant prospect of world competition which the President holds out, the prospect of "the whetting of American wits by contest with the wits of the rest of the world," means that the women of Japan are to carry on the great competition which she hopes will make her great and powerful. Not only this, but the statesmen of Japan suspend their limitation of the hours of labor for 15 years, in which time those patient drudges are expected to conquer the cotton trade of the Orient for Japan.

THE WOMEN WHO PARTICIPATE IN THIS COMPETITION.

If the statesmen of America have not been awakened, the statesmen of Germany are awake and do know what this modern competition involves. In addition to other textile industries, Germany has a promising cotton industry in Saxony, which is the foremost industrial State in Germany. The recent business crisis has shown the tendency to use female labor in place of male labor wherever possible. Our consul at Dresden reports as follows:

From the statistics of sick funds, it is learned that the employment of female labor is increasing much more rapidly than male, and also much more rapidly, comparatively, than the female population. From 1906 to September, 1910, the number of female workers increased by 24.5 per cent. The great accession of able-bodied female workers in the last few years is remarkable, and is to be attributed to the rise in the cost of living, which causes women to leave household duties for more remunerative work.

The hausfrau of Germany has even anticipated the progressive thought of our President, leader of the Democratic Party, and proposes to abandon her pots and pans and start out to sharpen her wits "by contests with the wits of the rest of the world."

America has hitherto been protected by the wisdom of the Republican statesmen of the last 50 years. But on Wednesday, when the chairman of the Ways and Means Committee, the gentleman from Alabama, opened the debate on this bill, he warned this House and the country that that 50-year era is ended, and that we are about to return to the piping times "before the war," when the United States Government borrowed money at 12 per cent interest and all the people dwelt in Democratic simplicity. The gentleman from Alabama thinks that his changing of eras is going to be attended by no greater disturbance than the singing of a grasshopper in a deserted field on a midsummer day. The President thinks there may be a little disturbance, some people being so unreasonable as to remain awake during the performance, for the President says in his address:

To some not accustomed to the excitement and responsibilities of greater freedom our methods may in some respects and at some points seem heroic, but remedies may be heroic and yet be remedies. It is our duty to see that they are genuine remedies.

FREE TRADE IN AGRICULTUREAL PRODUCTS.

This world-wide competition to which the President and the Democratic Party wish to commit this country makes no exception of classes except in some favored cases. The wheat farmer of the Northwest has protection, but the potato farmer must exist under absolute free trade. Consider for a moment the condition of a potato farmer who has for years raised his crop for the New York market. Year in and year out he probably does not realize 30 or 35 cents a bushel, for the freight rates on a bushel of potatoes sometimes amount to 15 or 20 cents if the farmer is as far away from New York as Maine or Ohio.

Now, to what sort of competition does this bill subject the potato farmer? To the competition of all the world, including the great potato-raising regions of Germany. The freight on a bushel of potatoes from Hamburg, Germany, to New York City is 9 cents, so that Germany as a market is nearer than the greater part of the eastern country which is tributary to New York City. European wages for day labor are very small for both men and women. It is probable that 50 cents for a man and 30 cents for a woman would be a fair compensation for work in the potato fields. I can not give the exact figures, because the work on which I was obliged to rely—German Life in Town and Country—was published in 1901, when wages were lower, men getting 36 cents and women 24. But under the protective policy of Germany wages have increased. Moreover, the treatment of the female farm laborers has probably greatly improved. The authority which I have already cited records this incident, which, in 1901, was said to have occurred "several years ago":

Upon a manorial estate in West Prussia some 40 Polish women are employed. These people could no longer bear their terrible ill usage, for they were treated like cattle, and they resolved to seek release in flight, which they did by taking the night train to Berlin. No sooner, however, was their flight discovered on the estate than word of it was sent to the police there, with the result that two police wagons were in waiting for the party at the station on their arrival, and in these they were placed and conveyed to prison.

Yet there is no doubt that the competition of the underpaid men and women in the potato fields of Germany will at once become a serious factor in the farm life of America, when we remember that the American farmer has been forced to pay a wage which in Europe would be considered princely.

SCIENTIFIC PROTECTION.

I do not believe that many Members of this House wish inordinate protection. I for one cooperated gladly with my Republican associates in proposing a tariff commission. When this fateful bill shall have run its brief course, another House of Representatives will frame a bill on scientific and humane principles, which will be indorsed by the American people for years to come.

The great question which is before us in this Hall to-day is how best to conserve the old ideals of America. Tariff contentions are supposed to be largely devoted to questions of wealth, and that is necessary in this age, when wealth, properly distributed, uplifts mankind. But before it is possible to distribute wealth conditions must be right for the production of wealth. After all, however, the great question has not to do with wealth, but the well-being and advancement of the men, women, and children who live in this America to-day. On this side we uphold the principles of the glorious era which has done so much in the last 50 years and with confidence await the outcome.

HON. THOMAS STERLING, OF SOUTH DAKOTA, IN SENATE.

Mr. STERLING. But the fact remains that through your representation at the other end of the Capitol and on this floor your 20,000,000—and I am not counting your colored vote any more than you do, and I voice no prejudice against a white man's government "down there," only I would not for economic reasons have you "cover too much territory"—your 20,000,000 are rulers over 90,000,000. With your 57,0000,000 bushels of wheat, you, in effect, determine that the producers of 630,000,000 bushels shall come into direct competition with the surplus wheat of the world under whatsoever conditions as to labor, cultivation, or soil that surplus is produced. With your 60,000,000 bushels of oats in 15 Southern States, you control in the determination that the producers of 947,000,000 bushels shall be protected by a tariff of only 6 cents per bushel. With your 710,000 bushels of barley raised in the 15 Southern States in 1909, you say that the growers of 172,633,000 bushels of barley shall compete with the many million bushels which will be imported under the rate provided in this bill, a reduction of 50 per cent from the rate of 1909. Nobody will be more highly pleased over this item than the American Brewers' Association, though it will be at the cost of many million dollars to the farmers of the Northwest alone.

I here refer to a table I have compiled from the census reports of 1910, showing the production of these crops in the several States of the South in 1909 and the total production in the other States of the Union, and ask that the same be printed in connection with my remarks.

The PRESIDING OFFICER (Mr. OWEN in the chair). Without objection, permission will be granted.

The matter referred to is as follows:

Farm statistics.

[1910 census reports.]

State.	Wheat.	Oats.	Barley.	Flax.

Total in United States	683,379,259	1,007,142,980	173,344,212	19,512,765

Mr. STERLING. And so with the other farm products. The producers of 38,000,000 bushels of potatoes, 395,000,000 pounds of butter, 426,000,000 dozen eggs in the entire 15 States of the South determine, through their Representatives, that the producers of 350,000,000 bushels of potatoes shall sell their surplus in free competition with the rest of the world; that the producers of 1,225,000,000 pounds of butter shall have as their protection the unreasonably low rate of 2½ cents per pound, which would easily mean a loss of $15,000,000 to the producers of the American product; that free competition with Canada shall be the lot of the producers of 1,165,046,485 dozen of eggs is all settled by the votes of the States producing a little more than one-third that number.

HON. WESLEY L. JONES, OF WASHINGTON, IN SENATE.

Mr. JONES. I will say briefly that under existing conditions the Canadians impose a duty of 17½ per cent on our lime going into that country, while on lime coming into this country the duty is 5 cents per hundred pounds, including the package. According to the handbook, that is equivalent to an ad valorem duty of 8 or 9 per cent. So that the Canadians practically shut us out of their market, while under the existing law we give them an advantage in ours.

The effect of the proposed law is to leave the barrier that Canada has erected against us, and to take down still further whatever barrier between this country and Canada exists on our side. In other words, they will maintain their 17½ per cent duty on our lime and the package in which it is imported, while we propose to reduce our tariff to 1 cent per hundred pounds.

HON. PORTER J. MCCUMBER, OF NORTH DAKOTA, IN SENATE.

DEMOCRATIC PARTY VERSUS AMERICAN FARMER.

Mr. MCCUMBER. And so I shall address myself first to you, the Democratic Party, with reference to your assault upon the American farmer. In this year 1913 you are about to commit a greater crime against the American farmer than has ever been perpetrated by any political party against any class of people during any period of recorded history. You are about to rob him of sacred rights which he has paid for through long years of toil, self-denial, and patient waiting. With violent hands you are about to strip him of every advantage which the changed conditions of home supply and demand were about to yield him. You have declared that he is an outcast in the land which he has made, the only one of all the classes of American people who is not entitled to any consideration at your hands. You have insulted his sense of fairness, slapped him in the face, and kicked him into the gutter. * * *

You had him in the slough of depression during all of your last administration, from 1893 to 1897. You saw him working himself out of that mire and just beginning to reach a degree of prosperity to which he was justly entitled. You behold the farmer by close frugality and economy just getting his head and shoulders out of the muck of this depression, out of the everlasting debts and into the sunshine of prosperity, and it seems to afflict you with a fit of madness, and with the swift and deadly stroke of your tariff bludgeon you strike him down.

* * * * * * *

Unlike the United States, which consumes nearly all of its wheat crop, Canada does not consume one-seventh of its western crop. That vast surplus must go into the world's market. Its nearest market is the Minneapolis, Duluth, Buffalo, and other mills of the Northwest. Open the floodgates of our present tariff wall and it will immediately pour over and into this country and level our prices to the world prices and keep them level for at least a century.

If the farmer were more prosperous than the rest of the world, I could see some reason for legislating against his interests, but as he is far less prosperous than any other people in the United States, further depressing his prices, further aggravating the injustices of his situation, seems to me to be almost criminal.

—

HON. FRANK E. GUERNSEY, OF MAINE, IN HOUSE OF REPRESENTATIVES.

CANADIAN POTATO MENACE.

Mr. GUERNSEY. One of the chief food products of the country is potatoes. One of the great potato-growing sections of the country is New England and particularly the State of Maine. This industry in Maine is exceptionally exposed to foreign competition. On three sides the State is surrounded by Canada. Across the international line farm lands equally as good as those within the State are valued at 30 to 50 per cent less. Farm labor per month is proportionately less. The potato pickers of Aroostook County last fall were paid from $2.50 to $3 per day, while at the same time in the Annapolis Valley, in Nova Scotia, the same class of labor was receiving $1.50 per day.

The Democratic tariff bill selects this great food product grown in New England States for sacrifice, placing it on the free list and placing it there now, with the result that it will imperil the price of the crop this year; placing it there in the face of the fact that foreign potatoes can enter the markets of New York and Boston, the great potato markets of the East, at water rates far cheaper than northern Maine potatoes can be transported to such points by rail.

DANGER OF FOREIGN POTATOES.

The danger of this foreign competition is clearly shown by the extent that foreign potatoes entered these markets during the last fiscal year, even with the present tariff in force. For the fiscal year ending June 30, 1912, there were imported into this country from England 3,377,426 bushels; from Scotland 4,645,877 bushels, and from Ireland 4,606,981 bushels of potatoes, which, together with some other importations, brought the total amount of potatoes imported up to nearly 14,000,000 bushels, which paid the duty of 25 cents per bushel and entered our markets. With that duty removed foreign potatoes many times that amount will annually be imported and take from our farmers our markets to that extent.

MAINE FARMERS INJURED.

Add to the foreign competition the competition of Canada, with her lower-priced lands, lower-paid labor, and cheap water transportation from the Maritime Provinces to Boston and New York markets and it will be seen that the Maine potato grower will, under the provisions of the pending bill, suffer from severe shrinkage in his land investment and in loss of market for his product. All considered, the present 25 cents duty is none too much to properly equalize conditions with the potato producer, foreign or Canadian.

If this administration believes that a reduction in the potato tariff should be made, it should be made gradually; only a portion should be removed at this time. The immediate free listing of this important product, in the production of which so many have their all invested, will bring financial ruin to large numbers of farmers in the New England States. If this provision in the bill free listing potatoes is allowed to stand and become a law, the Democratic Party must be held accountable in the elections to come for whatever distress and disaster follows. This tariff discrimination against potatoes is particularly unjust in view of the fact that the framers of the bill in dealing with other important food products not grown in New England dealt differently.

UNFAIR DISCRIMINATION.

The great wheat-growing sections of the Northwest are allowed to retain a duty of 10 cents a bushel on wheat to guard their product against the wheat fields of Canada. The rice of Texas and other Southern States is amply protected under the provisions of this bill for the well-known reason that in the South they are making at present large investments in rice culture, and a protective tariff is necessary to promote the industry; consequently the rice growers are taken care of. The producers of pineapples, oranges, and grapefruit in Florida are allowed protective duties, and the Louisiana sugar grower is given three years in which to adjust his business to the proposed free listing of his product.

I assert again that the Underwood tariff measure now before Congress contains in its provisions deliberate, intentional, and unjust discriminations against the manufacturing and agricultural interests of the New England States. [Applause on the Republican side.]

—

HON. A. P. GARDNER, OF MASSACHUSETTS, IN HOUSE OF REPRESENTATIVES.

FISH.

Mr. GARDNER. In the name of the consumer fish is to be put on the free list. Poisonous as that cup may be for the fisherman, his draft has been embittered because his sense of injustice has been aroused.

My Democratic friends, why did not you in the name of the consumer put rice on the free list?

Is it because rice yields a revenue? Fish yields more revenue. Is it because rice is imported, notwithstanding the present duty? More fish than rice is imported, notwithstanding the present duty. Is it because the cultivators of rice are poor men? In all the history of Gloucester, never was anyone able to retire from business on profits made in the fisheries.

What is the explanation then? Why in the name of the consumer do you distinguish between one raw food product and another raw food product? Why do you make fish of fish while you make fowl of rice and of vegetables, early and late, and, for a while at least, of sugar? Some one must throw light upon this question. Else it should be no cause for astonishment should the censorious accuse you Democrats of sectional favoritism.

—

HON. WILLIAM D. B. AINEY, OF PENNSYLVANIA, IN HOUSE OF REPRESENTATIVES.

Mr. AINEY. Mr. Chairman, the people of this country are just awakening to the fact that a minority party temporarily in power is about to take advantage of its transitory authority and place upon the statute books of our Nation a tariff law the avowed purpose of which is to strike down the long-established policy of protection to American industry.

Under the specious argument of reducing the high cost of living it first attacks the products of the farm by proposing wholesale reductions of the present protective duty upon articles raised or produced by the American farmer, leaving the agricultural interests of our land to withstand the tide of importation from Canada, South America, and Europe.

On these articles the custom duty under the proposed Underwood bill is on an average but one-half what it is under existing law. Dairy products receive woeful hurt. Foreign butter soon may be imported to compete with the American product by paying 3 cents per pound in place of 6 cents; hay at $2 per ton in place of $4.

Apples will be called upon to compete with the great Canadian and Nova Scotian crops with the protection of only 10 cents per bushel as against an existing duty of 25 cents.

Milk and cream may, under the Underwood bill, be brought across the Canadian line at any point free of any duty, to depress the price, as against the protection afforded the farmer by the duty of 2 cents per gallon on milk and 5 cents per gallon on cream, which the existing tariff law requires to be paid.

Milk, preserved or condensed, will go upon the free list, and thus bring the American dairyman into unequal competition with the foreign products.

What is true of dairy products is equally true of grains and vegetables produced on the American farm, notably potatoes, which, under the present law, are subject to an import duty of 25 cents per bushel, will, under the Underwood bill, be admitted free, and so supplant the products of American soil.

When the Underwood bill becomes a law, those engaged in producing them must face a new rival and greater competition; and this, the Democratic Party frankly admits, is for the purpose of reducing the high cost of living.

The farmers of the country are asked to accept this tariff bill and policy, which lays the ax at the very root of the tree of their prosperity, because, forsooth, the Underwood bill proposes to place agricultural implements on the free list.

The Democratic proposition is to remove the duty on the implement with which the farmer digs his potatoes, and expect the farmer to so rejoice in the saving on the price of a hoe that he would welcome the flood of duty-free potatoes imported to depreciate the price of his own product.

Such logic could find no better illustration than in a proposition to cut one's throat to stop one's appetite.

The toiler in America is an American citizen. This gives the highest honor which can rest upon anyone. The toiler in other lands is not protected and cared for by such an equality of citizenship or privilege.

The living and the wage must necessarily be different, and a protective tariff imposed by the Federal Government measures that difference and is calculated to keep and maintain every American citizen on the high plane and privilege of his American citizenship.

—

HON. FRANK PLUMLEY, OF VERMONT, IN THE HOUSE OF REPRESENTATIVES, APRIL 28, 1913.

Mr. PLUMLEY. There is no answer in the bill or the report to my question: Why is the tariff on manufactured marble reduced only 5 per cent and the tariff on manufactured granite reduced 50 per cent? But there is a reason, and perhaps I find it. In No. 4 of the hearings, relating to Schedule B, on page 565, I find the statement of Mr. Frank J. Hanold, of Townsend, Townsend & Co., 423 West Twenty-first Street, New York City, representing the National Association of Wholesale Granite Dealers, comprising 18 firms engaged in the business of selling domestic and imported granite monuments at wholesale. He recommends that the tariff on manufactured granite be reduced from 50 per cent to 20 per cent. He claimed that at 20 per cent ad valorem the cost of the imported article would be in excess of the cost of the domestic article. * * *

No manufacturers of granite were heard, and the rate of duty was cut to 25 per cent, substantially granting the request of the importer. Whether it was because the importer requested a tariff that would invite competitive importation or because the committee regarded this industry, whose finished product is practically all labor, as one which should be stripped bare of protection and left to combat its foreign rivals with a wage scale that is high while theirs is low, I can not say, but such is the result of their action—and the consequences must be most serious.

Wages in Barre, Vt., and vicinity: Cutters, 40¾ cents per hour, minimum; polishers, 40¾ cents per hour, minimum.

Foreign: Cutters, 15 cents per hour, average; polishers, 14 cents per hour, average.

When the present bill of prices expires the new bill will require $4 a day for eight hours.

The granite business of the United States is in no sense a trust; each manufacturer is in competition with every other. In Washington County, Vt., my home county, there are over 140 manufacturing concerns in direct competition with each other, and I am advised that the same condition exists all over the United States. Should the tariff be raised 100 per cent over the rate of to-day it would not at all affect the prices of the product, owing to the sharp competition which prevails. It would mean simply increased production within the United States without increase of price to the consumer. If the tariff is reduced so that foreign competitors ship their manufactured product into this country to any considerable extent, it will reduce the output of our manufacturers without lessening the cost to the consumer.

This is a case where that for every foreign monument sold in the United States American labor manufactures one less. The American laborer gets just so much less opportunity to sell his product, and the American manufacturer parts with his profits for the benefit of the foreign producer and the home importer. * * *

EXCERPT FROM DEBATE ON GRANITE PARAGRAPH IN SENATE.

Mr. DILLINGHAM. Mr. President, I wish to inquire of the member of the committee having this matter in charge what consideration moved the committee in reducing the rate of duty upon granite from 50 per cent to 25 per cent ad valorem?

Mr. GALLINGER. And the duty on unmanufactured granite from 10 cents to 3 cents per cubic foot?

Mr. STONE. It was reduced by the House one-half, from 50 per cent to 25 per cent, because the House presumed that the reduction was a proper one in the interest of the consumer and of the revenue.

Mr. DILLINGHAM. I have examined the House hearings, but have been unable to find that anybody recommended it, excepting Mr. Hanold, who represented the firm of Townsend, Townsend & Co., of 423 West Twenty-first Street, New York City. Mr. Hanold said that, in appearing before the committee, he represented the "National Wholesale Granite Dealers' Association, comprising 18 firms engaged in the business of selling domestic and imported granite monuments at wholesale," and so forth.

If anybody else appeared before either the House or the Senate committee recommending this reduction or giving any reason for it, I should be glad to know who it was.

Mr. STONE. I was just about to say that I do not recall that anyone appeared before the Senate committee in relation to this item; but my attention is now called to the fact that a granite manufacturers' association of Quincy, Mass., filed a brief.

Mr. DILLINGHAM. Yes; but they were opposed to the proposed reduction.

Mr. STONE. Yes; they were opposed to it.

Mr. DILLINGHAM. Now, I am asking upon what consideration the recommendation was made that the rate be reduced? Who asked for it?

Mr. STONE. Just upon the ground that it was thought that the rate was unnecessarily high and should be reduced. There are practically no importations.

Mr. DILLINGHAM. Does the Senator recall anybody except the band of importers in New York represented by Mr. Hanold who recommended the reduction?

Mr. STONE. No; I do not know who appeared. * * *

I do not think any person interested in quarrying or manufacturing marble or granite appeared before either committee to insist upon a reduction of the duties. I think not.

Mr. DILLINGHAM. I think not, too. No consumer in the United States asked for it, so far as I have been able to find by an examination of the record of the hearings. I do not think that anybody asked for it, except the importing companies in New York, and they recommended that the duty be reduced from 50 per cent to 20 per cent.

Mr. STONE. That may be so, if the Senator please. I do not know.

—

HON. A. J. GRONNA, OF NORTH DAKOTA, IN THE SENATE.

Mr. GRONNA. If we really wish to extend our markets abroad by securing more favorable tariff rates, why not make offers meaning something to countries which can give us a market for our products rather than throw our markets open to countries which will give us nothing in return?

Mr. President, this is so absolutely contrary to the policy advocated by that great statesman, James G. Blaine, that I do not want anyone to believe or think that he can delude the American farmer and make him believe that this is reciprocity such as was advocated by that great statesman.

—

HON. JOHN D. WORKS, OF CALIFORNIA, IN THE SENATE.

Mr. WORKS. Mr. President, there is another phase of the question that to my mind is more serious and threatening than the enactment of an ill-advised and injurious tariff law.

I do not believe, Mr. President, that if it were not for the influence of the executive branch of the Government, directed at the lawmaking power, and the coercive effect of the secret political caucus, the passage of this bill through either branch of Congress would have been possible. I take it for granted it will pass this body substantially as it was framed in advance. This, if newspaper accounts are to be credited, was done by a committee of Democrats and a Democratic President, or with the mutual agreement or concurrence of the two. It has been asserted and has been very generally believed that the President insisted that certain provisions should go into the bill and that other of its provisions are a compromise of views as between the President and Democratic members of the committee and the Democratic caucus. So, in any comments I may make on this phase of the question I will assume that the President of the United States aided in framing the bill and is using his

powerful influence to have it passed in the form approved by him and known to have his approval. Added to this comes the political caucus that adopts the bill in the form desired by the President. The bill, as thus indorsed, is not satisfactory to many even of the dominant party. Its adoption and support by the majority party is the result of presidential and caucus influence combined. The President lets it be known that he desires the passage of the bill. The party leaders, in caucus, insist that this is an administration measure and that Democrats must stand by the administration, and this secures its adoption in caucus. That is one step. Then, when the bill comes up for consideration it is insisted that it was agreed upon in caucus and is a party measure and Democrats must stand by the party. And they do. It is not a matter of individual conscience, reason, or judgment. A man under oath must forego his own conscientious convictions and judgment and vote with his party or come into disfavor and be branded as an apostate and betrayer of his party. The President commits himself beyond recall to a bill not yet introduced and without having heard the presentation of their views by the legislative representatives of the States where vital interests and important industries are to be affected by it.

Thus we have a bill agreed upon and marked for final passage upon consideration only by a few men of one party, concurred in by the President acting with representatives of this one party. This comes in part from the pernicious doctrine that the President is the leader of his party instead of, or as well as, the President of the whole people. The two are utterly inconsistent when it comes to the making of laws. Having committed himself to the measure in advance, we hear of the remarkable spectacle of distinguished Members of this body of his own party going to the White House and pleading with the President of the United States to consent that Congress may so modify the bill as to afford some protection to one of the great industries of their States.

HON. FRANK W. MONDELL, OF WYOMING, IN THE HOUSE OF REPRESENTATIVES.

Mr. MONDELL. Our wages are higher in this country under organization, because by and through a protective tariff that maintains prices it is possible for the manufacturer to pay a good wage, and therefore possible for the organized laborer and the organized artisan to compel the payment of a good wage.

But take from the industry its profits, place it in competition with unpaid labor abroad, make it nonproductive, and you can make bread of stones and draw blood from a turnip as easily as you can secure a living wage under those conditions.

Contested-Election Case—William J. MacDonald Against H. Olin Young.

EXTENSION OF REMARKS
OF
HON. J. D. POST,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 26, 1913,

On House resolution 231.

Mr. POST. Mr. Speaker, at the November election, 1912, there were four candidates in the twelfth congressional district of the State of Michigan standing for the office of Representative in Congress. In this contest, however, we are only concerned with the single question of whether or not the contestant, William J. MacDonald, under the proofs submitted by him, is entitled to a seat in this body.

Before entering into a discussion of this question it may be well to recite some facts pertinent to the inquiry, and resort to some of the laws of the State of Michigan relating to the primary and general elections of that State.

It is provided that each elector, to be entitled to cast his ballot, must enroll himself before registration officers provided for that purpose and designate his party affiliations. The registration days are the last Saturday of January and the first Monday in April preceding the primary election, except that on election day any enrolled voter may change his registration. No person is entitled to vote unless he is enrolled in the manner provided by the law.

The primary election law provides that a general primary for the nomination of candidates shall be held upon the last Tuesday of August preceding every November election.

At the primary election it is provided that delegates may be selected to a county convention from the wards, precincts, and townships in such number as the controlling committee of a political party may designate. A political committee is chosen by the county convention, and the committee selects its chairman and secretary. A congressional committee is authorized to be selected either by the various county committees or by the candidate for Congress.

When a vacancy occurs by the nominee for Congress withdrawing or other cause, the congressional committee is authorized to fill such vacancy.

In case of the formation of a new party all candidates must be presented by way of petition, but electors may write in the name of a candidate not upon the ballot.

The evidence in the case before us discloses that at the August primary held in the twelfth Michigan district names of persons, in some of the counties comprising the district, were written upon the ballot and voted for as the candidate of the National Progressive Party for the office of Representative in Congress. Of the persons thus voted for Joseph M. Rogers, an elector of Marquette County, received 11 votes, the highest number of votes cast for any person whose name was so written upon the primary ballot. At the time he was not enrolled as a member of the Progressive Party, but was enrolled as affiliated with the Republican Party.

It is significant to note here that the primary act contained a provision to the effect that "all votes cast for a candidate upon the ballots of one political party, when such candidate is enrolled as a member of another party, shall not be counted," and it was made unlawful for any board of election commissioners to print the name of any candidate upon the official ballot prepared for the use of the voters for the November election, unless such candidate was selected under the authority of the primary act.

It certainly can not be successfully contended that Joseph M. Rogers was nominated in conformity to the provisions of the primary act. His nomination, to say the least, was irregular. He was not eligible to be the recipient of votes, at the time being enrolled as a Republican, and the board of election commissioners were wholly unauthorized to count or canvass the vote cast for him.

The votes cast at a primary are to be canvassed by the board of election commissioners, and any candidate who conceives himself aggrieved in the count made by the election inspectors, or the return made by the board of commissioners, may file with the board a petition, setting forth the fraud or irregularity complained of, and in this manner procure a correction of any fraud, irregularity, or mistake in the counting of the ballots or the conduct of the election. Notice is required to be served upon the opposing candidate and ample opportunity is given to present to the tribunal created for that purpose any claims that might be made against the manner in which a name has been placed upon the ballot or any irregularity in the conduct of the election.

The contestee, Hon. H. Olin Young, nor anyone in his behalf, filed no complaint with the board of election commissioners in the counties of the district where names were written upon the ballots for nominees of the National Progressive Party. No Republican in that district raised any objection to the counting of such ballots, and the boards of county commissioners certified the results, as required by law, to the secretary of state. The State board of commissioners, composed of the secretary of state, the treasurer of the State, and the commissioner of the general land office, canvassed the votes in counties for Joseph M. Rogers, without any objections emanating from any source whatever. The matter rested in this condition until about the 9th or the 10th day of October, 1912, without any steps being taken to determine the legality of the nomination of Joseph M. Rogers as the candidate of the Progressive Party. Joseph M. Rogers, on or about the 10th day of October, 1912, withdrew as a candidate and mailed a notice of his withdrawal to each board of election commissioners in the 15 counties comprising the district. No candidate of any political party and no elector of the district from the August primary to the withdrawal made any contention whatever as to the regularity of his nomination.

As I have heretofore said, in one or two counties of the district members of a Progressive county committee were selected at the August primary. The members of these committees, with certain volunteers, called a meeting to be held at Escanaba, Delta County. At this meeting a congressional committee was selected, and Nathaniel L. Fields was chosen chairman and George Shiras secretary to such committee. After the withdrawal of Joseph M. Rogers the chairman and secretary of the committee, about the 14th of October, 1912, filed with the board of election commissioners of Marquette County the name of the contestant, William J. MacDonald, duly certified, to fill the vacancy occasioned by the withdrawal of Rogers. Subsequently and shortly thereafter a like certificate was filed in each of the remaining counties of the district.

On the 14th day of October the chairman and secretary of the State central committee of the national Progressive Party filed with the board of election commissioners of each county in the district, as required by law, a certificate showing the nominees of that party for presidential electors, State officers, Congressman at large, and the name of William J. MacDonald as the nominee for the office of Representative in Congress. The sole purpose of this certificate is to enable the election officers to determine how to prepare and print the ballots for the use of the voters on election day. In this certificate contestant's name was spelled "M-c-D-o-n-a-l-d," when it should have been spelled "M-a-c-D-o-n-a-l-d," and on the 15th day of October the secretary of the State central committee sent to each of the county boards a telegram in these words: "Congressman, twelfth district, should be spelled William J. MacDonald, correct." In 14 counties of the district this telegram was properly interpreted, but in Ontonagon County the message was misinterpreted, and the word "spelled" was taken to be the word "Sheldon." In that county the name of the contestant was printed on the ballots as "Sheldon William J. McDonald."

By the law of Michigan it is the duty of the county and State committees of political parties to certify to the boards of election commissioners, who print the ballots for the use of the voters, the names of all candidates not less than 20 days before the election. All of these various steps were taken in order to procure the name of the contestant to be printed upon the official ballot; the ballots were printed, and no candidate of any political party, committee of a party, or elector raised an objection to the manner or form of placing contestant's name upon the ballot until November 1, four days prior to election day, when the chairman of the Republican State committee sent a night letter to each county board to the effect that, according to a recent ruling of the Supreme Court of Michigan, the name of contestant could not be placed upon the ballots, and pointed out that it was their duty to reconvene and order ballots printed omitting his name. On the 2d day of November he sent another telegram, asking that stickers be placed over the name of contestant before the ballots were delivered to the voters.

It seems as though the deputy attorney general of the State of Michigan also sent a telegram to each board of election commissioners of the same purport as the first message of the Republican State chairman. Upon learning of these telegrams the contestee engaged a little in the telegraph business himself and sent to the various boards this message:

> It is my personal desire that the name of W. J. MacDonald remain upon the election ballot of your county.

The request of the Republican State chairman and the deputy attorney general were wholly ignored and that of the contestee acquiesced in. The contestee also addressed a letter to the voters of the twelfth congressional district, in which he said the contestant was a candidate for prosecuting attorney in Houghton County in the August primary on the Republican ticket; that he was defeated, and he himself was the Republican candidate for Congress, receiving 21,905 votes, while he accused the contestant of being hand picked, not more than 25 persons being concerned in his selection. He asked, "Which, then, is the people's candidate?" He further stated in his message that he had known from the day of MacDonald's selection that his name could not legally be placed on the ballot, but that he was at all times willing to submit the question to the test of a popular vote, and wound up his message with the exhortation "Let the people rule." Upon these facts the contest was submitted to the electors of the district.

If MacDonald could not legally be the candidate of the National Progressive Party because he was not registered as a Progressive, we submit that there was ample time and opportunity between the time of his selection and the election to have settled that question in the courts of the State of Michigan. If votes cast for Joseph M. Rogers could not be counted for lack of authority in that act because enrolled as a Republican, the act itself in explicit terms points out the remedy. If MacDonald was selected to fill a supposed vacancy caused by the withdrawal of Rogers, and there was in fact no vacancy to fill, because Rogers's supposed nomination was without warrant or authority of law, there was a remedy at law under the statutes of the State of Michigan in that exceptions could have been filed against the counting of the ballots cast for Rogers. If the Progressive State and congressional committees were irregularly and illegally created, and for that reason without potentiality, and their acts wholly void of legal essence, we take it that the courts of the State of Michigan are clothed with the inherent power to declare void and set aside such acts.

But the settlement of none of these questions, to our mind, is necessary to arrive at a proper conclusion in the case before the House. The contestee was more vitally interested in the contest than any other person. He warned the voters of the district before the election that he had known from the day of MacDonald's selection that his name could not be legally placed on the ballot, and invited the rule of the people. He declined to adopt the means laid down in the laws of the State to permit the use of a name upon the ballot claimed to be there illegally and wrongfully. Neither did the State committee of the Republican Party, nor the attorney general's office, take any legal steps to prevent the use of MacDonald's name in the battle of ballots that was fought out in the Upper Peninsula of Michigan on the 5th day of November last. Is there or not a day of repose, a limitation in which all questions are or must be considered settled? Can those most vitally interested remain quiescent until the will of the voters has been expressed at the polls, and, if opposed to their contention, then disfranchise the electorate of the district, however innocent, that electorate may be of any wrongdoing, on account of technicalities in the manner of nominating a candidate? Measured upon principles of equity and justice, such should not be permitted. This House should not be so encompassed by the technical statutes of the States, when by the fundamental law of the land it is the sole judge of the qualifications, election, and returns of its Members.

This House, with its large powers and wide discretion, should not be confined within too narrow limits. It possesses all the powers of a court having full jurisdiction to try the question, Who was elected? It is not limited to the powers of a court of law, but under the Constitution possesses all the functions of a court of equity.

It is contended that from the fact that contestant, at the time of the general November election, 1912, was enrolled as a Republican, and the Michigan primary act, providing that no ballots cast for the candidate of a political party shall be counted for such candidate when enrolled as affiliated with another party, is decisive of his right to a seat in this House. In one of the earliest contested cases to come before the House, the Georgia case of Spaulding against Meade, decided in the Ninth Congress, the House decided that its "power to judge could not be concluded by a State law."

In the Pennsylvania case of Wright against Fuller, Thirty-second Congress, decided in the House in 1852, it was considered that, notwithstanding section 5 of Article I of the Federal Constitution makes the House of Representatives the judge of the election returns and qualifications of its Members, that the powers enumerated are not plenary but are subordinate to the second and fourth sections of the same article—the first of these sections providing that Members of the House shall have the qualifications requisite for the most numerous branch of the State legislature—the fourth section empowering the legislature in each State to prescribe the places, manner, and times of holding elections for Senators and Representatives, such regulations being subject to alterations made by the Congress.

The State legislatures may prescribe the places and times of holding elections for Members and regulate the manner of conducting such elections, subject to any alterations Congress may see proper to impose. They may do these things, but I deny their right to go further. They can not impose upon a Member a qualification not coming clearly within the limits of the provisions in the Federal Constitution. A Representative must be 25 years of age, a citizen of the United States for seven years, and an inhabitant of the State from which he is chosen.

In addition to these qualifications he must be qualified to be a member of the most numerous branch of the State legislature.

The only qualifications prescribed by the constitution of the State of Michigan for a representative in the general assembly are that he shall be a citizen of the United States and a qualified elector of the district he represents.

At the November election last year the contestant was more than 25 years old; had always been a citizen of the United States; was a resident of the State of Michigan; and was a qualified elector of the twelfth congressional district. He possessed all the qualifications requisite to entitle him to a seat in this House under both the Federal and State Constitutions. He was enrolled as affiliated with the Republican Party on the very day of the election. He was never enrolled otherwise, unless since the election. If this registration under the statutes of Michigan disqualified him from being a candidate on the Progressive ticket, then I submit a new qualification has been imposed upon a Member of the House, and one not required by either the Federal or State Constitution. I am reverting to this question at some length for the reason that the contestee in his

answer alleges this enrollment to be fatal to the candidacy of the contestant and renders the votes cast for him illegal and void.

Fortunately we are not without precedent upon this highly important question. In the Thirty-fourth Congress (1856) two contested-election cases came before the House, Turney against Marshall and Fouke against Trumbull. The constitution of the State of Illinois, from which the cases arose, contained this provision:

The judges of the supreme and circuit courts shall not be eligible to any other office of public trust or profit in the State or the United States during the term for which they are elected nor for one year thereafter. All votes cast for either of them for any elective office given by the general assembly or by the people shall be void.

Marshall and Trumbull were both judges of the class enumerated in the Illinois constitution, were while serving in office candidates for the office of Representative in Congress, each received majorities of the votes cast in their respective districts, and were each given their certificates of election by the governor of the State. Both their seats were contested upon the grounds that the votes cast for them were null and void under the provisions of the State constitution. It seems to me that the question presented in these cases is on all fours with the case now before the bar of the House. The sole question in each case was whether a State might superadd to qualifications prescribed by the Federal Constitution for a Representative in Congress. If the contestant, William J. MacDonald, was enrolled as a Republican, then the Michigan primary law says no votes cast for him upon the Progressive ticket shall be counted. The question in the case is identical, if the law is applicable to the general election, and superadds a qualification not embraced within the Constitution of the United States. Mr. Justice Story in his Commentaries (vol. 2, p. 101) says:

The States can exercise no powers whatsoever which exclusively spring out of the existence of the National Government that the Constitution does not delegate to them. They have just as much right, and no more, to prescribe new qualifications for a Representative as they have for a President. Each is an officer of the Union, deriving his powers and qualifications from the Constitution, and neither created by, dependent upon, nor controllable by the States.

The Constitution having prescribed the qualifications of a Representative, it is only fair to presume that it was intended to exclude all others. In the cases of Marshall and Trumbull the House practically unanimously decided that the provision of the Illinois constitution, providing that votes cast for a candidate for Representative while he was serving a term as a supreme or circuit judge should be null and void, was imposing a new qualification not provided for by the National Constitution. Under this decision it certainly must follow that the provision of the Michigan primary act, if applicable to the general election, providing that no votes cast for a candidate for Representative shall be counted if such candidate is enrolled as affiliated with another party is null and void. This must be true upon principle. If a State, under the inhibition of the Constitution, could add a new qualification, it could add more than one. It could superadd many new qualifications, and would have the power to vary or change them. The different States might make different qualifications, and such an incongruous state of affairs would deprive the people of the right to choose for a Member of Congress any person having only the qualification mentioned in the Constitution. The addition of any qualification imposed by the State would necessarily disqualify any person having only the qualifications prescribed by the Federal Constitution. It may be said the question involved in this case may not be one of qualification of a Member of Congress, but a question of election arising under the primary act and laws of the State of Michigan. The contestee in his answer makes the point that the contestant is ineligible for his seat in Congress, not because he lacked any of the qualifications prescribed by the Constitution of the United States, but because he was disqualified by the laws of the State of Michigan. He was disqualified from receiving votes upon the National Progressive Party ballots because he was then registered as a Republican.

In this connection I want to quote from the able brief filed in behalf of the contestee by Mr. Henry E. Davis:

Out of abundant caution let it be emphasized that contestant's right to the seat claimed by him is denied, not so much because the Ontonagon ballots may not be counted for him under the plainly and repeatedly declared law of Michigan respecting the correction of errors of form—about the propriety and expediency of which law, although it is the law of the State, opinions may differ—as because of the larger, greater, and controlling fact that by the law of the State, her power and right to make which is beyond all question, and in the deliberate and purposed contemplation thereof, contestant was never a candidate, and accordingly was not voted for, at the election which he claims to have been chosen, and all ballots purported to have been cast for him at such election were and are void. Behind and over this law the House can no more go than it can go behind or over the law of Michigan prescribing under Article L, section 2, clause 1, of the constitution the qualification requisite for electors for the most numerous branch of the State legislature.

The broad assertion that the contestant was never a candidate, that all ballots purporting to have been cast for him are null and void, is certainly begging the very question at issue. This assertion can only be made upon the assumption that contestant was not qualified to be a candidate, and being disqualified no votes cast for him could be counted. If the Legislature of the State of Michigan exceeded its powers in making such laws, and imposed a qualification not authorized by the constitution of the State, this House certainly can go over or behind such laws. The constitution of the State of Michigan is fixed and definite in defining the qualifications of the electors for the most numerous branch of the State legislature.

In Coffin *v.* Election Commissioners, Ninety-seventh Michigan, page 189, it is held:

The source of all authority to vote at popular elections is the constitution.

The electorate is constituted by the fundamental law and the qualifications of electors must be uniform throughout the State. To the same effect is the holding in case of Attorney General *v.* Abbott, One hundred and twenty-first Michigan, page 545.

Article 3, section 1, of the constitution of Michigan, says:

In all elections every male inhabitant of this State, being a citizen of the United States, 21 years of age; a resident of the United States, 21 years of age; a resident of the State for six months, the township or ward for 20 days, shall be an elector and entitled to vote.

If the contestant measured up to these qualifications defined by the fundamental law, then he was a qualified elector of the district, and under section 5, article 5, of the State constitution possessed all the qualifications for the most numerous branch of the State legislature.

It can not be said in the face of the decision in the Marshall and Trumbull cases that this was not an addition of a new qualification, the right to create which is prohibited by the Federal Constitution.

In 1856 the Senate, in the case of Lyman Trumbull, decided that a State had no authority to add to the qualifications prescribed by the Constitution for a Senator. In 1884, in the case of Wood against Peters, coming from the State of Kansas, the House reaffirmed its position that a State may not add to the qualifications prescribed by the Constitution for a Member.

No contention is made by the contestee that the persons who voted for the contestant were not qualified electors and legally entitled to a vote, nor is it intimated that the election was not conducted in all respects according to law. In addition to this the proviso to the effect that votes cast for a candidate upon the ballots of one political party when such candidate is enrolled as a member of another party shall not be counted for such candidate is limited exclusively to the primary election and is wholly inapplicable to the general November election.

In the election Mr. Young received 18,190 votes, and in 14 counties Mr. MacDonald received 17,975 votes, while in Ontonagon County he received 458 votes. The State board of canvassers did not count the votes for the contestant he had received in Ontonagon County, because his name was preceded by the word "Sheldon." Had these votes been canvassed for him he would have received 18,433 votes, or a plurality of 243. Their result was not announced until the 10th day of December, when a certificate of election was issued to the contestee.

At the opening of the present session Mr. Young appeared at the bar of the House, took the oath of office, and served until the 10th day of May, when he resigned his seat.

Notwithstanding his resignation it still remained for the contestant to show that he is entitled to the seat made vacant by the resignation. That act on the part of Mr. Young could not destroy whatever rights the contestant had in the premises. The question, stripped of all its legal technicalities, resolves itself into the question of the intention of the voters who cast the 458 votes in Ontonagon County. Did these voters intend to cast their ballots for the contestant?

It was indeed unfortunate that a mistake occurred in this county in printing the ballots.

There is no evidence to indicate that if the word "Sheldon" had not been printed before the contestant's name in Ontonagon County, and apparently as a part of his name, that the result would have been different. In fact, the numerous candidates whose names appeared upon the ballot of the National Progressive Party ticket, along with that of the contestant, received practically the same number of votes cast for the contestant. No one would question but that the voters intended to cast their ballots for the other candidates upon the ticket, and by what process of reasoning any doubt can be thrown upon those cast for the contestant I am unable to understand.

The State board might well have treated the word "Sheldon" as mere surplusage. However, they saw proper to give the word efficacy as a part of the name, and being a ministerial body, clothed with limited jurisdiction, we have no fault to find with their determination. Under the decisions of the courts of the State of Michigan it may have been confined to the face of the returns from the several counties in the district, but the House is not so circumscribed. It may look beyond the face of the returns and consider all the surrounding circumstances of the election to determine the intention of the voters.

In the Virginia election case of McKenzie against Braxton, decided by the House in 1872, it was held:

That the House can go behind the ballot to ascertain the intent of the voter, so as to explain what is ambiguous or doubtful. If by the aid of extrinsic evidence that which is ambiguous or doubtful can be made clear and perfect, then no harm can result by resort to such evidence.

In the contested case of Campbell against Morey, decided in 1884, it was held:

That the intention of the voter ought to prevail whenever it can be ascertained by an inspection of the ballot, and if the ballot is ambiguous the intention of the voter may be shown.

It is not claimed that there was any other William J. MacDonald in the twelfth congressional district of Michigan, or that there is any other person in the district by the name of Sheldon William J. McDonald. It is not contended that the 458 votes cast for Sheldon William J. McDonald in Ontonagon County were intended to be cast for any other person than the contestant. But, it is contended, that at the time of the general election last November it was the settled law of the State of Michigan that the intention of the voter must be determined from the face of his ballot, and that such had been the adjudged and settled law of the State for more than 70 years, as laid down by the highest judicial tribunal of the State, and that the name "Sheldon William J. McDonald" could not be taken and read as, or intended to be, "William J. MacDonald" in canvassing the votes cast for Representative.

The supervisors of elections for the county of Ontonagon canvassed all the votes cast for Members of Congress upon the National Progressive Party ticket under the name of "Sheldon William J. McDonald," and certified to the State canvassing board that such person had received 458 votes. In the other 14 counties the votes were certified under the name "William J. MacDonald." The State board of canvassers had then before them the certified returns from all the counties in the district, and it must have been patent to them that a mistake had occured in printing the name of the congressional candidate on the official ballot in Ontonagon County. The record before them made in 14 counties in the district pointed unerringly and indisputably to only one fact, and that was that the name of the official nominee for Congress of the National Progressive Party was "William J. MacDonald." They knew more than this. They knew the 458 votes certified under the name of "Sheldon William J. McDonald" from Ontonagon County were intended for no other than the official nominee of the National Progressive Party, and that such candidate, by every consideration of fairness and justice, was justly entitled to them. If they did not know these things, their lack of such knowledge will not justify the House in deliberately disfranchising 458 voters of Ontonagon County and 17,975 who voted for the contestant in the other counties of the district.

When they saw the name of "William J. MacDonald" canvassed upon the return of 14 counties in the district and the name of "Sheldon William J. McDonald" standing alone upon the canvass of Ontonagon County they knew that a mistake had been committed in the printing of the ballots of that county. And while the State board of canvassers may have felt that they were bound, under the laws of the State of Michigan, to recognize the mistake and that they were helpless to remedy the wrong that had been innocently made, yet we do not believe that the House is without power to administer the proper remedy.

Cooley, in his excellent work, page 611, says:

We think evidence of such facts as may be called the circumstances surrounding the election, such as who were the candidates brought forward by the nominating conventions, whether other persons of the same name resided in the district from which the officer was to be chosen, and, if so, whether they were eligible or had been named for the office; if the ballot was printed imperfectly, how it came to be so printed, and the like, is admissible for the purpose of showing that an imperfect ballot was meant for a particular candidate, unless the name is so different that to thus apply it would be to contradict the ballot itself, or unless the ballot is so defective that it fails to show any intention whatever, in such case it is inadmissible.

It will be noticed that Cooley says "if the ballot was printed imperfectly" that the courts have a right to consider how it came to be so printed, and that evidence aliunde is admissible for the purpose of showing that an imperfect ballot was meant for a particular candidate. When the board of State canvassers observed that the name upon the ballot in 14 of the counties was William J. MacDonald and in Ontonagon County alone was Sheldon William J. McDonald, it was certainly apparent to them that the ballots used in the latter county were imperfect ballots, and that the name had been improperly printed upon the ballots used in that county.

We do not believe that they were justified in rejecting the entire poll of Ontonagon County for this office. McCrary on Elections, section 488, says:

The power to reject an entire poll is certainly a dangerous power, and though it belongs to whatever tribunal has jurisdiction to pass upon the merits of a contested-election case, it should be exercised only when in an extreme case—that is to say, a case where it is impossible to ascertain with reasonable certainty the true vote.

Certainly no one will contend that it is impossible to ascertain with absolute certainty the true intent of the voters who cast 458 ballots in Ontonagon County for the contestant. For this House to follow the precedent set by the board of State canvassers in rejecting the entire vote cast for the contestant in Ontonagon County would be to establish a very dangerous precedent.

In the case of Daley *v.* Petroff (10 Philadelphia Reports, 389) the court, upon this question, says:

Power to throw out the vote of an entire precinct should be exercised only under circumstances which demonstrate beyond reasonable doubt that there has been such disregard of law or such fraud that it is impossible to determine what votes were lawful or unlawful or to arrive at any result whatever, or whether a great body of voters have been prevented from exercising their rights by violence or intimidation.

In Chadwick *v.* Melvin (Bright's Election Cases, 489) it is stated in this way:

There is nothing which will justify the striking out of an entire division but an inability to decipher the returns or a showing that not a single legal vote was polled or that no election was legally held.

McCrary on Elections, in section 489, states the rule in a different way to be that—

Nothing short of an impossibility of ascertaining for whom the majority of votes were given ought to vacate an election, especially if by such decision the people must, on account of their distant and dispersed situation, necessarily go unrepresented for a long period of time.

It is said that "Sheldon William J. McDonald" is not the same name as "William J. MacDonald." Looking at the face of the ballot only, this is literally true, but looking beyond the ballot, considering the extrinsic evidence, the circumstances surrounding the election, we know that both stand for the same identical person. The circumstances of the election demonstrate this beyond any reasonable doubt. We know beyond peradventure that the word "Sheldon" was prefixed before the name of contestant upon the ballots in Ontonagon County by a mistake pure and simple. Knowing all these things, is the House, sitting as a court of equity in the trial of this case, powerless to correct the mistake? Are we, in the face of this knowledge, to ratify the action of the State board of canvassers and reject the poll of an entire county? Applying the rules of law heretofore cited, it seems that there should be little difficulty in a proper solution of the problem. Is it conceivable that simply because the board of election commissioners of Ontonagon County, having innocently caused the word "Sheldon" to be printed before the name of the contestant—458 legal votes, cast in good faith by honest electors—the House is without jurisdiction or authority to correct so palpable a mistake? Suppose the ballots had been printed "W. J. MacDonald," or "W. Jos.," or "W. Jas. McDonald," and the evidence showed that they were intended for the contestant, the election being otherwise honest, this House by an unbroken line of decisions in contested cases would count every such ballot for the contestant.

The printing of the word "Sheldon" before the name of the contestant is shown by the undisputed evidence to have been an egregious error on the part of the election officials, and to adopt the language of the court in the case of Bowers *v.* Smith (11 Mo., 55)—

The suffrage is regarded with jealous solicitude by a free people, and should be so viewed by those intrusted with the mighty power of guarding and vindicating their sovereign rights. Such a construction of the law as would permit the disfranchising of a large body of voters because of an error of a single official should never be adopted.

If we are mistaken in assuming that precedents have been established by this House for the correction of such errors committed by the election officials intrusted with the preparation of the ballot, then we submit that this case is one in which it is highly important to establish such a precedent. Such a course

in dealing with this case will be approved by the sense and intelligence of every fair-minded man.

It must be borne in mind that had the clerk of the board of election commissioners of Ontonagon County followed the strict letter of the law and caused the name to be printed on the ballot as it appeared upon the certificate filed by the chairman and the secretary of the committee, instead of attempting to follow the telegram, there could be no pretense for a contest in this case. It was, to say the least, an act of extreme carelessness on his part. It is significant that in the canvass of the votes of Ontonagon County the votes cast for the contestant were thrown out while the votes cast for one of the presidential electors, whose name stood upon the ballot in a worse attitude than that of Mr. MacDonald, were counted. The true name of the elector was Gustavus D. Pope, and was printed upon the official ballot as Gustavus T. Tope. These ballots were counted by the State board of canvassers for Gustavus D Pope. In that case they certainly looked carefully to the intention of the voter. The two words spelled different names, but it was clearly a misprint in the preparation of the ballots. The one is no more flagrant than the other, and the same rule of construction should have been applied to each. As the returns lay before the State board of canvassers they exemplified a written instrument in which the name of William J. MacDonald appeared fourteen times and Sheldon William J. McDonald once only. The word "Sheldon" was ambiguous and uncertain, and the cases are numerous that extrinsic evidence is admissible to cure such imperfections even in the most solemn instruments, and thus guarded the rule is most salutary and just, and not to apply it in this case would be to establish a precedent and deprive a contestant of rights fairly and honestly acquired.

Evidence was taken to establish the fact that the contestant did not file with the Clerk of the House within the time prescribed by law his statement of expenses after the November election, 1912, nor until the 21st day of April, 1913. On that date he did file a statement showing that he had incurred no election expenses subsequent to the filing of his statement before the election on October 26, 1912. Later he filed a statement showing the sources from which he obtained campaign funds. The correctness of these statements have not been questioned. My individual opinion is that a fair construction of the statute requires the filing of the statement whether any expenses have been incurred or not. In other words, the statute is in terms mandatory. Yet it must be conceded that it is open to construction. Should the House, on account of the omission, deprive the contestant to a seat to which, as we have shown, he is justly entitled?

In this connection I want to call attention to the fact that the contestee raised no issue whatever upon this question in his answer filed to contestant's notice of contest. He could have made the question by a countercharge in his answer, but wholly failed to do so. The evidence offered upon this point was taken without objection. The precedents are numerous to the effect that the contestant in an election case must confine his proof to the allegations of his notice and the contestee to the countercharges alleged in his answer.

The Revised Statutes of the United States, section 105, provides that the notice shall specify particularly the grounds upon which the contestant relies in the contest, and section 106 requires the answer to admit or deny the facts alleged in the notice and to further state specifically any other grounds upon which the contestee rests the validity of his election.

As early as the Ninth Congress, in a case reported in Clarke & Hall's Reports, page 165, it was held by the House that a "petitioner ought not to be permitted to give evidence of any fact not substantially alleged in his petition."

In the case of Butler v. Lehman (37th Cong., 1 Bartlett's Repts., 358) it was held that when the issues are made the inquiries of the committee "should be directed solely to determining those issues as presented by the parties and to the consideration of such testimony only as should be found pertinent to sustain them as in proceedings at law."

And, again, in the case of Stovell against Cabell, Forty-seventh Congress, reported in Second Ellsworth, page 668, it was held that "depositions in regard to precincts not mentioned in the notice of contest or upon issues not raised by it were inadmissible."

There are numerous other precedents sustaining the position that the contestee having omitted to make an issue of contestant's failure to file in time his expense account after the election evidence relating thereto should not now be considered. And in view of the fact that no one has questioned the truth of the belated statement filed as late as April, 1913, and the one filed subsequently, the case might rest upon these decisions. However, the Federal statute is penal in its nature and does not relate to any of the qualifications of a Member of Congress. If an issue is made in a contested case, or whether an issue is made or not, and the truth or the falsity of a statement is attacked and the evidence discloses that such statement was falsely made for the purpose of concealing an election procured by bribery or fraud, then I believe it is the duty and the right under the law to consider, in connection with other facts, such false statements.

Let me say in conclusion that when the facts in this case are fairly considered and the law applicable to the established facts justly applied, we have here presented a free and fair election and a true determination of who a plurality of the voters of the twelfth congressional district of Michigan desired to represent them in Congress, and that the title of William J. MacDonald to a seat in the House is beyond question just and legal.

Combinations in Restraint of Trade.

EXTENSION OF REMARKS
OF
HON. RICHARD W. AUSTIN,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 30, 1913.

Mr. AUSTIN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an interesting and able editorial which appeared in the New York Times of August 11, 1913, the subject being "Combinations in Restraint of Trade."

The editorial is as follows:

COMBINATIONS IN RESTRAINT OF TRADE.

The forecasts of the foreign trade figures for the fiscal year indicate an advance over those of 1912. Exports of iron and steel, for example, were $304,500,000 against $268,000,000 the year before. Oil will exceed one hundred millions, and copper about the same. The increase of our manufactures in foreign trade is as surprising as the recent decrease of our agricultural exports, and the astonishing thing about it is that the growth is mainly the result of the efforts of combinations on their defense against restraint of trade, the Government being the accuser. It is an easy estimate that the Steel and Oil Trusts contribute almost half an annual average of our manufactured exports by the entire country, although they would fall below that in a year whose exports was abnormally large like 1912–13. That the Oil Trust's goods go to the ends of the earth is known to all.

In some countries our Government is defending that trade against foreign attack at the same time that it is attacking the trust at home. That is the case in Austria and Germany.

The last report of the Harvester Co. contains this passage:

"The expansion of the foreign trade continues. This has been the most important feature in the development of the industry since the formation of the company in 1902. The foreign trade has increased fivefold in the 10 years of the company's operation, increasing from $10,400,000 in the year 1902 to $50,000,000 in the last year. It now constitutes 40 per cent of the entire business of the company. On the other hand, the sales of harvesting machinery, tillage implements, and twine in the United States now constitute only one-third of the company's total sales."

The extent to which the Steel Trust rivals this salesmanship was put on record in President Farrell's testimony in the conspiracy suit. In 1912 this single concern built up an export trade of $92,000,000. It was a good answer to the reproach of neglected opportunities, and a promise that the hobbies should be removed in the new dispensation. President Farrell testified that in 1912 17 per cent in volume and 14 per cent in value of the trust's business was export. It even sold to Australia, 14,000 miles away, and maintained domestic prices at that. But users of the trust's materials were assisted in every way to sell abroad, even salesmen and office facilities abroad being supplied. This suggests to what an extent our amazing foreign trade is the creation of these "big fellows."

All existing markets have been preempted by those who had a foreign trade when we were importers. These possessors of the markets were prejudiced against interlopers, and inspired a like prejudice against the goods of competitors, ourselves. It is necessary to establish warehouses all over the world and to keep scores of thousands of tons afloat ready for sale on orders to arrive, destinations being changed according to market variations during a voyage. The trust's component corporations failed where the "trust has succeeded. The result of putting the trust out of business as a conspirator in restraint of trade is indicated by the changing character of our foreign trade. We are ceasing to be hewers of wood and drawers of water for the rest of the world, and are making foreign buyers tributary to the workers in our factories. Our exports of manufactures now exceed $1,500,000,000 annually, and of that total manufactures of foods contributed only $319,000,000. The greatest gain in our exports for the year just finished was in manufactures ready for consumption, which increased $105,900,000, to $778,000,000. Here lies the prosperity of the future, the recompense for the agricultural prosperity of the past, when we could not eat the food we raised, just as the time is coming when we can hardly raise the food we eat. But our exports of manufactures must be the products of the trusts, because they are the greatest producers. To shackle the trusts or to abolish them is to tie our own hands in the world's contest for ease of life through the profits of industry.

Contested-Election Case—William J. MacDonald v. H. Olin Young.

EXTENSION OF REMARKS
OF
HON. BURTON L. FRENCH,
OF IDAHO,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 26, 1913.

Mr. FRENCH. Mr. Speaker, the facts in the contested-election case of William J. MacDonald versus H. Olin Young are not greatly complicated, but are such as to raise several very important questions that it is the duty of the Congress to consider.

The certificate of election was issued to H. Olin Young upon the showing that at the last general election he had received 18,190 votes as against 10,322 votes for John Power, 1,077 for William O. Trezise, 17,975 votes for William J. MacDonald, and 458 votes for Sheldon William J. McDonald.

Contestant instituted the pending contest upon the ground that the votes cast for Sheldon William J. McDonald were, as a matter of fact, intended for and should be counted for William J. MacDonald, and that if they were counted for him it would give the said William J. MacDonald a total of 18,433 votes, or a plurality over the vote of the next highest candidate, H. Olin Young, of 243.

The contestee, Hon. H. Olin Young, accepted the certificate of election upon the theory that the question of whether or not he or MacDonald should be seated in the Sixty-third Congress was a question that could only be considered by that Congress after it should convene and the elections committees be appointed.

Upon May 10, 1913, Mr. Young tendered his resignation to the House of Representatives.

In the course of his remarks, prior to tendering his resignation, Mr. Young made the following statement:

I am convinced that if the 458 votes in Ontonagon County should be counted for the contestant, no other facts can be satisfactorily proven which in a forum governed by broad equitable rules would justify a verdict in my favor. I am also convinced that it was the intention of those 458 electors to vote for the candidate of the National Progressive Party.

The contestant was the only person claiming to be such candidate, and while under the law of Michigan as it now is, and as it has been for 70 years, he is not entitled to such votes, I do not care to hold a seat in this House under a title that may be questioned by some honorable and disinterested men. I have therefore prepared my resignation as a Member of this House, and shall forward it to-day to the secretary of state of Michigan and file a duplicate with the Speaker.

In the usual manner contestant filed with the Elections Committee No. 1 his brief. This was followed by the filing of a brief entitled "Brief in opposition to seating contestant," and Mr. Henry E. Davis, of counsel, on pages 3 and 4 of the brief submitted by him, after reviewing the case in part makes this statement:

This being the situation, it is wholly immaterial that contestee for a time occupied and afterwards resigned the seat involved, and is not now claiming the same; the question is whether contestant is entitled to the seat. In such situation contestee might well leave the matter in issue for consideration without suggestions of his own toward its proper solution, but upon advice of counsel it seems due to him and to the interests of the people of his district that he should, through counsel, rather as amicus curiæ than as his advocate, submit for consideration of the House what is hereinafter set forth, in which view this memorandum is entitled as above, namely, "Brief in opposition to seating contestant," rather than, as is usual in such cases, "Brief for contestee."

Appearing, then, according to his own designation, as amicus curiæ rather than as advocate of any rights of contestee, counsel set forth in his brief numerous questions that have to do with the right of contestant to a seat in this body.

THE ISSUES.

The notice of contest makes the following allegations:

"1. The nominee of the Progressive Party (one Rogers) entered under the law by petition, having resigned and declined to become a candidate, the congressional committee of that party duly designated contestant to fill the vacancy caused by such resignation.'

"2. Formal notice of contestant's nomination was sent to the board of election commissioners of every county.

"3. Pursuant to such notice, the name of contestant appeared as candidate in each county, being printed in the regular place on the final ballot, except in Ontonagon County.

"4. In Ontonagen County the county clerk printed contestant's name in the proper place on the final ballot as 'Sheldon William J. McDonald,' instead of 'William J. MacDonald.'

"5. The surplusage 'Sheldon' thus appearing was unknown to contestant at any time which would afford him opportunity to seek relief from the addition of such surplusage, and became known to him only after publication of the determination of the board of canvassers.

"6. The official return of the canvass of Ontonagon County certified the vote of the county as follows: 'For William J. MacDonald, none; for Sheldon William J. McDonald, 458.'

"7. The total number of votes cast and counted for contestee is 18,190, and for contestant 17,975; and if the votes cast and counted for Sheldon William J McDonald had been added to those cast and counted for contestant, the latter would have had a plurality over contestee, to wit, of 243 votes."

The answer of contestee admits or affirms that:

First. Contestant was the apparent Progressive nominee, but denies that he was in law such nominee.

Second. The person professing to be the nominee of the Progressive Party (Rogers) claiming to have been chosen by primary election, declined to be a candidate, and that a body purporting to be the congressional committee of the Progressive Party presumed and undertook to designate contestant to fill the supposed vacancy.

Third. That no ballots whatever cast for contestant at the election, whether those in question or those not in question, can be counted for him, for the reason that by the statutory and adjudged law of the State he was not a candidate of the Progressive Party "under the authority of the law," and accordingly was not eligible to be, and in contemplation of law was not, voted for at the election, and the ballots purporting to have been cast for him at the said election were and are void.

Fourth. That formal notice of the supposed and pretended nomination of the contestant was sent to the board of election commissioners of every county, and that his name appeared as candidate in every county in the regular place on the official ballot as candidate of the Progressive Party, except in Ontonagon County; that the county clerk of Ontonagon County caused to be printed in the proper place on the official ballot reserved for the candidate of the Progressive Party the name Sheldon William J. McDonald, and that the return of the canvass of Ontonagon County was as alleged in the notice of contest.

Fifth. That by the statutory and repeatedly adjudged law of the State of Michigan, the Ontonagon ballots in question can not be counted for contestant because of the difference in name, the correction of which, if error, would require going behind the ballots, which is not permissible under the law of the State.

LEGALITY OF NOMINATION OF CONTESTANT.

It is urged that contestant is not entitled to receive any of the votes cast for him in any of the counties upon the theory that he was not legally upon the ballot. This contention rests upon the manner in which the vacancy or supposed vacancy that contestant was nominated to fill was created, and whether as a matter of fact there was such a vacancy, and if so, whether or not the candidate was eligible to be placed upon the ballot, and if so whether or not the parties nominating him were eligible so to do.

The primary election law of Michigan contains, among others, the following provisions:

No person shall be permitted to vote at any primary election unless he shall have been enrolled in manner provided as a member of a political party, and voters in the various political parties have opportunity to become enrolled voters of the particular party with which they affiliate, on certain specified days. Whenever an enrolled voter has changed his party affiliation and desires to be enrolled as a member of another political party, he may personally make application for reenrollment only on enrollment day. In every congressional district there shall be nominated at the August primary election preceding every general election, by direct vote of the enrolled voters of each political party, a party candidate for Representative in Congress. There shall also be elected at the primary, by direct vote of the enrolled voters of the political party in each county, as many delegates as such parties shall be entitled to by the call issued by the county committee of such party for the county convention thereafter to be held by the party within said county in that year for the purpose of electing delegates to the State convention called for the purpose of nominating candidates for State offices. When any candidate, after having been nominated as in the law provided, shall withdraw before the printing of the ballots, the proper board of election commissioners shall cause to be placed upon the ballot, in place of the name of such candidate, the name of the candidate selected by the proper party committee, as shown by the certificate of its chairman and secretary, in manner prescribed by the general election law; and in congressional districts comprised of more than one county, the county committee provided for in the law of each political party of each county of the district shall elect one or more electors of the party, residing within the district to be represented, as a member or members of the committee of such political party for such district: *Provided*, That the party nominee shall have the privilege, if he so elect, of naming the committee of the political party for the district from which he has been nominated. Votes cast for any candidate upon the ballots of one political party, when such candidate is enrolled as a member of another party, shall not be counted; and it shall be unlawful to print on any official ballot prepared for the use of voters at any election the name of any candidate, unless such candidate was selected under the authority of the law, and this prohibition shall operate against any candidate selected in any mass convention, or by any so-called independent voters at any caucus or convention. The county committee, except chairman and secretary, shall be chosen by each political party at each county convention held after each August primary.

It is admitted that at the time of the general primary election in August, 1912, the person who was nominated for Congress

as the nominee of the Progressive Party (one Rogers) was an enrolled elector as a Republican in Marquette County. The law provides that "votes cast for any candidate upon the ballots of one political party where such candidate is enrolled as a member of another, shall not be counted."

I do not think that, under the decisions of the courts of Michigan, if the candidate Rogers were nominated for an office wholly within the control of the State, there would be any question as to the interpretation of the foregoing statute, and I believe that under it Rogers would fail of nomination. Rogers was enrolled as a Republican. The law specifically states that votes cast for any candidate upon the ballot of one political party where such candidate is enrolled as a member of another party shall not be counted.

The supreme court of Michigan on November 1, 1912, held that the nomination of one Cook as a candidate for judge of probate in a county of the State of Michigan was illegal and void, for at the time he was voted for as a candidate of the Progressive Party in the primary, he was enrolled as a member of another political party.

With regard to the view that the Congress should take in the matter of the nomination of Rogers, it is important to consider whether or not the particular statute of Michigan is not unconstitutional as applied to a Member of Congress on account of the provisions of the Federal Constitution defining the qualifications of Members of the House of Representatives, which are that a Member shall be not less than 25 years of age, a resident of the State from which he shall be elected, and shall have resided not less than seven years within the United States.

In my judgment the provision of the Michigan statute attempts to impose a qualification upon persons seeking membership in the House of Representatives that is not in harmony with the Constitution. The State of Michigan has added to the qualifications recognized by Congress, the additional qualification that a person to be eligible for nomination shall be enrolled as a member of no other political party than that of which he received the votes at the primary election. This identical question has probably never been presented to this Congress, but questions somewhat similar have been presented and the principle, at least, is not a new one.

In the case of Wood against Peters, from the State of Kansas, in the Forty-eighth Congress, it was developed that Peters had received 99,866, and that contestant Wood had received 83,364 votes. It was contended that Peters was not entitled to his seat because he fell within the inhibition of the constitution of Kansas that provides that the supreme and district judges of the State shall not hold any office of profit or trust under the authority of the State or United States during the term of office for which said justices or judges shall be elected.

It was held in this case by the House that such provision could not be binding upon this body, because otherwise the State would be conceded the power to limit or qualify the eligibility of persons aspiring to membership in the House of Representatives.

In the report upon that case, the majority of the committee cite the cases in the Thirty-fourth Congress of Turney against Marshall and Foulke against Trumbull, both of Illinois, as cases that involve precisely the same question.

After reviewing the case in point and precedents, the House adopted the report of the majority of the committee that Peters was duly elected a Member of Congress from the State of Kansas and is entitled to his seat.

It is true that the minority report was submitted, but the very vote by which its adoption was rejected is significant of the sentiment prevailing in Congress upon that question, for in support of the minority report there were 20 yeas as against 106 nays. After this vote when the proposition of confirming the title of Mr. Peters was submitted it was agreed to without division.

In view of this it is my judgment that, notwithstanding that which is apparently the well-fixed rule or law of the State of Michigan as applied to officers over whom the State has entire control touching qualifications, I can not concede that the State has the right to so limit the possible candidates for Congress in a manner that would make the nomination of Rogers illegal and invalid if he is otherwise qualified.

ROGERS'S RESIGNATION AND THE NOMINATION OF M'DONALD.

If, then, we may recognize that Rogers was nominated, clearly when he resigned he created a vacancy, but it is contended that contestant was not eligible to such vacancy assuming that there was one.

It is urged that he, too, was enrolled as a Republican and consequently could not have had his name placed upon the ticket. The same conclusion that I have reached with regard to the placing of the name of Rogers upon the ticket is reached by me in considering the question of eligibility of MacDonald from the standpoint of his qualifications. I need not review this further. I believe that he was eligible, and I might say in this connection that the limitation that has been placed upon the right of ballots to be counted only for candidates who may not be enrolled as of another political party than that for which the votes are cast is the more unreasonable when applied to the contestant as a candidate for nomination for Congress under the Michigan statute for the reason that there was no possible way by which he could have qualified. The period within which he should have enrolled as a member of the Progressive Party had passed. Indeed, it had passed prior to the time that the Progressive Party was organized, so it was something that was wholly beyond the power of contestant to control.

LEGALITY OF CONGRESSIONAL COMMITTEE.

But it is urged that if contestant be eligible he was not nominated by a duly organized body authorized to act under the laws of Michigan for and in behalf of the Progressive Party. It is true that the Progressive Party was of recent origin. It is altogether probable that in many instances mass meetings were held in place of conventions, and, in the absence of a regularly constituted party machinery, volunteers were recognized and relied upon in various localities to act for and in behalf of the political organization.

It is a well-established principle that it is presumed that the laws have been complied with that have to do with directing the manner in which political organizations shall operate and the manner in which ministerial officers shall perform their duty. It is charged that the committee that nominated contestant was not legally constituted, but it has not been proven. It was stated by contestee in a letter to the voters of the twelfth congressional district:

As a candidate for Congress Mr. MacDonald was "hand picked" by the Progressive committee, which was appointed by one man, Mr. Joseph M. Rogers, who himself had received 11 votes only as a candidate for the Progressive Party for Congress.

But it is urged that as a matter of fact the committee was not constituted in this way. The testimony of several persons has been obtained tending to support this point of view. One of the persons relied upon is Joseph M. Rogers. In the examination that was conducted in laying the foundation for the defense of contestee against contestant the question was asked whether the Progressive or National Progressive committee was selected at the Escanaba conference and he replied that he knew nothing about it. He was asked whether it was selected at any other time or place, and he replied, "I have no knowledge." He was asked whether or not he ever appointed a congressional committee, and he replied, "I did not." Upon cross-examination he was asked whether or not he did not send a written communication declining to be a candidate for Congress on October 9, 1912, the said communication addressed to the committee of the Progressive Party. He replied that he did. He was asked if he understood that Mr. Field was chairman and Mr. Shiras was secretary of the committee, and he replied that he did. He was asked whether or not he could state that delegates were not elected to attend a congressional convention of the Progressive Party, and he replied that he could not.

Somewhat similar information was obtained from other persons, but nothing that I have discovered in the evidence conveys a stronger opinion than a doubt or an admission of lack of information upon the subject. The burden of proof rests upon the contestee or upon those who challenge the right of contestant to a seat in Congress, and my judgment is that they have not established as a fact that the Progressive congressional committee was not elected and organized according to law.

It is brought out to my satisfaction, and, I think, to the satisfaction of the committee, that in at least two of the counties there were regularly chosen members of the congressional committee. It may be admitted that from some of the other counties those who were working with the committee were not chosen according to the provisions of the law touching party organizations. The general election law of Michigan provides a certain way by which the congressional district committee of each political party may be selected and organized. More than this, there is provided in the primary law that the party nominee shall have the privilege, if he so elect, of naming the congressional committee of his party for the district from which he has been nominated. This provision is recognized as standing in lieu of the selection of the committee under the general election law.

It may be urged that the committee that nominated contestant was not elected under the general election law and was not nominated by Rogers, the original nominee of the Progressive Party. However, the committee, if not in fact named by Rogers, was recognized by him as the congressional committee of the twelfth district, or, in other words, the district for which he was nominated.

He recognized said committee most emphatically when, early in October, 1912, he resigned as the National Progressive nominee for Congress, transmitting his resignation to the organization that purported to be the congressional district committee of the twelfth congressional district. He addressed letters to the honorable election commissioners of Ontonagon County, under date of October 9, 1912, advising them of his resignation. Clearly the committee was recognized as such by Mr. Rogers, and it is reasonable to view this recognition as tantamount to appointment; and in the absence of any challenge made prior to the election of the authority or asserted authority of the congressional committee that nominated MacDonald, I can only conclude that the committee must be regarded as having acted within its rights and that at any time subsequent to the general election in November, it is too late to question the authority of such committee.

More than this, no one working within the Progressive Party, either within the twelfth district in Michigan or elsewhere, is heard to question the authority of the committee of that party organization.

RIGHT OF ALL VOTES TO BE COUNTED.

Admitting that if contestant had been a candidate for an office wholly under the control of the State his name could have been prevented from going upon the ticket because of the fact that he was not enrolled as a Progressive or because of the possibility that the congressional district committee that nominated him had no such authority, the fact remains that contestant's name was actually placed upon the ticket in all of the counties excepting Ontonagon and in that county was placed upon the ticket with an additional word "Sheldon" as a part of his name.

The question now is pertinent whether or not the votes which were cast for MacDonald in all the counties shall not be counted for him in spite of whatever irregularities may have occurred. MacDonald, the contestant, was the de facto nominee of the Progressive Party in the twelfth congressional district.

He was nominated by the de facto committee, whose right and authority in the matter was not questioned, but rather was accepted by the ministerial officers of the State when the name of contestant was placed upon the ticket. If, as a matter of fact, contestant's name should not have appeared upon the ballot, the question should have been raised and could have been raised by some elector in the district prior to the general election.

A similar question was raised with respect to a candidate for probate judge and the supreme court held that his name should not go upon the ticket. Here is the remedy that could have been applied by any elector of the district. Here is the remedy that ought to have been sought if anyone expected ever to seek relief. It could not be claimed that the electors of the district were unaware of the possibilities in the case for the chairman of the State committee had sent telegrams to the various county clerks advising them not to place the name of contestant upon the ticket. More than that, contestee had recognized the discussion that was evidently taking place in the district with respect to the right of the name of contestant to appear upon the ballots, and he stated in a public communication to the voters of the twelfth congressional district that it was his personal desire that the name of W. J. MacDonald remain upon the election ballot.

There have been other instances where de facto committees and de facto officers have been recognized by Congress, and the question that I raise is not altogether new, although probably it is applied in this particular manner for the first time. More than this, I can not believe that the Congress of the United States must be bound by the strict interpretation of the several State laws in such degree that it must refuse to recognize the will of a majority or of a plurality when such will has found expression through the institution that has been provided for the preservation of the rights and the liberties of a free people.

The electors of the twelfth congressional district might have written upon the ballots the name of contestant and voted for him. They went into the booths with their ballots and found the name William J. MacDonald printed upon what purported to be an official ballot. They voted for MacDonald in good faith, there can be no question about this, and I have no doubt in my mind as to the right of the votes to be counted that were cast for contestant in the several counties.

The attorney for contestant contended vigorously before the committee that the several States should be left free to define their election laws under the Constitution and that the interpretation of the laws and the sufficiency of the compliance with the laws governing election officials recognized by the courts of the several States should be binding upon Congress.

I asked counsel if this might not mean that upon the same state of facts a person presenting himself as elected to Congress from the State of Michigan might not be denied his right to a seat while another person presenting himself to Congress from a district in Wisconsin, immediately across the line, might be declared entitled to membership. Counsel admitted that such might be the case, but urged that it would be proper. It is my judgment that such a rule as that can not and should not meet with the approval of the Congress.

While this seems to be the natural and reasonable conclusion, it is a conclusion that I think we are compelled to reach, and that is abundantly sustained by precedents from the State courts and precedents established by the House of Representatives. It was held in the case of Commonwealth *v.* Combs (27 Kentucky Law Report) that when the certificate of nomination was filed substantially in the form and manner prescribed by law it was not within the province of an election officer to go behind it to determine whether or not it was rightfully done.

In the cases of Schuler *v.* Hogan (168 Ill., 369) and State ex rel Piggott *v.* Benton (13 Mont., 306) the election was contested because of the alleged invalidity of the certificate of nomination and courts held that the certificate of nomination regular upon its face and filed by the proper officer was prima facie evidence of the nomination so certified.

The case of Bowers *v.* Smith (111 Mo., 45) is exceedingly interesting. The Union Labor Party had not polled at the last preceding election the requisite vote that would entitle the party to put a ticket in the field in the manner provided for parties casting a certain vote. The ticket, however, had been placed in the field; it had been duly certified; ballots had been printed and furnished to voters and the election had been held. The court decided that objection because of insufficiency of votes at the previous election should have been made before the election and not afterwards. In other words, to quote the principle as indicated in another decision, Allan *v.* Glynn (17 Colo., 349):

Irregularities which do not tend to affect the results are not to defeat the will of the majority; the will of the majority is to be recognized even when irregularly expressed.

Somewhat similar cases have been presented to Congress in the past. Among the early ones were the following: David Bard, Fourth Congress; Talliafaro *v.* Hungerford, a Virginia case in the Thirteenth Congress; Spaulding *v.* Mead, in the Ninth Congress. The doctrine followed in these cases has been followed since. It was followed in the election cases of Milliken *v.* Fuller, in the Thirty-fourth Congress; Shiel *v.* Thayer, in the Thirty-seventh Congress; and Boyden *v.* Shober, in the Forty-first Congress.

In the contested-election case of Smith *v.* Jackson, Fifty-first Congress, on January 23, 1890 (p. 757, vol. 1), Mr. John Dalzell presented a report. Numerous questions were considered in connection with this case, and among them the question of technical violation of the law upon the part of the election officials.

In several precincts it appeared that the actual voting place was not the place established by the county court as the legal voting place. Again, it was charged that in one precinct the ballot box was left for a time with one of the judges unsealed, contrary to law, and it was asked that the votes of this precinct be thrown out.

In passing upon these questions of technical violation of the law, assuming that in all instances there had been an actual violation, the House sustained the committee in holding that if there had been any violation of law it was only technical and did not tend to the interest or prejudice of the contestee, and could not deprive the voters of the right of having their votes counted as cast.

In the Virginia case of Cornet *v.* SWANSON, in the Fifty-fourth Congress, questions arose that are of interest in connection with the pending case. The constitutionality of the election law of Virginia was questioned and the majority of the committee, after stating the fact that the Supreme Court of Virginia had by unanimous decision affirmed the constitutionality of the law in every particular, declared that it was not necessary to pass on the question in order to reach a just conclusion in the case, but says:

It would not necessarily follow, in the opinion of the committee, were it conceded that the Walton election law was unconstitutional, and therefore inoperative as to the particular features of that law here assailed, that no valid election had been held in the fifth congressional district of Virginia. The sections which are assailed by reason of their alleged unconstitutionality are not so essential to the operation of the law under which this election was held, or so inseparably connected with

its other provisions and requirements, that even should they be thought to be inoperative this committee would be justified upon that ground in declaring that there had been no legal election.

In the course of the debate it was urged by a member of the committee, Hon. John J. Jenkins, of Wisconsin, that the election having been de facto, even conceding the law to be unconstitutional, the contestant must still make out a case to enable the House to seat him, and that to unseat the sitting Member would bring the House face to face with the proposition that all the Virginia Members, including at least one seated by the House, owed their seats to elections held under that law.

In this case the committee was sustained by the House.

Recognizing that the statute of Michigan requires a congressional committee to be appointed in a definite way, I can not construe the statute adversely to contestant when there was open the opportunity of any elector in the district to challenge the right of the proper authorities to place the name of MacDonald upon the ticket to be voted upon at the election.

It is immaterial that the chairman of the Republican State committee notified the respective officials that they should not place MacDonald's name upon the ticket. Such notice could not be regarded as an official action. The proper remedy that the electors of the district, or any electors of the district, had was to invoke power of the courts in determining the question.

This was not done. MacDonald's name was permitted to go upon the ticket, and the Congress, following a long line of precedents, must refuse to set aside an election where there was no fraud and where the action complained of it is not alleged resulted in misleading any voter and where to set aside the election would be to set aside the clear expression of opinion of a plurality of the district.

SHALL THE VOTES CAST FOR SHELDON WILLIAM J. M'DONALD BE COUNTED AS CAST FOR WILLIAM J. MACDONALD?

The next important consideration for the House is to determine whether or not the votes cast for Sheldon William J. McDonald should be counted for William J. MacDonald. Now, what are the facts in connection with this matter?

Upon the official ballot in all the counties of the twelfth congressional district save one MacDonald's name appeared as William J. MacDonald. In Ontonagon County, however, it appeared as Sheldon William J. McDonald. John Garvin was the county clerk of Ontonagon County in Michigan, and as such was the clerk of the board of election commissioners and canvassers of the county. It was the duty of said board to prepare the official ballot, and with respect to the placing of the name of contestant upon the ticket Mr. Garvin has been examined with great care and his testimony is very clear.

He states that he received a certificate from the board of State canvassers certifying the names to be printed on the official ballot, and showing that of Joseph M. Rogers for Congress, and that he had been duly nominated. He testifies that he received two notices of withdrawal, one from J. M. Rogers and the other from Joseph M. Rogers as a candidate for Congress.

He testifies that he received a notice of substitution of William J. MacDonald in the place of Joseph M. Rogers as candidate for Congress on the National Progressive ticket for the twelfth congressional district, and that this notice was signed by Nathaniel Field, chairman, and George P. Shiras, secretary, of the district organization.

He testifies that following this he received a letter from Charles F. Hoffman, secretary of the State central committee of the National Progressive Party, dated October 12, 1912, inclosing certificate of nomination of various candidates, and upon which the name of the candidate for Congress for the twelfth district appears as William J. McDonald. Witness testified that following this he received a telegram from Hoffman that he understands was sent to each of the 15 members of the election commissioners, requesting them to correct the spelling of MacDonald's name, it having been certified to the various boards of election commissioners as McDonald, whereas it should have been MacDonald. Witness Garvin also produced a telegram addressed to him, which read as follows:

10/15, 1912.

Received at
Dated Detroit, Mich., 15.
To BOARD OF ELECTION COMMISSIONERS,
Courthouse:

Congressman twelfth district should be Sheldon William J. McDonald. Correct.

CHARLES F. HOFFMAN.

As a matter of fact, an error was made somehow in the transmission of the telegram to the clerk of Ontonagon County, and a communication from the manager of the Western Union Telegraph Co. to Mr. Charles Hoffman, Owosso, Mich., shows the telegram as sent by Mr. Hoffman to John Garvin, county clerk of Ontonagon County. The communication is as follows:

THE WESTERN UNION TELEGRAPH COMPANY,
MANAGER'S OFFICE,
Detroit, Mich., December 28, 1912.

Mr. CHAS. HOFFMAN,
Owosso, Mich.

DEAR SIR: Replying to yours of December 27, beg to state that we have now located the telegram to Ontonagon, which read as follows:

"Congressman twelfth district should be spelled William J. MacDonald, correct."

We have shown this message to-day to Mr. Charles O'Neil, who has called on us.

Very respectfully, C. H. CADWALLADER, *Manager.*

As a result the name of MacDonald appeared incorrectly as Sheldon William J. McDonald upon the ballot in Ontonagon County and 458 votes were cast in said county for such candidate. Shall these votes be counted?

It seems to be generally admitted that it was the intention of the 458 electors to vote for the National Progressive Party candidate for Congress. Contestee admits this in his speech in the House of Representatives on May 10 last. He admits that the contestant was the only person claiming to be such candidate. No one is heard to raise a question that challenges the accuracy of this assumption. The one thing that Congress then is called upon to determine in this connection is whether or not the votes cast for Sheldon William J. McDonald shall be counted for William J. MacDonald.

In numerous cases that have come before the House of Representatives this question has been met, and it has been determined that the equitable and just course to follow is to count the votes for the person for whom it was intended that they be cast.

Among the early cases were Turner against Bayliss, Eleventh Congress; Williams, Jr., against Bowers, Thirteenth Congress; and Willoughby against Smith, Fourteenth Congress.

In the Virginia election case of McKeuzie v. Braxton, in the Forty-second Congress, the House decided that it has the right to go behind the ballot to ascertain the intent of the voter, so as to explain what is ambiguous or doubtful. It is clearly developed in that case that in printing of ballots whereon occurs an error in a name the limitations of the House are very different from those of a canvassing board.

The official returns gave Lewis McKenzie 10,259, Elliott M. Braxton 9,065, E. M. Braxton 3,654, and L. McKenzie 935.

The grounds that were relied upon by contestant were, first, that the House is not permitted to look beyond the ballot to ascertain the voters' intent; second, that the ballots in question can not be held to have been intended for Elliott M. Braxton.

The committee reports continued, as follows:

It may and doubtless is sometimes necessary to sacrifice justice in a particular case in order to maintain an inflexible legal rule, but all just men regret such necessity and avoid it when possible to do so. Your committee are clearly of the opinion that no such necessity exists here. So far from demanding such a sacrifice of right the law as well as equity forbids it.

The contestant asks the House to apply the strict rule which has sometimes, though not always, been held to govern canvassing officers, whose duty is purely ministerial, who have no discretionary powers, and can neither receive nor consider any evidence allunde the ballots themselves. It is manifest that the House, with its large powers and wide discretion, should not be confined within any such narrow limits. The House possesses all the powers of a court having jurisdiction to try the question, Who was elected? It is not even limited to the powers of a court of law merely, but under the Constitution clearly possesses the functions of a court of equity also. If, therefore, it were conceded that the canvassers erred in counting for the sitting Member the votes cast for E. M. Braxton and Elliott Braxton, it would not determine the question as to what the House should do. What, then, is the true rule for the government of the House in determining what votes to count for the sitting Member? Your committee are clearly of the opinion that where the ballots give the true initials of the candidate's name that is sufficient, and we therefore without hesitation hold that the ballots given for E. M. Braxton must be counted for the sitting Member.

Another objection, urged with much more zeal by contestant's counsel, is to the votes cast for Elliott Braxton, 235 in number. These, it is urged, can not be counted for Elliott M. Braxton, the sitting Member. Even if we were not permitted to look beyond the ballots themselves, we could have little doubt as to our duty; but under some circumstances and for certain purposes evidence outside of the ballots themselves is admissible. It is true that no evidence allunde can be received to contradict the ballot nor to give it a meaning when it expresses no meaning of itself, but if it be ambiguous or of doubtful import the circumstances surrounding the election may be given in evidence to explain it and to enable the House to get at the voter's intent. We see no reason why a ballot ambiguous on its face may not be construed in the light of surrounding circumstances in the same manner and to the same extent as a written contract.

* * * * * * *

The cases are numerous where an imperfect ballot, by the aid of extrinsic evidence, can be made clear and perfect. No harm can result from admitting such extrinsic evidence so long as it is only admitted to cure or explain such imperfections and ambiguities as could be cured if they occurred in the most solemn written instruments, and to this extent and no further would we carry it. Thus guarded and qualified, the rule is most salutary and most just.

This case is very illuminating in indicating the powers of Congress in endeavoring to ascertain who have been elected to the Congress, and the principle is recognized that purely ministerial officers must necessarily be bound to consider what appears upon the face of the returns themselves, but that a different rule applies when the parties in interest come before a body clothed with full power to pass upon their rights, in the light, not only of the returns themselves, but of all competent evidence.

In the case of Mudd against Compton (Md.) in the Fifty-first Congress, the certificate of election had been awarded to Compton, and contest was instituted by Sidney E. Mudd. Without going into all the details of the case, and recognizing that there were numerous other points at issue besides the one to which I shall call attention, one point especially is important to be cosidered as a precedent in examining the present case, which developed in the case of Mudd against Compton. There were cast for Sidney E. Mudd 16,279 votes, for S. N. Mudd 1 vote, for S. E. Mudd 1 vote, for Mudd 1 vote, and a ticket upon which Sidney E. Mudd's name appeared twice was not counted at all, though the voter indicated clearly his intention to vote for him. It was decided that this ballot should be counted, as well as the others, notwithstanding the different spelling of the name; and the total votes, as ascertained by the committee, that were cast for him were 16,283.

The committee found that there were cast for Barnes Compton 16,280 and for Compton 1 vote, making a total of 16,281, a plurality for Sidney E. Mudd of 2 votes.

In the report of the majority members of the committee, submitted by Hon. William C. Cooper, it is stated, "There were no persons by the name of Mudd and Compton other than the contestant and contestee candidates for Congress at this election, and therefore, under the well-established rule of the House, the vote for "Compton," if counted at all, should be counted for contestee, and the votes for "S. E. Mudd," for "Mudd," and for "S. N. Mudd," for the contestant.

The report of the majority members of the committee was approved by the House of Representatives by a vote of 150 yeas against 145 noes.

In Noyes against Rockwell, Fifty-second Congress, there were 3 ballots cast for Hosea Rockwell, 4 for H. H. Rockwell, 1 for Hosey Rockwell, 1 for H. Rockwell, making 9 which were rejected by the canvassing board. Both the majority and the minority members of the House committee reported that these votes should be counted for the contestee. There was 1 ballot cast for H. Noyes, 1 for Henry T. Noyes, and 1 for Henry Noyes, making 3 which were rejected by the canvassing board, but both majority and minority members of the committee in their reports expressed their conviction that these ballots should be counted for contestant.

SHOULD A DIFFERENT RULE APPLY?

But it is urged that in view of the position that the court of Michigan has taken, a different rule ought to apply to the pending case.

I am satisfied that it has been the established law of Michigan that for offices wholly within the control of the State the incorrect spelling of a name such as appears in this case would be fatal. The question then arises, Shall Congress be bound by the rule that has obtained in Michigan? It is a very generally accepted doctrine that where the supreme court of a State has made an interpretation of the law of the State the Congress shall regard this interpretation as correct, if it shall not be ont of harmony with the Federal Constitution; but it is an equally well-established rule of Congress that no decisions that are of mere inferential character shall control the Congress in its determination of a question of this character. Indeed, the Congress is not required to recognize the decisions of the supreme courts of the States when these decisions are pertinent to the particular question at issue.

In this case the supreme court did not pass upon the question that is now in issue. It is true that contestant applied to the court for relief. He filed a petition with the Supreme Court of the State of Michigan praying for a writ of mandamus to be transmitted to the board of State canvassers compelling said board to reconvene and recanvass the returns and issue a certificate to contestant.

The supreme court denied the petition, but filed no opinion therewith. The conclusion of the court as stated upon the hearing was that the court declined to take jurisdiction on the ground that Congress was the sole judge of the qualifications of its Members.

Upon the foregoing facts the board of State canvassers issued a certificate of election to H. Olin Young.

The question, however, received wide attention. It attracted the attention of the late candidate of the Progressive Party for President, Col. Theodore Roosevelt, and in view of statements made by Col. Roosevelt a letter was written by the then chief justice of the Supreme Court of the State of Michigan, Justice Joseph B. Moore, addressed to the editor of the Detroit Evening News and published in the News on March 31, 1913. Quoting from the letter, Justice Moore said:

I took no part in the decision in the MacDonald case, because I was in Detroit when the case was presented upon necessary business of the court. I claim nothing because of the fact, because I approve of what the court did. Mr. Roosevelt says the question is simple, and that by denying Mr. MacDonald relief the court overruled itself, citing Joachim v. Kennedy (37 Mich., 67). If Col. Roosevelt ever read that case, he knew that the parties to it were contestants for the office of city treasurer at Ishpeming, a case where the State courts could, of course, take jurisdiction.

The case of MacDonald was entirely different. The contest was between a Congressman and one who claimed to be a Congressman-elect. If Mr. Roosevelt possesses a tithe of the intelligence he credits himself with, he knew that the State court had no right to interfere in this controversy. Section 5, Article I, of the Constitution of the United States reads: "Each House shall be the judge of the elections, returns, and qualifications of its own Members, and a majority of each shall constitute a quorum, to do business." This language may not mean much to Mr. Roosevelt, but to a court that has taken the oath to support the Constitution of the United States, it means much. The language is simple and unambiguous, and to one who respects his oath of office it is controlling.

As early as the Ninth Congress, in the Spaulding case, it was held that the whole question of the returns and qualifications of Congressmen rested with the House of Representatives, and that has been the uniform holdings of Congress and the courts from that time until this. In 94 Michigan, 448, when the court was made up of John W. McGrath, chief justice, and George H. Durand, Frank A. Hooker, Charles D. Long, C. B. Grant, and H. M. Montgomery, associate justices, A. Oren Wheeler, claiming to be elected Senator on the Republican ticket, asked for a writ of mandamus, just as Mr. MacDonald did, to compel the canvassing board to act. The court declined to do so for the reason that under the State constitution, the State senate was the sole judge of the election and qualification of its members. This opinion was based upon earlier opinions of the court where the same principle was involved. It has been followed in many later cases. Among them that of Mr. Belknap, who claimed to be elected to Congress. The court said in that case: "The House of Representatives is made the judge of the election and qualification of its own Members."

From the foregoing it must appear that the Supreme Court of Michigan did not expect that the Congress would be bound by any decision that it might make and did not regard it in any other way than that the question of whether or not the votes cast for Sheldon William J. McDonald in Ontonagon County should be counted for contestant should be determined by the House itself.

This attitude of the court is undoubtedly in line with the principle that has been established by the House. It has become axiomatic that the courts of a State have nothing to do directly with the judging of elections, qualifications, and returns of Representatives in Congress, and numerous cases are in point, and among them the Illinois election case of Le Moyne against Farwell, Fifty-fourth Congress.

As a rule the House has held that it should be governed by the interpretations of the State supreme court touching the law of the State in question, but the decision of the court on an analogous case, though not the identical question in issue, can not be regarded as binding, as was determined in the Mississippi election case of Lynch v. Chalmers in the Forty-seventh Congress.

The Michigan cases cited in brief of counsel on behalf of contestee can not be regarded as more than analogous, and the chief justice of the supreme court of the State has expressly disclaimed any intention of the court to pass upon the question involved in the case that is before the House.

In view, then, of the attitude of Congress touching election laws in numerous States, of the fact that the Supreme Court of Michigan declined to pass upon this particular question upon the theory that the question was one that belonged to the jurisdiction of the House, I am forced to come to the conclusion that not only all the votes cast for Sheldon William J. McDonald should be counted for contestant, but that the House of Representatives is abundantly within its right when it so determines.

CAMPAIGN EXPENSES.

The question is raised that contestant did not comply with the campaign-expense laws of the Federal Government prior to and following the last general election.

The law provides that every person who shall be a candidate for Congress, not less than 10 nor more than 15 days before the date of the general or special election, shall file with the Clerk of the House of Representatives "(1) a full, correct, and itemized statement of all moneys and things of value received by him or by anyone for him with his knowledge and consent, from any source, in aid or support of his candidacy, together with (2) the names of all those who have furnished the same

in whole or in part, (3) and such statement shall contain a true and itemized account of all moneys and things of value given, contributed, expended, used, or promised by such candidate, or by his agent, representative, or other person for and in his behalf with his knowledge and consent, together with (4) the names of all those to whom any and all such gifts, contributions, payments, or promises were made for the purpose of procuring his nomination or election."

The law also provides that every such candidate within 30 days after such general or special election shall file with the Clerk of the House of Representatives "(1) a full, correct, and itemized statement of all moneys and things of value received by him, or by anyone for him, with his knowledge and consent, from any source, in aid or support of his candidacy, together with (2) the names of all those who have furnished the same in whole or in part, (3) and such statement shall contain a true and itemized account of all moneys and things of value given, contributed, expended, used, or promised by such candidate, or by his agent, representative, or other person for and in his behalf with his knowledge and consent up to, on, and after the day of such primary election, nominating convention, general or special election, or election by the legislature, together with (4) the names of all those to whom any and all such gifts, contributions, payments, or promises were made for the purpose of procuring his nomination, indorsement, or election. (5) Every such candidate shall include therein a statement of every promise or pledge made by him, or by anyone for him with his knowledge and consent or to whom he has given authority to make any such promise or pledge, before the completion of any such primary election or nominating convention or general or special election or election by the legislature, relative to the appointment or recommendation for appointment of any person to any position of trust, honor, or profit, either in the county, State, or Nation, or in any political subdivision thereof, or in any private or corporate employment for the purpose of procuring the support of such person or of any person in his candidacy, and if any such promise or pledge shall have been made, the name or names, the address or addresses, and the occupation or occupations of the person or persons to whom such promise or pledge shall have been made shall be stated, together with a description of the position relating to which such promise or pledge has been made. In the event that no such promise or pledge has been made by such candidate that fact shall be distinctly stated."

Evidence was taken showing that the contestant failed to file with the Clerk of the House as provided by law prior to the general election held on November 5, 1912, an affidavit setting forth the source or sources of moneys contributed to his campaign fund, and that contestant also failed to file, as provided by law, an affidavit touching election contributions and expenses within 30 days following the general election.

No issue was made in the pleadings upon this subject, and the committee found that the precedents are numerous to the effect that, no issue having been made, the committee is not bound to give the subject consideration. However, for my part—and I am satisfied that all the members of the committee agreed with this idea—I felt it was the duty of the committee to inquire into the facts that were disclosed in an effort to determine whether or not the contestant should be entitled to a seat. The country has been impressed with irregularities in connection with numerous elections; the country has witnessed the wholesale expenditure of money in the conduct of various campaigns. In response to a nation-wide public sentiment that laws be enacted looking to the purification of our elections, most of the States have endeavored to meet the situation within the States by the passage of corrupt-practices acts, and the Congress of the United States has endeavored to meet the situation by the passage of an act looking to the publicity of campaign contributions and expenditures made in connection with the campaigns.

In the last Congress the House affirmed its belief in the principle that a person presenting himself as a Member-elect to the House could be denied his seat for violation of laws having to do with campaign expenses and publicity of the same, though the laws in question were statutes of the States and not of the Federal Government. This principle was affirmed in the cases of McGill against Catlin and McLane against Bowman. The same principle would undoubtedly apply in the present case, and if it were disclosed that the report filed by contestant was intended to mislead and to deceive the House and the failure of the contestant to file an adequate report prior to the election, or any report at all within 30 days following the election, were intended to cover up the receipt of money from unworthy sources or the illegal expenditure of money, for my part I would stand for invoking the right of the House to deny a seat to the contestant.

In the pending case contestant did file an affidavit prior to the election setting forth expenditures that he had made. He did not file prior to the election an affidavit setting forth the sources of moneys received nor an affidavit within 30 days following the election setting forth either his expenditures that he had made or the contributions that he may have received.

It is shown, however, that later on contestant tried to correct these mistakes. It is shown that on April 21, 1913, contestant filed an affidavit referring to all expenses that he had incurred subsequent to the first affidavit that he had filed on October 26, 1912, and set forth in the affidavit that he had been to no expense whatever following that date.

The records also show that contestant on April 24, 1913, filed an affidavit setting forth that he received a contribution to his campaign fund in the amount of $500, through George Shiras, on behalf of the National Progressive Party.

From an examination of the facts in the case it does not appear that the failure of contestant to comply with the law was willful or on account of ulterior purposes. It is set forth in his affidavit filed five months almost after it should have been filed that contestant was to no expense whatever following the filing of the previous expense account. Certainly there was nothing with regard to which contestant could have been afraid or could have desired to avoid disclosing by his affidavit. There was nothing to disclose other than the most creditable circumstance that he had been to no expense whatever.

Admitting that the House might impose disciplinarian punishment and deny the person presenting himself as Member-elect a seat because of failure to comply with the campaign-publicity law, does the House believe that under the circumstances the penalty should be imposed in the face of the facts recited? Again, the contribution that contestant received, amounting to $300, was most assuredly a reasonable contribution, and was not even sufficient to pay the postage on one letter addressed to each of the persons in the contestant's district to whom he had a right to appeal in asking that he be elected.

The source of the fund was perfectly legitimate, for the money came from the organization of the party of which contestant was a candidate through the hands of a member of that party who personally is regarded in the highest esteem on account of his probity and manly worth. Surely upon this showing the House will not desire to invoke the extreme penalty that it could impose.

I take the position that every case that may be presented to this House rests distinctly upon its own merits with relation to invoking extreme remedies on account of the manner in which the person presenting himself for membership in this body conducted his campaign. If it were shown that in this case contestant had failed to file an expense account to avoid disclosures of unworthy receipt of money or an excessive expenditure of money or the expenditure of money in a corrupt manner, for my part I would vote against recognizing him as entitled to a seat in the House. But under the circumstances, with nothing disclosed that reveals discredit, and in spite of a contest in which it may be reasonable to expect that if contestant had conducted himself in his campaign in an unworthy manner it would have been brought to the attention of the committee, I can not feel that justice would be promoted, that good citizenship would be served, that our laws looking to the purification of our election would be vindicated by denying contestant a seat in this Chamber.

CONDUCT OF MR. YOUNG.

There is another feature connected with this case to which I can not fail to refer. The contestee, Hon. H. Olin Young, was for many years a Member of this body, who was honored and respected on account of his high conception of public duty and the manner in which he met the responsibilities that membership in the House of Representatives placed upon him.

Mr. Young was awarded the certificate of election as a result of the conclusions of the board of election commissioners following the last campaign. He accepted that certificate, as he stated to this House, with the knowledge that the question of whether or not he was entitled to his seat or whether or not contestant was entitled to a seat could not be determined prior to the assembling of the Sixty-third Congress, nor by any other body besides the House itself.

There were rumors, as Mr. Young advised the House, of conditions that might be disclosed touching substantial errors in his district that might modify the final count. However, after further examination and consideration of the various features of the question, on May 10, 1913, contestee tendered his resignation to the House and thereby relinquished whatever rights, if any, he may have had.

The House can not fail to recognize and approve the candor and honesty of judgment displayed by contestee in reaching a conclusion so disastrous to his personal interest prior to the opportunity of the House to inquire into the merits of the case, nor can the House fail to approve of the frank and honorable manner in which contestee has conducted himself during the entire trial.

In concluding his address to the House prior to tendering his resignation on May 10 last, Mr. Young said:

But after 10 years of service here, reflecting on the conditions under which men are elected to the House and on the strength of the temptations here to palter with one's intellectual integrity in favor of what is believed to be popular and the greatness of the reward for so doing in temporary honors, I am confirmed in my opinion of the high average, unselfishness, honor, and courage of the membership of this House.

I could not do better than to borrow the sentiment expressed by Mr. Young as characteristic of his fellows in the House, and to say that he has demonstrated himself as worthy of its being ascribed to him.

Mr. Speaker, in discussing this question, as I have reached the various features important for the House to consider in connection with the case, I have indicated my conclusions. In view of this I shall omit any lengthy summary and shall briefly say that, in my judgment, no essential reason has been advanced why the votes cast for contestant in the twelfth Michigan district should not be counted for him, nor why the votes of Ontonagon County cast for Sheldon William J. McDonald should not be counted as cast for contestant, for whom it is conceded they were intended.

I believe that this House should find that contestant was duly elected, and that he should at once be permitted to assume the full responsibilities that go with being a Member of this body.

The Underwood Tariff Bill a Step in the Dark for the Farmer, the Laborer, and the Business Man.

EXTENSION OF REMARKS

OF

HON. ASHER C. HINDS,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 30, 1913,

On the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. HINDS. Mr. Speaker, while we are in the midst of a difficult task it is well for us to pause for a moment and, forgetting details, take a general view of the work. Because the Underwood tariff bill has about 2,000 paragraphs it is very difficult to give at once an idea of its tendencies as a whole. Emphasis has been given to one portion or another according to the views of localities or special industries. There have been learned debates on the woolen schedule and the cotton schedule, and on certain parts of the agricultural schedule which involves the great staples like wheat and corn. But viewing this bill as a whole, throwing aside complicating details when possible, and referring to them only as they bear upon the great principles they involve, it seems that the treatment of the farming interests of America affords the key to the problem. Indeed, this must be so from the nature of our civilization, as Prof. Thorold Rogers said: "It is certain that the agriculturist must earn more than is necessary for his own support before any other person can contrive to exist. It was with some reason, therefore, that the economists and Adam Smith put him in the first rank of productive laborers. However scanty may be his share in the distribution of wealth, except he abide in the ship, none can be safe."

In what I have to say to-day, however, I do not speak for the farmer any more than for the merchant in the city and the artisan in the factory. The principle of protection must include all, directly or indirectly, else our tariffs are robberies, and all conscientious men must hasten toward free trade as fast as possible.

HARMONIOUS NATIONAL DEVELOPMENT.

It has been widely assumed that protection was simply a device for helping infant manufacturing industries. Inasmuch as many of those infants have got to be very old and some very prosperous, the Democratic argument that protection is not necessary is obvious if we are going to take a superficial view of the great question.

If, on the other hand, we are to take the view that protection is necessary for attaining and keeping a harmonious national development, the question assumes another phase. If we are going to take the view that every other nation except England has taken, then we must look into the subject of tariffs from the standpoint of our own national independence and self-reliance.

Keeping in mind that viewpoint, the treatment of the agricultural schedule is the most significant part of the bill. Because the wisdom of the fathers decided in 1824, when ocean freight rates were very high, that there should be a tariff of 10 cents a bushel on potatoes is not in itself significant now that the Democratic Party has decided to abolish the present tariff of 25 cents a bushel and open our ports freely to the potatoes of all the world. A Senate amendment would provide for a countervailing duty of 10 per cent from countries or dependencies which impose a duty on potatoes imported from the United States. This means that if there is any virtue in such protection the remedy is in the hands of the foreign competitors of the American farmer.

Because in 1824 a tariff of 5 cents a pound was levied on butter is not in itself a reason why the tariff should be cut to half this amount in the year 1913. It may be that the farmer will be able to furnish butter 2½ cents cheaper, even though the consumer may not get the advantage. Because milk and cream have had a duty for 20 years is not in itself a reason now why there should not be free trade, unless there is some fundamental reason connected with the harmony and prosperity of the people of America. If there is some fundamental reason why the Underwood bill in these respects is wrong, we ought to find it out and withhold our approval from it.

REVOLUTIONARY ACTION TO BE DEPLORED.

There is one reason which should be disposed of at once. All governmental action ought to be taken slowly and by degrees. Neither in prices nor in policies ought there to be revolutionary actions. When in 1846 the Democratic Party, under the lead of Robert J. Walker, decided to go toward a free-trade basis, they decided that a reduction in the tariff ought not to be made abruptly. Again, in the temporary lease of power which the Democratic Party had in 1894 the wisdom of the Democratic statesmen of that time concluded that the duties of the agricultural schedule should be reduced but not abolished. This year the Democratic caucus of both the Senate and House have decided that a large number of the staple products are to be dealt with with a heavy hand, and at once. No one can at this time picture all the unfavorable results of such drastic and revolutionary changes in business. It reaches into every farmhouse, it reaches into the business of the city merchant, it reaches into the income of every man, directly or indirectly. For it can not be that a revolution in the business of one class can confine itself to that class alone without in the end bringing discomfort to all.

THE PRINCIPLES OF JUSTICE IN LEGISLATION.

But beyond the unwise extent of this revision there comes up the broader question whether or not such a sudden change is inherently wise and just. The public conscience has been aroused in legislative questions to an extent not before known in America. A greater proportion of the people are watching the course of action of Congress to-day than ever before. There ought to be also, with this increased interest, an increased desire to confront all questions, especially economic questions, with candor, with a painstaking common sense, and with a laborious statistical knowledge. If we do not do this, the public business will go so far wrong as to militate against the public welfare and the welfare of individuals.

MODERN CONDITIONS DO NOT FAVOR FREE TRADE.

The first thing we must keep in mind always is that the world is continually changing so far as the business of producing, distributing, and consuming commodities is concerned. The Democratic Party, sponsors of the Underwood tariff bill, assume that the trend of modern civilization is in favor of lower tariffs or no tariffs at all. It is an assumption directly against fact. Historically that party has always leaned toward free trade and the English example. If we can prove that the English example is inexpedient for a country situated as the United States is situated, then the argument which bolsters up so many thousands of Democrats will have received a tremendous blow. This argument addresses itself especially to portions of the agricultural schedule.

THE FARMER AND THE MANUFACTURER.

In the best of our tariff bills heretofore agricultural products have had fair treatment with manufactures. Underlying that idea was a basic proposition that legislation was intended to make happier and more prosperous the American people. This meant not a few already prosperous people but all the people. A tariff bill that only helps some of the people and makes less

prosperous many other people ought not to have its place in enlightened statesmanship in any country.

It is not proper to so arrange the tariff rates that certain manufacturers shall have great advantages at home and abroad while similar enterprises, like the farm home, shall be put under an undue stress of competition.

Tariff legislation is the most important of all legislation, because it reaches nearer than any other legislation into every home. If a machinist or a stonecutter or other laborer is obliged to see the product on which he works passed by in the markets because the product of foreign workmen can be produced at a lower cost, and if this condition is brought about by the legislation in Congress, then we ought to see to it that the change has back of it the principles of justice and equity. If the American farmer is to live with the incidents of a modern civilization in a highly enlightened Nation, he ought not to be compelled to dispose of his products alongside of the products of farmers who live in a cruder or less enlightened manner.

REASONS FOR ESTABLISHING A TARIFF COMMISSION.

Therefore it is evident that tariff legislation ought to be based on fairness, equity, and justice. It is believed that the best modern thought gravitates to the idea of tariff legislation which has been followed so successfully by Germany and other continental countries, and which the best thought in America has adopted, whereby tariff legislation should be preceded by an exploration of facts and reasonings which should not be limited by partisan and selfish motives. This is the idea of the tariff commission, which has become a cardinal principle among the most progressive thinkers in America.

The Democratic Party, in its tariff legislation at this session of Congress, has rejected this equitable and modern method and has returned to the antique method, making as its excuse that the American people have been oppressed by the legislation of the last 50 years, and that freedom can only be restored by a return to the old policies of the Democratic Party.

Now, what were those old Democratic policies? They were, in tariff matters, an approximation to free trade. America discarded those ideas in 1861. In 50 years of Republican legislation it has been a cardinal principle that tariff legislation must be equitable among all classes of occupations. If the manufacturer must be considered, so also must the farmer and the laborer.

PROTECTION WORLD WIDE.

In the 50 years which have marked the great work of the Republican Party for liberty, civilization, and progress the idea of the United States Government in establishing the doctrine of protection has been approved by nation after nation, until to-day there is but a single country that adheres to the idea of letting business affairs, so far as tariffs are concerned, entirely alone. That country is England. I do not mean the British Empire, because the great colonies of England have followed the example of the United States of America. I mean simply England, with Wales, Scotland, and Ireland. They, under the jurisdiction of their Parliament, have still adhered to what is known as free trade.

Modern thought has gradually come to the conclusion that what is called "big business"—that is, great corporations with great capitalization, where personal responsibility and personal conscience have become reduced to a minimum and the greatest success is the criterion as measured by dividends—that such "big business" must be regulated by the Government to a certain extent. I believe that all civilized nations recognize this, England among the others. And the question of the imports of merchandise was one of the earliest to have Government supervision. England, by her peculiar situation as developed in the last 60 years, has thought that while "big business" must be regulated in general, yet in the matter of imports of merchandise from other countries, she has thought that the individual could take care of himself. All other nations have been thinking differently in the last 30 years.

Germany, France, and up to this time the United States, have made it a cardinal principle that in matters of trade the producing classes ought to be free from discrimination originating abroad. Strange anomaly, that England, always so jealous of all the rights of Englishmen, should have gone so far in the direction of free trade that English farmers find themselves under a substantial disadvantage. It is undoubtedly an outrage that grain, bacon, and eggs from Denmark and fruits and vegetables from France and Holland should be carried by the English railroads from the seaport to the place of consumption at rates far lower than are charged for similar foodstuffs of English production. But the foreigner can furnish solid trainloads, where the isolated English farmer can furnish only scanty truck loads. This discrimination against the English farmer has been one of the causes of working out the decay of English agriculture.

ENGLAND'S EXAMPLE OF FREE TRADE.

Inasmuch as the President of the United States and the Democratic Party have decided that they would go toward the example of England and away from the old example which other nations except England have followed, a question is presented which, finally, every one of us must settle for himself at the ballot box.

The leader of the opposition in the British Parliament, in a speech at Leeds, England, within a twelvemonth laid great stress on the fact that the phenomenon of an increased cost of living without a corresponding rise in wages is met with in England, but not elsewhere. In Germany there has been a rise in wages which much more than compensated for the increased cost of living.

Hitherto much has been spoken against this new Government policy so far as it relates to the laboring man in manufactures. Less has been said in relation to the farmer and to other producers of natural products. Yet the farmers make up a third of the people.

The greatest lack of our processes of legislation and policies of government is a lack of sympathy and understanding between classes of occupations and classes of society. This tariff bill has been framed with a fine regard for the great merchant classes of the great metropolitan centers of the country. In this House we ought to look out that justice may be done among all classes, both those who can come here to make their demands known and those who are precluded by the expense of the journey. Two hundred years ago Madam de Sévigné described flippantly the injustices and cruelties of the Government in Brittany, but "it would be a mistake," says De Tocqueville, "to suppose that Madam de Sévigné, who wrote these lines, was a selfish or cruel person," but she "had no clear notion of suffering in anyone who was not a person of quality." An American legislator ought, by study and investigation, to put himself in the place of those for whom he is legislating.

THE AGRICULTURAL DUTIES.

It should be remembered that the agricultural duties which are being swept away either absolutely or in large part have been in existence 20, 30, 40 years, and some of them since the foundation of the Government almost continuously. Now, a new policy is to be enacted at once without any examination worthy the name, and simply because of the high cost of living, although it can not be proven that the tariff has had any material effect on this question. In the countries outside the United States tariff changes are made after careful study and in due regard to the changed conditions of progress. This bill simply lays a rough hand on existing economic conditions without regard to anything except the desire to change.

Let us see how this bears on the small farmer. I do not mean the small farmer who lives within 20 miles of a city, where he can take his produce and dispose of it to the consumer at first hand. He undoubtedly has an advantage, inasmuch as he reaps the benefits of the high cost of living, while still keeping the advantage of country location. But I mean the great mass of the farmers who have to sell by means of railroad freights, and the intervention of the city middleman. What has happened in the last 15 years and 30 years to change their basic conditions?

THE CONSOLIDATION OF MARKETS.

First. The consolidation of markets so that the farmer, to a large extent, finds his market no longer in the village or city of his county, but rather in the metropolitan market which does business for a whole section of country. Such markets are Boston, New York, Chicago, Baltimore, etc. Take the illustration of one of the Eastern States. Farmers living a hundred and twenty-five miles from Boston, and on the railroad line, ship their products to the great market, although there may be a smaller market within 20 miles, and the smaller market may seek supplies from the larger. From this it happens that the great market has not only great purchasing power, but it also has great financial and moral power over the small and relatively weak producer, as well as over the consumer.

THE INTRODUCTION OF COLD STORAGE.

Second. The establishment of cold-storage plants has brought another great revolution in the farmers' market. Cold-storage plants require a large capital and a great paraphernalia of arrangement. Therefore the great metropolitan markets like Boston, New York, and Chicago have, as annexes, great cold-storage plants. The scattered producer on the farm, oftentimes acting without concert with other similar producers, finds his convenience and profit in still further becoming a supporter of the great market, and at the same time the great market increases its hold on the producer as well as the consumer. It is a common thing in these later days for eggs to be collected in the country in summer, shipped to the large market, to be held there until winter, and then the same eggs are shipped back into the country.

THE REVOLUTION IN TRANSPORTATION.

Third. Another great revolution has come in the last 30 years. The transportation on land and sea has been revolutionized. On the land in this country the fast freight and the refrigerator car have made the farmer tributary to markets which he never even heard of in his youth.

With all these changes, how are the producing classes and the consumers likely to fare? More than 200 years ago a famous Englishman wrote, "Traders may grow rich while the nation grows poor."

With so great markets, with free trade bringing the products of all the nations, is everybody going to be satisfied and prosper? Apparently all Englishmen are not happy over this great world-wide market.

FREIGHT RATES CAN NOT BE NEGLECTED.

To-day the ships of England and Germany work together to give low freight rates to other countries, especially to America, and the European Governments have a watchful eye over these arrangements and over one another. For instance, not long ago the British tariff commission awoke to the fact that the freight rate from Hamburg, Germany, to London, England, was considerably lower than from London to Hamburg. This meant, of course, a disadvantage for English goods as against foreign goods. One of the witnesses before the tariff commission developed the fact that goods could be sent from Berlin, Germany, to Leicester, England, more cheaply than from Southampton, and a leading manufacturer in Leicester gave this testimony:

My son, when he was in Berlin, found the rate for export very much less than the rate for German internal trade. He told me that they were sending into London goods at only half what it cost to bring goods back from London to Germany. The Government owned the railroads and do everything to assist the business.

All this supplementing railroads with steamers has gone on in the world's commerce since the Republican tariff rates in America have been built up. Now America proposes to turn down the old tariff system, and do it without adequate investigation or study. Mr. UNDERWOOD and the majority on that side of this Chamber have rejected the theory of a tariff commission and propose to turn over the farm and the factory of America to chance. But while we are relying on chance, there is to be keen and comprehensive arrangement so far as our competitors are concerned.

THE CONTRACTING OF THE WORLD'S GIRDLE.

Forty years ago a talented author, much in favor in boyhood days, wrote a book describing the adventures of a traveler who had accomplished the seemingly impossible feat of going around the world in 80 days. Three years ago a member of the staff of a Paris newspaper reduced the time of such a journey to less than 40 days. This summer a journalist attached to one of the New York papers has accomplished the feat in 35 days, 21 hours, and 35 minutes. Since the boyhood days of the legislator the girdle of the world has been reduced from 80 days to 35—less than one-half.

That wonderful revolution of transportation has been accomplished in a generation. Remarkable results in an economic way have been brought about in this shortening of the earth's girdle. Not long ago the London papers recorded that 2,000 cases of peaches from the Wenatchee Valley, in the State of Washington, United States of America, were delivered to Covent Garden, with the bloom still on the fruit, within 13 days. It was a miracle of transportation and it emphasized a great fact in economics. Whatever civilization may be in different States and countries, whatever the conditions of labor may be, whether people live in comfortable homes or uncomfortable homes, whether they have good raiment or poor raiment, there is a world market which more and more is obliterating the local markets of our fathers.

The Democratic Party is evidently going to try for the American people this world-wide market. They say it is a good thing for England, why should it not be a good thing for the United States. It is true that we have not investigated the subject. Mr. UNDERWOOD and his associates declare that a scientific investigation is not necessary, and we have been turned over to the secret deliberations of Democratic caucuses.

INTERESTING PHENOMENA OF TRANSPORTATION.

Three years ago an inquiry developed the fact that the ocean freight rates and the land freight rates were so diverse that the foreigner was getting a great advantage over the manufacturer in the United States. The cost of carrying 100 pounds of crockery in crates from London to Chicago was 22 cents, while the cost of the same amount of freight from a pottery in Ohio to Chicago was 21 cents. From London to Abilene, Kans., the rate was 73 cents, while from the Ohio factory to Abilene the rate was $1.03; and the rate from London to "common points" in Colorado 74 cents, while the rate from the Ohio factory to Colorado was $1.45. Probably considerable of the injustice has already been obviated through the agency of the Interstate Commerce Commission.

But in the main the great difference between ocean rates and land rates can not be obviated, because there are two different kinds of transportation. There seems to be no limit to the tonnage of steamers, except the necessity of dredging the harbors. But the limit of freight cars has been well-nigh reached, and now freight rates on the land are beginning to be raised. The rates in England have been raised, and it is evident that there must be an increase in America if the increase in the wages of the employees is to go on.

Another great fact must be taken into account, and that is that the ocean transportation is dominated by an international trust, of which America has little part or lot. And this great fact ought to make us hesitate when we are about to commit the prosperity of America to the hands of foreigners, so far as tariff rates are concerned.

A DISQUIETING SITUATION.

Another thing about ocean freight rates that ought not to be forgotten is that they are cheaper from Europe to America than from America to Europe, and for that reason the trans-Atlantic steamers bring over from Europe to New York cheap stuff to ballast the ships.

The seaboard manufacturer and farmer find this fact one of tremendous significance. With the great changes that the approach to free trade will bring, with the unsolved problem of ocean freights dominated by a European trust, both manufacturer and farmer must view the prospect with disquiet. This is especially so with the farmer, because of the experience of the English farmer with free trade and ocean freight rates.

WHAT IS ACTUALLY HAPPENING TO ENGLAND.

The statisticians of Great Britain have for half a century kept a record of the increase of British capital, meaning the private capital owned by the people, as distinguished from money in the national treasury. It is a striking and interesting record of the progress of that nation which has been held up as the wealthiest nation on earth, and yet one development of British society makes an exception to the general record of prosperity. Without going into details, the capital or property of the United Kingdom, in dollars, have been given by the London Economist, a great financial paper, from decade to decade. From these facts the following remarkable table has been deduced:

	1865	1875	1885	1895	1905	1909
	Millions of dollars.	*Millions of dollars.*	*Millions of dollars.*	*Millions of dollars.*	*Millions of dollars.*	*Millions of dollars.*
Lands	9,071	9,737	8,229	6,740	6,356	6,326
Farmers' profits	3,017	3,251	2,540	1,791	1,655	1,604
Houses, furniture, &c.	7,451	10,317	14,050	16,147	19,583	20,848
British capital invested abroad	.....	.....	6,330	7,786	9,855	11,349
Material property, public utilities, trade capital, corporations, etc.	.....	.....	17,700	19,428	25,992	27,846
	19,539	23,305	48,855	51,892	63,441	68,063

THE RESULT OF OCEAN FREIGHT RATES AND THE WORLD MARKETS.

The purport of this table means that the value of land is reduced continually and that the farmers are gradually being driven to the wall, while capitalists are seeking other investments. It is to be noted, also, that the decreases in English agriculture have been going on right at the time when it is thought that gold has been growing cheaper. In other words, it is thought that in the last 20 years the gold dollar does not represent so much purchasing power as formerly.

EFFECT OF PROTECTION ON AMERICA.

Turning from England to America, how different is the picture. In the last decade the value of farm property in the United States has increased from $20,439,000,000 to $40,991,000,000. It is true that America is a newer country and an expanding country, and it should not be expected that England should have such a superabundant prosperity; but in the older parts of America there is also a healthy prosperity. In New England, for instance, the value of farm property has increased from $639,000,000 to $867,000,000. In the Middle Atlantic States the increase has been from $2,310,000,000 to $2,959,000,000.

In Germany agriculture is well known as one of the most prosperous industries. France also is well known for its prosperous agriculture since it has abandoned the principles of free trade.

ENGLISH AGRICULTURE A SICK INDUSTRY.

More than a hundred years ago a poet, whose heart beat for humanity, put in verse a plaintive lament over one of the sudden changes due to the economic policies of England, and the words of Oliver Goldsmith might well be applied to this age, as they have been applied time out of mind:

Ill fares the land, to hastening ills a prey,
Where wealth accumulates and men decay.
Princes and lords may flourish or may fade—
A breath can make them, as a breath has made—
But a bold peasantry, their country's pride,
When once destroyed, can never be supplied.
A time there was, ere England's grief began,
When every rood of ground maintained its man.

Critics say that Goldsmith mistook the signs of the times, but anyone who has had the leisure to read, not the poets of England but the financial journals of that country, knows that the evil days of English agriculture are come. Only a month ago a leading article in the London Times entitled "The land and the people" summed up in one tense sentence the facts:

The root of the whole matter is that agriculture is and long has been a sick industry, and the problem is how to cure it, as an industry, not by treating parts of it, and still less by setting one part against another, but by infusing life into it as a whole.

EFFECT ON NATIONAL STABILITY.

The reason is well understood in England. Under the modern development of world markets the soil of England can not feed her people. Therefore it is impossible to have a tariff on agricultural products, because the landowners would at once become monopolistic. The Unionist Party found that they could not agree to a duty on agricultural products, although they were protectionists in principle. So that, apparently, England must become more and more a land of merchants, manufacturers, and artisans, and less and less a self-sustaining and harmoniously developed nation.

Germany avoided the English mistake. The ocean freight rates had been reduced so greatly that the wheat farmer of Europe must go out of business or be protected by tariffs. Then Bismarck led off, making his memorable declaration in the Reichstag in 1879:

Is not the moment approaching when our agriculture will no longer be able to exist because corn is pressed down to a price at which it can not be remuneratively produced in Germany, taxation, the cost of living, and the cost of land being as they are? When that moment comes then not only agriculture but the Prussian State and the German Empire will go to ruin as well.

EFFECT ON THE NATIONAL PHYSIQUE.

On the morning of March 5 of this year, when the great inaugural procession was a recent memory in Washington, the Washington Post had a communication complimenting the military display, in which the writer, a resident of London, said:

Your inauguration procession yesterday impressed me as a parade of the virile, living heart of the United States of America. The color of the leather worn by the troops, the variegated hues of the cloaks, the horses, the unmilitary carelessness of some of the militia companies could be adversely criticised; but, whatever they lacked in detail, the physique of the men was obviously a finer average than our own, excepting our picked crack regiments.

And the writer added:

I have seen every pageant that has passed through London streets during the last 20 years.

THE EFFORT TO FOLLOW ENGLAND.

Apparently the watchword of this Democratic administration is foreign trade without regard to the harmony and contentment of the American people. Foreign trade is a great advantage to any country if it can be combined with domestic prosperity. Germany has reaped great advantages from the foreign trade that has come to her during the last decade. Secretary Redfield, of the Department of Commerce, has made foreign trade his main aim. As a Member of Congress he made a strong speech against the tariff, claiming that manufacturers ought to study efficiency, and that tariffs were not necessary. That set the pace for the raid on the American manufacturers as being behind the times. And yet the other day I picked up the annual Encyclopedia Britannica for 1912, and I found there that in the American cotton mills the machinery was ahead of all competitors in the world.

Of course the meaning of the new statesmanship, led by the President in the White House and the Secretary in the Department of Commerce, means in trade policy and political policy that America is to follow in the pathway of England. England's pathway is to keep cheap labor, in order that she may compete in the markets of the world with her manufactured goods. Do you want to follow England? The Democratic Party evidently thinks it is the proper thing to do. They are cutting down the duties on manufactured goods and are reducing the duties on agricultural products to a free-trade basis.

AN IMPORTANT STEP WITHOUT CAREFUL INVESTIGATION.

This great revolution in policy is being taken without any deliberate study or investigation. There should have been a tariff commission to find out what the effect of this revolution would be on the people of America, especially on those who live in the farm homes and in the industrial villages. In 50 years we have not had a change in the protective tariff, excepting in matters of detail. Now we are having a radical change of policy, going beyond matters of detail, and we are making this surpassing change without a semblance of inquiry.

Do you think it is safe to follow England's example blindly? Do you suppose that a policy that may be good for England will necessarily fit America, with its continental position? The area of England is only about that of the single State of Georgia. No English town is more than 90 miles from the sea. What may be good for her may not be good for all the lands and people of America. Do you not think that some responsible body ought to have deliberated on this great question of policy? Does it seem the part of common sense that this bill should have been framed in a secret caucus, without the farmers of America being consulted?

DOES THE NEW WAY PROMISE BETTER THINGS?

But you say that we have tried the American policy for 50 years, and we have had duties on potatoes, shoes, and cotton cloth for all this time. It is true that we have prospered in a way that no other nation on earth ever prospered, but nevertheless we want a change. In the last five or six years prices have been high. We are not certain it is due to the tariff. We have had the same old protection for 50 years, and sometimes prices have been low and sometimes high. But nevertheless we are going to take away this protection, and by following the free-trade example of England we ought to be happy. If we are going to follow England's example, it must be because England is happier than we. Is England happier than America? In 1912 almost half a million British subjects left that country. Those who are left, something like 40,000,000 people, constitute a prosperous nation undoubtedly—a nation of noble men and women, but a nation which has destroyed its industrial and social equilibrium. The emigration has taken away thousands of men in the prime of life, leaving the women to work in the factories. There are in England proper and Wales an excess of females over males of 1,200,000. Is it any wonder that the social discontent has in some cases gone to extravagant lengths?

Even in the older parts of this country, like New England, the number of males and females are practically the same. In the whole of America there are 106 males for every 100 females. In Germany also the balance of society has been kept.

SOME MISCONCEPTIONS AS TO FOODSTUFFS.

We have thought very little about the relative importance of our foodstuffs. We have thought of the United States as a great wheat-producing country, and the great city merchant and banker have gladly reckoned the credit that would be brought to America on the ledgers of the banks of Europe. It would surprise most people who have not examined the subject that the national corn crop is almost four times the wheat crop, and that the oat crop is greater than the wheat crop, and that the potato crop is over half the wheat crop. An interesting book which came from the press last year, entitled "The Potato," gives some interesting statistics about food products that are most used by mankind, and lo and behold, like Abou ben Adhem, the modest potato leads all the others in Christendom!

In 1909 the potato crop of the world was estimated at almost 5,000,000,000 bushels. The world's corn crop that year was about 3,500,000,000 bushels, while wheat was a little less than corn. The Democratic economists have assumed that we are an exporting country in agricultural products because of wheat and corn, and therefore they have lumped together all the agricultural products and declared that so far as farmers were concerned free trade was the best policy. It is evident that we are in great danger of assuming too much. And it may be that the world market that has made such havoc in England may work havoc also in this country. Other things besides wheat and corn can be transported long distances. The Egyptian onion farmer can send a bushel of onions to New York at an expenditure of about 20 cents in ocean freights. The potato farmers of Canada and all Europe have a potentiality that would flood any market. In the latest statistics, as given in the work already cited, the potato crop in the various countries, in bushels, foots up as follows:

United States	278,985,000
Canada	74,746,000
Austria-Hungary	639,407,000
France	373,000,000
Germany	1,702,803,000
Great Britain and Ireland	285,713,000

Certainly all those potato fields of the world can get to the New York market without trouble if they are not too far remote, for Europe, at least, is nearer to New York than most of the potato fields of America, as is shown by the table of freight rates:

Railroad rates on potatoes, carload lots, to New York from—	Cents.
St. Paul, Minneapolis, Minn.; Oshkosh, Manitowoc, Green Bay, Wis.; Escanaba, Bagley, Mich.—per bushel	21.68
Fredericton, St. Johns, New Brunswick—do	15.53
Presque Isle, Me—do	17.87
Houlton, Me—do	15.53
Greenville, Me—do	14.65
Hamburg and Bremen, Germany, by steamer—do	9.80

AN ILLUSTRATION OF THE WAGES HERE AND ABROAD.

Not only is the American at a disadvantage as to the freight rates to the New York market, but he has also a great disadvantage in the matter of wages. In Lincolnshire, England, potatoes are picked up at wages, for men, $1; women, 48 cents; and for boys and girls, 30 cents a day, and all board themselves.

We have been told that efficiency ought to be studied in America and that tariffs are extravagances. Undoubtedly in some things America may be behind the times, and it may be that the Democratic policies may awaken us from our lethargy. But it may be, on the other hand, however, that those gentlemen who are preaching efficiency so loudly are simply putting forward carefully assorted but exceptional facts, and that, after all, the American people are as near up to the times as any other people.

BREAD MAKING AFFECTED BY CIVILIZATION.

A certain school of political thought in this country will not bring themselves face to face with the fact that we have built up a civilization unlike any other, where the man who does the ordinary service of daily life gets a better income and a larger life. His services have to be compensated for and it works out into the cost of living. Three years ago the United States Senate investigated the high cost of living, and the Democratic minority of the committee proposed the following conundrum:

Wheat bread superior to most of that made in America, and made of American wheat flour, can be bought in London at retail for 5 cents for a 1-pound 6-ounce loaf. In Marseille the retail price of the best bread is 8.6 cents per 2.2-pound loaf. It does seem odd that we furnish the London baker with the material for making his bread and then he makes a loaf weighing 170 per cent of the weight of our own loaf for half the same money.

The problem now being before the partisan economist, he answers it according to the prevailing explanation. This year we may be expected to be told that the bread makers of America are less efficient than those of Europe. But it so happens that a year after this problem was presented the British Board of Trade sent investigators to America to study the cost of living, and they took up the question of bread making, and they have set forth the true reason as they found it:

In spite of a connection that is manifest between the prices of bread and those of wheat flour, the high price of the former has to be looked for mainly in the circumstances attending the manufacture and distribution of the loaf—in the rate of wages paid, in the establishment charges (including those of delivery and of advertisement), in the more frequent distribution through middlemen, and in the range of high total profits involved in the machinery of production and distribution.

In other words, a London baker gets $8.75 weekly wages while an American baker gets $18 a week.

Fresh bread can not probably be imported by ocean liners, but potatoes can be, and therefore we will have bread a la American civilization and potatoes a la European civilization.

THIS GREAT STEP IN THE DARK.

The doctrine of protection has existed in its greatest success during the 50 years of Republican administration. Suddenly the other doctrine finds itself intrenched in all departments of the National Government, and we are about to see enacted into law a great bill which changes all the economic professions of America. And yet governments and legislative bodies sometimes exhibit such sudden changes. Great bodies of men are sometimes more prone to take a step in the dark than individuals. Where in America would you have looked for political sanity if not in the Commonwealth of Virginia in the year 1795? George Washington was then President of the United States, and the great Virginia leaders who were grouped around him were still living, and yet adverse public opinion arose to such an extent against Washington's conduct of affairs that the Virginia Legislature declined to express undiminished confidence in him; and when the friends of the great President asked that the legislature might at least disclaim any imputations on the motives of the President, the resolution was, after a division, carried by a majority of only 16 in a house of 140.

In other words, the Virginia Legislature, yielding to the temporary craze of political passion, solemnly declared that while George Washington might possibly be honest he had still been wonderfully fooled. Yet the policy which Washington adhered to was justified by time and experience. We have seen the policy which has been approved in principle in these Halls for 50 years thrown down by a great and heedless majority. They have taken this step in the dark with all the self-confidence that sometimes overtakes majorities and individuals. They have changed a policy that has existed for 50 years, under the plea that the people have desired it, when in reality it was desired by great and selfish interests. The great mass of the people have not looked into the details of this bill. That which the people expected would be done with deliberation and care is being done at the behest, not by the whole of the people but by certain localities and interests. We might apply to the majority which has framed this bill in secret caucus what a great historian applied to a famous but injudicious sovereign:

No man is fit to govern great societies who hesitates about disobliging the few who have access to him for the sake of the many whom he will never see.

Navy and Naval Reserves.

EXTENSION OF REMARKS
OF
HON. WILLIAM KETTNER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 2, 1913.

Mr. KETTNER. Mr. Speaker, I ask unanimous consent to print in the RECORD a couple of resolutions by the San Diego Chamber of Commerce regarding the Navy and Naval Reserves.

The SPEAKER. The gentleman from California asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The matter referred to is as follows:

THE CHAMBER OF COMMERCE OF SAN DIEGO COUNTY,
San Diego, Cal., August 27, 1913.

Mr. WILLIAM KETTNER,
608 House Office Building, Washington, D. C.

DEAR SIR: We inclose herewith copies of a resolution adopted by our board of directors at the regular meeting held Wednesday, August 20, 1913, one being in reference to the formation of a naval reserve on the Pacific coast and the other urging the carrying out of the program of Secretary of the Navy Daniels in regard to military and naval needs of the Pacific coast as reported in the daily press, and would earnestly request that you give the matter such attention as will best bring about the desired result.

Yours, very respectfully,
WM. TOMKINS, *Secretary.*

Resolution.

"Whereas the Navy Department of the United States has been recently reported in the daily press as favoring a substantial increase in our Navy; and

"Whereas there are at present an insufficient number of officers and men to properly man the battleships and auxiliary boats of the fleet now constructed, and in the event of war untrained men of little value in the naval or military service short of two or three years' practical experience in the service; and

"Whereas a great many recruits will be required for the new battleships and auxiliary boats to be constructed:

"Now, therefore, the San Diego Chamber of Commerce strongly advocates the formation of a naval reserve which will be an important branch of the naval defense; and be it further

"*Resolved*, That a copy of this resolution be forwarded to the Secretary of the Navy, to the southern California Representatives in Congress, to the associated chambers of the Pacific coast, and to each and every chamber of commerce and kindred organization of the Pacific coast, with the request that a similar resolution be adopted and forwarded to their respective Representatives in Congress."

I hereby certify that the above is a true and correct copy of a resolution unanimously adopted by the board of directors of the San Diego Chamber of Commerce at a regular meeting held Wednesday, August 20, 1913.

F. J. LEE, *President.*

Attest:
WM. TOMKINS, *Secretary.*

SAN DIEGO, CAL., *August 27, 1913.*

Resolution.

"Whereas the San Diego Chamber of Commerce is in favor of a good, strong Navy that will enable this Nation to maintain its position and make its reasonable demands on other countries respected; and

"Whereas a strong Navy is the first and indispensable line of defense for the Pacific coast; and

"Whereas it has been reported in the daily press that the Secretary of the Navy has recommended, or is about to recommend, to Congress an appropriation to construct at once four battleships of the largest and most approved type, together with all other necessary auxiliary boats: Now, therefore, be it

"*Resolved*, That the San Diego Chamber of Commerce most strongly indorse such naval program and that this expression of indorsement is entertained by a great majority of the citizens of the Pacific coast; and be it further

"Resolved, That this resolution be mailed directly to the Secretary of the Navy and a copy thereof mailed to Senator JOHN D. WORKS, to Congressman WILLIAM D. STEPHENS, and a copy to the Associated Chambers of Commerce of the Pacific Coast, and a copy to each and every chamber of commerce and kindred organization on the Pacific coast, with the request that they adopt similar resolutions, expressing the sentiments of their immediate locality, and forward the same to the Secretary of the Navy and their respective Representatives in Congress, to the end that the Secretary of the Navy and all Pacific coast Representatives in Congress be fully advised that the entire Pacific coast is strongly of the opinion that the time has come to not economize in respect to the Navy and that a strong Navy located in Pacific coast waters, with all strategic points along the Pacific coast of the United States well fortified, garrisoned, and mined, are necessary for the proper defense of the Pacific coast, an important factor in the maintenance of peace."

I hereby certify that the above is a true and correct copy of a resolution unanimously adopted by the board of directors of the San Diego Chamber of Commerce at a regular meeting held Wednesday, August 20, 1913.

E. J. LEA, *President.*

Attest:
WM. TOMKINS, *Secretary.*

The Defense of Alaska—The Union of the White Race and the Problem of Universal Peace.

EXTENSION OF REMARKS
OF
HON. ALBERT JOHNSON,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 30, 1913.

House joint resolution 121, introduced by Mr. JOHNSON of Washington, August 26, 1913:

"Whereas Alaska at present depends for its defense entirely on the Navy; and

"Whereas the Navy may through some unforeseen accident be crippled and become unable to protect our Pacific coast; and

"Whereas Alaska would in that case be occupied by the enemy and be used as a base of operations against the Pacific coast States; and

"Whereas for these reasons it is urgently desirable that a railway should exist which would enable our Army, with the consent of Canada, to undertake the defense of Alaska; and

"Whereas it is practically certain that the railway would never be used for that purpose, since its mere existence, without any express agreement with Canada regarding its use, would discourage an attack on Alaska: Therefore be it

"*Resolved, etc.*, That the President be, and he is hereby, requested to take the necessary steps, by negotiating with the British and Canadian Governments, to establish railway connection between the United States and Alaska."

Mr. JOHNSON of Washington. Mr. Speaker, soon the United States must adjust itself to the idea of the new Pacific Ocean. Three great world movements are making headway, all tending to a great change on the Pacific and to a new order of things beyond that ocean. These great movements are:

(1) The opening of the Panama Canal.

(2) The awakening of Asia.

(3) The building of railroads in Alaska and the peopling of that great Territory.

These three great forward movements make it certain that all the world must change its point of view. What has been the back door becomes the front door. Who will have control? Who will be master of the new Pacific? Who will keep the peace on that great ocean, whose very name is a synonym for peace? Which nation will have commercial supremacy? On which side of the broad waters will be the New York of the Pacific? Which one of a dozen ambitious cities will become another Liverpool? What will be the medium of exchange? Will it be the pound sterling, or the Japanese yen, or the German mark, or the dollar of Uncle Sam?

These great world movements will make a new Pacific. Not one of these movements can happen again. There are no more hemispheres to bisect. There are no more world majorities to awaken. There are no more great domains on this continent to populate and develop.

For the purposes of this discussion the peopling of Alaska may well be considered in connection with the peopling of western Canada. It will be well for the United States in its development of Alaska to walk hand in hand with the Government of the Dominion of Canada. Particularly can we benefit by the example of British Columbia. We should study the laws by which that great region is being prepared for a full share of the prosperity that must come to the North Pacific under the conditions which are now in the making.

So far as human wisdom can forecast the future the events of the next decade will be decisive; the conditions which they will create will be final—simply because our planet is just so large and not larger. If we desire that these conditions should be in accord with our wishes, we must make up our minds now.

Thus my remarks in explanation of House joint resolution 121 will relate to two problems:

(1) The development and defense of Alaska.

(2) The permanent control of our own destiny.

The first of these two problems is of immediate urgency; the second somewhat more remote, though of supreme importance. Happily, in solving the first we shall also take an important step toward the solution of the second.

I.

THE DEVELOPMENT AND DEFENSE OF ALASKA.

The United States has made the new Pacific possible by cutting the canal at Panama. The next step is the development and protection of Alaska. With the tariff bill enacted and a currency bill scheduled for early action, we should, in my opinion, allow no problem to take precedence over the question of railways in Alaska. Until the Committee on Territories makes its report, it would be premature to say whether these railways should be built by the Government or by private capital, but no one can have a moment's hesitation in saying that they should be built forthwith. Deeply impressed with this conviction, I feel compelled to say a word now, in advance of the regular discussion. I wish to point out the need of these railways from a new point of view, and thus to do what in me lies to secure for the subject the earliest possible consideration

The new point of view concerns the importance of these railways for the defense of Alaska and of our entire Pacific coast. Everyone remembers what an essential part the Trans-Siberian Railway played in the Russo-Japanese War. Had that line not been in existence, Russia would have lost not only Manchuria but eastern Siberia. Had the line been double-tracked there would have been no war. Russia's position would have been too strong to be assailed with any chance of success. You see, a railway may become a very effective guaranty of peace.

ALASKA'S PERIL.

We have no railway from the United States to Alaska, either double-tracked or single-tracked. In case of war Alaska would be lost to us within a week unless we held the naval supremacy in the Pacific. Now, I do not for a moment suppose that our Navy would not make a better showing than the Russian Navy did. If we could keep all our warships together, no Japanese fleet at present could face them. But could we keep them together? We have 8,000 miles of seaboard to protect. We could hardly leave our entire Atlantic and Gulf coasts without naval defense in order to place our united Navy in the Pacific. The Japanese Navy, on the contrary, might be free to act as a unit anywhere, without having to detach a single skiff for home defense, for the west coast of Japan can only be approached through five narrow straits, which would probably be blocked by mines, while her east coast is so fortified as to require no naval protection.

Japan with her modern-built battleships—

Says The Navy of June, 1913—

could wipe out the entire force of the United States from the Pacific as easily as one of our Atlantic dreadnoughts could destroy a fleet of wooden men-of-war of 100 years ago. An enemy could easily land an army of 100,000 or 200,000 men with impunity on the Pacific coast, and it is questionable whether the coast defenses at Honolulu could repel a naval attack by modern battleships. Even if a naval attack was unsuccessful an army could be landed within a few miles of these fortifications and the forts could be invested from the rear.

The chance of our being involved in war in the Pacific seems remote. But many wars were declared impossible until they broke out. If we are sure that we shall have no more wars, then all the millions that we spend on Army and Navy are thrown away and we ought to abolish those useless establishments at once. If prudence demands that they be kept in a state of efficiency, prudence also demands that we forecast the emergencies under which they may be needed, and that we remedy any conditions which might condemn our valiant Army and Navy to inaction, and by that very fact invite attack. A stitch in time saves nine. He who offers his undefended cheek to the smiter is apt to be smitten. No sensible man wants war if it can possibly be avoided. If we can lessen the danger of war by simply giving our people access to a vast reservoir of wealth, any unnecessary delay would damage our reputation as level-headed business men.

Three facts stare us in the face:

(1) In the absence of railway communication Alaska depends for its defense entirely on the Navy.

(2) We could send only part of our naval force to defend it, while the enemy might be free to attack with his whole force.

(3) If our fleet were defeated the south coast of Alaska would afford to the enemy the best conceivable base for attacking our Pacific States.

An editorial in the Washington Post of July 16 describes the situation so clearly that I can not do better than quote it:

THE VANCOUVER DOCTRINE.

If our Pacific coast is practically without naval protection, as affirmed by Rear Admiral Van Reypen, a war with Japan would involve the loss of Alaska. With unlimited resources in coal and timber, the south coast of Alaska would present an ideal base for an attack on our Pacific coast, being much nearer to Asia and to Puget Sound than any base that an enemy might capture on the Hawaiian Islands. This fact lends interest to a communication in the Vancouver News-Advertiser, printed elsewhere in this issue, to the effect that, as a geographic necessity, Canada is the protector of the United States. Says our Canadian contemporary:

"At the mere thought of another power in possession of Alaska, every Canadian feels his flesh creep, his hair stand on end. We simply could not tolerate it, and should be compelled by the most obvious requirements of our own safety to join our forces to those of the United States in an attempt to drive out the invaders."

Unfortunately, so long as the British navy is tied up in the North Sea, and no railway communication exists between the United States and Alaska, even the combined land forces of the United States and Canada could not prevent the temporary occupation of Alaska by a superior naval power. From this point of view, the recent announcement of the early construction of a railway through northern British Columbia to Dawson and thence to the Alaska boundary becomes interesting.

Premier Richard McBride, of British Columbia, expects soon to visit Ottawa and Washington to discuss that proposed extension of the Grand Trunk Railway. It may be taken for granted that in his conferences with our statesmen the strategic value of the proposed railway will not be overlooked. Branch lines would, of course, be built to connect the main line with the harbors of Alaska, to their immense commercial benefit. When the facilities exist for concentrating the combined American and Canadian forces on any threatened point within a few days, no naval force, however superior, will care to attack any part of the Pacific coast, either of the United States or of Canada. Senator Power, of the Canadian Parliament, who some weeks ago was disturbed by the vision of 20,000 Japanese invading British Columbia, will thus regain his composure.

The projected Canadian line would stimulate railway building through Alaska. When the safety of our entire Pacific coast can be assured by building the two lines needed to connect Cordova and Seward, the two leading ports of southern Alaska, with the interior, with each other, and with the Dawson line, the necessary legislation ought to be forthcoming.

The statement that "the United States is by far the pleasantest, safest neighbor that Canada could possibly wish" will be thoroughly appreciated and reciprocated on this side of the boundary.

I feel convinced that the time is not far distant when this "Vancouver doctrine" will be considered of at least equal importance with the Monroe doctrine. Its original statement in the News-Advertiser being thus an important historical document, it is reprinted entire as an appendix. A few days ago it was restated in a far more impressive form by no less an authority than Sir Richard McBride, prime minister of British Columbia, as quoted in various newspapers, as follows:

PREMIER MCBRIDE FAVORS PANAMA-ALASKA RAILWAY—PROPOSES THAT CANADA AND THE UNITED STATES COOPERATE IN BUILDING GREAT STRATEGIC LINE.

The Panama-British Columbia-Alaska through line has for some time past occupied a prominent place in the policy of provincial developments now being carried into full effect by the prime minister of British Columbia, Sir Richard McBride, and may indeed be looked upon as the climax of that policy.

In addressing the Progress Club at Vancouver a few days ago Sir Richard intimated that he regarded the bringing into existence of a railway connecting Alaska with the United States and the great canal via British Columbia as the principal ambition of his career.

I have been working for some time on this railway project, and it is only within the past two years, since the provincial government undertook to build the Pacific Great Eastern Railway, that such a north and south line through British Columbia has made the entire scheme altogether feasible.

As the situation stands at present the Pacific Great Eastern will extend from Vancouver northerly for 700 miles, and our proposal is to secure the further extension of this line through the Yukon to the Alaskan boundary, there making contact with the United States Federal railway system, toward the construction of which that Government proposes to appropriate $40,000,000.

I would point out that until Alaska gets direct rail connection with the south it will and must continue an isolated zone and unable to secure the best advantages for its legitimate development. Needless to say, while the expenditure of the moneys likely to be provided by the American Congress will greatly assist local development in Alaska through railway media, without overland connection to the south such development can only continue within a very circumscribed zone.

COST MANY MILLIONS.

To intersect the Grand Trunk Pacific Railway at Hazelton, British Columbia, and build from the Peace River to Alaska will call for an investment of from forty to sixty millions. My plan is to have the Ottawa and Washington Governments guarantee company bonds sufficient to carry out the work and enter into an agreement with the Pacific Great Eastern Railway Co. for the construction and operation of the line.

The road can be projected through a country of splendid potentialities, a country thoroughly adapted for successful mineral, timbering, and agricultural development, apart altogether from its great scenic, tourist-attracting values. The line can be built and in operation within four years from to-day. As next year marks the completion of the centenary of peace, it would, in my opinion, be wise for both interested countries to consider this project as fully equal in commercial and historic value and significance with the opening of the Panama Canal.

Apart from the highly important commercial values of such a north-and-south international Pacific coast railway, the strategic utility of such a line would be unquestionable.

The relations between Canada and the United States of America at the present time are thoroughly harmonious and singularly cordial. War between these two countries in the future appears an impossibility. Perhaps never before have we come to such perfect understanding of one another's work and ambitions. And hence a way should easily be prepared for the completion of a treaty between the two countries which would allow Americans generous privileges through British Columbia. Among these privileges the transportation of troops in time of necessity should be an easy item to adjust.

RICH AREAS UNDEVELOPED.

Because of their distance from the settled centers of civilization to the south, the potentially rich areas of northern British Columbia and Alaska have heretofore been greatly handicapped in their development. Indeed, only recently have the surpassing riches of these territories secured general recognition. The present day holds great expansion in store for these sections of the neighbor countries.

If is impossible to bring about the complete and desirable development of these isolated northern areas without railways, and a project of so great international advantage and importance should be easy of consummation if a treaty be devised providing for the building of the road and its operation with full protection of American interests. When it is considered that the Province of British Columbia alone proposes to answer for the building of the first 700-mile section, this should be sufficient warrant for the larger authorities undertaking the completion of the plan.

FOR DEFENSE AND DEVELOPMENT.

Every Member of this House who has given thought to Alaska and to the problem of national defense will join me, I am sure, in thanking our Canadian friends, especially Sir Richard McBride, for this high-minded declaration and for the promise of the early construction of a railway which is so important to us. This resolute and far-seeing action on the part of the Canadians ought to put an end to the stepmotherly treatment which Alaska has received from us during the 46 years of our ownership.

Even if the Canadians build their line to Dawson and grant us the privilege of transporting troops over it in case of necessity, that will not help us much unless we build the lines required in Alaska itself, for Dawson is 330 miles from Cordova and 440 miles from Seward, and separated from them by the wildest kind of mountains, practically impassable for troops except by rail. And if it be true that the Canadian line to Dawson would hasten the development of railways throughout Alaska, it is equally true that the building of Alaskan railways would hasten the building of the Canadian line, which is to connect Alaska with the United States and thus make it defensible by our land forces. As the writer in the News-Advertiser very properly remarks, not one soldier, not one pound of ammunition would ever be shipped over that line, nor would any agreement with the Canadian Government be needed; the mere existence of the railway would suffice to scare away the enemy. If any doubt still existed on that subject, Sir Richard McBride's statement has removed it.

CAN WE HESITATE?

Because I wish to see Alaska developed, because I wish to see her placed beyond all danger of attack, and especially because I wish to make sure that her south coast shall never be used by a hostile fleet as a base for attack on Puget Sound, Grays Harbor, Portland, and San Francisco, therefore I say that we ought not to delay another moment in endowing Alaska with an adequate system of railways. Bitterly did the Russians regret the procrastination and parsimony which led them to delay the building of the Trans-Siberian Railway so long, and to lay only a single track, and thus forced them in the end to spend a sum which would have sufficed to build a dozen such lines.

With such an object lesson before us can we hesitate? Even $100,000,000 would be a cheap price if thereby our entire Pacific coast can be relieved of the danger of invasion. A war would in a short time cost us many hundred million dollars, for which we could get no return. Dreadnoughts are a good insurance against war, but we vote for them with sour faces, because they yield no revenue. Not sour but sweet should our faces be, as sweet as joy can make them, when voting for the construction of a railway system which will constitute an insurance policy on a novel endowment plan, not only requiring no payment of premium but yielding an immediate and rapidly growing revenue.

II.

THE PERMANENT CONTROL OF OUR OWN DESTINY.

But while we are on the subject of insurance against war I should fail in my duty if I did not point out the greater danger which is to be met by a still cheaper insurance policy. Strategic railways skirting our coast from San Diego to Seward will, by the courtesy of Canada, insure us against invasion so long as the would-be invaders, even though in command of the sea, are inferior to us in numbers and resources. But neither railways nor the utmost expenditure for Army and Navy will insure us when the invaders are nine times stronger than we. The overshadowing question of to-day is: What are we going to do when the nine hundred millions of Asia united and armed in the same proportion as Japan demand unrestricted admission for those of their laborers who wish to profit by the opportunities of the land of high wages? Gentlemen, we pride ourselves on being a

wide-awake, energetic, practical Nation. Our boast is that when a thing has to be done we go ahead and do it. Shall we sit with idle hands and watch this Asiatic danger growing till it is beyond our control? Here is a case where a stitch in time will save not nine but nine millions.

We do not know what is going to happen in China this year or next, but anybody with half an eye in his head can see that the overthrow of the Manchus meant the breaking of the dam that restrained the yellow flood. The Manchus dared not develop the great army planned by Sir Robert Hart, knowing that an army consisting mainly of Chinese would inevitably turn against the Manchu Government. No such motive restrains the present Government, which is completely in the hands of the Chinese themselves. The very conflict that is now going on must hasten the development of the army and afford it that training in actual warfare which is better than all maneuvers. They need not be in a hurry to raise Sir Robert Hart's army of 4,000,000; half a million will suffice to make the continuance of British rule in India impossible. And when India escapes from British control the supremacy of the white race is at an end, the supremacy of Asia assured. Even if southern China cuts loose from the north, that will not alter the result; south China, north China, Japan, and India will be a unit on the question of emigration.

YELLOW PERIL NOT A BUGBEAR.

An article on this subject by J. O. P. Bland in the Atlantic Monthly for June, 1913, is all the more instructive because written with the avowed purpose of proving the yellow peril military to be a bugbear. The author admits and even emphasizes the high mental caliber of many of the Chinese leaders; he fully realizes the immense resources of the Empire and the tremendous advantage it possesses in its superabundance of cheap labor to develop those resources; he repeatedly declares the Chinese to be "economically superior to any race on earth"; he describes how rapidly these 435,000,000 are becoming aware that beyond the borders of their Empire there are rich lands where life is a luxury compared to the perpetual struggle against famine at home; he pictures the growing indignation of these 435,000,000 when they find that the white man is determined to exclude them from all these lands of hope. Yet, in the face of all these patent, permanent facts he declares the yellow peril military to be a bogy. Why? Because the present administrators of China are too corrupt and too jealous of one another to permit the early introduction of substantial reforms. In a word, the safety of the white race depends on the continuance of Chinese official corruption!

WHAT STRONG MEN HAVE DONE.

A brief glance through history reveals a dozen instances proving how quickly that condition is apt to vanish. France, in the early days of the Revolution, seemed condemned to hopeless anarchy; yet a few years later, through the genius of one man, she had become more solidly united and more efficiently organized than any other nation and was giving laws to Europe.

Turkey in 1656 had for 30 years been on the brink of ruin, plunged in official corruption that seemed beyond remedy, with her treasury empty, her armies defeated and mutinous, revolt in every Province, her very capital threatened by the Venetians. Mohammed Köprilli, a penniless Albanian, 75 years old, who began his career as a cook and never learned to read or write, was appointed prime minister. In five years his armies were victorious everywhere, his treasury overflowing, and Europe was once more trembling at the Turkish power. An Albanian—that is to say, an Aryan—placed his genius at the service of a Mongolian power and tried his best to make that power supreme, just as Sir Robert Hart did 200 years later.

You say China is too poor to fight. You forget that the wars of the first French Republic were fought entirely on paper money. All authorities, including Mr. Bland, bear witness to the integrity and administrative capacity of Chinese business men. If such is the case, do you not see that China may at any moment find her Napoleon, as France did, and as China herself did a dozen times during the past 3,000 years? When he begins to turn the rascals out and looks around for honest and able men to take their places, will not the business world offer him an ample choice? And if he thus transforms China into an obedient, efficient machine, do you think he will be content any more than his French prototype or his Chinese predecessors were? British dominion in India hangs by a thread. A Chinese Napoleon could put an end to it with a word, and thus add the 315,000,000 of India to the 435,000,000 of China. The vast Mohammedan world, hissing with hate of Christendom, would instantly join hands with an efficient, triumphant Asiatic league in order to complete and share its supremacy and to wreak the long pent up vengeance on Europe.

Then our turn will come. The Chinese leaders gave notice long ago that as soon as they are strong enough they will force open the doors of Australia and America for their emigrants, with cannon if necessary. Then the question will arise: "Shall America's destiny be controlled by herself or by Asia?" If we do not wish to adopt the policy of the ostrich, trying to banish the peril by shutting our eyes to it; if we wish to make good our boast of being the most active, most clear-sighted, and promptest Nation, we must take the proper steps without delay. A stitch in time saves nine. When the Baltimore fire started, a bucketful of water would have put it out; after it had gained headway, the united fire departments of several cities were powerless to stop it.

What are the proper steps? Against united Asia, a power of 900,000,000, soon to number 1,000,000,000, there is but one defense—the early union of the white nations. This, therefore, must be the keynote of our policy. I am glad to be able to announce that a movement in that direction has been started in this very capital of the Nation, and that a promise of cooperation has already been received from Europe. I feel confident that the seed has fallen on fertile soil and in the right season, and while its growth may not be as rapid as the planters might wish, it has every prospect of bearing fruit.

PANARYAN ASSOCIATION.

The aims of the movement are set forth in the prospectus of a proposed Panaryan association to promote the union of the white race. The prospectus says:

As soon as the 900,000,000 Asiatics are strong enough they will demand free admission to the United States and to European colonies. If even the 50,000,000 of Japan are able to exert such pressure as we now witness, what will happen when the 435,000,000 of China and the 315,000,000 of India possess modern armies and navies proportioned to their numbers? Their common demand for unrestricted admission will serve as an iron bond, uniting their armed forces into one huge mass.

Against such a power, even the utmost armament of any single white nation would be of no avail. To look no further ahead than five years were childish, nay criminal levity. A policy of drift must inevitably lead to a series of frightful wars, sweeping aside all arbitration treaties like wisps of straw. The United States, Canada, and Australia, the lands of highest wages, would have to bear the brunt of the onset. The only possible means of defense, the only reliable protection for white labor against deadly competition, is the union of the great white nations. To that paramount necessity all other considerations must yield. United we stand, divided we fall. To every white nation it is essential that India's 315,000,000 and vast resources shall not reenforce the Mongolians but remain under the beneficent control of Britain, thus strengthening the Aryan race to which their highest castes belong. It is equally essential that the 6,000,000 white men of Australia and New Zealand, our own flesh and blood, shall not become subject to Mongolians; that Siberia, the destined bulwark of Europe, the America of the Slavic race, shall remain a part of the Russian Empire; that France and Holland shall not be robbed of their East Indian possessions. None of these dependencies can in the long run be defended except with the support of the united white race.

To attempt to unite all the white nations at once would needlessly complicate a task which will prove sadly complicated even in its simplest form. The initial combination must be just large enough to be predominant, but not larger than necessary, lest it lose its cohesion and become impotent through the internal strains peculiar to every political structure before it gets into the habit of acting as a unit. A "trust of civilization," consisting of Britain, France, Germany, and the United States, would suffice to break the deadlock which paralyzes Europe and to replace it by an effective concert based on common interests, and magnetic enough to secure the virtual union of the entire white race in the near future. In fact, such a quadrilateral trust would instantly have the support of nearly all the other European States, for they would feel that the destinies of humanity could not be more safely guarded than by the four strongest, most enlightened, most humane nations.

That quadrilateral trust—suggested by Mr. Carnegie in his letter to the Boston Peace Congress in 1904—would at once constitute that international executive power which is the only means to insure universal peace, the early cessation of the growth of armaments, and their gradual reduction till they shall be just sufficient to keep the executive power securely predominant. It would represent that "concentration of the preponderant military strength into the hands of the most pacific communities" without which, according to the Navy League, there can be no permanent peace.

The Navy League—Southern Building, Washington—and the National Defense League—District Bank Building, Washington—deserve credit for their wise foresight in urging the Nation to maintain an adequate armament. But against the 900,000,000 of Asia, with their incredibly cheap labor, which may soon enable them to build with ease six or eight warships to every one of ours, no armament that the United States alone can maintain, even with the sacrifice of half our revenue, will be strong enough. The only adequate armament is the cheapest—union with our parent nations.

What is the first thing to be done? The whole country is fast awaking to a sense of its peril, and statements like the above are heard on every side; but all this agitation will remain fruitless so long as it is unorganized. The advocates of union must give the example of union. America, being most exposed and best acquainted with the peril, has the strongest motive to take the lead. The name "Panaryan Association" has been suggested as the most appropriate and the most serviceable in appealing to the educated class in Europe.

The first task will be to discuss the means to promote union. Early union is impossible without mutual concessions on the part of Britain, France, and Germany. We can not take active steps in this country to bring about these concessions, nor even hint their nature without appearing presumptuous; but a Panaryan Association started here would soon have branches in Europe, whose work would naturally consist in pleading with their fellow citizens in behalf of these mutual concessions.

The supremacy of the white race does not mean that other races are to be forever denied admission to lands controlled by white men. It means that the problem of their admission or exclusion is to be solved, not by a mere counting of heads nor by cannon answering cannon, but through patient scientific study and balancing of arguments by the wisest men of the wisest, justest, most humane nations.

OVERPEOPLED, FAMINE-STRICKEN ASIA.

The fundamental principles of this movement are well set forth in a letter from Prof. E. A. Ross, of the University of Wisconsin, one of the foremost economists in America. The letter accompanied his application for membership in the proposed Panaryan Association.

Statesmanship is the art of seeing and providing for coming problems a long time in advance, and, therefore, I regard your endeavor to promote the "get-together" spirit among the leading groups of the white race as statesmanlike. I agree with you that, during most of this century at least, the interests of civilization and the well-being of the laboring classes will best be served by preventing the high-pressure areas in Asia from discharging their surplus population into the regions now held by the white race. I have set forth this idea in a chapter of my book Changing America, and also implied it in my book The Changing Chinese. I do not assume the superiority of the Aryans over the Mongolians, but I take my stand on the proposition that the terrible struggle for existence, produced in most parts of Asia by certain elements of their civilization, ought not to be communicated to other lands by great streams of migrant coolies with low standards, ready to work for almost any wage. All the low-pressure countries should protect themselves against the high-pressure countries until these countries, by elevating woman, individualizing their people, and restraining their fecundity, have become low-pressure countries.

To many of you this question has not the local importance that it has for the people of the Pacific coast. But I take it that all place the welfare of the Nation first and foremost. Now, what doth it profit the Nation to gain all the wealth in the world and lose its own soul? The question of Asiatic immigration is a question of life and death to the white race. Expose the white workman to a competition which takes away his opportunity to labor, and you take away his opportunity to live; you kill him just as surely as if you shot him with a rifle. Representative RAKER and Senator NEWLANDS would forbid the immigration of any but white people to this country. That is very well so far as it goes, but if we do nothing else, if we let things drift while we are wrangling over the tariff, the lobby and the Mexican muddle, a time is bound to come when the Asiatic, nine times stronger than we, will demand admission with the voice of cannon. Then we shall pray on our knees for an entangling alliance and most likely pray in vain, for by that time all our possible allies will have been crushed, robbed of their colonies, and reduced to helplessness.

The only means to ward off the crisis, the only means to keep the white race in this country from being swamped in a dusky flood, the only insurance policy that will cost us nothing, is the timely union of the great white nations. To bring about that union while it is yet timely is the foremost duty of American statesmen, if they care to deserve the name. A stitch in time saves nine. It is encouraging to know that in this undertaking we are sure of the whole-hearted cooperation of the most powerful man in Europe, the Emperor of Germany, who, as far back as 1895, long before anyone else thought of the yellow peril, uttered his famous warning: "Völker Europas, wahret eure höchsten Güter!" (Peoples of Europe, guard your highest interests!). All other pending questions are trifles to this. A sense of solidarity must be developed until the cry of any white nation in danger shall bring the whole race to its assistance as automatically as a nation rushes to the assistance of one of its provinces. Such a habit can not be drilled into half a dozen vast nations in a year, nor in five years, and hence the time to begin the drilling is not to-morrow but to-day. We poke fun at the people who say mañana. Let us not say it ourselves. A stitch in time saves nine.

ONLY WAY TO AVOID COMPULSORY MILITARY SERVICE.

Many of you feel it a burden to have to maintain a navy sufficient to hold its own against the Japanese Navy supported by the meager resources of a nation of fifty millions. What sort of a Navy shall we have to maintain when the rival on the other side of the Pacific numbers 900,000,000? And what about the Army? If Europe, with 440,000,000 population, keeps 5,000,000 men under arms, Asia, with more than twice the population, can easily keep 8,000,000. Can you conceive of any way by which we could then escape compulsory military service? Australia and New Zealand have already been compelled to adopt it. If we be grown men, not heedless children, let us open our eyes to this fast-approaching crisis now and provide for it in time, while it costs us nothing, and not wait till it costs us untold millions of treasure and torrents of blood. We can increase our Navy fivefold without the expenditure of a cent. How shall we do it? By simply annexing the British, German, and French Navies. We can have an army of two millions on a peace footing and an Army of eight millions on a war footing at no cost to ourselves, simply by making the German, French, and British Armies coalesce with our own. This is the only way in which we can hope to escape universal military service and a crushing expenditure for a gigantic navy, which, after all, could not keep abreast of our 900,000,000-headed rival.

Do you not think it worth while to look into this matter? And if you will take the trouble of looking into it you will find that the defensive union of the four most advanced nations is entirely feasible. It is simply a matter of a few compromises for the advantage of everyone concerned, compromises which have already won the approval of the best thinkers in Britain, France, and Germany. Everything depends on the first step, and that step we can take by simply creating an organization for the purpose.

PRACTICAL WAY TO ASSURE UNIVERSAL PEACE.

You are aware of the widespread movement for peace. Mr. Nobel has given $1,800,000 to it; Mr. Ginn, $1,000,000; Mr. Carnegie, $10,000,000. Thousands of people all over the globe are studying night and day how to solve this problem of universal peace. Here is a way—the surest way—probably the only way; at any rate, the way in which all existing peace has been brought about: By the consolidation of the existing areas of internal peace, a consolidation which in the past was accomplished for the most part by conquest, in a few cases by voluntary union under external pressure. One more consolidation and the area of internal peace will become world-wide. Any one can see that the four great powder-making nations, the four great gun-making, machine-using, coal-mining, shipbuilding, money-owning, technically trained nations, representing probably nine-tenths of the world's industry, would together constitute such an overwhelming power as to make war henceforth impossible. It would mean the almost immediate arrest of armaments and their gradual reduction to a mere fraction of their present size. Not only would our insurance policy cost us nothing, but it would greatly reduce our present expenditure. This union of the four leading nations we can bring about by simply creating an organization for the purpose.

GUARANTEE THE RIGHT TO LIVE.

Many of you share these views. Let me entreat you to act in accordance with your convictions and to let no technicalities stand in the way. We are gathered here to look after the interests of our constituents, their inalienable rights to life, liberty, and the pursuit of happiness. The primary, fundamental right is life. Our foremost duty, therefore, is to make sure that our constituents' right to live shall not be abridged. This foremost duty compels us to take the proper measures to secure our constituents against a competition which threatens to take away their opportunity to labor, that is to say, their opportunity to live. The proper measures for this purpose require the cooperation of the other white nations. Evidently we can not legislate for foreign countries. Shall we say, therefore, that we will not do our foremost duty, simply because it can not be done by legislation? Every one of us is daily doing for his constituents a score of things which are not legislative. Let us do for them the most important thing of all, even though it be not legislative. By creating an organization to work for the union of the white race, we can give the impulse toward the creation of similar organizations in Europe, which will have it in their power to bring about the fulfillment of the conditions of union. It stands to reason that our example will make all the deeper impression in Europe if the initiative in setting the example is taken by the Members of the highest legislative body of the land. In a word, the mandate with which our constituents have honored us, the confidence which they have reposed in us that we will look after their highest interests, imposes on us the duty of doing this extra legislative work which is to assure to our fellow citizens their primary, fundamental right—the right to live.

APPENDIX.

THE VANCOUVER DOCTRINE—ALASKA'S VALUE—A PLEA FOR CONSTRUCTION OF RAILWAYS THROUGH BRITISH COLUMBIA, NORTHWARD.

[News-Advertiser, Vancouver, British Columbia, April 12, 1913.]

In the Century Magazine for February, 1913, Mr. Alfred Holman, editor of the San Francisco Argonaut, asks:

"Could we lose Alaska? We have seen that Russia lost Alaska because the country could not be retained by a nation without what Admiral Mahan has defined as sea power. Except for her respect for the American Republic and the restrictions of the Monroe doctrine, England would have possessed herself of Alaska during the Crimean War. The figures on the board have indeed been changed, but the essential conditions are precisely what they were 50 years ago, plus an emphatic demonstration, in recent years, of the strategic as well as of the commercial value of the country. With Alaska, the United States is, and may remain, master in the Pacific Ocean. I say 'with Alaska,' because in Alaska are to be found the timber, coal, and food supplies essential to naval efficiency, even to naval supremacy. These facts write plainly on the wall of national prudence and caution, 'Have a care!' If Alaska is to remain American territory under any condition which may arise, we must have a defensive policy, and we must sustain defensive forces adequate to any possible demand upon them."

The general impression in the United States is that the Hawaiian Islands are the most important naval base in the Pacific, and that so long as they are held by the United States the coast of California,

Oregon, and Washington is safe. In the Forum, March, 1893, five years before the annexation of the islands, Admiral Mahan wrote:

"Too much stress can not be laid upon the immense disadvantage to us of any maritime enemy having a coaling station well within 2,500 miles * * * of every point of our coast from Puget Sound to Mexico. Were there many others available, we might find it difficult to exclude them all. There is, however, but the one. Shut out from the Sandwich Islands as a coal base, an enemy is thrown back for supplies of fuel to distances of 3,500 or 4,000 miles—or between 7,000 and 8,000 going and coming—an impediment to sustained maritime operations well-nigh prohibitive. * * * It is rarely that so important a factor in the attack or defense of a coast line—of a sea frontier—is concentrated in a single position, and the circumstance renders it doubly imperative upon us to secure it."

In saying "There is, however, but the one," Admiral Mahan evidently did not deem it necessary to add "aside from those which are already ours." As a matter of fact, every word that has been written to emphasize the importance of Hawaii for the protection of the coast of the Pacific States must be repeated with double emphasis in regard to the Aleutian Islands and the south coast of Alaska. The public would be more familiar with this fact if geography were taught by means of globes instead of maps. Every skipper in the Pacific knows that the straight line of navigation between Seattle and Yokohama runs not through the Hawaiian Islands but through the Aleutians. Shift the eastern terminus to San Francisco, and the line still passes only 200 miles south of the Aleutians. The Yokohama-Seattle line is 1,687 miles shorter by way of Alaska than by way of Honolulu. Shift the east end to San Francisco and the Alaska route is still 1,015 miles shorter than the Honolulu route. In other words, a fleet trying to establish a base of operations for attacking the United States would never dream of going 1,000 or 1,700 miles out of its way to Hawaii, when an ideal base, totally undefended, may be found near the Bering River coal field, only 1,150 miles from Seattle.

For the present, indeed, the supremacy of the United States Navy in the Pacific, soon to be made doubly effective through the opening of the Panama Canal, secures Alaska against attack. But naval supremacy is a precarious thing. A cyclone, like that of Samoa, may in a few minutes wreck the finest fleet. Pearl Harbor, "the Gibraltar of the Pacific," is carved out of comparatively recent volcanic rock. What if a renewed outbreak like that of Mount Pelee should overwhelm a squadron while at anchor in the harbor? At present, indeed, volcanic activity in the Hawaiian Islands is confined to the easternmost island, 200 miles east of Pearl Harbor, but geology has given no guaranty that the eruptive force, which hitherto has traveled eastward, may not take a backward leap. Submarines and airships have introduced new elements of uncertainty. In its recent maneuvers the United States Navy technically lost half a dozen of its finest battleships through attacks by submarines. If this should happen in real warfare, Alaska would at once be defenseless. The enemy would promptly occupy its south coast and use it as the most convenient base of operations against Seattle, Portland, and San Francisco, without paying the slightest attention to Hawaii.

This is a matter which Canada can not regard with indifference. It is a mere platitude to say that the United States is by far the pleasantest, safest neighbor we could possibly wish. A hundred years' experience has made it plain that from this neighbor we have absolutely nothing to fear. At the mere thought of another power in possession of Alaska every Canadian feels his flesh creep, his hair stand on end. We simply could not tolerate it, and should be compelled by the most obvious requirements of our own safety to join our forces to those of the United States in an attempt to drive out the invaders.

The moment we put this conclusion in plain words we perceive with dismay that our help would avail very little against an enemy able to throw his force at will on any point of the coast, which, in the absence of railways, we could only reach with troops inferior in numbers and equipment. Grievously is the fact thus brought home to us that the British Navy, supposed to rule the five oceans, is in reality tied up in the North Sea.

The situation would be wholly different if a railway extended from the Grand Trunk to Dawson and thence to the Alaska boundary, with a branch to every port, thus establishing continuous railway connection between the United States and Alaska. This would lead to the speedy construction of a network of railways in Alaska, extending to every part of the coast that is worth protecting. The very sight of those railways on the map would suffice to scare away the would-be invader, for he would know that Canada, in order to safeguard her own vital interests, would instantly place her lines at the disposal of the United States for the transportation of troops and supplies. In reality not one soldier, not one pound of ammunition would ever be sent that way so long as it was known that the means of sending them existed. The railway would simply banish war from the eastern half of the Pacific, and that name, hitherto undeserved, would become singularly significant.

The value of a Hazelton-Dawson railway would for a good while be mainly strategic. We have already drawn pretty heavily on the future in the matter of railways, and so long as the southern half of British Columbia is insufficiently provided with them, we should deem it premature and somewhat imprudent to build a line through the wilderness a distance of some 800 miles, which for many years could hardly pay expenses. Though we should like to see the safety of Alaska insured, yet that motive is one which concerns our neighbors more than ourselves.

An imperative motive for the immediate construction of the line would be created if it were made a condition of the transfer of southeastern Alaska to Canada, as has been suggested in connection with the Stephens resolution introduced in the United States Congress on February 7. We should in that case feel it our duty to build that line with all possible speed, and to postpone all other railway work until we had seen the first train running from the United States to the Arctic Circle, even though we knew that the line would not pay a cent in dividends for 20 years to come. However, though the longitudinal line might by itself remain unremunerative, the transverse branches to the ports, unhampered by a line of custom-houses, would at once give rise to an active trade, and the northern half of British Columbia, with the climate of Scotland, Denmark, and southern Sweden, would soon be filled with settlers. Skagway, Juneau, Wrangell, and all the other ports of the present coast strip of southeastern Alaska would in a few years develop into wealthy emporiums, controlling the lumber trade of the interior and smelting its ores.

Some Canadians in their patriotic pride feel uncomfortable to think that, in virtue of the Monroe doctrine, Canada is under the protection of the United States. They may gain a new sense of equilibrium from the knowledge that the United States in also under the protection of Canada, in virtue of a Canadian supplement to the Monroe doctrine, a supplement which we may without undue presumption call the "Van Cleave doctrine," after the city where, so far as we know, it was first promulgated.

Woman Suffrage.

EXTENSION OF REMARKS
OF
HON. EVERIS A. HAYES,
OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 3, 1913.

Mr. HAYES. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech delivered by my colleague [Mr. KENT] on last Sunday at the Columbia Theater, in this city, on the subject of "Woman Suffrage."

The speech is as follows:

CONCERNING WOMAN SUFFRAGE—FROM A MAN'S VIEWPOINT.

We who claim descent from northern Europe are legitimate heirs of a respect for our women. Back through all the Germanic and Scandinavian literature, through the historical records of Tacitus and others, runs the tradition of woman's high place in the home and the State, a position of equals and companions, rather than of dolls and drudges. And no one can charge that we spring from effeminate stock.

Latterly, with the growth of luxury, the oriental, the southern doctrine crept in among the wealthy, carrying with it the idea of man's possession of woman, with its inevitable concomitant of seclusion, but it did not affect the large bulk of the people. The pale-faced, soft creatures that flit through the tales of Scott and other chroniclers of the aristocracy were not the mothers of the race. They did not represent the old traditions which persisted among the middle classes and the common folk. The ideal of woman purring by the fireside was not the ideal that inspired the pioneers of the ages or any of our race who have had the stern work of the world to do.

It is true that in those ancient days and down to modern times women took but little direct part in Government except as it came to them from heirship. This was because the conception of democracy was inchoate. The later development of the demand for universal suffrage as an inherent element of democracy was slowly being formulated. It is not at all remarkable that this should have been belated, for as we look back to our Revolutionary times we find that the chief reason our men gave for their revolt was an objection to "taxation without representation"; that is, their resentment was first directed against the taking of a small part of their property unless they had a voice in its abstraction and subsequent disposal.

It was not until later, when Jefferson formulated in the Declaration of Independence the great statement of the right to "life, liberty, and the pursuit of happiness," that people phrased their realization that there were more sacred things to be secured and preserved by representative government than mere property. It is directly in this line of democratic progress that we shall confer suffrage upon our women.

Even now there are shallow minds who, while admitting that those women that are taxed by the assessor should have a voice in electing that assessor, believe that the franchise should be curtailed so as to include only those from whom the assesssor collects directly.

These taxation doctrinaires ignore a matter of fundamental import. For all women, as well as all men, are taxed directly or indirectly; and, further, all legislation has a bearing upon taxation, so that the tax-representation people are forced by their own reasoning to admit that all women have the right to be represented and to secure that representation in the only way they can secure it directly and effectively—at the ballot box.

It has long been recognized that the selected individual has practically reached his maximum development. Ancient Greece probably furnished the world the most perfect type of individual men of which there is record. But Socrates and Phidias were jostled by slaves; and, lacking real democracy, Greece perished. Development from now on must be social, must be a recognition of the duty of human beings to each other, so that by gradual process more people may enjoy greater opportunity. This is the meaning of democracy. It is this social impulse which is now moving the world.

From the standpoint of individualism I know no possible argument against the emancipation of women. They are entitled to equal opportunity, and even without it many of them have risen to positions of equal eminence with men. But when we look at the problem from the social side we find that there is insistent need for their full participation in the responsibilities of life as found in organized society. In women the social sense is more fully developed, more a motive force, than in men.

None of us who has had the good fortune to have had a mother's care fail to recognize that his real code of ethics is based upon her teaching and her example. As that code broadens and becomes more heedful of the "other fellow," more nearly concerns the welfare of society, then there comes the necessity that the mother, knowing the needs of the times, shall teach the social code to the children. A boy whose mother has taught him that politics is something abstruse and something necessarily unclean, of which she knows nothing, that boy is unnecessarily ignorant and will have much to learn on his advent into the larger world. He may not always learn the lesson aright, as his teachers may not possess the moral character of his mother.

I do not believe that any greater benefit can come to our people than that which will accrue by giving to the mothers the franchise privilege and responsibility, which will educate them to a clear comprehension of political needs, so that they may impart social ideals to the coming generation. I shall revert to these three propositions again.

I do not believe that a woman can be an adequate companion—looking at the matter from the selfish standpoint of the man—without realizing and comprehending those problems which are of the highest interest to every man who is a worthy citizen of the Republic.

Again, although there is no such thing as an inherent right to vote—indeed, no such thing as inherent rights of any kind, as all rights must flow from what is recognized from time to time as social expediency—yet, having established the ideals of democracy and of equal rights, as we conceive them, under democracy there can be no logical denial of the right of the woman to participate in government. Again, women in common with men have a duty to society and this duty can not be fully performed without knowledge of conditions and participation in the attempt to better them. Instead of being denied the vote, they, and men as well, should be compelled to vote.

Those men who have been of use in the world have usually traced their character to their mothers. It is inconceivable that any man of the right sort who had a mother sufficiently strong to mold his character would deny her adequacy to exercise the franchise. It is always the other fellow's mother that will not pass muster. Somehow, democracy and Christianity have not yet drilled into us the appreciation of the equal rights of the "other fellow."

When we consider our wives the viewpoint may be different. There has been a tradition imparted from other races of possession and of control. What a farce this control is, is known of all and especially fills the funny sheet with banal joy. This theory of possession and control may be operative in what is left of Turkey, but it has no standing with us.

The follies of extravagant women spring largely from this discredited theory of the sheltered life. There can not be a sheltered life for anyone in these days of yellow journalism, yellow dances, and questionable garb. The only shelter is the shelter of inherent character. I wish to quote from the great prophet of American democracy, Walt Whitman:

Her shape arises,
She, less guarded than ever, yet more guarded than ever;
The gross and soil'd she moves among do not make her gross and soil'd;
She knows the thoughts as she passes—nothing is conceal'd from her;
She is none the less considerate or friendly therefor;
She is the best belov'd—it is without exception—she has no reason to fear and she does not fear;
Oaths, quarrels, hiccupp'd songs, smutty expressions, are idle to her as she passes;
She is silent—she is possess'd of herself—they do not offend her;
She receives them as the laws of nature receive them—she is strong,
She, too, is a law of nature—there is no law stronger than she is.

When we come to consider our daughters, the idea which we must contend against, for it is still prevalent, is that she, too, if the family be financially fortunate, should purr by the fire and practice on the piano, learning nothing worse about life than what she may read of crimes in the newspapers and of disgusting nastiness in the erotic novels.

Of course, she can help the poor by giving them coins she begs from papa, but she must never know the source of his prosperity, for it often springs from social injustice; nor may she suspect that the remedy for undeserved poverty must lie in letting the people have what they produce, rather than in begging papa to hand back to his real creditors, the working people, 2 cents on the dollar. That would be teaching her socialism.

I am often asked how suffrage works in practice. It works just as sane and sensible people would expect it to work. In California, it has improved our conditions in all respects, and most visibly in the decency which has come about in elections. Women have not been anxious to force or to inaugurate women's policies. For this, they deserve our gratitude. Nothing could be worse than that a sex line should be drawn in politics. We feel that we shall never have to meet this issue.

For 20 years I have been in the thick of political contention. I know the great game of practical politics from the suburbs to the stock yards, from the city to the thrashing crew in the field. There is nothing dirty about politics unless the cards are played with dirty hands. We have seen in California, with woman suffrage, the schoolhouse displace the saloon as political headquarters.

With the ballot we confer upon our women, our partners and companions, an added appreciation of social responsibility, an ability to contribute directly to social welfare, a noble, a limitless opportunity for the exercise of that altruistic sense which they possess more fully than do men.

As to those who oppose our ideals of society and of democracy—as these ideals appear in the adult suffrage movement—I have never been able to comprehend the arguments of such of them as are disinterested and honest. I realize that many people are belated. Let us pray that they may soon catch up with progress. But there are many whose opposition bears the stigmata of vicious personal interest; the alcohol traffic, white slavery, much of the polite and useless and demoralized society are opposed to the emancipation of women. The alliances which are formed against adult suffrage are surprising.

It is strange to consider the opposition here in Washington. To anyone who knows how anxious are the Members of the House and Senate to receive the vote of their constituents it seems obvious that those Members who violently line up in opposition have no faith that their wives would vote for them if they had a chance.

We hear talk of the feminization of the race, but men have not been feminized by having been born of woman, any more than the widow who has struggled in the world of men, that her sons and daughters might live, has become masculine.

Effeminacy is not a matter of sex. It is a question of uselessness. The stronger, the keener, the more intelligent our women become, the more virile will be the race.

I began with the thought of equal companionship, the ideal of a home where human nature can develop to the full. You, whose mothers and wives are strong, able, loving women, have you never felt the thrill of real fellowship, have you never added to the tenderly loyal affection you feel for them as women, the handclasp which you give to the man who is your closest friend? You who have never enjoyed the privilege of going to the polls, our most sacred shrine, in company with your mother and your wife, as I have done, can not realize the supreme pleasure of sharing with your nearest and dearest the highest of privileges, that of full American citizenship.

In closing I again quote from Whitman:

Where women walk in public processions in the streets, the same as the men,
Where they enter the public assembly and take places the same as the men;
Where the city of the faithfullest friends stands;
Where the city of the cleanliness of the sexes stands;
Where the city of the healthiest fathers stands;
Where the city of the best-bodied mothers stands;
There the great city stands.

Preparedness for War.

EXTENSION OF REMARKS
OF
HON. KENNETH D. McKELLAR,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 6, 1913.

Mr. McKELLAR. Mr. Speaker, several days ago various newspapers published statements, purporting to come from the Secretary of War, about our unpreparedness for war in so far as our Army is concerned.

I am confident that these published statements did not correctly set forth the views of the Secretary of War, and on Sunday last a statement was made by Mr. JAMES HAY, the chairman of the Committee on Military Affairs of this House, which statement so clearly sets forth the condition of our Army and its preparedness to meet any emergency that I feel that this statement should go in the RECORD.

Therefore I ask unanimous consent that it may be printed in that part of the RECORD reserved for such documents as a part of my remarks.

The statement is as follows:

ARMY READY, HE SAYS—HAY, OF VIRGINIA, MAKES REPLY TO SECRETARY GARRISON—URGES CRITICS TO GET FACTS—REPRESENTATIVE ASSERTS THAT PEOPLE WOULD NOT STAND FOR LARGER FORCE—COSTS $160,000,000 YEARLY NOW—NO MIDDLE GROUND BETWEEN PRESENT PLAN AND ENLISTMENT OF 500,000 MEN.

Representative JAMES HAY, of Virginia, chairman of the House Military Affairs Committee, yesterday scoffed at the statement of Secretary of War Garrison that the United States is unprepared for war so far as its Army is concerned. He declared that the Army of this country is exactly what it is intended to be; that is, a nucleus for the country to rally around in time of war.

"We have an Army," said Mr. HAY, "that is better paid, better clothed, better housed, and better equipped than any army of its size in the world. The personnel, both enlisted men and officers, is unsurpassed. Our officers are particularly well educated in all branches of military science.

"The genius of the American people will never stand for a large army. Our present Army cost over $100,000,000 last year, and in the last 10 years we have spent over $1,000,000,000 on the Army. If that vast amount has not produced anything better than we are led to believe by statements recently made, it would be a great deal better to stop the appropriations altogether.

AMPLE RESERVE SUPPLY.

"As a matter of fact, we have in reserve over 1,000,000 service rifles and all the small-arms ammunition needed for them. Our reserve of small-arms ammunition is now what the War Department has frequently told Congress it desired.

"We are acquiring field artillery in reserve and field artillery ammunition in reserve. We have a large clothing reserve and a plentiful quantity of medical supplies.

"So that the Army is prepared for any emergency that may arise.

"The only way possible to put this country on a footing with the first-class powers is to increase the Regular Army to at least 500,000 men. That would cost not less than $500,000,000 a year. We have not had a war with a first-class power since 1812, and it does not seem to me that we would be justified in spending so much and departing from a policy in order to be prepared for a war which is in the minds of some people, but which, as a matter of fact, taking our situation into consideration, is inconceivable.

"The plan proposed by some persons to have a reserve is based upon what is done in continental Europe, where military service is compulsory. In order to have a reserve here we must pay for it. It is impracticable to expect men to enlist for one, two, or three years and then serve without pay four years in the reserves.

MAKE ARMY EFFICIENT.

"The service is not so attractive as to invite men to serve without pay, and it seems to me to be the part of wisdom to make the Army we have, which can not be increased, the most efficient in the world instead of aping the militarism of continental Europe.

"We have a national guard of about 120,000 men, who in a short time could be placed in the field and render efficient service. There is a bill pending now in Congress to create in time of war a volunteer force, which will probably become a law before this Congress ends.

"So Congress, at least, has not been neglecting the Army nor blind to the importance of preparing for the defense of the country in time of war.

"For myself I deplore the action of some gentlemen in holding up the Army of the United States to the world as inefficient and unprepared, when they ought to know, if they take the trouble to learn the facts, that such is not the case."

Memorial of the Carded Woolen Manufacturers' Association.

EXTENSION OF REMARKS

OF

HON. ASHER C. HINDS,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 4, 1913.

Mr. HINDS. Mr. Chairman, I ask permission to insert in the RECORD a memorial of the Carded Woolen Manufacturers' Association. Although the woolen schedule has been dealt with by the House and Senate, yet certain manufacturers ask the favor of printing certain views. As it has been an important matter in the State which I in part represent, I ask that this memorial be preserved in this way.

The CHAIRMAN. The gentleman from Maine [Mr. HINDS] asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The memorial referred to is as follows:

SCHEDULE K AND THE RULE OF JUSTICE.

When we act we should act with caution and prudence, like men who know what they are about, and not like those in love with a theory. (Woodrow Wilson.)

A letter to the President of the United States and the Sixty-third Congress from the Carded Woolen Manufacturers' Association.

CARDED WOOLEN MANUFACTURERS' ASSOCIATION,
450 OLD SOUTH BUILDING,
Boston, Mass., June 26, 1913.

To the President of the United States and Members of the House and Senate of the Sixty-third Congress, Washington, D. C.

SIRS: Four years ago the carded woolen manufacturers were among the first to urge the Sixty-first Congress to make the tariff on wool and wool goods fair to all producers and consumers by making the rates ad valorem instead of specific. The request was denied, and as a result not only the wool-manufacturing industry but the business of the entire country has been kept in a state of uncertainty by tariff agitation. Now the Sixty-third Congress is engaged in revising the tariff, and we desire to call your attention to serious defects in the Underwood Schedule K as passed by the House of Representatives and as redrafted by the Finance Committee of the Senate.

FREE WOOL IS UNJUSTIFIABLE.

The first defect to which we direct your attention is the removal of the duty from wool and wool by-products. This feature of the proposed revision is unjustifiable, regardless of whether the tariff is designed for protection or for revenue only. It will not be denied that this country is suited for the growing of wool and for converting wool into finished products. Consequently, a tariff on wool or wool goods is protective, regardless of whether it is intended for revenue or for protection. It follows that a tariff on wool materials must be placed on wool, by-products, and manufactures of wool, in order to be fair.

The history of the Payne-Aldrich tariff law illustrates a fact that requires no proof—that is, that a tariff law must be based on justice in order to be reasonably permanent. A tariff act which protects one class of producers and exposes another class to the full force of foreign competition introduces that element of privilege and discrimination so abhorrent to the American sense of fair play. Gov. Wilson in his speech accepting the nomination for President said:

"There are two great things to do. One is to set up the rule of justice and of right in such matters as the tariff."

We ask that the rule of justice be applied in the revision of Schedule K by placing a fair duty on wool as well as on wool goods.

ANOTHER PERIOD OF AGITATION.

A law that makes wool free and places a duty on manufactures of wool will settle nothing. Its enactment will be the beginning of another period of agitation to place a duty on wool and wool by-products or to remove all duties from wool goods. If there are any manufacturers so shortsighted as to want wool free of duty in their mills, while a duty is retained on the products of their mills, we want it understood that we are not numbered among them. The country has not voted for free wool or free trade. Gov. Wilson when a candidate for President put the quietus on free trade, so far as he and his party were concerned, by this statement:

"You can not have free trade in the United States, because the Government of the United States is of necessity, with our present division of the field of taxation between the Federal and the State Governments, supported in large part by the duties collected at the ports."

A large majority of the voters at the last election cast their ballots for candidates who favored protection to American industries. It is admitted that the Underwood bill as originally framed by the Committee on Ways and Means provided for a duty on wool. We ask that the will of the voters be obeyed by carrying out this plan of the committee, and presumably of the House of Representatives, and that the tariff on wool materials, whether framed for revenue or for protection, shall be apportioned fairly on all commercial products—wool, by-products, tops, yarns, roving, and fabrics. As to the rate to be placed on wool we recommend that it be ad valorem and that it be the same on all kinds of wool and wool by-products. Only in this way will it be fair.

THE TARIFF ON WOOL GOODS.

As to the tariff on partly manufactured products and finished wool goods, it is our deliberate judgment that the 35 per cent proposed by the Underwood bill is calculated to cause serious injury to wool manufacturing in this country. The belief is based on our own experience and on the recent experience of the Canadian woolen industry under a tariff approximating very closely the Underwood rates. In this connection we call your attention to the report of a recent investigation of the Canadian woolen industry made by a representative of the Daily Trade Record, of New York, and which has been printed as a Senate document. We believe that wool manufacturing is as efficient and economical in the United States as anywhere in the world, if efficiency and economy are measured not in dollars and cents but in the expenditure of labor and material to produce a given result in the finished fabric. But wool and wool goods are exchanged in foreign and domestic commerce on the basis of dollars and cents. The American woolen industry is unable to compete with the foreign industry under the Underwood tariff rates because of the higher money cost for labor and other items of manufacturing expense in the United States. Added to this is the important fact that for nearly 50 years woolen manufacturing in this country has been conducted under the unequal conditions created by specific tariff rates, by which vast quantities of certain grades of raw material have been excluded from the country by prohibitory duties, while other grades of raw material have been imported under comparatively low duties. The equipment and organization of our mills, the processes of manufacture, and the experience of our operatives have all become adjusted to these arbitrary conditions that have resulted directly from the laws enacted and enforced by the United States Government.

OFFICIAL RESPONSIBILITY.

Those charged with the duty of revising the tariff now should remember that the United States Government is solely responsible for the arbitrary conditions that have resulted from the woolen schedule enacted in 1867 and still in force. For that Government now, after a period of 46 years, to change suddenly from high specific duties to the low ad valorem rates of the Underwood bill would be an act of injustice that would prove disastrous to the wool manufacturers of the country.

These facts, in our judgment, create an obligation on the part of the present administration to make no change in policy without giving American manufacturers time to adjust their manufacturing plants, organization, and processes to the new conditions. Whatever form this bill may finally take, we earnestly urge that the duties on foreign manufactured goods should not become operative until 90 days after the change on raw material goes into effect. In taking this course, which is prompted by justice, common sense, and ordinary prudence, we are but urging that you put into practice the following policy stated by Gov. Wilson in his speech accepting the nomination for President:

"We do not ignore the fact that the business of a country like ours is exceedingly sensitive to changes in legislation of this kind. It has been built up, however ill-advisedly, upon tariff schedules written in the way I have indicated, and its foundations must not be too radically or too suddenly disturbed. When we act we should act with caution and prudence, like men who know what they are about and not like those in love with a theory. It is obvious that the changes we make should be made only at such a rate and in such a way as will least interfere with the normal and healthful course of commerce and manufacture."

The fixing of the rates on wool goods under such complex conditions as obtain at present is a matter not of arithmetical calculation but of judgment. It is our judgment that the new tariff should, as the first step in tariff revision, be made to provide a net protection of not less than 45 per cent ad valorem on the finished goods, and that the duties on partly manufactured articles—tops, yarns, etc.—shall bear the same proportion to the rate on the finished goods that the cost of manufacturing such products bears to the cost of manufacturing the finished goods.

We ask you, regardless of party affiliations, to support the various suggestions we have made for the revision of Schedule K, because we believe they will contribute to a settlement of this question on a basis of justice and thus give to the textile trade and the country an assurance of freedom from tariff agitation.

Respectfully,

CARDED WOOLEN MANUFACTURERS' ASSOCIATION,
EDWARD MOIR, *President.*
ARTHUR WHEELOCK, *Secretary.*

Steel Cars on Railroads.

EXTENSION OF REMARKS

OF

HON. CHARLES A. TALCOTT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 8, 1913.

Mr. TALCOTT of New York. Mr. Speaker, I ask unanimous consent to extend in the RECORD remarks I made before the Interstate and Foreign Commerce Committee last February concerning the use of steel cars on railroads.

The SPEAKER. The gentleman from New York [Mr. TALCOTT] asks unanimous consent to extend his remarks in the RECORD on the subject of steel cars on railroads. Is there objection? The Chair hears none.

The remarks referred to are as follows:

Mr. TALCOTT. In April, 1911, Mr. Chairman and gentlemen of the committee, an excursion of teachers left Utica, N. Y., for this city on the Delaware & Lackawanna Railroad. The route was first to Binghamton by the branch line, then by the main line of the Delaware & Lackawanna to Stroudsburg, where the train was transferred to the tracks of the Pennsylvania Railroad, and on that road, at Martins Creek, in the State of Pennsylvania, the train was derailed and 12 of the excursionists were killed, and, the cars taking fire, some were burned to death. This disaster called my attention to the matter of steel cars, especially so when the report of the Interstate Commerce Commission in regard to that accident contained as one of the findings that if steel cars had been used on this train there would have been little, if any, loss of life.

The desirability of steel cars needs very little argument now. First, it is established by the action of the managers of railroad companies themselves who are voluntarily introducing steel cars in their equipment throughout, and the following shows the increase in the purchase of steel cars during the past few years: Recent statistics given by the Railway Age show that in January of 1912 the passenger cars under construction were about 77 per cent steel, 16 per cent wood with steel underframes, and 7 per cent wood. The increase of steel and steel underframe passenger cars is shown by the following table:

Cars approximately in service.

	Steel.	Steel underframes.
Jan. 1, 1909	629	673
Jan. 1, 1910	1,117	1,098
Jan. 1, 1911	3,133	1,636
Jan. 1 1912	5,347	2,399
Increase 1912 over 1909	4,718	1,726
Increase, 1912 over 1909 per cent	750	256

So far as interstate commerce is concerned, many roads equip trains traveling at a high rate of speed with steel cars now.

Second, the results of accidents show the great superiority of steel cars. Take the accident to the Twentieth Century Limited at Hyde Park, New York, in March, 1912, when the cars, with one exception, traveling 60 miles an hour were derailed, the track for hundreds of feet torn up and demolished, and the train thrown into the Hudson without a single fatality; or take the accident on the Pennsylvania Railroad at Warrior Bridge, in February, 1912, where the whole train was thrown down an embankment when traveling at the rate of 60 miles an hour with only five fatalities; then compare these cases with cases like the Martins Creek disaster, or the disaster at Westport, or the disaster on the Delaware & Lackawanna road at Corning and you have evidence of the superiority of steel cars that is strong and convincing.

Third, the superiority of steel cars is shown by the reports of the Interstate Commerce Commission and the reports of the experts connected with that commission as well as the reports of other experts. Accidents have been investigated and reports have been made to the Interstate Commerce Commission in regard to them, and the commission has given thorough consideration to the necessity of the introduction of steel cars. In the report of the Interstate Commerce Commission for 1911 at page 91 there is the following reference to steel cars:

The commission on February 2, 1911, in responding to Senate resolution of June 25, 1910, respecting the cost of building and maintaining postal cars of wooden and of steel construction, reported in part as follows:

"We regard the steel car for use in passenger trains as having passed the experimental stage, as is evidenced by the rapidly increasing use of that type in newly constructed sleeping cars, coaches, and dining cars. There can be no doubt that a steel mail car will afford much more protection to the safety of the employees in the car as well as to the mail matter. The cost of a steel car is but little more than that of a wooden car. The cost of maintenance of the steel car can not be accurately stated at this time, but there is no reason to assume that it will be much greater than for a wooden car. In any event the extra cost of construction and maintenance can not equal the advantages arising from the added safety which the steel car affords. We think that hereafter steel mail cars should be constructed in the place of other types made partly or largely of wood."

In the report of the Interstate Commerce Commission for 1912, at page 62, there is the following:

In its last annual report the commission recommended legislation requiring the adoption of steel cars and the use of the block system, as well as standardization of the operating rules of all interstate carriers. It also noted the necessity of ascertaining and improving the physical condition of tracks and roadways. Up to September 1, 1912, 81 accidents had been investigated, 49 of which were collisions and 31 derailments, the other one being a grade-crossing accident. These investigations have confirmed the superiority of the steel car from the standpoint of safety. It may be noted, however, that the railroads generally are replacing their older cars with modern cars of all-steel or steel underframe construction as rapidly as conditions will permit, and as a result the danger from the use of unsound cars is gradually disappearing.

In his report on the accident at Westport, Conn., October 3, 1912, Commissioner McChord says:

The cars in train second No. 53 were of wooden construction, and the forward end of the first parlor car was lying against and across the fire box of the overturned engine and immediately caught fire. Three parlor cars were burned. It is obvious that had these cars been of modern steel construction they would not have been destroyed by fire, and it might have been possible to have saved the lives of some of the injured passengers who were caught in the wreckage and crestrate the inherent weakness of wooden cars and their unsuitability for service in modern high-speed trains, and emphasizes the necessity of compliance with the commission's recommendation in its last annual report relative to the adoption of steel cars.

The report of the accident at Warrior Bridge, Pa., February 15, 1912, says (Accident Bulletin No. 43, p. 26):

The comparatively small loss of life can undoubtedly be attributed to the all-steel equipment of the train.

In his report on the accident near East Corning July 4, 1912, Mr. H. W. Belnap, chief inspector of safety appliances of the Interstate Commerce Commission, says:

This accident has again demonstrated the superiority of all-steel equipment. In this connection attention is called to the following recommendation which was made in the report dealing with the accident which occurred on the Pennsylvania Railroad at Fort Wayne, Ind., on August 13, 1911:

"That in order to provide the safety to which the traveling public is entitled, the substitution of all-steel equipment in high-speed passenger service shall be required at the earliest practicable date."

It is also noted that in its twenty-fifth annual report to Congress the commission recommended "the adoption of steel cars—postal, baggage, and passenger."

In the report on the accident near Estabutchie, Miss., Mr. Belnap says:

The first three cars of this train were of steel underframe construction, and none of them were materially damaged, as is shown by illustration No. 1. In illustration No. 2 the dining car is seen at the left, standing on the southern end of the trestle. On the right is seen the third car of the train, the body of it being perfectly undamaged. Between these two cars can be see the remnants of the two wooden tourist cars, one of which was built 26 years ago. What happened to these two cars can not but lend emphasis to the recommendation contained in the commission's last report to Congress that the adoption of steel cars be required. The bridge through which these cars plunged, although in good condition and well maintained, was not of sufficient strength to withstand the pressure to which it was subjected. Had these cars been of modern steel underframe or all-steel construction, or had the bridge been of stronger construction, the long list of casualties would undoubtedly have been greatly reduced.

In the report of the accident at Fort Wayne, Ind., August 13, 1911, he says:

The entire equipment of the train, with the exception of the dining car, was of all-steel construction. The dining car was equipped with non-telescoping ends. The speed of this train was so great and the impact of the colliding engines so terrific that the head engine on No. 28, as well as the freight engine which they fouled on track No. 3, was turned entirely around. Several of the six-wheel trucks were torn from the

cars in No. 28 and buried entirely in the rock ballast of the roadbed, while three of the cars of this train were torn entirely from their trucks and landed at the foot of the embankment.

Had the cars on this train been of the wooden construction commonly used they would undoubtedly have been crushed to pieces and telescoped by the impact, causing a frightful loss of life. To the all-steel equipment can undoubtedly be attributed the fact that not a passenger lost his life and only one was seriously injured.

And among the recommendations made is the following:

It is further recommended that, in order to provide the safety to which the traveling public is entitled, the substitution of all-steel equipment for wooden equipment in high-speed passenger service shall be required at the earliest practicable date.

The bill H. R. 11822 was introduced by me June 17, 1911, referred to the Committee on Interstate and Foreign Commerce, and the committee requested the opinion of the Interstate Commerce Commission in respect to the bill. In the annual report of the commission for 1911, at page 91, there is the following statement in relation to that bill:

On June 24, 1911, in response to a request from the Committee on Interstate and Foreign Commerce of the House of Representatives for the expression of the commission's opinion with respect to House bill No. 11822, the intent of which was to require steel passenger cars, we further indicated our views regarding the requirement not only of steel postal cars, but also with respect to passenger, baggage, and express cars, as follows:

"* * * The commission has considered this bill and approves of its general purpose as a reasonable provision for greater safety, but would suggest the advisability of some modifications, as follows:

"1. It would deem highly important that the provisions of such act as may be passed in this respect should include all mail, baggage, and express cars.

"2. It is believed that the limit of time within which carriers should be prohibited from bringing into use new cars not in conformity with the provisions of the act should be approximately a year after the passage of the act or, possibly, a somewhat shorter period. This is suggested for the reason that there are doubtless many orders already placed and contracts in existence for the building of new cars, many of which are no doubt also in process of construction.

"3. It seems to us that the period within which all carriers subject to the act should be required to bring into conformity all their equipment of the kinds designated with the proposed act should be extended somewhat beyond that suggested in the bill, and perhaps ought to be not less than 10 years from the passage of the act. This suggestion is made because of the knowledge that at the expiration of a shorter period of time there would be many cars capable of as satisfactory service as they are now, and that to put them out of service altogether in a less period than that suggested would entail a very heavy loss upon the carriers and would deprive them of the use of cars approximately as good as many of their standard cars now in use.

"4. It is believed that even at the end of the 10-year period suggested there would be many cars available for further valuable service with reasonable safety, especially on minor roads where few and small trains are operated and for short distances. This would be particularly true with respect to cars of special construction and strength, such as Pullman cars. For these reasons it is also believed that the commission should be vested with authority, in the event the bill is enacted into law, to extend the period of time within which particular carriers might continue the use of cars, also the time within which any carrier might be permitted to use particular cars which might at that time be deemed by the commission to be reasonably safe upon such investigation or inquiry as might in its judgment be necessary."

The experience and observations of the commission since these views were expressed, taken as a whole, tend toward their confirmation.

When I framed bill H. R. 13038 I introduced provisions in keeping with some of these suggestions. It provides for steel postal, express, and baggage as well as for steel passenger cars, and discretion in relation to the operation of many provisions of the law is lodged with the Interstate Commerce Commission.

The bill, I think, is open to argument in but one section. It is that section which refers to the location of steel cars in the trains. I take it for granted, so far as the use of steel cars is concerned, that the case is made out by the Interstate Commerce Commission and by the opinion of all men who have made the matter a study.

Mr. ESCH. Would you think the increasing output of steel cars by the carriers is really an estoppel as against them from now claiming that they should not adopt steel cars?

Mr. TALCOTT. I think not, Mr. Esch. You yourself have given a great deal of time to this matter. You introduced the first bill, I think, in regard to steel cars. That must be seven or eight years ago.

Mr. ESCH. Eight years ago, I think.

Mr. TALCOTT. When I introduced this bill I did not know of your bill, but I found afterwards that you were really the pioneer in the matter. I think you realize, Mr. Esch, that in these matters there must be systematic action, that there must be a correlation established. If the measure related simply to the business of one railroad in a single State, it would be one thing; but here we are dealing with the regulation of the railroads of the whole country and there must be some way by which a degree of correlation can be had. Under this last bill of mine I have placed large discretionary power with the Interstate Commerce Commission, and there is nothing in the bill which is hostile to the railroad companies, for I believe they are just as much in need of this legislation as the people who use the railroads. They already have undertaken the introduction of steel cars to a very large extent, and it is the purpose of this bill to follow up this work and make it effective. If steel cars are used high speed is practicable; if wooden cars are used a safe limit of speed should be required.

Mr. DRISCOLL. Were there any steel cars in that excursion train?

Mr. TALCOTT. In the Martins Creek accident?

Mr. DRISCOLL. Yes.

Mr. TALCOTT. No, there was not one.

Mr. HAMILTON. That accident where the train was thrown into the Hudson, I am curious to know why some people were not drowned.

Mr. TALCOTT. The water was not deep enough there, I think. Of course, in deep water a steel car will sink, and I think a wooden car will also with its heavy trucks. The river was covered with ice.

Mr. HAMILTON. You said there was not a single casualty.

Mr. TALCOTT. I did not say a single casualty; I said there was not a single fatality. There was a large number of injuries, and so in the accident at Warrior Bridge, in Pennsylvania.

Mr. HAMILTON. I should think falling into the river would be just one of the cases where a steel train would be particularly defective.

Mr. TALCOTT. I did not intend to argue that a steel car was unsinkable, but I think you will find that the ordinary wooden car is no better. But, as I say, the last bill that I introduced, which is the basis of this hearing, contains the provisions of the bill first introduced by me, which was referred to in the report of the Interstate Commerce Commission for 1911, and it also contains provisions intended to carry out some of the suggestions contained in that report of the Interstate Commerce Commission. In section second there is a further provision in relation to the location of wooden cars in trains. That provision is as follows:

That from and after January 1, 1912, it shall be unlawful for any common carrier engaged in carrying United States mail to locate or run in any train between adjoining steel cars or between the engine and an adjoining steel car any mail car not constructed of steel, and from and after the said 1st day of January, 1912, it shall be unlawful for any common carrier engaged in interstate transportation to locate or run in any train on its line in interstate traffic or in interstate transportation of passengers between adjoining steel cars, or between the engine and an adjoining steel car, any express car, baggage car, or passenger car not constructed of steel.

Now, Mr. Chairman and gentlemen, that provision is simply an extension of the provision relating to the use of steel mail cars. It makes that provision applicable to passenger, express, and baggage as well as mail cars. And there is a criticism by one of the members of the Interstate Commerce Commission, I think, and his objection in part is based on the fact that the number of rear-end collisions exceeds the number of head-on collisions, and that if wooden cars are put in the rear end of the train they will get the full force of the impact in a rear-end collision; also that there are some matters of detail in the running of railroads that would make such a location of wooden cars inconvenient. Now, it seems to me the main criticism leaves out of consideration one important fact, and that is the number of accidents from derailment. If you take the number of accidents from derailment, together with the number of accidents from head-on collisions, they will greatly exceed the number of those from rear-end collisions; but, in the case of both head-on collisions and derailments, the presence of the steel car is a very great advantage.

Speaking in regard to the accident at Westport (in connection with the accident at Corning), the New York State Public Service Commission (Rept., p. 9) called attention to the fact that if there had been a steel car at the front of the train at Westport it would have saved a great many of the lives, because one great cause of loss of life was the burning of the Pullman cars, one of which fell across the fire box of the engine. This danger of fire seems to be always present in the accidents in which wooden cars are involved.

The CHAIRMAN. You spoke a few moments ago of the action of the railroads themselves in voluntarily adopting the use of these steel cars to some extent. I ask what your observation is as to the rapidity with which they are doing that. Are they making as much progress as they can reasonably be expected to make?

Mr. TALCOTT. That I can not state. I think the Interstate Commerce Commission can speak in relation to that.

Mr. ESCH. I think, Mr. TALCOTT, that in the January number of the Railway Gazette of this year you will find a list of steel cars put in commission by the various railroads in the United States. I have that list for a year ago, and I can hand it to you for printing in the record, if you wish.

Mr. TALCOTT. I think the last report of the Interstate Commerce Commission said that they were making as many introductions of steel cars as could be expected under the conditions.

But I think we have reached a point where steel cars on high-speed trains should be required. If wooden cars are used, a safe speed limit should be fixed.

The CHAIRMAN. I had in mind, at the beginning of this Congress, to insist on reporting a bill requiring all trains that run above a certain speed to be composed of steel cars.

Mr. TALCOTT. All steel cars?

The CHAIRMAN. Yes; all steel cars; but it was represented to me by the railroads, and, if I recollect rightly, the Interstate Commerce Commission was rather sanctioning that claim, that they were putting them in as rapidly as under the conditions they well could be expected to put them in.

Mr. TALCOTT. Well, under the conditions, but the conditions are not such as lead to satisfactory correlation of the work; and if the committee will refer this matter to the Interstate Commerce Commission I believe that the Interstate Commerce Commission will agree with this view.

The CHAIRMAN. You do not want to increase still further the profits of the Steel Trust by requiring the railroads to take their entire output, do you?

Mr. TALCOTT. That is not my purpose. I am in favor of steel cars, and I am also in favor of steel rails, and it seems to me that we have reached the point in transportation where both are necessary.

The CHAIRMAN. What is your idea, if legislation should be determined upon, to accelerate the progress of the railroads as to the limit of speed at which that requirement should be made?

Mr. TALCOTT. That I should have to ask somebody to pass upon who is more conversant with the practical matter of railroad transportation; but I think if the use of wooden cars is permitted a safe speed limit should be fixed.

Mr. DRISCOLL. Are you willing to let them wear out their wooden cars?

Mr. TALCOTT. In this bill that is left to the Interstate Commerce Commission.

Mr. ESCH. What limit do you put to the time that they should all be steel cars?

Mr. TALCOTT. The first limit was 1916. The commission, I think, recommended a limit of 10 years from the time the bill becomes law.

The CHAIRMAN. Would it not be all right to allow them to wear out their wooden cars by operating them in slow trains?

Mr. TALCOTT. Certainly; and there is that provision at the end of the bill, as follows:

SEC. 5. That the Interstate Commerce Commission may from time to time, upon full hearing and for good cause, extend the period within which any common carrier shall comply with the provisions of section 1 of this act, and the Interstate Commerce Commission may from time to time, after such investigation as may be necessary, permit any such common carrier to use particular mail cars, express cars, baggage cars, or passenger cars, the use of which shall be deemed by the commission to be reasonable and proper.

There has been no disposition, I think, to draw a harsh rule against the railroad companies; because, of course, there has to be adaptation to these circumstances, but the use of steel cars has gone so far now by the companies that complete equipment will be an easy matter.

In regard to the second section, I agree with you, Mr. Chairman, that the best plan, the only really safe way to make up a train is to have it all of steel cars. It does not make very much difference where you have the wooden cars in a train in which there are steel cars; in case of collision something must happen to the wooden car. For instance, in the Corning disaster the last car was a wooden car, and the next to the last car a steel car; then there was a wooden drawing-room car, or a wooden sleeping car; when the collision occurred the last car, the wooden car, was completely demolished and a great portion of the lives lost, I think, were lost in that car; the engine then telescoped the steel car about 5 feet, and it was only a steel coach, and drove it two-thirds way through the wooden sleeper. That case seems to show very conclusively that wherever you put the wooden car in the train something will happen to it, especially in a rear-end collision.

In the Mississippi case there were three steel cars ahead; then came two wooden cars, and these wooden cars were completely demolished. The steel cars were unharmed. It seems to me, however, that the safest place for the wooden cars, after all, is in the rear of the train; because then in a derailment or in a head-on collision you have the advantage of the protection of the steel car in front.

Mr. ESCH. Of course, head-on collisions are generally more disastrous than rear-end collisions, because the trains are approaching from opposite directions. In rear-end collisions the forward train is either stationary or moving in the same direction as the colliding train; hence the impact will never be so great as in the head-on collision.

Mr. TALCOTT. It would seem not. Of course, there have been very great losses of life in rear-end collisions, like the one at Corning; but I think you are right, Mr. Esch, as a general rule.

Mr. ESCH. You have heard some objections made to the installation of all-steel trains. One was on account of the added weight and hence the increase of motive power, the increase of the size of the rail and the strengthening of bridges. Do you think those objections are insuperable?

Mr. TALCOTT. The increase of weight in rolling stock has been so great during the last few years that I think almost all railroads have provided strength in roadway and bridges sufficient to stand the weight of steel cars. I doubt if the steel-car train produces so great weight as some of the freight trains when loaded. I do not think it makes very much difference in the expense of rolling stock, and I believe steel cars last longer. Take the two cars that were involved in the accident at Odessa. The rear car was a sleeper; the next car was a diner; they were both all-steel construction, and the last car was telescoped by the locomotive in the rear and telescoped in front by the dining car; but both these cars were taken 500 miles on their own trucks to Milwaukee to be repaired. The telescoping of the sleeper by the diner was caused by the unusual position in which the sleeper was placed when struck by the locomotive.

The CHAIRMAN. I believe you modestly disclaimed being a mechanical expert?

Mr. TALCOTT. I am not a mechanical expert. All I know about the subject I have learned since the accident at Martins Creek. The matter was called to my attention in this way.

The CHAIRMAN. I wished to examine you about this idea embodied in one of the bills. Of course, I understand that, so far as fire is concerned, the danger you speak of would be obviated; but would not strength and lightness of weight be as well obtained by the steel frame?

Mr. ESCH. Underframe.

The CHAIRMAN. As by the entire car?

Mr. TALCOTT. That is a matter of argument, and when I drew this bill I drew it with the idea that the term "steel cars" would cover both steel frame and all-steel construction.

The CHAIRMAN. I suppose the superstructure of steel cars is more expensive than the frame used in the framework, is it not, Mr. ESCH?

Mr. ESCH. Yes, sir; there is more of it.

The CHAIRMAN. It is of a more expensive character, too, is it not?

Mr. ESCH. You can put any amount of ornament you want to on it.

Mr. TALCOTT. I have this provision in the bill: "Unless constructed with steel by plans approved by the Interstate Commerce Commission." I thought that could be safely left with the Interstate Commerce Commission—whether there should be merely steel frame or entire steel construction. On the Harriman lines, as I understand it, where they have introduced steel cars to a large extent, they are of steel-frame construction. The superstructure is not steel, as is the case with many cars on the New York Central and Pennsylvania lines.

Mr. ESCH. I think the car sills are also made of steel, and the vestibules and framework are made of steel.

Mr. TALCOTT. That is so, too, on a great many wooden cars.

Mr. ESCH. You know we legislated in regard to mail cars, and I think the provision there was for steel cars or steel underframes.

Mr. TALCOTT. Steel underframes were provided for; yes.

Mr. ESCH. That raises another objection against all-steel cars; that is the possibility of heating; or, in our northern latitude, of keeping them heated in the winter season. What can you say in regard to that subject?

Mr. TALCOTT. I admit there may be some objection in that respect; but I have never noticed it on the New York Central, for instance, where steel construction is very generally used. I think both objections to the cold in winter and to the heat in summer in regard to steel cars is overcome by the great advantage of the steel in two respects. In the first place, by the use of steel superstructure you avoid one of the great dangers of fire; and, in the second place, you avoid the danger of loss and injury from splintering. A wooden superstructure when it goes through an accident is pretty well splintered; and there is time after time in the accidents that have occurred when injuries have been due to this splintering of the wood of the superstructure.

If I recall rightly, one of the lives that was lost at Bridgeport was lost in that way, and I think if you will take the reports of accidents and study the details you will find in the case of wooden cars many casualties have been occasioned by the splintering of the wooden superstructure. Those are the two advantages that I think outweigh the disadvantages, which,

of course, to a certain degree, exist in regard to temperature, both cold in winter, perhaps, and heat in summer. But as far as that is concerned these objections are merely temporary, because I think you are going to have a steel-car construction very soon, if you have it not already, that will give just as good protection against cold in winter and heat in summer as any wooden car has ever given. It must be remembered, too, that this question is not one of convenience merely; it is a question of safety, of protection to life.

I believe if a reasonable statute like the one before the committee is not enacted regulating the use of steel cars there are certain to be laws regulating the speed of trains in which are wooden cars.

I will print as a part of my remarks the following bill:

[H. R. 13038, Sixty-second Congress, first session.]

A bill to promote the safety of passengers and others upon railroads by compelling common carriers engaged in interstate commerce to use cars constructed of steel, and for other purposes.

Be it enacted, etc., That from and after the 1st day of January, 1914, it shall be unlawful for any common carrier engaged in carrying United States mails to use on its lines any mail car not constructed of steel, and that from and after the 1st day of January, 1918, it shall be unlawful for any common carrier engaged in interstate commerce to use on its lines in interstate traffic or in interstate transportation of passengers any express car, baggage car, or passenger car not constructed of steel.

SEC. 2. That from and after January 1, 1912, it shall be unlawful for any common carrier engaged in carrying United States mail to locate or run in any train between adjoining steel cars or between the engine and an adjoining steel car any mail car not constructed of steel; and from and after the said 1st day of January, 1912, it shall be unlawful for any common carrier engaged in interstate commerce to locate or run in any train on its line in interstate traffic or in interstate transportation of passengers between adjoining steel cars, or between the engine and an adjoining steel car, any express car, baggage car, or passenger car not constructed of steel.

SEC. 3. That from and after January 1, 1913, any common carrier engaged in carrying United States mail is prohibited from bringing into use on its line any new mail car not constructed of steel; and that from any after January 1, 1913, any common carrier engaged in interstate commerce is prohibited from bringing into use on its line in interstate traffic or interstate transportation of passengers any new or additional express cars, baggage cars, or passenger cars unless constructed of steel in accordance with plans approved by the Interstate Commerce Commission.

SEC. 4. That any such common carrier using on its lines any mail car, express car, baggage car, or passenger car in violation of any of the provisions of this act shall be liable to a penalty of $1,000 for each and every such violation, to be recovered in a suit or suits to be brought by the United States district attorney in the district court of the United States having jurisdiction in the locality where such violations shall have been committed; and it shall be the duty of such district attorney to bring such suits upon duly verified information of such violation being lodged with him; and it shall be the duty of the Interstate Commerce Commission to lodge with the proper district attorneys information of any such violations as may come to its knowledge. Every distinct violation shall be a separate offense, and in case of a continuing violation each day shall be deemed a separate offense.

SEC. 5. That the Interstate Commerce Commission may from time to time, upon full hearing and for good cause, extend the period within which any common carrier shall comply with the provisions of section 1 of this act, and the Interstate Commerce Commission may from time to time, after such investigation as may be necessary, permit any such common carrier to use particular mail cars, express cars, baggage cars, or passenger cars the use of which shall be deemed by the commission to be reasonable and proper.

The Late Maine Election.

EXTENSION OF REMARKS
OF
HON. GUY T. HELVERING,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 11, 1913.

Mr. HELVERING. Mr. Speaker, we have heard considerable from the other side of the House in relation to the recent contest in Maine, and it would appear, if we are to take Republican authority for it, that a most notable victory was won.

However, I note, when we begin to look into the records of the past, that the third Maine district, in its present form and before it was redistricted, has been practically uniformly Republican, as in the last 17 elections the Democrats have been successful but once. Evidently our friends, the enemy, are content with most any crumb of comfort, as they have but slight hopes of soon securing a square meal at the table provided by the voters for their honored guests.

Now you will note that while our opponents are ready to proclaim that the election of Mr. PETERS means a repudiation of Democratic tariff legislation, the statistics show that the Democrats polled their normal vote, and that, in my opinion, is remarkable under the circumstances.

I say remarkable, because the most contemptible pressure has been brought to bear to sway the voters of that district—a form of oppression used with success in the campaign of 1896 and at frequent intervals since in order to prevent Democratic victory.

I hold in my hand a copy of a calamity sheet published in Skowhegan, Me., on January 2, 1913. Mark the date, for it furnishes the proof that even before the death of Mr. Goodwin the manufacturers of Skowhegan had started out to discredit Democratic legislation by threatening their employees with the most dire results if the tariff was revised downward.

This paper was sent to me by one E. B. Moore, treasurer of the Wesserunsett Worsted Co., of Skowhegan, and I am led to the conclusion that he and the other manufacturers had financed the publication, because we find on the first page, in bold-faced type, the announcement that by sending to the office of the publisher a list of the names of those to whom it is wished to send the paper all would be furnished copies. I have yet to find a publisher willing to do this for nothing, and it is an extremely probable conclusion to infer that he would look for his pay to come from Moore and other interested parties, especially as Mr. Moore seemed to be active in circulating the sheet among Representatives.

On the first page we find a picture representing the satyr "Radical tariff revision," bringing ruin and desolation to a manufacturing center. On the last page we find an illustration showing how "Soup houses came after the Wilson bill passed." The relation of the Wilson bill to the disastrous times of the early nineties has been too often discussed to require any attention at this time, and as the prophecy contained in the first illustration can only result from a distorted imagination we can only deal with it as romance and dismiss it as unworthy of argument.

The leading article we find is an interview with this same E. B. Moore, and from that I will quote but one paragraph, for it shows to what extremes these tariff beneficiaries will go when it is feared that special privilege is to be withdrawn from them. Mr. Moore said:

> Our company will close the Wesserunsett Worsted Mills if the Underwood-La Follette bill becomes a law, and I further predict that every other mill in this community engaged in any branch of the textile industry will have to close its doors.

And with that threat to the labor of Skowhegan Mr. Wood and his brother manufacturers would have each one of the 6,000 people of Skowhegan write to all of those with whom they have business relations, to all relatives and personal friends, and thus secure at least 100,000 to bring pressure to bear on Congress to let the special privilege alone.

Were these men who started this campaign of misrepresentation and coercion engaged in a legitimate business? I will let Mr Moore answer that, and the quotation which I shall read is from the brief which he submitted to Hon. OSCAR UNDERWOOD, chairman of the Ways and Means Committee. Mr. Moore wrote:

> Cloths marked "Made in Britain," "Made in Germany," "Made in France" command a higher price and are given the preference by the American buying public over even more meritorious cloths offered as domestic. A large percentage of the cloths now sold to the consumer as imported are made here.

From this we must logically conclude that the American manufacturers, at least some of them, are not above obtaining money under false pretenses. For once I am inclined to give them credit, for it is their due. They are only guilty of petty larceny in misrepresenting only a portion of their product, while they could make a much greater profit by resorting to grand larceny and misrepresenting it all.

And while we are on this subject we should not overlook the fact that the manufacturers are, by their own statement, given a protection not shown in the tariff rate. We know what the latter amounts to; but according to Mr. Moore they have another margin of protection, because the American consumer pays a higher price for the goods with a foreign label.

But let us return to our calamity sheet. Here we find interviews with various business men of Skowhegan. How much these interviews were influenced by the pressure brought to bear by the manufacturers I do not know, but it is reasonable to believe that those who are asking the people of Skowhegan to bring pressure to bear on Congress would not be above using coercion to get the desired interview from those who exist largely by and through the favor of the mill managers. Some of these interviews are worthy of publication in Puck or Judge, and I will read a few excerpts to show you how illuminating they are.

We find that Mr. S. H. Swain, who is, we are informed, the biggest real estate agent in the county, the first real estate agent to sell Maine farms extensively and now the agent for the E. A. Strout Farm Agency, of New York, the biggest in the country—thus it is that the paper introduces him—can only see

ruin to himself and his town if Mr. Moore's predictions come true, and he is certain that this ruin will engulf him and wreck his business, a business, by the way, which is so enormous that he has "been able in 12 years' time to sell 60 farms in Somerset County to people from other States and Aroostook County men, as well as others."

If the real estate movement is to be judged by this volume of business done in 12 years, it would appear as if there was mighty little to ruin.

Mr. F. W. Bucknam is proprietor of the largest drug store in the county—again I quote the paper. He says:

> The closing of our textile mills in town would so cripple the drug business, at least, I have my doubts as to whether or not we could ever recover from the blow.

From which we conclude that revision downward will mean less sickness, less drugs to be bought, and I am surprised that Mr. Moore did not follow this up with an interview with the undertaker to show that as the result of this decrease in sickness and in the purchase of medicine he would be forced to either go out of business or else offer cut rates in coffins.

Even the milkman has to be dragged into this calamity chorus, and A. C. Newton, who is declared to be one of the biggest milk dealers in the county, says:

> The milkmen of Skowhegan can not furnish as good milk with the worsted and woolen mills of our town closed as they do now.

There is logic for you. As soon as the cows are informed that the Underwood bill has become a law they will immediately seek revenge by impairing the quality of their product. They might stand for our putting their hides and their meat on the free list, but if we touch the profits of Mr. Wood they will visit us with their vengeance.

I could quote many more such extraordinary statements from this sheet, but will not go further into it. I have referred to it in order to show you the pressure brought to bear upon the voters of the third district of Maine. The men who were threatening in January were unquestionably making use of threats in September. We can imagine the way the voters who were employed in these mills were intimidated and threatened with the loss of employment if they did not vote against the party which had made tariff revision possible. For the voters who were so intimidated I have naught but sympathy. It is pretty hard to be true to your convictions when, if you live up to them, you are threatened with loss of employment, and have wife and children in the home who must be fed and clothed. That many of these voters were so intimidated I have no doubt, but the astonishing thing is that there were to be found in that district nearly 15,000 voters who were independent enough to say to those men who would debauch the ballot: "You may control the labor which we sell to you; you may possess the right to say whether you shall or shall not give to us employment, but you can not control our franchise or our rights as American citizens."

Oh, yes, our Republican friends may rejoice over the result of this particular election, but I wonder if they are enamored with the means resorted to in order to encompass it?

Banking and Currency Bill.

EXTENSION OF REMARKS
OF
HON. S. A. WITHERSPOON,
OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 10, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. WITHERSPOON. Mr. Speaker, under general leave to print and extend my remarks in the RECORD I submit the substance of the speech delivered by me in the Democratic caucus, as follows:

This bill provides for a currency system as a substitute for our present system. The proposed currency is based on certain assets described in the bill, and within the short time at my disposal I wish to advocate the proposition that the notes of farmers, secured by the warehouse receipts of the products of their tolls, should be included in the assets forming the basis of this currency.

In order that my position shall not be misunderstood I wish to say that I am opposed to all asset currency. According to my understanding of the subject asset currency is a return to the ages of barbarism. Centuries ago, when the science of money was unknown, divers assets were used as a medium of exchange. In the rude ages of a misty antiquity cattle were used as money, and Diomede gave nine oxen for his armor, while Glaucus gave a hundred. Instead of money the people used salt in Abyssinia, shells in India, dried cod in Newfoundland, tobacco in Virginia, sugar in the West Indies, nails in Scotland, copper in Rome, iron in Sparta, and other commodities in other countries. But the lessons of experience and the wisdom of centuries finally forced all civilized countries to the conclusion that silver and gold are the best mediums of exchange, and the very qualities of those metals convinced the world for many centuries that they were created by God and stored in the earth to serve its inhabitants as the best money that can be used.

But the fact that for so many centuries these metals proved that by their use the people could exchange their commodities at the least possible cost and with the maximum amount of justice between man and man, and that their use as money afforded the least possibility for selfishness and greed to monopolize and appropriate the profits of the people's toil, brought down on both metals the most bitter hostility of modern commercialism, which hostility first manifested itself in the demonetization of silver throughout the world, and, secondly, in a scheme of currency by which the use of gold as a medium of exchange shall be as effectually prevented as that of silver. This scheme of currency locks up in the vaults of the banks all the gold in existence, calling it a bank reserve, forbids its use as a medium of exchange, and destroys its function as money just the same as if it were all buried in the bottom of the ocean.

When the law stops the coinage of silver and then provides as a condition of conducting the banking business that the banks shall accumulate and monopolize all the gold and silver money of the country and lock it up in their vaults and call it a sacred reserve never to be used as a medium of exchange, it has effectually destroyed the use of money and created the necessity for the substitution of something else in its stead. The substitute which modern selfishness, greed, and ignorance has found for money is bank credits, and the present bill, recognizing the utter unreliability of bank credits as a substitute for money, shapes those credits in the form of currency notes and secures them by the deposit of assets as a basis of their issuance.

The adoption of this asset currency is the legitimate offspring of goldbuggery. It is the logical and inevitable conclusion which follows the gold-standard heresy. When we accept the stupid nonsense that gold is the only legitimate medium of exchange, then the fact that this one metal is so limited in quantity that it can not possibly affect as money the interchange of our commodities, we are forced to discover something else as a substitute, and the present bill has discovered bank credits in the form of currency notes secured by assets. This was the aim and purpose of the bankers of the world when they fooled the people into the demonetization of silver, and in this bill they will realize the fulfillment of their fondest dream. It is the return of civilization to the asset money of the barbarous ages. It is the rejection of all the lessons of the centuries and the repudiation of all the experience and wisdom of the past. It tramples under foot the science of money as developed and expounded by the great philosophers of political economy and follows the footsteps of selfishness and greed. It is the same old cross of gold on which the people hung in 1896 and listened to the thunder of Bryan's eloquence. It is the same old crown, but its cruel thorns have grown much longer, sharper, and more poisonous than they were 17 years ago.

AGRICULTURAL ASSETS.

While I oppose all forms of asset money, yet, assuming what I believe to be true, that the present scheme of asset currency will become the law of the land, I contend that the notes of farmers, secured by warehouse receipts for the products of their toil, should be made the basis of the proposed currency on the same terms as the paper of commercial and manufacturing concerns, and that no discrimination should be made against agriculture in favor of either commerce or manufactures, and if it were necessary to make any discrimination at all I should favor making it in favor of agriculture, because it is the basis of the prosperity of both commerce and manufactures.

The contention that the issuance of currency would involve the system in speculation and increase the high cost of living suggests two questions with reference to this feature of the bill. The first of the questions is whether the language of the bill does or does not include the notes of farmers, and the second question is whether or not they should be embraced.

First. Does the language of the bill include or exclude the notes of farmers secured by agricultural products? On this question my position is that section 14 of the bill does embrace

such paper and makes it eligible for rediscount at the regional reserve bank, but that section 17 of the bill authorizes the Federal reserve board to refuse the issuance of the proposed currency on the security of such notes, and that if the Federal reserve board should see fit to reject such notes as the basis of the new currency their eligibility for rediscount would be futile, because in that case the regional reserve bank could not get the funds with which to rediscount such notes. The correctness of this position will be apparent from an inspection of sections 14 and 17 of the bill.

SECTION 14.

This section describes the paper eligible for rediscount as "notes and bills of exchange drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used for such purposes." Both clauses of this description accurately designate the notes of farmers secured by the warehouse receipts for their products. It is conceded if a farmer gives his note to the bank for money to be used in the planting, plowing, hoeing, gathering, and ginning of his cotton it would be for an agricultural purpose, but it is suggested that when he comes to sell his cotton and in order to secure a fair price he borrows money from the bank, pledging his cotton as security, he ceases to be a farmer and becomes a speculator in that transaction. In other words, it is contended that as long as he is producing the cotton he is a farmer, but in disposing of the product of his toil he is suddenly converted into something else. All my life I have seen these tillers of the soil coming to market in the fall of the year and selling their cotton, but I never heard one of them called anything else but a farmer because he was engaged in disposing of the products of the farm.

The truth is that in selling his cotton he is not only engaged in agriculture—just as much as he was in the planting and cultivation of it—but he is then engaged in the most important part of the business of a farmer, without which all the other acts of his business would amount to nothing. When the manufacturer has finished the products of his factory and borrows money with which to send men all over the country to sell them, nobody calls him anything but a manufacturer in disposing of his goods or denies that money thus borrowed is for any other than manufacturing purposes, though the money borrowed may enable him to hold his goods for a better price; and if we are to apply the same rules of construction to the same language with reference to the farmer and manufacturer, then when in order to hold his cotton for a better price the farmer gives his note to the local bank, secured by the warehouse receipts for his cotton, he is engaged in the business of disposing of the products of agriculture, and such a note is drawn for agricultural purposes, just the same as if it had been given to raise money with which to plant and cultivate his crop. The first clause of this description therefore literally embraces the kind of notes which I think should be the basis of this proposed asset currency. But the second clause of the description of notes eligible for discount still more clearly covers these notes when it provides that all notes shall be eligible for rediscount whose proceeds have been used for agricultural, industrial, or commercial purposes. In the beginning of the year the farmer arranges with the merchant to "run him," or supply him with goods to make his crop. In the fall of the year the farmer takes his cotton to town and goes to his merchant to settle the account. But the price of cotton is so low that the proceeds of the cotton will not pay it. He then puts his cotton in the warehouse and takes the receipts with his note to the local bank, which discounts the note and gives him the money. He then takes the proceeds of this note and pays his account with the merchant, as far as it will go, giving him a trust deed to secure the balance of the account. This account is a commercial debt, because it is due to a merchant engaged in a commercial business, and it is also agricultural in purpose, because the credit was extended solely to enable the farmer to engage in agriculture. Therefore, when the farmer uses the proceeds of his note at the bank to pay his account with the merchant he has used the proceeds both for an agricultural and a commercial purpose, and it falls literally within the terms of the second clause of the description.

But some seem to think that because the transaction shows that he intends to hold his cotton for a higher price, therefore the note was given, not for a commercial or agricultural but for a speculative purpose. If this view were correct, then no note could ever be drawn for agricultural, industrial, or commercial purposes, for in every case there is always an ulterior purpose. When the manufacturer gives his note for money for the purpose of making or selling his product he is not only actuated by this manufacturing purpose, but his ultimate purpose in the transaction is to get some profits for himself out of it. When the merchant gives his note to the manufacturer to evidence his debt for the goods he has bought his purpose is to engage in a commercial transaction, but his ultimate purpose is to secure the profits in the sale of his goods, and he expects to accomplish this purpose by holding the goods until he can sell them at prices that will make his business profitable. When the banker borrows money from another banker and gives his note therefor his purpose is to transact a strictly commercial business, but, all the same, his ultimate purpose is to reloan that money and to get the interest on it. The position, therefore, that when a farmer discounts his note at the bank and raises thereby the money to pay his debt to the merchant the proceeds of the note are not used for an agricultural or commercial purpose, because he intends to hold his cotton for a better price, logically leads to the absurd conclusion that no paper can be drawn for such purpose.

While, therefore, I believe that the language of section 14 clearly embraces farmers' notes, yet I have no objection to but will vote for any amendment that will make the meaning plainer. My whole object in discussing section 14 is to emphasize the fact that the trouble does not lie here, but in section 17.

SECTION 17.

In the provision of section 17 lies the danger of discrimination against the farmer. This is the section of the bill which provides for the issuance of the proposed currency. It provides that the regional bank which has rediscounted notes and bills of exchange may make application to the Federal reserve bank, composed of seven appointees of the President, for the issuance of currency on the notes which it has rediscounted, and that it is entirely in the discretion of said board whether it will permit such notes to be the basis of the new currency or not. It can refuse to allow any currency to be issued on the notes of farmers without giving any reason therefor. The language of section 17 is as follows:

SEC. 17. That Federal reserve notes, to be issued at the discretion of the Federal reserve board for the purpose of making advances to Federal reserve banks as hereinafter set forth, and for no other purpose, are hereby authorized.

In this language of section 17 we find the joker of the bill, so far as the farmer is concerned. If this board should think, as others think, that in holding his cotton the farmer is a speculator, and should desire, as others have expressed the desire, that the farmer should let his cotton go as fast as it is ready for market, and should deem it bad policy to supply him with the funds with which to hold his cotton, then under the unlimited discretion given to the board in section 17 it will never authorize any currency notes to be issued on the notes of farmers secured by the warehouse receipts for agricultural products. The fact that section 14 has made the farmers' notes eligible for rediscount will avail nothing, for however willing the local bank may be to discount his note and however willing the Federal reserve bank may be to rediscount that note, yet if the Federal reserve board should refuse to authorize the issuance of currency notes on his paper, the local bank and the Federal reserve bank will be unable to accommodate him, because they will not have the funds. The only way to avoid the danger of this discrimination against the farmer is not in an amendment to section 14 but in an amendment to section 17, limiting the discretion of the Federal reserve board, so that it will be powerless to make such discrimination. I suggest that the first sentence in section 17 be amended by adding these words:

Provided, That the board shall not refuse to authorize the issuance of currency notes on the security of notes secured by warehouse receipts for agricultural products on the ground that such notes are drawn for speculative purposes.

If this amendment were adopted, then all possibility of discrimination would be removed and the farmer could feel that he had been treated as all other classes.

AGRICULTURAL ASSETS SHOULD BE INCLUDED.

Having shown that the notes of farmers secured by the warehouse receipts for their products will not certainly be included unless section 17 of the bill should be amended, the second question is whether they ought to be included. It is feared by some that to make these notes the basis of currency would result in the speculative holding of agricultural commodities and thus increase the high cost of living and be injurious to commerce. This contention is incorrect, and will appear so for several reasons. In showing these reasons I shall refer to cotton, because I am more familiar with it, but what I say with reference to cotton applies to wheat, corn, and other products of the farm.

COTTON A NATIONAL AND NOT A SECTIONAL QUESTION.

If the farmers of the South could be placed in a position of independence which would enable them to market their cotton as the world needs it and be relieved from the necessity of throwing the entire crop on the market at once, it would undoubtedly enable them to get a better price therefor, and this

would increase the national wealth. The benefit would not be confined to the South. The cotton crop is about 15,000,000 bales. Of this, one-third, or 5,000,000 bales, are sold and consumed in our own country and two-thirds, or 10,000,000 bales, in foreign countries for nearly one-half billion dollars in gold. While the value of this cotton sold in foreign markets is measured in money, yet, like all other commodities in international trade, it is exchanged or bartered for what we get from the countries with which we trade. In exchange for this cotton we get the tea, coffee, silks, laces, linen, diamonds, champagne, and other luxuries of foreign countries, and the commodities for which our cotton is exchanged do not come to the South, because our people are too poor to use them, but they satisfy the wants and gratify the tastes of the wealthy classes in the North. The quantity of these commodities for which our cotton exchanges depends entirely upon the price it brings. If cotton is worth 15 cents a pound, it will exchange for one-third more of these commodities than when it is worth 10 cents a pound, and therefore the national wealth, and especially the wealth of the North, is in direct proportion to the value of the cotton exported. But I am asked if I would repeal the law of supply and demand, and I answer in the negative. I want the price of cotton and all other products to be regulated by that law. The law of supply and demand, if permitted to operate without legislative and artificial obstacles, will fix the prices of all products at the cost of production and a reasonable profit. This is all that any honest man will ever desire and all that any dishonest man should ever be permitted by law to take from his neighbor. But in order that the law of supply and demand should fix the price of cotton so as to give the farmer the cost of production and a fair profit, it is necessary that he should be placed in the same condition of freedom and independence enjoyed by those with whom he exchanges the products of his toil. If his poverty and helplessness forces him to sell his cotton at prices dictated by others and in quantities larger than the market demands, then he will no more get the cost of production and a profit on his cotton than will the merchant whose debts force him to take whatever price he may be offered for his goods. If the pressure of debts compel the farmer to dispose of as much cotton in a couple of months as the world can use in 12 months, the inevitable effect will be in the future, as it has been in the past, to reduce the price of cotton below the cost of production; and to avoid this injustice to the farmer, as well as this economic loss to the Nation, I insist that the bill should be so amended that the farmer can secure the benefits of the proposed currency and thereby enable him to market his cotton as the world needs it, in order that he may obtain a fair price for the product of his toil and the Nation may obtain an adequate return in its exchange for those commodities of foreign countries which supply the needs of the great, rich North.

But it may be asked how the southern farmer gets pay for his cotton if it is exchanged with foreign countries for commodities used mostly in the North. The answer to this is that the southern farmer buys the goods manufactured in the North, and this is the way in which he receives the price of his cotton in the clearing of international trade. The value of his cotton therefore determines not only the quantity of foreign commodities with which it supplies the richer section of the Union, but also measures his purchasing power to take and consume the products of northern factories and western grain and meat. The economic relations of the different sections of the Union are such that it is impossible to impoverish one without injury to the others and impossible to benefit one without increasing the prosperity of all the others. It is therefore nothing less than national folly to discriminate against the farmer in this or any other legislation.

INDEPENDENCE OF COTTON FARMERS NOT INIMICAL TO THE MANUFACTURER.

Having shown that the national wealth would be increased by higher prices for exported products, and that the North as well as the South would reap the benefit from proper marketing of 10,000,000 bales of cotton in foreign countries, I come to the objection that this involves the idea that domestic manufacturers must pay more for the cotton they buy. Of the 5,000,000 bales of cotton used in American factories, one half of it, or two and one-half million bales, is used in southern factories and the other half in northern factories. If, therefore, the gradual marketing of cotton and the consequent higher prices would injure one section, it would to the same extent injure the other, and hence the question can not be regarded as sectional.

But I submit there is no real conflict between the interests of the manufacturer and the farmer who supplies him with his raw material, and this will be apparent from a consideration of the real condition of cotton. The 15,000,000 bales of cotton annually produced are made ready for market within the short space of three months—September, October, and November. The fact that the farmer is in debt for the supplies with which he has produced this cotton and is unable to procure the funds with which to pay these debts forces him to throw all this cotton, whose value often approaches a billion dollars, on the market at once at whatever price it may bring. This places the manufacturer in the position of purchasing enough cotton in the fall months to supply his factory for the entire year. He must either do this or permit this cotton to pass into the hands of speculators, at the risk of having to pay later an exorbitant price. To lay in a year's supply of cotton within two or three months is a great burden on the manufacturer, and imposes on him the investment of three-quarters of a billion dollars practically at one time.

This cotton becomes idle capital on his hands until it is gradually used up. The interest on the money he must borrow to carry it and the insurance and storage charges is a huge sum to be taken from his profits. In order to sustain these burdens he must necessarily get the cotton at less than its value and thus impoverish the farmer upon whom he is dependent for his raw material. This condition forces the cotton manufacturer to become a speculator. When he buys his year's supply in the fall he often makes a mistake as to the value, which depends upon the size of the crop. The Government with all its means of information sometimes errs in its estimate of the crop as much as 2,000,000 bales as late as the 1st of December. If this estimate is much less than the actual production, the manufacturer buying his year's supply in the fall will naturally pay more than its value, and if the estimate is too great he will pay less. In both cases the success of the manufacturer rests upon the uncertain basis of speculation, and these conditions result either in abnormal profits or disastrous losses, and in both cases either the farmer or the manufacturer must sustain the injury resulting from an unnatural glutting of the cotton market at one season of the year. The only remedy for this evil is the gradual marketing of the cotton crop just as the world needs it. This can be accomplished in no other way than to place the farmer in a position where he can procure on the security of his cotton the funds with which to pay his merchant and to sell his cotton as the world needs it. His notes secured by warehouse receipts for his cotton should, therefore, be included in the paper on which the new currency is to be issued. This would save him the profits now made by speculators and the interest now made by the money lenders, who now supply the funds for the manufacturers to hold the cotton. It would greatly increase his productive capacity and insure the world a more bountiful supply of the fleecy staple. It would not injure the manufacturer, for what he needs is not so much a low price on cotton as a steady, stable price, which would enable him to make his contracts on a safe basis of prices. He would be relieved from the danger of violent fluctuations in the market and from the necessity of gambling in cotton futures to hedge against the manipulations of the gamblers. It would put him on the same level with all the other business men who buy their goods as they need them and no longer be compelled to buy a year's supply at once.

The truth is that the interests of the farmer and the manufacturer, the interchange of whose products constitutes the business of the country, are so mutual and interdependent that whatever benefits or injures one will have the same effect upon the other. The holding of farm products lessens rather than increases speculation.

Having demonstrated that the issuance of currency notes on the paper of farmers secured by warehouse receipts for their products will increase the national wealth and benefit rather than injure the manufacturer as well as the farmer, I deny that the issuance of currency on farmers' notes would increase speculation. The idea that it would result in the extensive holding of cotton for exorbitant prices is an impossibility. The farmer is like all other men, and would be subject to the same law which governs other classes in the disposition of his products. The law of supply and demand would regulate the sale of his product, as it does the sale of the goods of the manufacturer and merchant, and whenever that law offered him the cost of production and a reasonable profit he would sell, just as others do. The interest he would have to pay on the borrowed currency, the other expenses of holding his cotton, and the necessity of using the proceeds in making the next crop would certainly induce him to let his cotton go as soon as he could sell it at a fair profit, and the real danger is that these conditions would often force him to part with it too soon. The only possible effect of placing him in a condition where he could procure funds on the security of his cotton would be to relieve him of that helplessness and dependence on his creditors which necessitates the sale of his cotton at a loss. He is not and could never

become a speculator. To denominate the farmer as a speculator is to confound all distinction between the producer of wealth and the speculator and gambler. The speculator produces nothing. He adds nothing to the wealth of the world. He simply buys from one and transfers to another, and his profits are the difference between what he pays and what he receives for the products of others. The gambler neither produces anything nor does he transfer what belongs to another. He simply bets on the fluctuations of the market, and what he makes or loses is the result of chance. But the farmer is a producer of wealth, and his profits are the difference between the cost of production and the price at which he sells. He looks no more like the speculator and the gambler than a rosebud looks like a monkey.

INFLATION OF THE CURRENCY.

Another objection urged against the use of farmers' notes for the issuance of currency is that it will result in an undue inflation of the currency. We are reminded of the immense values of cotton, hay, corn, wheat, and other agricultural products, and on the assumption that if notes secured by these commodities could be used as the basis of currency the amount of money would be increased to the full value thereof, the conclusion is drawn that an absurd inflation of the currency would follow. This would not be possible. It could not happen under any bill based, as this is, on the gold-standard heresy whose prime object and inevitable effect is to contract and limit the currency. The express provision of this bill is that there shall be $1 of gold or lawful money in the vaults of each regional bank for every $3 of currency issued. If the regional reserve banks could collect every dollar of money in existence in their vaults, they would only have $3,000,000,000, and therefore the highest possible amount of currency that could be issued would be $9,000,000,000, which would be just one-half of the $18,000,000,000 of bank credits which under the present financial system has been substituted for money as a medium of exchange and which is the fabulous amount on which the people pay interest as one item of the enormous cost of the interchange of their products. If under the system of currency provided in the bill the banks should not collect in their vaults any more money than they have now, the greatest possible amount of the new currency would be $4,500,000,000. Whether this would be a harmful inflation of the currency would depend on the question whether it would be added to or substituted for the enormous bank credits which have taken the place of money, but if it should be, and the necessity should arise to exclude any class of paper as a basis of currency, it would be much wiser to exclude prime commercial paper whose value depends upon the solvency of banks and merchants than the notes of farmers secured by warehouse receipts for wealth already produced whose value depends on no such contingency.

JUSTICE TO THE FARMER.

No currency system which fails to give the farmer the same facility in guarding his interests against economic losses as it gives to those engaged in commerce and manufactures is fair and just. Recognizing the weakness of the plea of justice in an age of selfish commercialism, I have shown how the financial independence of the farmer in the disposition of his crops would increase the national wealth and how it would really benefit the manufacturer at the same time it benefits the farmer. I have also shown how futile are the objections that it would result in speculation and in the inflation of the currency. If I have established these four propositions, then this at least is a case where there is no reason why justice should not be done him in the currency laws. The real situation discloses the injustice in the discrimination against the farmer. His products are interchanged for manufactured goods. Nine billion dollars of agricultural products are annually interchanged for the products of the factory, and the terms on which this exchange is made fixes the profits or losses of the farmer. At the first of the year he begins to buy the goods of the manufacturer, and the merchant charges them against him all through the year. He can take no part in the prices at which these goods are charged, for the law enables the manufacturer to fix the price. A protective tariff enables the manufacturer to add the amount of the tax to the value of his goods, and cutting the farmer off from foreign markets forces him to pay the law-fixed price. As he can not buy elsewhere, he must pay the price, though it be double the fair value of the goods. N. only does the iniquitous tariff law shield the manufacturer in the disposition of his goods, but the patent laws are equally as potent in effecting an unfair and unjust interchange of agricultural and manufactured products. The Committee on Patents in the Sixty-second Congress spent a month in investigating the effect of these laws, and it was made clear in the hearings that a very large proportion of manufactured goods are now covered by patents, and that within the last five years there has grown up a custom by which manufacturers, exercising the powers given them by the patent laws as construed by the courts, not only fix the prices of their goods to merchants, but also fix the prices at which the merchants must sell these goods to consumers.

This monopolistic domination of the prices of manufactures requires that the merchant must sell these goods at prices which give him profits ranging from 20 to 150 per cent, and if the merchant is unwilling to charge such exorbitant prices he can not buy the goods. The manufacturer, under the power of his patent monopoly, makes the merchant his tool to oppress the farmer. The Patent Committee reported a bill to the last Congress to remedy this evil, but the bill was never considered in the House. It is to be hoped that the same bill will be reported to this Congress and passed into law.

But under the tariff and patent laws the price of every item in the farmer's account is fixed, and always at exorbitant rates, in the amount of which he has no voice. The price is already marked on the goods when he comes to buy, and he must take them on the terms fixed by others. No merchant or clerk ever asks him how much he will give for an article, but the question always is, What price has already been marked on the goods?

He comes to town in the fall to settle the account of supplies with which he has made his crop, and then he finds the long account, setting down the price of every item. He offers his cotton in payment. He is not asked how much he will take for his cotton. He has no more voice in its price than in the prices of the goods for which he exchanges his cotton. He is shown a telegram showing the market price of his cotton as fixed by a gang of gamblers on the cotton exchanges of New Orleans, New York, and Liverpool, and he is then called upon to agree upon the final terms of the exchange of his cotton for the goods of the manufacturer whose prices have been fixed in the one case by gambling and in the other by the power of the Government exercised in its tariff and patent laws. If the prices of both products involved in the exchange are such that his cotton does not bring the cost of production, then the farmer must either submit or make other arrangements for the payment of his debt.

If he submits, the settlement is made, the proceeds of his cotton is credited on his account, and he executes a mortgage to secure the balance and also his supplies for another year. But if he rebels against the injustice and goes to the bank with his note and the warehouse receipt for his cotton and thus tries to borrow the money with which to pay his debt to the merchant, in order that he may be able to hold his cotton for a fair price, the contention is that the wording of this bill should compel the banker to refuse him the money, because it would be speculation and result in an inflation of the currency. In other words, with the club of protection in one hand and of the patent monopoly in the other, the Government fells the farmer to the ground, and when he struggles to his feet and staggers to the bank with the best security on earth the proposition in this bill is that he be sent away with the denunciation that he is a speculator because he is unwilling to accept the prices fixed by gamblers.

THE FOLLY OF THIS DISCRIMINATION.

The injustice of this discrimination in legislation against agriculture just pointed out finds no compensation in resulting benefits, either to commerce or manufactures, and is therefore sheer folly, if not a crime. Agriculture is the basis of all material prosperity. It is the foundation on which both commerce and manufactures rest. No factory could run a day without the raw materials that come from the country and without the food which the farmer supplies to sustain its employees. The greatest possibility of manufactures is therefore limited by the wealth produced on the farms, and this possibility increases or diminishes as agriculture prospers or languishes. The profits, interests, and freights of commerce must come out of agriculture, and when legislation forces the profits of manufactures and commerce up to that abnormal point which equals or exceeds the entire profits of the farms, their factories close, their laborers strike, banks and merchants fail, railroad companies fill their sidetracks with empty cars and panic breeds universal disaster, because foolish legislation has undermined the foundation of prosperity. This folly is like the folly of the man who takes the stones and brick from the foundation of his house in order to strengthen and decorate the roof whose abnormal weight then crushes the entire structure. A fair illustration of the effect of the discriminations by which the farmer is impoverished for the enrichment of commerce will be found in a table published on page 294 of part 1, volume 47, of the CONGRESSIONAL RECORD, showing that he gets little more than half

of what consumers pay for his products, the balance being distributed among the agencies of commerce:

	Received by farmer.	Paid by consumer.
Onions	$821,000	$8,212,000
Potatoes	8,437,000	60,000,000
Coffee	2,402,000	12,009,000
Rice	1,354,000	6,191,000
Cabbages	1,825,000	9,125,000
Milk	22,912,000	48,880,000
Eggs	17,238,000	28,730,000
Meat and poultry	219,300,000	291,000,000
	274,289,000	464,147,000

This table shows that the American consumers pay $464,147,000 annually for eight products of the farms while the farmers receive for the same products only $274,289,000, the difference of $189,858,000 constituting the interest of the banks, the freights of the railroad companies, and the profits of the merchants who effect the distribution of these commodities. Our financial system exacts as large a penalty from agriculture for the enrichment of commerce as the tariff and patent laws exact for the enrichment of manufacturers.

This legislative discrimination against agriculture has been the vice of Republicanism for a half century. Every function of the Federal Government has been freely exercised to impoverish agriculture for the benefit of commerce and manufactures, and the practical result of this pernicious policy has been to concentrate the wealth of the country in the cities and towns and to build up the fabulous fortunes of multimillionaires engaged in these Government-favored departments of our commercial and industrial life. On the other hand, the legislation of profits out of farming has naturally driven the people into the towns and cities, so that we have in the last two decades an abnormal growth of urban population, which has increased from one-third to one-half of our people, and a corresponding decrease in our rural population from two-thirds to one-half, with an absolute decrease of the rural population in many sections and with 11,000,000 acres of abandoned farms in New England alone as a splendid monument to our folly.

But the vice of this discrimination has been continued so long that it has become a habit of thought, and it has become almost impossible to frame a law on any economic subject without some trace of this vicious policy. The farming classes, after many years of agitation, constrained the passage of a parcel-post law, but the law was framed, though ostensibly for the benefit of the farmers, in such a way that it at once developed a stupendous movement of manufactured goods all over the country; but on account of the prohibitive rates and other absurd provisions it has been utterly futile to move the traffic of farm products from the country to the cities. And, likewise, in the provisions of this currency bill as construed by its framers this same pernicious policy has manifested itself. It is strange that we should find this Republican vice in Democratic councils after it has been so long denounced in our party, and it can only be explained on the principle that "Vice is a monster of such frightful mien" that we may hate it for a while, but long contact with it will finally make us endure it, and then welcome it, and at last embrace it.

Glass Currency Bill.

EXTENSION OF REMARKS
OF
HON. A. W. LAFFERTY,
OF OREGON,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, September 13, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. LAFFERTY. Mr. Speaker, during the past summer I spent two months in Europe, during which time I studied conditions abroad in a general way. It seemed to me that the bankers are in the saddle over there more securely even than they are here. I was requested by the city editor of the Washington Post, Mr. Rochester, to prepare a statement of my impressions for that paper, and it is printed herewith:

[From the Washington Post, Sunday, August 31, 1913.]

BEAUTIES OF EUROPEAN TRIP SURPASSED ON PACIFIC COAST—FOREIGNERS OPPRESSED BY MIGHTY ARMIES, SAYS REPRESENTATIVE LAFFERTY, LOOK UPON AMERICA AS THE WORLD'S LEADING NATION—BANKERS RULE OTHER COUNTRIES.

(By WALTER LAFFERTY, Member of Congress from Oregon.)

Doubtless few pass through this life without contemplating, at least, a trip which will give them a personal observation of the principal parts of our globe and the inhabitants thereof. Sharing this common desire, I took occasion recently, during the pendency of the tariff bill in the Senate and the consequent lull in the House proceedings, to spend two months in Europe. The trip was much more delightful than I had imagined it would be. I was never given to hard work. Therefore to find that during travel abroad one can not help but absorb quite a bit of knowledge, even without effort, appealed very strongly to me.

I wish that all Americans could visit Europe. Not only would they enjoy it, but they would come home with higher appreciation of our institutions than they had ever supposed possible. They would come home with a fervid patriotism. They would return with an admiration for Washington, Jefferson, and the other heroes and statesmen of the formative period of our Republic more intense than they had ever felt before.

PEOPLE SUPPORT BIG ARMIES.

The people of Europe are our equals in every way. They only lack in opportunities. Their taxes are heavy. Germany supports nearly 1,000,000 soldiers in time of peace and France 500,000. No wonder the foreigners coming to our shores oppose a large standing army. Think of it! The United States, with wealth and population far exceeding either France or Germany, has a standing Army of only 95,000 officers and men.

The people of Europe are under control of the money power. That is to say, the banks and bankers exercise an influence on the Governments of Europe which is controlling. The Bank of England, a private corporation, issues its own notes, printed on the cheapest kind of white paper in ordinary black ink, with the name of the governor of the bank, and the auditor in fac simile, and these notes are the legal tender in Great Britain. They also pass current anywhere in Europe. They are "asset currency" of the simplest kind. The Bank of England assures us that it has the securities on hand to justify its note issues, and we take their word for it. The bankers of England and the bankers of other European countries form an aristocratic class. They sell credit to the average business man at high rates of interest, a function which should be under control of the Government.

EUROPE LOOKS UP TO UNITED STATES.

The people of America have control of their own Government, or at least they are fast getting control of it. * * *

Throughout Europe, America is regarded as the leading nation of the world. American inventions are in use everywhere. * * *

Comparisons lead me to believe that with the progress America is now making toward complete government by the people it will not be long till laws will be enacted which will actually guarantee equality of opportunity in this country, or, in other words, a fair and equitable distribution of the wealth we are producing. When that time comes no person will be allowed to work more than 8 hours a day, nor more than 48 hours a week. It will be unlawful to employ any man, woman, or child for less than a living wage. Every man who works will be able to take a vacation of 30 to 60 days each year in the mountains or at the seashore. And every man and woman who is industrious will some time in life be able to travel and see the world in which they live.

WEALTH IS CONCENTRATED.

Millions in America are working 10 and 12 hours a day for a bare subsistence, while bankers are selling at a profit credit which should be provided by the Government at cost on good security. It is said by our Government statisticians that the total wealth of this Nation amounts to $125,000,000,000, and that 50 men own 40 per cent of this wealth. Think of it! And that 200,000 men own 70 per cent of our wealth, leaving only 30 per cent for the remaining 99,800,000 people! These figures are staggering; but we are going to change all that, cut out the graft, and give to every man what he earns and no more. I think I clearly see this trend of things in America, and America is going to emancipate the world.

COST OF EUROPEAN TOUR.

The cost of a two-month trip to Europe may be kept within $500. The steamer ticket will cost $100 each way, first class, or $35 second class. One's expenses while in Europe, including railroad fares, hotel bills, and incidental expenses, should not exceed $5 a day.

However, many claim that the average tour of Europe, first class, including incidental expenses, will reach $1,000, so it would be well for anyone contemplating the trip to figure that he may spend more than $500. In Europe practically all classes of people travel by rail second and third class. The rates are much cheaper than first class and accommodations for a day trip are just as good. Much can be saved in the way of hotel bills by avoiding those hotels making a specialty of entertaining Americans. Such hotels charge rates much higher than American hotels, considering the service.

Starting upon an ocean voyage one should take along some old and warm clothing. It gets quite cold at sea at all times of the year. The passengers lounge on the sun decks, play shuffleboard and other games, and new clothes would soon be old.

Every ship now has wireless equipment. The larger passenger ships issue small daily papers, giving the more important events. Messages are sent from and received on the ships in midocean without delay or difficulty. The expense is not much more than ordinary telegraphing.

SEASICKNESS NOT COMMON.

Severe seasickness is not so common as formerly. The vessels are heavier and steadier. Still it is well to get a stateroom near the center of the ship if possible. Most passengers feel a little squeamish the first day or two out, but after they have gotten over it and acquired their "sea legs," as the sailors say, which means accommodating the body to the motion of the ship, nothing is more exhilarating than life at sea.

I visited Ireland, Scotland, England, France, Belgium, Denmark, Germany, and Austria. The people were most interesting everywhere. The scenery is pretty enough, the fields and lawns are well kept, and

dwelling houses are made to look cheerful with flowers, but for natural scenic beauty there is nothing that I saw to compare with the Pacific-coast country in America. The "blue Danube" at Vienna probably is the prettiest river in Europe. At least it equals the Rhine. But neither of these rivers approach in beauty or grandeur the Columbia or the Willamette, in Oregon. The snow-covered mountains of Switzerland, of which I had a glimpse, would only make foothills for the towering white-capped peaks of the Cascades and the Sierras. The pine forests of Austria and Germany would but make underbrush alongside the gigantic redwoods of California and the stately firs of Oregon and Washington.

WONDERFUL OLD CATHEDRALS.

By association with the ancient cathedrals and other old buildings of Europe, history is brought back to the tourist and made to appear as though it happened but yesterday. One is reminded forcibly of the rapidity with which the generations pass. In London, upon the Strand, one may gaze upon numerous buildings which stand to-day just as they stood the day Shakespeare was born. And they look quite modern at that. In Vienna, wherever you go "a thousand years are looking down upon you." In fact, St. Stephen's Cathedral in that city was started only 500 years after Christ. The Egyptian obelisks and Grecian statuary in Paris, brought there by Napoleon's army only a little over a century ago, were chiseled by artists who flourished centuries before the birth of Christ.

The little cathedral on the banks of the Seine, in Paris, containing the tomb of Napoleon, is one of the modern places of interest. The granite sarcophagus containing the remains of the great soldier looks as though it might have been finished yesterday. The hundreds of flags and banners carried by Napoleon's soldiers are arranged around the walls near the dome of the cathedral. They are not incased, and are beginning to disintegrate.

EASY TO LEARN LANGUAGE.

One of the most pleasant surprises to every young American traveling abroad comes when he learns how easy it is to pick up a smattering of foreign languages. To be able to ask a question of a German or speak to a Frenchman in his own tongue, and to understand his reply in the same language, I had supposed required months or years of study. Such is not the case. The secret is to be found in the fact that many of their words are practically the same as ours, and when you get the accent from hearing the words pronounced many times a day, you are well on the road to speaking the language. I was told that anyone with an ear for music would learn the languages rapidly, as much depends upon remembering sounds and being able to reprodnce them. Much help is also derived from the little books with which all tourists provide themselves, giving the foreign language parallel with the English.

In Vienna I bought one book giving seven different languages in parallel columns. I found that in some instances the English word ran clear across the page, with but slight variation. The reason for this similarity of words in all European languages is the fact that all the nations of Europe came from a common source. When the people started north through Europe they scattered and settled in different parts, and in the centuries they have developed different languages, but many of the words originally used in common have been retained in all the languages, which but illustrates again how small the world is and how closely we are all akin.

Urgent Deficiency Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. JOSEPH B. THOMPSON,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 6, 1913,

On the bill (H. R. 7898) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes.

Mr. THOMPSON of Oklahoma. Mr. Chairman, the smallest and most unimportant incidents are seized upon and by constant repeating and additions are made the pretext for arguments and reasons to increase the size, and thereby multiply the expense of maintaining our Army and our Navy. Once during each year when the appropriation bill is before the Congress we hear the same prophecies of disaster that await us if millions of dollars additional taxes are not levied upon the American people for the increase of the Army and the Navy. We are told that we can no longer isolate ourselves and refuse to take part in European politics; that we are a world power, and that we must enlarge our Army and our Navy in order that we may be prepared to enter upon any conquest or take part in any war that our position as a world power and our meddling in European politics may thrust upon us. During the past three months our relations with Japan and Mexico have furnished new and powerful arguments to those who would increase the expense of the Army and the Navy.

I for one am opposed to an increase in either branch of our military service. I do not believe in war. I believe that the nations of the earth have advanced in intelligence and moral development to that position where war will shortly be known among the nations of the world no more. The handling of the Japanese and Mexican situations by the President and the Secretary of State during the present crisis affords a striking illustration of the settlement of disputes by peaceable means and without recourse to arms. The conduct of the President and Secretary Bryan during all the periods of anxious diplomacy through which our Nation is now passing has reflected great credit on them and added luster to the high ideals of American statesmanship. In the absence of war, and with a certain knowledge that all disputes between nations can and will be settled by peaceable methods, there is no necessity for a large Army and a large Navy. Our people are already weighed down by the burdens of taxation without entering into competition with England, Germany, and France and embarking upon the enterprise of enlisting new men in the Army and sending new ships out upon the seas. The expenses of this Government were $236,964,372 in 1878, in 1888 they were $259,653,959, in 1898 they were $443,368,582, and in 1908 they were $659,196,319, an increase of nearly 300 per cent during the period of 30 years from 1878 to 1908. The increase in population between the same dates was 84 per cent. In 1796 the per capita expenditure of our Government was $1.34; in 1907 it was $8.91. I believe an average family in the United States is supposed to consist of five members. Therefore every family in the United States in 1908 was paying toward the support of the General Government $44.55 per annum. It is true that this amount is not extended on the tax duplicates and is not collected from us by the tax gatherer, but it is no less a tax by reason of being collected indirectly and over the merchant's counter than if it were collected directly by the tax gatherer. I believe it is estimated too that where one dollar finds its way into the Treasury by reason of collecting this tax indirectly by the tariff method five dollars are taken out of the pockets of the American people and placed in the vaults of the manufacturers.

Every family in the United States is paying more than $250 per year directly toward the support of this Government and indirectly for the benefit of special privilege.

The appropriation for the support of the Army for the fiscal year 1913 was $90,958,712.98, and the appropriation for the naval service during the same period was $123,151,538.76, a total of $214,110,251.74. During the year 1912 there were enlisted in the United States Army 81,331 men and 4,470 officers, and during the same period there were enlisted in the Navy 46,651 men and 3,114 officers; and, in addition, there were in the Marine Corps 9,567 men and 319 officers, and in the Philippine Scouts, which is under the control of the War Department, 5,480 men and 180 officers, making a total of 151,112 men, or 1 man for every 595 of the population of the United States. Mr. Speaker, this does not take into consideration the militia of the various States or the Naval Militia, which is about equal to the number of enlisted men. An army of this size is large enough for the purposes of this Government or any other Government that is not embroiled in war.

We do not need a large army and a large navy. We are 5,000 miles away from Europe and its troubles and 7,000 miles away from the Orient, and on every farm in this country there is an arm ready to be stretched forth in the defense of our country should necessity require it. If the dollars expended in one year for the support of our Army and Navy as they are, and without increase, were laid one against another, it would make a string that would reach from New York to San Francisco and from San Francisco back to New York again, or one-fourth the distance around the world.

It would pay 342,029 men a wage of $2 per day for an entire year. It would employ a thousand men at $2 per day every working day in the year for 342 years. As against this enormous expenditure for the support of the Army and the Navy, there was appropriated for the fiscal year 1913 to promote agriculture the pitiful sum of $16,648,168, and yet more than 40 per cent of the population of the United States are engaged in this great industry. There comes up from all parts of the country a demand for development and an appeal for the best class of immigration, and yet in the face of this demand we are spending nearly fifteen times as much annually for the support and increase of our Army and Navy as we are for the benefit of the great producing masses of the country. It is high time for us to quit following the fashions of rotten and fast-decaying European monarchies by attempting by a display of pomp, ceremony, uniforms, and music to stir the blood and thrill the souls of our people with patriotic love for our flag unless on that flag in its every fold is displayed the motto of the Republic:

Equal rights to all and special privileges to none.

The farmers and the working people of our country desire no more than this; they are entitled to no less.

The purposes and uses of large armies and navies by the nations of the Old World are twofold: First, to repel invasion or to enter upon a foreign campaign to maintain its territorial integrity or to extend the borders of its frontier; second, to maintain within its own borders the system of special privilege

which recognizes the division of its people into classes—a governing class of lords, dukes, and counts, and a lot of other detestable flunkyism, on the one hand, and a working class of serfs, who bear the burdens and fight the wars for the poor privilege of being slaves, on the other.

Mr. Chairman, God so created this world as to render a large army and navy on our part unnecessary for the first purpose, and Thomas Jefferson so created this Republic of ours as to render it unnecessary for the second purpose.

The necessity for a large army and navy is not the fault of the Creator of the world or the creator of the Republic. If a necessity for it does exist, it is because of the weakness and folly of those who have been trusted with power and who by law have built up a privileged class in this country, who, knowing the source of their power and the cruelty of their privilege, are unwilling to trust to the just judgment of their countrymen. I am unwilling to spend one dollar of the people's money to increase an army or add an additional ship to a navy to be used in forging the chains of industrial slavery by forcing our laboring people to work at a wage which will not furnish food for the mouths and clothing for the backs of those who call them husband and father.

Mr. Chairman, I am opposed to the aristocracy that exists in the Army and Navy. It has so come to pass that it is almost impossible for the splendid young men, the sons of our working people, our farmers, and our business men, to secure entrance to our Military and Naval Academies. When I came to Congress last spring I was foolish enough to harbor the fond delusion that I had a right to nominate one young man to attend the United States Military Academy at West Point and two young men to attend the Naval Academy at Annapolis. This fond hope was soon shattered, for when I named for these positions the sons of Oklahoma farmers and laborers and business men, the first intimation I had that they were rejected came from parties here in Washington, who were kind enough to inform me that I could give the appointment to their sons and they could enter immediately. Made to order for the very purpose. When I suggested that there was a statute requiring the appointee to be an actual resident of the State from which the appointment was made, I was informed that I could have the right to name some town in my State as his place of residence.

I informed them, one and all, that the sons of Oklahoma fathers and mothers—boys who loved Oklahoma, who loved the history of our country, the traditions of our fathers; boys who, when they became officers in our Army, would be able to sympathize with those who labor to feed the world in time of peace and who fight the battles of the Nation in time of war—would be appointed to the places at my disposal, or they would remain vacant until Gabriel should declare time at an end.

But I have drifted far afield in discussing this subject from the lesson I wished to impress—the picture I desire to draw. If the lessons of history are true we are following in the footsteps of all the governments that have arisen and flourished and passed away, and whose wrecks now serve as the milestones of time in our treatment of and preparation for war, and the attention and solicitude we manifest toward those things which promote peace.

The Government has by law aided in building up our great manufacturing industries and our railroad systems. Of this we make no complaint if the people of the country are to and do receive fair treatment from them, but we are unwilling to make them our masters and furnish a guard with which they can maintain their mastery. I protest against continuing to make large appropriations for war, and plead that we for a little while devote our attention to bettering the condition of that large class of our citizenship for whom we have done so little, but to whom we owe so much. I desire to call the attention of the Congress to a few figures which are more eloquent than any words can possibly be of the neglect of the Government toward the American farmer.

Millions and multiplied millions of dollars have been taken from the pockets of the American people to build up the manufacturing industries of our country. Beginning with the first tariff act in 1789 down to the Underwood Tariff Act in the year 1913 our Government has levied a tribute on the consuming masses for the benefit of the manufacturer that has built up and developed that branch of industry beyond conception and unparalleled in history. The same is true of our transportation lines. The Congress early began a system of appropriations to deepen the rivers, widen their channels, dredge the gulfs and bays, connect bodies of water by canals, and, after the invention of the steam engine, to assist in constructing railroads, and by appropriations and land grants by the Federal Government and gifts and gratuities on the part of States, counties, cities, towns, and communities these have jumped into billions of dollars. The land grants alone by the Federal Government aiding in the construction of railroads amount to more than 200,000,000 acres of land, valued at more than $6,000,000,000. We are just now completing across the Isthmus of Panama a canal to connect the waters of the Atlantic and Pacific at a cost of nearly a half billion dollars. All this has been done for the purpose of bettering the condition of our people and to advance the prosperity of our country, but during all these years not one dollar has been appropriated to aid the farmer in the construction of good roads that he might more cheaply and expeditiously market the products of his farm. All of the manufacturing industries of our country might be closed, but if nature had sent an abundant crop throughout our country we would be blessed with general prosperity. Every railroad might cease to operate its trains, and yet if the wheat, corn, and cotton and the other staple crops were abundant famine would not be abroad in the land. The manufacturer may conduct his industry during every working-day in the year, and the railroads may run their trains every day in the year, but the very moment a drought strikes down the wheat, corn, and cotton crops every line of industry and every line of business is paralyzed. The manufacturer must close down his plant and the railroad must cease its operations. The farmers of the country furnish the products for the manufacturer and the freight for the transportation company.

In the Philippines, Porto Rico, and in the Canal Zone the Government of the United States is spending millions of dollars in the construction of good roads. If we will decrease the appropriations we are annually making for the Army and Navy and increase the appropriations for good roads in the United States, we will have made the greatest and most effective preparation for war, because it is the farmer and the laborer of the country who in time of war goes forth to defend his country against its enemies, both foreign and domestic. Unless some action is taken by the Congress that will make farm life more profitable and consequently bring more contentment to the farmers, a very serious condition will exist in the United States within a short time. Our farm products are now decreasing. In 1904 we exported 593,000 head of cattle; in 1909 we exported 208,000; in 1910, 125,000; and in 1911 about 95,000 head. We imported from Mexico, in 1908, 63,000 head of cattle; in 1910, 188,000; and in 1911 over 200,000. In 1908 we exported foodstuffs in its raw state, $189,000,000, and manufactured foodstuffs, $331,000,000; cotton, $437,000,000. In 1907 we exported more than $1,050,000,000 worth of farm products. Since that year our exports have been steadily decreasing and our imports increasing. With this shifting of the balance of trade we are becoming a debtor instead of a creditor nation.

In 1908 the number of cattle on the farms in the United States was 50,073,000; in 1909 there were 49,379,000; in 1910 there were 47,279,000; in 1911 there were 39,679,000; in 1912, 37,260,000; and in 1913, 36,030,000; showing a steady decrease in the number of this great food-producing product of the farm—nearly 15,000,000 in a period of five years, or 3,000,000 animals per year; and this, too, notwithstanding the increased demand for beef and all by-products of the packing plant.

Beginning with the year 1907 and extending down to and including the year 1912, the wheat crop of the United States was, in—

	Bushels.
1907	735,260,970
1908	634,087,000
1909	664,602,000
1910	737,189,000
1911	635,121,000
1912	621,338,000

showing a steady decrease in this great food-producing cereal, the crop in 1912 being 114,000,000 bushels short of the crop produced in 1907.

During the 10-year period from 1890 to 1900 the increase in the agricultural occupation in the United States was 21 per cent. In other occupations it was 32 per cent. In all parts of the country our citizenship is gradually drifting away from the farms and into the cities. In my judgment this drifting of the people from the farms to the cities could be largely decreased, if not entirely stopped, if there was a system of good roads throughout our country that would permit the farming and laboring population to enjoy some of the privileges of social life that under existing conditions are denied to them on the farms but afforded them in our cities. There are over 2,000,000 miles of public roads in the United States, and the Government of the United States is using more than one-half of this mileage in transporting its mails over rural and star routes. The Government uses these roads which it has not contributed one penny toward building, and it constantly holds over the heads of the farmers and those supplied with mail the threat that it will discontinue such service if they do not, at their own expense and by their own toil, keep these roads in good condition. The

Government of the United States has no better right to appropriate the roads built by the farmers of the country than it has to appropriate the railroads of the country; in fact, it would have a much better moral claim if it were to attempt to appropriate the railroads of the country to its own use, because it has contributed many billions of dollars toward their construction.

The matter of good roads is not only of great interest to the farmers of the country, but it is likewise of great interest to the consumers of farm products. The cost of transportation must finally be paid by the consumer, and the cost of transportation at this time almost equals the cost of production. Whatever, therefore, will decrease the cost of transportation will decrease the price finally to be paid for the agricultural products by the consumer without decreasing the amount the farmer secures for his products. It simply would reduce the expense of the middleman—the transportation company.

The latest Federal census showed the value of farm products to be nearly $9,000,000,000. About two-thirds of these farm products are consumed at home. The other third, or $3,000,000,000, is marketed, and in order to place it upon the market an average haul of 9 miles to town must be made over the unimproved dirt roads. The Secretary of Agriculture of the United States estimates that there is moved over the 2,000,000 miles of unimproved dirt roads annually about 3,000,000 tons of farm products at a cost of 25 cents per ton-mile, and he further estimates that this cost could be reduced by one-half if the roads were improved. This would result in an annual saving of $300,000,000 to the consumers of farm products.

Mr. Chairman, what I have said points the moral I desired to draw, and that is that the safety of a country and its perpetuity is not measured by the number of its armed soldiers nor the size and thickness of the walls of its forts and arsenals nor the bore and range of its cannon, nor yet by the thickness of the plates of steel and the swiftness of its battleships, but rather by the love and veneration of its citizenship, who by fair treatment have come to know that the rich and the poor, the mighty and the weak, all stand equal in the presence of the law.

Woman Suffrage and Good Roads.

EXTENSION OF REMARKS

OF

HON. BURTON L. FRENCH,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 11, 1913.

Mr. FRENCH. Mr. Chairman, I ask unanimous consent to insert in the RECORD an address by my colleague from Idaho [Mr. SMITH] delivered at Fairview, Ohio, a large part of which discusses the suffrage question.

The CHAIRMAN. The gentleman from Idaho asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection?

There was no objection.

The address is as follows:

[Speech of Hon. ADDISON T. SMITH, Representative in Congress from Idaho, delivered at the Thirty-fourth Annual Pennyroyal Reunion, at Fairview, Guernsey County, Ohio, August 21, 1913.]

"Mr. Chairman, ladies, and gentlemen, it is certainly most appropriate that the people of this historic section should year after year gather here to renew their bonds of friendship, to exchange their plans for the future, and to tenderly recount the good deeds of those who have passed on.

"We are occupying historic ground to-day. Over the old National Road traversing this section passed many times to and from Washington Presidents Jackson, Harrison, Polk, and Taylor; also such distinguished men as Sam Houston, John C. Crittenden, Chief Justice Marshall, and Davy Crockett.

"It is the only great highway built entirely by the Federal Government. It extends from Cumberland, Md., to St. Louis, Mo., a distance of over 800 miles, and was constructed at a cost of over $7,000,000. From the time of its construction, in 1825, until the railroads were built to the Mississippi it was the chief thoroughfare from the East to the then frontier States.

"The building of this great road was a godsend to the pioneer farmers along the way, as it furnished employment to thousands of them with their teams. They were not only benefited by their own earnings, but by the money spent in their locality, and land values were enhanced because of their proximity to such a splendid highway.

"As many as twenty 4-horse passenger coaches have been counted in line at one time, and there were thousands of broad-wheeled wagons covered with canvas in use for transporting freight. It took fast mail from Washington 54½ hours to reach Columbus and 94 hours to St. Louis.

"Along this old road passed the hardy and restless pioneer, whose spirit has constantly moved westward and is now wrestling with the mountains and plains of the Rocky Mountain and Pacific Coast States.

"The people who rescued that great West from the almost impassable barriers to civilization and those who are now there reclaiming the desert wastes, opening the storehouses of the mountains and harnessing the mighty rivers, possess the same indomitable spirit as those hardy pioneers who nearly a hundred years ago traversed this great thoroughfare seeking a favorable spot on which they could spread their tent and make homes for themselves and their families.

"The western country is still in its infancy. It is only a few years since the wealth in mountain, valley, and river has become known. These resources only need the progressive spirit of the pioneer to make these opportunities available and to demonstrate the possibilities of that region. Those who have gone there have not only been active in developing the material resources, but they have also made great strides in civilization and in the enactment of laws for the betterment of society and the elimination of the spirit of greed and domination which is so prevalent in older communities. The pioneers have always been the reformers, as the history of the human race shows, and those of the West are no exception to that rule.

"Among all the States in the new West Idaho proudly lifts her head. She was one of the first States in the Union to give woman her rightful place in the affairs of government. For nearly 20 years woman has been on an equality with man at the ballot box, and she has brought to that responsibility a determination to have those laws enacted which are intended to improve the morals of the people, to protect the public health, to give her children better opportunities in the struggle of life, and to accomplish many other things which will benefit her community, which the men, because of their disinclination or indifference or their time being too much occupied in their business affairs, have not done.

"Her natural ambition for the education and success of her children and the improvement of her surroundings, which has made the American wife and mother the best guardian of the home in all it signifies, has spurred her on to accomplish her great work. She constantly has in view the welfare of the home, the welfare of her children, and the general welfare of the human race. Through her active cooperation at the polls there have been placed on the statute books of Idaho many laws far in advance of those in the older States. Our pure-food laws, which are as stringent as any in the Nation; our antigambling laws, which have practically eliminated this vice in Idaho; our local-option laws, which have driven the saloon from over three-fourths of the counties in the State; our direct-primary laws, which have placed the selection of the State and county officers in the hands of the people; the widow's pension law, which permits her children to remain with their mother, their natural guardian, instead of sending them to an institution; our fruit-inspection laws, prohibiting the sale of wormy fruit and requiring the systematic spraying of fruit trees; our Sunday rest and many other beneficent laws are all due to the intelligent and active cooperation of the women of the State in the creation of public sentiment in favor of these wise enactments and by placing in office those who were favorable to this progressive legislation.

"I do not desire to be understood as approving the unreasonable campaign that is being conducted by the militant suffragettes in England. Their disgraceful and illegal acts can not aid their cause, and are deplored by all sensible and law-abiding people.

"The campaign which has been made in this country during the last 50 years for woman suffrage has been conducted in the most dignified and conservative manner. They have appealed to reason and patiently awaited the ripening of public sentiment favorable to their cause. They have shown that their interests are unselfish; that while they desire to have a voice in the making of the laws in order that good results may follow, they are perfectly willing that the men shall have the honor of executing the laws. They were only impelled by the deep affection for their children and their love of the home and the fireside to assert their right to help place in the legislature those who are willing to enact the laws which they demanded. What is true of Idaho is equally true of all woman-suffrage States. They tried persuasion for years to accomplish their plans, without success, and are now trying the ballot. In all those States where the women have won the right to vote much has already been accomplished toward the enactment of legislation which has contributed greatly to the betterment of all mankind. The polling places have been moved from the obscure street and placed in a prominent and neatly kept building. The act of casting the ballot has been dignified into a great responsibility and privilege. Only men with clean records are put up for public office and the old-time ward heeler has lost his occupation.

"Under the gentle influence and cooperation of woman—wife, mother, sister, and sweetheart—I confidently believe that within the next decade politics in this country will be placed on a higher plane in all the States; that the reins of government in town, county, State, and Nation will only be placed in the hands of those who are unselfishly devoted to the moral and intellectual improvement of the people; that laws will be passed which will inure to the protection of the wage earner, the weak, and unfortunate, and that the grasping and selfish will be curbed in their greed to acquire more than their share of the wealth of the country to the exclusion of those who have been deprived of the opportunity to enter the race unhampered.

"While many wise and wholesome laws have been enacted and many more are being contemplated, I hope that Congress and the various State legislatures may soon enact legislation providing for a comprehensive, systematic, and cooperative plan for improving the roads of the country from the Pacific to the Atlantic and from the Lakes to the Gulf. The benefit to the commerce of the country by the construction of the great Panama Canal can not be estimated, yet I confidently believe that if the expenditure of the four hundred millions in that great undertaking had been spent in the improvement of the roads of the country it would have brought greater prosperity to the Nation and the people than will result from the opening of the canal. I am glad to note that the enthusiasm of nearly a century ago for national highways which resulted in the construction of the National Road is being revived, and that we can confidently look forward to the construction of similar highways in all parts of the country during the next decade.

"We are this year appropriating $180,000,000 for pensions for our soldiers, and their widows and orphans, for the great service they rendered our Government when its life was in peril, which is distributed in the rural communities, towns, and cities in every section of the Union. No other Government funds find their way into so many of the interior States, for the millions appropriated yearly for the construction of battleships, for the improvement of rivers and harbors, the payment of the Army and Navy, and the thousands of Government employees is spent largely in the coast States. When our veterans and their widows have passed away the money that is now being spent for pensions should be appropriated for road construction. In this way the inland communities will get their proportion of the Government funds, of which they contribute their share in the internal revenue and customs duties.

"In all probability next year's appropriation for pensions will be eight or ten million dollars less than last year. By the use of this saving on the pension appropriation for road building we could undertake an immense system of road improvement without feeling the burden on our resources. Each year the pension appropriation will be less than the previous year, and the good-road appropriation could be correspondingly increased, until within 10 or 15 years we would have a network of highways that would bring unexampled prosperity to the wage earners, enrich the farmers, and give a stimulus to commercial undertakings which have not been equaled in the world's history.

"When we contemplate the possibilities of this great country and reflect on our Nation's history and the progress we have made in the arts and sciences, in inventions, in agriculture, and in the cultivation of those Christian graces which bind us closer in brotherly affection, how glad we should be that we are American citizens living in the twentieth century. While we may differ in our politics or our religion, we are patriots and lovers of a common country, ready to work together for its advancement and the preservation of its institutions, and to take a determined stand against those doctrines opposed to our form of government, the advocates of which prefer the red flag to our Stars and Stripes.

"It is good to live in times like these and to participate in the grand undertakings which are making the world better. Such occasions as this can only result in good. An interchange of opinion is always desirable, and better acquaintance results in unity and cooperation and a more kindly interest in the welfare of our neighbor. We go from this place more loyal than ever to Pennyroyaldom, more proud of our country and its achievements, and more confident that the future has in store for us continued progress and development as a people and a Nation."

The Modern Woman.

EXTENSION OF REMARKS

OF

HON. HENRY GEORGE, JR.,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913.

Mr. GEORGE. Mr. Speaker, I ask unanimous consent to print in the RECORD an article by Helen Keller, entitled "The modern woman."

The SPEAKER. The gentleman from New York asks unanimous consent to print in the RECORD an article by Helen Keller. Is there objection?

There was no objection.

The article is as follows:

[From the Metropolitan Magazine, December, 1912.]

THE MODERN WOMAN.

[By Helen Keller.]

THE WOMAN AND HER HOUSE.

We women have often been told that the home contains all the interests and duties in which we are concerned. Our province is limited by the walls of a house, and to emerge from this honorable circumscription, to share in any broad enterprise, would be not only unladylike, but unwomanly. I could not help thinking of this the other day when I was asked to go to a far State and take part in some work that is being done for the blind. If I accepted this invitation, should I not be leaving my proper sphere, which is my home? I have thought of it many times since I learned that there are in America over 6,000,000 women wage earners. Every morning they leave their homes to tend machines, to scrub office buildings, to sell goods in department stores. Society not only permits them to leave their proper sphere; it forces them to this unwomanly desertion of the hearth, in order that they may not starve. O my sisters in the mills and shops, are you too tired, too indifferent, to read the ridiculous arguments by which your rights are denied and your capacities depreciated in the sacred name of the home and its defense?

Woman's sphere is the home, and there, too, is the sphere of man. The home embraces everything we strive for in this world. To get and maintain a decent home is the object of all our best endeavors. But where is the home? What are its boundaries? What does it contain? What must we do to secure and protect it?

In olden times the home was a private factory. The man worked in the field or at his handicraft while the woman made food and clothes. She shared in out-of-door labor; but indoor work naturally became her special province. The household was the center of production, and in it and about it man supplied himself with all that he needed—or all that he had—by rudimentary hand processes. The mill to grind corn was not far away. The leather used by the shoemaker was from a beef killed by a neighbor. Over every cottage door the words might have been written: "Mr. & Mrs. Man, manufacturers and dealers in general merchandise." Home life and industrial life were one. To-day they are widely separated. Industries that used to be in the house are spread all over the world. The woman's spinning wheel and part of her kitchen and dairy have been taken away from her. When she seeks to understand economic affairs and to exert her authority in their management she is in reality only following her utensils.

HOME IS WHERE THE WORK IS.

The spinning wheel, ancient emblem of domestic industry, has been removed to great factories. She has followed it there both as worker and owner. So she still does her part in the great task of clothing the human race. Where the spinning wheel is the woman has an ancestral right to be. For no matter how complex wheel and loom have become she depends on them still to make the blanket that covers her child in its sleep. It is her duty as a housemother to watch her spinning wheel, to see that no member of the world family goes ill clad in an age when wool is abundant, when cunning machines can make good coats, when a ragged frock on a self-respecting woman is a shame to us all. It is for woman to follow her wheel, to make sure that it is spinning wool and not grinding misery, that no little child is chained to it in a torture of day-long labor. The spinning wheel has grown a monstrous thing. In order to identify it one must study wages, tariffs, dividends, the organization of labor and factory sanitation. The woman who studies these problems and insists on having a voice in their solution

is in her home as truly as was her grandmother whose tireless foot drove the treadle of the old spinning wheel. The home is where those things are made without which no home can be comfortable.

Once the housewife made her own butter and baked her own bread; she even sowed, reaped, thrashed, and ground the wheat. Now her churn has been removed to great cheese and butter factories. The village mill, where she used to take her corn, is to-day in Minneapolis; her sickle is in Dakota. Every morning the express company delivers her loaves to the local grocer from a bakery that employs a thousand hands. The men who inspect her winter preserves are chemists in Washington. Her ice box is in Chicago. The men in control of her pantry are bankers in New York. The leavening of bread is somehow dependent upon the culinary science of Congressmen, and the washing of milk cans is a complicated art which legislative bodies, composed of lawyers, are trying to teach the voting population on the farms.

It would take a modern woman a lifetime to walk across her kitchen floor, and to keep it clean is an Augean labor. No wonder that she sometimes shrinks from the task and joins the company of timid, lazy women who do not want to vote. But she must manage her home; for, no matter how grievously incompetent she may be, there is no one else authorized or able to manage it for her. She must secure for her children clean food at honest prices. Through all the changes of industry and government she remains the baker of bread, the minister of the universal sacrament of life.

When she demands to be mistress of the national granary, the national kitchen, the national dairy, the national sewing room, whoever tells her to confine herself to her house is asking her to move forward and backward at the same time. This is a feat which even her inconsistency can not achieve. The inconsistencies reside not in woman and her relation to her plain duties, but in her circumstances and in some of her critics. She can put a basket on her arm and bargain intelligently with a corner grocer, but she can not understand the problem of nationalizing the railroads which have brought the food to the grocer's shop. She is clever at selecting a cut of meat, but the central meat market must not be opened to her investigation; a congressional committee, which she did not choose, is doing its whole duty as father of the house when it tries to find out who owns the packing houses in Chicago, how much money the owners make out of her dinner, and why thousands of tons of meat are shipped out of the country while her family is hungry.

She opens a can of food which is adulterated with worthless or dangerous stuff. In a distant city a man is building himself a palace with the profits of many such cans. If a petty thief should break into her pantry, and she should fight him tooth and nail, she would be applauded for her spirit and bravery, but when a millionaire manufacturer a thousand miles away robs her by the peaceful methods of commerce she has nothing to say, because she does not understand business, and politics is not for her to meddle in.

Woman's old "domestic sphere" has become not only an empty shell with much of the contents removed, but a fragile shell in which she is not safe. Beside her own hearth she may be poisoned, starved, and robbed. When shall we have done with the tyranny which applies worn-out formulas to modern conditions? When shall we learn that domestic economy is political economy? The noblest task of woman is to get bread for her children. Whatever touches her children's bread is her business.

THE MOTHER SPIRIT IN THE WORLD.

Woman from times long gone has been the nurse, the consoler, the healer of pain. To-day the sick bed is often in a great public hospital. There she has followed it as professional nurse, and her services have been welcomed and acknowledged. In the hospital wards where she moves, deft, cheerful, capable, there are men unnecessarily laid low by the accidents of trade and children maimed and dying who might be well and playing merrily in the bright morning of life. From the battle fields of industry come the wounded, from the shambles of poverty come the deformed. What enemy has stricken them? How much of all this disease and misery is preventable? Shall the wise nurse stand by the bed of pain and ask no questions about the social causes of ill health? If her own child in her own home is needlessly hurt, she blames herself for her carelessness. In the world home if a child is needlessly hurt, she is equally responsible. By her vigilance in the world home woman can help to bring about a civilization in which every preventable disease shall be rooted out and every condition that causes broken bodies shall be examined and abolished. This is her problem. She is mistress of the sick room, and the sick room is world-wide.

The education of children is acknowledged as lying within the scope of maternal care. The mother is the first teacher before the child goes to school, and in the schoolroom her unmarried sister devotes herself as a professional foster-mother to the children of others. The American nursery is a public building with a flag flying over it. If anywhere, woman is mistress in the schoolroom. So evident is this that in relation to schools she has a certain political privilege. She can vote for the school committee and serve on it herself. But even here she is bound by a very short tether. She has nothing official to say about how much money shall be spent for schools. Her freedom in this respect, as in some others, is the form without the substance, for the fundamental question in the public-school problem is the question of money. That must be appropriated by men. Moreover, the laws relating to children—for example, the laws of compulsory education—are made by men. It is not for her to say whether a child shall be taken from school to grind in mill and factory. Yet every child plunged in ignorance, bent by man's work before his time, is a thwarting of her sacred mission to fill the world with children well born, well bred, beautiful, wise, strong for the burdens of life. The schoolroom and all that it means belongs to the central intimacy of home, and all that violates the schoolroom violates the sanctity of the woman's hearth.

It is idle to say that woman could not improve the schools, that the schools are already free, and that every child has opportunity for instruction. The efficiency of the school depends upon things outside the schoolroom. It has been found that you must feed your child before you can teach it, and that the poor home defeats the best schoolroom. Behind the free school we must have a free people. What profits it to provide costly school buildings for anemic, underfed children, to pass compulsory education laws and not secure a livelihood for the families whose children must obey them? What is the common sense of free textbooks without wholesome food and proper clothing? Where is the logic—masculine or feminine—of free schools and free child labor in the same commonwealth? These questions concern the most ignorant woman and the best educated woman, and the solution of them is necessary to the health and comfort of every home.

Woman's place is still the household. But the household is more spacious than in times gone by. Not all the changes of modern life have changed her duties essentially. Her work as spinner, bread giver, helper of the helpless, mother, and teacher of children is nowise different to-day, but is immensely increased and intensified. Too often confused by the dazzle and uproar of modern life she is the primal woman still, the savior and shaper of the race. In what a grim, strange abode must she often discharge her old-time functions! Sometimes it is no home at all, but an overcrowded, sunless lodging; it is not a shelter, but an industrial prison; it is not a nursery, but a lazaretto.

Countless mothers of men have no place fit to be born in, to bear others in, to die in. Packed in tenements forgot of light, unheeded and slighted, starved of eye and ear and heart, they wear out their dull existence in monotonous toil—all for a crust of bread! They strive and labor, sweat and produce; they subject their bodies and souls to every risk, lest their children die for want of food. Their clever hands which have so long been set to the spindle and the distaff, their patience, their industry, their cheapness have but served to herd them in masses under the control of a growing industrial despotism.

Why is all this? Partly because woman does not own and direct her own share of the national household. True government is nothing but the management of this household for the good of the family. Under what kind of government do we live? To this question, her question, woman must find an answer by following her sisters to their places of sojourn. It is for her to know if their home is home indeed, if their shelter is strong and healthful, if every room—in lodging, shop, and factory—is open to light and air. It is for her to see that every dweller therein has freedom to drink in the winds of heaven and refresh his mind with music, art, and books; it is for her to see that every mother is enabled to bring up her children under favorable circumstances.

THE NEW FAITH.

The greatest change is coming that has ever come in the history of the world. Order is evolving out of the chaos that followed the breaking up of the old system in which each household lived after its own manner. By using the physical forces of the universe men have replaced the slow hand processes with the swift power of machines. If the woman demands it a fair share of the machine products will go to her sisters and their families as when the loom stood at hand in their dwellings. They will no more give all their best years to keep bright and fair the homes of others while their own are neglected. They will no more consume all their time, strength, and mental capacity in bringing up the rosy, laughing children of others while their own sweet children grow up pitiful and stunted. There is motherhood enough in the world to go round if it is not abused and wasted.

Yes; the greatest change is coming that has ever come in the history of the world. The idea that a higher power decrees definite stations for different human beings—that some are born to be kings and others to be slaves—is passing away. We know that there is plenty of room in the world and plenty of raw material in it for us all to be born right, to be brought up right, to work right, and to die right. We know that by the application of ordinary intelligence and common good will, we can secure to every one of our children the means of culture, progress, and knowledge; of reasonable comfort, health, and happiness; or if not happiness, at least freedom from the unnecessary misery which we all suffer to-day. This is the new faith that is taking the place of the faith in blind, selfish, capricious powers. Religion, the life of which is to do good, is supplanting the old servile superstitions. The spirit of the time we are in has been eloquently described by Henry Demarest Lloyd:

It is an ethical renaissance, and insists that the divine ideals preached for thousands of years by the priests of humanity be put into form, now, here, and practically, in farm and mine, stock market, factory, and bank. It denies point-blank that business is business. It declares business to be business and politics and religion. Business is the stewardship of the commissary of mankind, the administration of the resources upon which depend the possibilities of the human life, which is the divine life.

What is there, then, so cold, sordid, inhuman in economics that we women should shrink from the subject, disclaim all part in it, when we touch it daily in our domestic lives?

Many young women full of devotion and good will have been engaged in superficial charities. They have tried to feed the hungry without knowing the causes of poverty. They have tried to minister to the sick without understanding the causes of disease. They have tried to raise up fallen sisters without knowing the brutal arm of necessity that struck them down. We give relief to a mother here and there, and still women are worn out at their daily tasks. We attempt social reforms where we need social transformations. We mend small things and leave the great things untouched. We strive after order and comfort in a few households, regardless of the world where distress prevails and loveliness is trodden in the dust.

Our abiding place will be home indeed when the world outside is a peaceful, bright home for mankind. Woman's happiness depends upon her knowledge of the facts of life as much as upon her lovely thoughts and sweet speech and her faithfulness to small duties. In woman is wrapped the hope of the future. The new child, the new civilization, all the possibilities that sleep in mankind are enfolded in her. In her travail is the resurrection of the human race. All this glorious promise can be brought to naught by ignorance of the world in which it is to be fulfilled. To plead with woman, to urge her to open her eyes to the great affairs of life, is merely to bid her make ready her house for the child that is to be born.

Currency.

EXTENSION OF REMARKS
OF
HON. C. BASCOM SLEMP,
OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. SLEMP. Mr. Speaker, I avail myself of the privilege afforded each Member of the House of extending his remarks in the RECORD by inserting therein the following:

First. A copy of resolutions adopted by the executive council of the Virginia Bankers' Association at a meeting held in Richmond, Va., on the 6th day of September last.

Second. Sundry letters from bankers in the ninth district of Virginia containing comments on the currency bill now before the House.

The resolutions and the letters speak for themselves and uniformly condemn the bill.

VIRGINIA BANKERS' ASSOCIATION,
OFFICE OF THE SECRETARY,
Farmville, Va., September 15, 1913.

MY DEAR SIR: The executive council of this association held a meeting in Richmond on the 6th instant to discuss the currency bill now pending before Congress, and the following resolutions were unanimously adopted at said meeting:

"*Resolved*, That while recognizing the patriotism and ability which characterize the currency measure now under consideration by Congress, we desire to record our convictions that the enactment of the bill in its present form would not be acceptable to the banks of this State, and would, in our judgment, involve the surrender of national charters by many of the institutions in this State; and that we earnestly suggest that each bank, National and State, should advise our Senators and Congressmen of our convictions and invoke their efforts to obtain modifications which we believe will be necessary to secure the efficiency of the banking and commercial interests of this State.

"*Resolved*, That in our belief the recommendation of the recent Chicago meeting of representative banking interests of the country furnishes a reasonable ground for the modification of the pending currency bill, and that copies of these resolutions be sent to our Members in Congress and to the chairmen of the Senate and House Committees on Banking, respectively."

Jos. M. Hurt, Blackstone; Walker Scott, Farmville; W. B. Vest, Newport News; J. W. Bell, Abingdon; C. E. Tiffany, Warrenton; C. Taylor Burke, Alexandria; H. W. Jackson, Richmond; Oliver J. Sands, Richmond; Thos. B. McAdams, Richmond; S. L. Barrow, Blackstone; T. P. Beery, Harrisonburg; Julien H. Hill, Richmond; R. E. Jordan, South Boston; G. R. Ratcliff, Manassas; J. J. Scott, Bedford City, members of the executive council."

Faithfully, yours,

WALKER SCOTT, *Secretary.*

—

THE PEOPLE'S NATIONAL BANK,
Abingdon, Va., September 13, 1913.

Mr. C. B. SLEMP, *Washington, D. C.*

DEAR MR. SLEMP: I am just in receipt of your letter of the 12th, and take pleasure in giving you my views regarding the currency form which is now before the House. I wish to say that I am not in favor of a change along the line which the new law predicts, and I do not believe it would be accepted by the majority of the banks in this State, and should this law be passed I believe it would involve the surrender of national-bank charters by many of the institutions in this State.

In my judgment it would be a hardship on most of the banks to take 10 per cent of the capital stock out of their business on 60 days' call. As for ourselves, we have no trouble in keeping up our reserve, and we would much prefer the present arrangements. When we have occasions to borrow money we have at all times been granted these accommodations, and I would much prefer borrowing money from the people whom we keep our reserve and balances with.

In regard to the exchange proposition, will say that I think this would curtail the income for country banks, as this source alone brings in considerable money in the run of a year. Of course my experience in the banking business is limited and my ideas which I have given you are to the best of my judgment for the betterment of banks in our section.

With kindest regards, I am,
Yours, very truly,

F. B. MCCONNELL,
Cashier.

—

THE FIRST NATIONAL BANK,
Wytheville, Va., September 15, 1913.

Hon. C. B. SLEMP, M. C., *Washington.*

MY DEAR SIR: I am due you an apology for not replying to your letter of recent date in regard to the currency bill now before the House, but as the executive committee of the Virginia Bankers' Association was to meet on the 6th instant I deferred writing.

That committee held its meeting on that date, and you possibly have before you now the resolutions that were passed, which resolutions I indorse.

If the present bill should become a law it would decrease our earnings in the loss of our interest and exchange account, and we do not like the idea of surrendering 10 per cent of our capital.

If the present bill should become a law I think a large per cent of the national banks in this section would surrender their charters and return to the State system, which we would not like to do, as we have tried both, and we like the workings of the national system under the present law so much better than we did the State. It looks to me that the Currency Committee should give some heed and show some respect to the opinions of men experienced and trained in the business of banking, but they seem to think it all emanates from that much-despised street in New York, and they can not see beyond their nose.

Yours, very truly,

C. W. GLEAVES, *Cashier.*

—

THE FIRST NATIONAL BANK OF ABINGDON,
Abingdon, Va., September 13, 1913.

Hon. C. B. SLEMP, *Washington, D. C.*

MY DEAR MR. SLEMP: I have your esteemed letter of the 12th instant in reference to the currency bill which is now before the House of Representatives.

I agree with you that the bill is a very important one, and one that affects the business and banking interests of the whole country vitally. It is my opinion that the recommendations made by the meeting at Chicago recently form a reasonable groundwork for the modification of the bill.

I think the national banks are in a less favorable position than the State banks on account of being compelled to either enter into the Federal reserve system or give up their charters, as you know the State banks have the option of either becoming members or remaining as they are. The national banks will be compelled to become members of the association or surrender their charters, in which latter event they will be forced to retire their circulating notes, which will make it necessary to dispose of their Government bonds. Unless the Government makes some provision for the immediate redemption of the 2 per cent bonds, any considerable number of national banks retiring from the system would cause the market for these bonds to go to an investment basis, which would result in a loss to the retiring national banks of more than the cost of their subscription to the Federal reserve banks. This makes it practically compulsory upon the national banks to enter the system. The State banks will probably wait until the new law is tried out by the national banks. If it proves to be a good thing, they will avail themselves of their privilege of entering the system; otherwise, they will remain as they are, operating under their State charters.

You can readily see from this how it places the State institutions in a much better position than the national banks.

The requirement of 20 per cent subscription to the stock of the Federal reserve banks, 10 per cent of which will have to be paid in cash and the remaining 10 per cent to be paid on call, is, in my opinion, excessive. It seems to me that the subscription should, in any event, be reduced to 10 per cent of the capital of each bank, 5 per cent of which should be paid in cash and a liability for the remaining 5 per cent. It seems unreasonable that each bank should be compelled to surrender 20 per cent of their capital to be managed by the Federal reserve banks and so little of the profit to be allotted to the stock-holding banks. I believe also that the banks should have some voice in the selection of the members of the Federal reserve board, as it does not seem fair or just that the banks should be required to furnish all the capital without any representation upon the board and only a meager return for the use of their money.

Another objection that I have to the bill is the requirement to keep the reserve of national banks with the Federal reserve banks without interest. It would seem to me that if the Government is to receive nearly all the profit from the Federal reserve banks that the banks should have at least interest upon their balances; otherwise, the bank that had $50,000 deposit with the reserve bank would receive no more benefit than the bank that only kept $5,000.

I do not think the rediscount privileges would be of any considerable advantage to banks in this section directly. It is possible that it might make it easier for their city correspondents to get accommodations from Federal reserve banks and thereby he the better enabled to accommodate their country bank correspondents, but as for any direct accommodation to be extended to banks in this section from Federal reserve banks, I do not anticipate it.

Another part of the bill that seems to me very objectionable is the extraordinary powers granted to the Federal reserve board over the national banks. As I understand the bill, it gives them power to make any number of examinations at any expense, requiring the bank to pay same, and it really seems to me that it takes the management of the banks out of the control of their officers and directors and places the entire management in the hands of the Federal reserve board. It would seem that under the new law the banks might be placed in a position of having to consult the Federal reserve board before extending their customers a line of credit.

The provision of the bill providing that the Federal reserve banks receive from any member checks on any other member at par would practically wipe out the exchange account of all the banks in this section and would very materially curtail the income of every bank in this section, and I think this applies generally to country banks over the entire country.

There are several other points in the bill that I would like to call to your attention, but I am in a hurry to get this letter off on the mail, and I may write you again Monday.

Thanking you for writing me, I am,

Yours, very truly,

J. W. BELL.

—

FARMERS' BANK OF SOUTHWEST VIRGINIA,
Wytheville, Va., September 13, 1913.

Hon. C. B. SLEMP, *Washington, D. C.*

MY DEAR SIR: Your favor of the 12th instant to hand and contents carefully noted.

The currency bill, as I understand it, applies more particularly to national banks. Ours is a State bank, but nevertheless there are many features in the bill that are decidedly objectionable to State banks, if these provisions apply to them as well as to national banks. State banks, as I understand it, can take stock or not as they may elect.

Then to require banks to collect and remit for drafts without charge is altogether wrong, and would curtail the income of the State as well as national banks.

There is so much that is objectionable in the bill that it would require more time to elaborate than I can possibly devote to the subject at present.

In its present shape the bill should be defeated in the House.

Very truly, yours,

V. C. HUFF.

—

PULASKI, VA., *September 15, 1913.*

Hon. C. B. SLEMP, *Washington, D. C.*

MY DEAR SIR: Your kind letter of the 12th is at hand. The currency bill, as you state, is very important. It will very materially reduce the income of our bank and of all country banks, with no corresponding benefit to the patrons of our bank or of any country bank.

If I understand the bill, the reserve bank does not pay interest on reserves deposited with them. The compulsory subscription of an amount equal to 20 per cent of our capital stock I do not like. The bill was not prepared to benefit the national banks, but it may benefit some people somewhere, but not in Pulaski or southwest Virginia.

I have not gone over section 27, referring to the savings department of national banks, very carefully or fully, but it will certainly increase the work and cost of that department, and I am unable to see the benefit.

It is a change, and as we have been a prosperous people for the past 13 years, it looks as though a change was wanted and we are about to get it.

Will you kindly send me a copy of the bill. Only one copy in our town.

Truly, yours,

JNO. W. ECKMAN.

—

THE FIRST NATIONAL BANK,
Pearisburg, Va., September 16, 1913.

Hon. E. BASCOM SLEMP, M. C.,
Washington, D. C.

MY DEAR SIR: Replying to your letter of recent date asking my views of the proposed currency legislation, would say there is much of the bill that a man of bank experience can not approve. I think all compulsory features are bad, whether applied to banking or otherwise.

The bill simply means to us that we will have to withdraw from our home customers not less than—

10 per cent of capital	$10,000
5 per cent of deposits	15,000
Total	35,000

on which we will be allowed to make or get a dividend of $500. We are using the money fully now at 6 per cent. Some small compensation may be realized by reduced reserve, but such profit will, no doubt, be taken up in expense of extra examinations.

As you know, with the development going on in this part of the State, we need all our money and more. You also know, Mr. SLEMP, that our paper is as good as the best, but at the same time we have no commercial (the kind banks lose money on) paper that would come under the rediscount class, as provided. It might be put in by misrepresentation, but without that we in the Southwest could not raise $100,000 of the true kind. We prefer what we have, backed by real estate, for, as J. J. Hill has said, "the fire risk is good, and it don't run away."

Briefly, we believe the administration is going to put that bill across. In that case we will accept it in good faith for a trial, but if it does work injustice to us we will simply give up national charter.

I wish you were in position to really do something along the right line, but we all know they are not going to let you have a word to say that they will listen to.

Viewed from a distance, it looks very much like a deal of strong-arm method is being exercised at present and that the Republican Members might as well be at home cutting corn.

Thanking you for writing me, and with best personal wishes, I remain,

Very truly,

C. L. KING.

—

TAZEWELL NATIONAL BANK,
Tazewell, Va., September 13, 1913.

Hon. C. B. SLEMP, *Washington, D. C.*

DEAR MR. SLEMP: Yours of the 12th received. I have read the currency bill carefully, and have also, as far as I have been able, read what recognized leaders in the banking world have had to say about it. One can easily see, with the total membership of the Federal reserve board appointees of the President, how our money system might become the tool of politics and with grave results. I do not, however, feel competent to discuss this feature of the bill.

I do not see how the bill as a whole will help the small banks. We are required to subscribe to the capital stock of the reserve bank an amount equal to 20 per cent of our own capital, 10 per cent of which is to be paid in cash, with the remainder subject to call. In addition, we are required to keep 5 per cent of our deposits with the reserve bank without interest. In return for all this we get not over 5 per cent dividends on our stock in the reserve bank and a discount privilege of doubtful value. In our case, and with our average deposits during the last year as a basis, we would receive $300 for the use of $20,000, at 1½ per cent. Take any agricultural section, such as ours, and commercial paper in the true sense is not to be had. Our loans are made to farmers and merchants to be used in their business in a general way and with a tacit understanding that the money will not be paid back until the farmers and merchants are good and ready. In the larger centers time paper is executed by one person or firm to another for goods delivered, and with the understanding by both the party executing and the party receiving the note that it will be promptly paid at maturity. This is commercial paper in its true sense, and as far as I know there is none in our district, unless perhaps in Bristol. If we get this class of paper we must go on the market and buy it, which we would not likely do for the purpose of rediscounting it. The reserve banks, with the consent of the Federal reserve board, may make their definition of commercial paper broad enough to admit the character of paper we handle; but if this is not done, in addition to the reserve we will be required to carry with the reserve bank, we will have to carry with our city correspondents sufficient balances to induce them to come to our rescue in time of need. Are you not afraid that even if the definition of commercial paper is broad enough to cover the character of paper handled by the country banks that the red tape to be gone through with in connection with rediscounting and the amount of publicity connected will restrain the country banks from using the privilege? To make myself clear, if one of our customers should receive notice from the reserve bank that they held his note, which he thought we held, and that he must pay it at maturity, it would put him in a panic, and he would make panicky every neighbor in 5 miles.

It seems to me that the notes to be issued should be bank notes, but with strict Government supervision as to reserves and redemption. This, however, is too big a question for the little fellow.

The provision to par all items will hurt the country banks quite a good deal. I know banks in small places that could hardly exist but for their revenue from exchange charges.

Do not understand me as opposing currency legislation. Means should be provided for a mobilization of reserves and for an elastic currency. I do think, however, that a system that would give quick relief to the larger centers, and by them to the country banks, would be preferable to the bill proposed. It is the business of our city correspondents to know us, and if they can get relief in stringent times they will gladly pass it along.

With kindest regards,

Yours, respectfully,

W. T. GILLESPIE.

P. S.—One other feature. The bill provides that while we may keep as much more than the 5 per cent of our deposits required with the reserve bank we must under no circumstances allow our balances with the reserve bank to fall below the 5 per cent. This means that a bank that has four times its capital in deposits will lose control of an amount equal to 40 per cent of its capital. Under present conditions we are required to keep a certain reserve with our agents in the cities, but the law contemplates that we can use these reserves in stringent times and have a reasonable time in which to build them up again.

W. T. G.

—

GATE CITY, VA., *September 16, 1913.*

Hon. C. B. SLEMP, M. C.,
Washington, D. C.

DEAR SIR: We have your letter addressed to us in regard to the currency bill now before Congress.

First, we desire to say that the banking system of this country needs some changes, but we do not think that the matter is being considered as it should be. This whole currency bill is being rushed upon the country without giving the country, and especially the bankers, time to weigh and consider the different features and conditions of this bill. The bill has had so many different proposed modifications that it is right difficult to know just what is proposed in the bill.

We believe that this bill as first offered to the country, without the changes as offered to the bill by the bankers at the recent Chicago meeting of bankers, will not bring the relief that the country wants, and will be positively harmful to the banking interests, as a whole, all over the land.

We have gone carefully over the proposed changes as offered by the bankers at Chicago, and we heartily indorse them all.

We do not believe that banks should be compelled to take stock in the regional reserve bank, but make it optional to the bank, at least for one year after the bill goes into effect, or as to that make it optional with the bank whether it ever takes stock in the reserve bank.

We do not think that the Government should go into the banking business, asking to take over the profits over and above 6 per cent paid to the holding banks on the stock held by them. This, it seems to us, is giving to the Government the profits that would naturally belong to the banking interests of the whole country, as this profit to-day properly belongs to them.

We do not think that this reserve bank should have the exclusive right to issue Treasury notes or Government notes. This will cripple the prestige that now belongs to a national bank.

The discount privileges under this bill are no advantage at all to a country bank, or, as to that matter, to an ordinary bank, as they can now rediscount with the city correspondents any first-class paper to a reasonable amount, and they are not hindered by a legal limitation as to the amount so rediscounted. It leaves it entirely optional with the directors of the reserve bank, and this is too great a power to place in the hands of men over the banks of a given district.

One of the very greatest harms that can possibly be done to a country bank is to take away the right to charge exchange. All country banks make a good per cent of their earnings in this way. This will cause us to lose quite a lot in our yearly income.

Again, we ask that the Federal reserve board be controlled in their appointments—at least a majority—from the banking interests of the whole country and not left entirely at the dictation of the President of the United States, as this will bring the banking interests under the control of politicians. And most certainly there will be an endless warfare if the banking system of the whole country is turned over to politics. Keep the banks of this country from politics, and in doing this we best serve the people and the bankers, who themselves have built up the marvelous system we have to-day.

We would urge that you use your influence to have this banking reform deferred until the December session of Congress, and by that time the whole matter will be more thoroughly settled by the bankers, who after all are the best men to consult in this whole reform.

If the same can not be deferred until then, we ask that you use your influence against the bill in its present form, unless the proposed changes as outlined by the recent bankers' meeting at Chicago be accepted and incorporated into this bill.

It will positively ruin the small banks of this country out of business, and they are as much entitled to do business as the large banks of the large cities. As the bill stands now it is legislation for the big bankers against the little banker. It is legislation for the few against the many. It is legislation for "special privileges of the few rich bankers against the many small bankers."

We both jointly ask that you try for these amendments, and if not granted vote against the bill.

We are,

Yours, very truly,

THE PEOPLE'S NATIONAL BANK, GATE CITY, VA.

—

THE NATIONAL BANK OF NORTON,
Norton, Va., September 15, 1913.

Hon. C. B. SLEMP,
House of Representatives, Washington, D. C.

DEAR SIR: I have yours of the 12th instant, and replying beg to say that I have read the currency bill which you sent me, but have not studied it as closely as I would like. It looks like there are many good features in it, but, of course, good results from it will depend largely on how the whole matter is managed and carried out by the men who will be at the head of it.

It seems to me that 10 per cent ought to be the total amount of the capital stock required from country banks and allow the other 10 per cent optional, and in regard to the matter of exchange charges it seems to me that way the act reads that one reserve bank shall accept all items at par from other reserve banks, but if it means that we could not collect any exchange from any of the banks with which we do business, we would not want it by any means, as it would work a great hardship on us and would very seriously affect our profits.

We received this morning copy of the bill with alterations made by a conference of bankers held in Chicago August 22 and 23. I have not yet had time to examine their corrections to see what they suggest. I will try to examine it right away and let you know what I think about it. I suppose you have a copy of these corrections.

Yours, very truly,

E. H. OULD.

—

BANK OF CLINCH VALLEY,
TAZEWELL, VA., *September 16, 1913.*

Hon. C. B. SLEMP, *Washington, D. C.*

MY DEAR SIR: Answering your favor of the 12th instant asking my views on the pending banking legislation, have to say that as a general proposition the whole question is entirely too big for me.

I will say, however, that I suppose I am committed to the report adopted by the representatives of the State bankers' associations and clearing-house associations at the conference held at Chicago, August 22 and 23, because at a recent meeting in Richmond, Va., I voted in the affirmative to the effect that the recommendations of the Chicago meeting furnished a reasonable ground for the modification of the pending currency bill. While undoubtedly there are many apparent objections to this bill, I am none too sure that the good features do not outweigh the bad, and I have every faith in you folks in Congress passing a bill that will measure up to the emergency when the test is applied, prove of the greatest benefit to the greatest number, and properly safeguard depositors, business interests in general, and the banking interests as well.

In this community, as in all this section perhaps, the discount privileges under this bill will be negative, and I might say under most any other bill they would amount to nothing, for we carry very little or no business paper, all being what we term "old-field accommodation paper." Absolutely none can be found that is better, and at the same time I may add none can be found that is slower. To give you an idea of the strength of this class of paper, offer as an illustration the fact that in the 24 years we have conducted this institution not one dollar has been lost by reason of a bad loan, and yet no one seems to have contemplated a bill whose features offer any encouragement to this class of paper, and I do not undertake to doubt the wisdom of same.

Respeaking your good offices in cooperating with the Democrats in trying to pass a safe and sane measure, and with kind, personal regards, I am,

Yours, very truly,

HENRY PRESTON, *Cashier.*

Mr. George W. Gillespie, of Tazewell, Va., president of the Tazewell National Bank, incloses a clipping from the Washington Post which he commends as important and of which he approves:

[From Washington Post of September 15.]

BANKERS ARE BEST CURRENCY CRITICS.

"The objections of the bankers to the Glass-Owen currency bill certainly are a more reliable index to the sentiment of the country than the opinions of so-called 'students of finance,'" remarked Henry J. Stafford, former State bank examiner of one of the Western States, at the Shoreham. "I do not believe anyone can question that the bankers are honest in their objections, and surely their opinions are based on practical experience. You might say that the banking interests, State and national, hold the 'purse strings of the country,' and unwise legislation might result disastrously. Any policy that would tend to control a portion of the paid-up capital, for affording a surrender of a percentage of their deposits in an arbitrary manner, as proposed in the Glass bill, and which would have the effect of reducing earning capacity and assets is bound to be looked upon with suspicion and met by resistance, and especially so where the benefits are more or less uncertain.

"This is particularly true of that class of national banks termed country banks, of which there are something over 7,000, and which have to contribute to the capital stock of the proposed regional reserve banks over $60,000,000 from their paid-up capital on the first assessment and be subject to call for a like amount in the event it is found that the full 20 per cent is required, and at the same time to surrender absolutely their control of more than $100,000,000 of individual and $32,000,000 Federal deposits, reducing their earning capacity in proportion and for a doubtful benefit. It is doubtful, because if advantage is not taken of the rediscount provisions—and certainly some banks will not while conditions remain normal—there would be no benefit, and in cases of stress, when aid from the reserve banks was necessary, the character of the paper of these country banks, while good, would be such as not to meet the approval and requirements of the Federal reserve board. Another objection is the basis of subscription to the capital stock of the reserve banks. The June statement of the comptroller shows that central reserve banks have a surplus of practically 90 per cent, other city reserve banks 70 per cent, and country banks but 60 per cent. It might be claimed, and with reason, by the country banks that a fair basis of stock subscription to the Federal reserve banks should be made on the basis of capital stock and surplus rather than on the basis of capital stock alone. The question of control of the Federal board, of the number of regional reserve banks, the sharing of profits, which indirectly constitutes a tax on somebody, presumably the borrower; placing of authority for note issues, reserve required, and other minor questions all have to be considered. I have failed to find any evidence of the Glass bill being received with any enthusiasm in any section of the country."

We inclose this view, and hope it will not be overlooked.

G. W. G.,
Tazewell National Bank.

Pure Wine Assassinated.

EXTENSION OF REMARKS
OF
HON. CHARLES F. CURRY,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, September 13, 1913.

Mr. CURRY. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD I include an article on sweet wines by Mr. Wiley.

The article is as follows:

PURE WINE "ASSASSINATED"—PUT TO DEATH BY SENATE AMENDMENT TO TARIFF BILL, SAYS WILEY—POSSIBLE FOR MANUFACTURERS TO ADULTERATE THE AMERICAN PRODUCT FREELY BY USING SUGAR AND WATER.

Pure wine in America has been assassinated by the United States Senate, in the opinion of Dr. Harvey W. Wiley. In a statement issued last night the former chief chemist of the Department of Agriculture said:

"From time to time as occasion presents, some one takes advantage of an ambush to shoot the food law full of holes. The last attempt is of such a particularly dangerous character as to warrant a notice and a protest. In the proceedings of the Senate, when the new tariff bill was under consideration, Senator STONE offered an amendment, which was adopted, to a certain proviso in the bill, which as amended reads as follows:

"'*Provided*, That the tax herein imposed shall not be held to apply to pure wine made exclusively from fresh grapes, berries, or other fruits to which has been added, before, during or after fermentation sugar, pure boiled or condensed grape must, or water, not exceeding in either case 20 per cent of the weight of such wine.'

"What a travesty on language to call such a concoction 'pure wine.' But if the Congress of the United States thus defines a pure wine it will

You can readily see from this how it places the State institutions in a much better position than the national banks.

The requirement of 20 per cent subscription to the stock of the Federal reserve banks, 10 per cent of which will have to be paid in cash and the remaining 10 per cent to be paid on call, is, in my opinion, excessive. It seems to me that the subscription should, in any event, be reduced to 10 per cent of the capital of each bank, 5 per cent of which should be paid in cash and a liability for the remaining 5 per cent. It seems unreasonable that each bank should be compelled to surrender 20 per cent of their capital to be managed by the Federal reserve banks and so little of the profit to be allotted to the stockholding banks. I believe also that the banks should have some voice in the selection of the members of the Federal reserve board, as it does not seem fair or just that the banks should be required to furnish all the capital without any representation upon the board and only a meager return for the use of their money.

Another objection that I have to the bill is the requirement to keep the reserve of national banks with the Federal reserve banks without interest. It would seem to me that if the Government is to receive nearly all the profit from the Federal reserve banks that the banks should have at least interest upon their balances; otherwise, the bank that had $50,000 deposit with the reserve bank would receive no more benefit than the bank that only kept $5,000.

I do not think the rediscount privileges would be of any considerable advantage to banks in this section directly. It is possible that it might make it easier for their city correspondents to get accommodations from Federal reserve banks and thereby be the better enabled to accommodate their country bank correspondents, but as for any direct accommodation to be extended to banks in this section from Federal reserve banks, I do not anticipate it.

Another part of the bill that seems to me very objectionable is the extraordinary powers granted to the Federal reserve board over the national banks. As I understand the bill, it gives them power to make any number of examinations at any expense, requiring the bank to pay same, and it really seems to me that it takes the management of the banks out of the control of their officers and directors and places the entire management in the hands of the Federal reserve board. It would seem that under the new law the banks might be placed in a position of having to consult the Federal reserve board before extending their customers a line of credit.

The provision of the bill providing that the Federal reserve banks receive from any member checks on any other member at par would practically wipe out the exchange account of all the banks in this section and would very materially curtail the income of every bank in this section, and I think this applies generally to country banks over the entire country.

There are several other points in the bill that I would like to call to your attention, but I am in a hurry to get this letter off on the mail, and I may write you again Monday.

Thanking you for writing me, I am,

Yours, very truly, J. W. BELL.

TAZEWELL NATIONAL BANK,
Tazewell, Va., September 13, 1913.

Hon. C. B. SLEMP, *Washington, D. C.*

DEAR MR. SLEMP: Yours of the 12th received. I have read the currency bill carefully, and have also, as far as I have been able, read what recognized leaders in the banking world have had to say about it. One can easily see, with the total membership of the Federal reserve board appointees of the President, how our money system might become the tool of politics and with grave results. I do not, however, feel competent to discuss this feature of the bill.

I do not see how the bill as a whole will help the small banks. We are required to subscribe to the capital stock of the reserve bank an amount equal to 20 per cent of our own capital, 10 per cent of which is to be paid in cash, with the remainder subject to call. In addition, we are required to keep 5 per cent of our deposits with the reserve bank without interest. In return for all this we get not over 5 per cent dividends on our stock in the reserve bank and a discount privilege of doubtful value. In our case, and with our average deposits during the last year as a basis, we would receive $300 for the use of $20,000, or 1½ per cent. Take any agricultural section, such as ours, and commercial paper in the true sense is not to be had. Our loans are made to farmers and merchants to be used in their business in a general way and with a tacit understanding that the money will not be paid back until the farmers and merchants are good and ready. In the larger centers time paper is executed by one person or firm to another for goods delivered, and with the understanding by both the party executing and the party receiving the note that it will be promptly paid at maturity. This is commercial paper in its true sense, and as far as I know there is none in our district, unless perhaps in Bristol. If we get this class of paper we must go on the market and buy it, which we would not likely do for the purpose of rediscounting it. The reserve banks, with the consent of the Federal reserve board, may make their definition of commercial paper broad enough to admit the character of paper we handle; but if this is not done, in addition to the reserve we will be required to carry with the reserve bank, we will have to carry with our city correspondents sufficient balances to induce them to come to our rescue in time of need. Are you not afraid that even if the definition of commercial paper is broad enough to cover the character of paper handled by the country banks that the red tape to be gone through with in connection with rediscounting and the amount of publicity connected will restrain the country banks from using the privilege? To make myself clear, if one of our customers should receive notice from the reserve bank that they held his note, which he thought we held, and that he must pay it at maturity, it would put him in a panic, and he would make panicky every neighbor in 5 miles.

It seems to me that the notes to be issued should be bank notes, but with strict Government supervision as to reserves and redemption. This, however, is too big a question for the little fellow.

The provision to par all items will hurt the country banks quite a good deal. I know banks in small places that could hardly exist but for their revenue from exchange charges.

Do not understand me as opposing currency legislation. Means should be provided for a mobilization of reserves and for an elastic currency. I do think, however, that a system that would give quick relief to the larger centers, and by them to the country banks, would be preferable to the bill proposed. It is the business of our city correspondents to know us, and if they can get relief in stringent times they will gladly pass it along.

With kindest regards,

Yours, respectfully, W. T. GILLESPIE.

P. S.—One other feature. The bill provides that while we may keep as much more than the 5 per cent of our deposits required with the reserve bank we must under no circumstances allow our balances with the reserve bank to fall below the 5 per cent. This means that a bank that has four times its capital in deposits will lose control of an amount equal to 40 per cent of its capital. Under present conditions we are required to keep a certain reserve with our agents in the cities, but the law contemplates that we can use these reserves in stringent times and have a reasonable time in which to build them up again.

W. T. G.

GATE CITY, VA., *September 16, 1913.*

Hon. C. B. SLEMP, M. C.,
Washington, D. C.

DEAR SIR: We have your letter addressed to us in regard to the currency bill now before Congress.

First, we desire to say that the banking system of this country needs some changes, but we do not think that the matter is being considered as it should be. This whole currency bill is being rushed upon the country without giving the country, and especially the bankers, time to weigh and consider the different features and conditions of this bill.

The bill has had so many different proposed modifications that it is right difficult to know just what is proposed in the bill.

We believe that this bill as first offered to the country, without the changes as offered to the bill by the bankers at the recent Chicago meeting of bankers, will not bring the relief that the country wants, and will be positively harmful to the banking interests, as a whole, all over the land.

We have gone carefully over the proposed changes as offered by the bankers at Chicago, and we heartily indorse them all.

We do not believe that banks should be compelled to take stock in the regional reserve bank, but make it optional to the bank, at least for one year after the bill goes into effect, or as to that make it optional with the bank whether it ever takes stock in the reserve bank.

We do not think that the Government should go into the banking business, asking to take over the profits over and above 6 per cent paid to the holding banks on the stock held by them. This, it seems to us, is giving to the Government the profits that would naturally belong to the banking interests of the whole country, as this profit to-day properly belongs to them.

We do not think that this reserve bank should have the exclusive right to issue Treasury notes or Government notes. This will cripple the prestige that now belongs to a national bank.

The discount privileges under this bill are no advantage at all to a country bank, or, as to that matter, to an ordinary bank, as they can now rediscount with the city correspondents any first-class paper to a reasonable amount, and they are not hindered by a legal limitation as to the amount so rediscounted. It leaves it entirely optional with the directors of the reserve bank, and this is too great a power to place in the hands of men over the banks of a given district.

One of the very greatest harms that can possibly be done to a country bank is to take away the right to charge exchange. All country banks make a good per cent of their earnings in this way. This will cause us to lose quite a lot in our yearly income.

Again, we ask that the Federal reserve board be controlled in their appointments—at least a majority—from the banking interests of the whole country and not left at the dictation of the President of the United States, as this will bring the banking interests under the control of politicians. And most certainly there will be an endless warfare if the banking system of the whole country is turned over to politics. Keep the banks of this country from politics, and in doing this we best serve the people and the bankers, who themselves have built up the marvelous system we have to-day.

We would urge that you use your influence to have this banking reform deferred until the December session of Congress, and by that time the whole matter will be more thoroughly settled by the bankers, who after all are the best men to consult in this whole reform.

If the same can not be deferred until then, we ask that you use your influence against the bill in its present form, unless the proposed changes as outlined by the recent bankers' meeting at Chicago be accepted and incorporated into this bill.

It will positively ruin the small banks of this country out of business, and they are as much entitled to do business as the large banks of the large cities. As the bill stands now it is legislation for the big bankers against the little banker. It is legislation for the few against the many. It is legislation for "special privileges of the few rich bankers against the many small bankers."

We both jointly ask that you try for these amendments, and if not granted vote against the bill.

We are,

Yours, very truly,

THE PEOPLE'S NATIONAL BANK, GATE CITY, VA.
By J. H. PETERS, *Cashier.*
THE FIRST NATIONAL BANK, GATE CITY, VA.

THE NATIONAL BANK OF NORTON,
Norton, Va., September 15, 1913.

Hon. C. B. SLEMP,
House of Representatives, Washington, D. C.

DEAR SIR: I have yours of the 12th instant, and replying beg to say that I have read the currency bill which you sent me, but have not studied it as closely as I would like. It looks like there are many good features in it, but, of course, good results from it will depend largely on how the whole matter is managed and carried out by the men who will be at the head of it.

It seems to me that 10 per cent ought to be the total amount of the capital stock required from country banks and allow the other 10 per cent optional, and in regard to the matter of exchange charges it seems to me that way the act reads that one reserve bank shall accept all items at par from other reserve banks, but if it means that we could not collect any exchange from any of the banks with which we do business, we would not want it by any means, as it would work a great hardship on us and would very seriously affect our profits.

We received this morning copy of the bill with alterations made by a committee of bankers held in Chicago August 22 and 23. I have not yet had time to examine their corrections to see what they suggest. I will try to examine it right away and let you know what I think about it. I suppose you have a copy of these corrections.

Yours, very truly, E. H. OULD.

BANK OF CLINCH VALLEY,
TAZEWELL, VA., *September 16, 1913.*

Hon. C. B. SLEMP, *Washington, D. C.*

MY DEAR SIR: Answering your favor of the 12th instant asking my views on the pending banking legislation, have to say that as a general proposition the whole question is entirely too big for me.

I will say, however, that I suppose I am committed to the report adopted by the representatives of the State bankers' associations and clearing-house associations at the conference held at Chicago, August 22 and 23, because at a recent meeting in Richmond, Va., I voted in the affirmative to the effect that the recommendations of the Chicago meeting furnished a reasonable ground for the modification of the pending currency bill. While undoubtedly there are many apparent objections to this bill, I am none too sure that the good features do not outweigh the bad, and I have every faith in you folks in Congress passing a bill that will measure up to the emergency when the test is applied, prove of the greatest benefit to the greatest number, and properly safeguard depositors, business interests in general, and the banking interests as well.

In this community, as in all this section perhaps, the discount privileges under this bill will be negative, and I might say under most any other bill they would amount to nothing, for we carry very little or no business paper, all being what we term "old-field accommodation paper." Absolutely none can be found that is better, and at the same time I may add none can be found that is slower. To give you an idea of the strength of this class of paper, offer as an illustration the fact that in the 24 years we have conducted this institution not one dollar has been lost by reason of a bad loan, and yet no one seems to have contemplated a bill whose features offer any encouragement to this class of paper, and I do not undertake to doubt the wisdom of same.

Bespeaking your good offices in cooperating with the Democrats in trying to pass a safe and sane measure, and with kind, personal regards, I am,

Yours, very truly, HENRY PRESTON, *Cashier.*

Mr. George W. Gillespie, of Tazewell, Va., president of the Tazewell National Bank, incloses a clipping from the Washington Post which he commends as important and of which he approves:

[From Washington Post of September 15.]

BANKERS ARE BEST CURRENCY CRITICS.

"The objections of the bankers to the Glass-Owen currency bill certainly are a more reliable index to the sentiment of the country than the opinions of so-called 'students of finance,'" remarked Henry J. Stafford, former State bank examiner of one of the Western States, at the Shoreham. "I do not believe anyone can question that the bankers are honest in their objections, and surely their opinions are based on practical experience. You might say that the banking interests, State and national, hold the 'purse strings of the country,' and unwise legislation might result disastrously. Any policy that would tend to control a portion of the paid-up capital, requiring a surrender of a percentage of their deposits in an arbitrary manner, as proposed in the Glass bill, and which would have the effect of reducing earning capacity and assets especially so, where the benefits are more or less uncertain.

"This is particularly true of that class of national banks termed country banks, of which there are something over 7,000, and which have to contribute to the capital stock of the proposed regional reserve banks over $60,000,000 from their paid-up capital on the first assessment and be subject to call for a like amount in the event it is found that the full 20 per cent required, and at the same time to surrender absolutely their control of more than $190,000,000 of individual and $32,000,000 Federal deposits, reducing their earning capacity in proportion and for a doubtful benefit. It is doubtful, because if advantage is not taken of the rediscount provisions—and certainly some banks will not while conditions remain normal—there would be no benefit, and in cases of stress, when aid from the reserve banks was necessary, the character of the paper of these country banks, while good, would be such as not to meet the approval and requirements of the Federal reserve board. Another objection is the basis of subscription to the capital stock of the reserve banks. The June statement of the comptroller shows that central reserve banks have a surplus of practically 90 per cent, other city reserve banks 70 per cent, and country banks but 60 per cent. It might be claimed, and with reason, by the country banks that a fair basis of stock subscription to the Federal reserve banks should be made on the basis of capital stock and surplus rather than on the basis of capital stock alone. The question of control of the Federal board, of the number of regional reserve banks, the sharing of profits, which indirectly constitutes a tax on somebody, presumably the borrower; placing of authority for note issues, reserve required, and other minor questions all have to be considered. I have failed to find any evidence of the Glass bill being received with any enthusiasm in any section of the country."

We inclose this view, and hope it will not be overlooked.

G. W. G.,
Tazewell National Bank.

Pure Wine Assassinated.

EXTENSION OF REMARKS
OF
HON. CHARLES F. CURRY,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, September 13, 1913.

Mr. CURRY. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD I include an article on sweet wines by Mr. Wiley.

The article is as follows:

PURE WINE "ASSASSINATED"—PUT TO DEATH BY SENATE AMENDMENT TO TARIFF BILL, SAYS WILEY—POSSIBLE FOR MANUFACTURERS TO ADULTERATE THE AMERICAN PRODUCT FREELY BY USING SUGAR AND WATER.

Pure wine in America has been assassinated by the United States Senate, in the opinion of Dr. Harvey W. Wiley. In a statement issued last night the former chief chemist of the Department of Agriculture said:

"From time to time as occasion presents, some one takes advantage of an ambush to shoot the food law full of holes. The last attempt is of such a particularly dangerous character as to warrant a notice and a protest. In the proceedings of the Senate, when the new tariff bill was under consideration, Senator STONE offered an amendment, which was adopted, to a certain proviso in the bill, which as amended reads as follows:

"'*Provided*, That the tax herein imposed shall not be held to apply to pure wine made exclusively from fresh grapes, berries, or other fruits to which has been added, before, during or after fermentation sugar, pure boiled or condensed grape must, or water, not exceeding in either case 20 per cent of the weight of such wine.'

"What a travesty on language to call such a concoction 'pure wine.' But if the Congress of the United States thus defines a pure wine it will

of necessity overrule any provision of the existing law relating to wine.

"There is only one kind of pure wine in the world and that is a wine made exclusively of the juice of sound, ripe grapes. All other wines by common consent must be prefixed with the name of the fruit from which they are made. Think for a moment what a riot of adulteration the above definition would permit. The total addition of 20 per cent of the weight of the wine may be made before, during, or after fermentation. No one can ascertain how much adulterating matter was used, because it is impossible to tell how much the weight of the finished wine will be. It is evident that it would of necessity be much larger than the original weight of the expressed grape juice. Hence, there would be no standard by means of which it would be possible to prevent an excessive addition of the adulterating ingredients.

"Let the people who are interested in the purity of products immediately protest against this outrageous attempt to debauch the wines of this country.

"A real, pure wine, made only of grape juice properly fermented and properly aged, has the poisonous properties of its alcohol modified until the wine may become actually wholesome taken in moderation. But here the Senate of the United States not only undertakes to define the worst possible adulterated article as pure, but under the guise of its authority seeks to poison the American consumer of wines with insidious and deleterious rum. In addition to this, by indirect and concealed means, it seeks to defraud the United States of the revenues which otherwise might be derived from the tax on brandy withdrawn for the fortification of sweet wines.

"It only remains now for the Senate to define whisky as an alcoholic beverage made of neutral spirits, burnt sugar, and synthetic flavors, and beer as an alcoholic beverage made of any old thing that will ferment and embittered with anything that is bitter, from capsicum to aloes, to complete the debasement of American beverages. Strange to say, this awful amendment was listened to and adopted without a single word of protest. The scene closes with the following laconic statement:

"The VICE PRESIDENT. The question is on concurring in the amendment of the committee as amended. The amendment as amended was concurred in."

"The assassination of pure wine was neatly and quickly accomplished."

Currency.

SPEECH

OF

HON. S. D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 16, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. FESS. Mr. Speaker, the most significant bit of research on monetary lines for a century was that done by the Monetary Commission, whose report is found in more than 20 volumes. The concrete recommendation of this commission is expressed in the central-bank proposition defeated in the last Congress. This proposed law was defeated before it was introduced by the label fastened upon it of money influence. It was approved by the banking interests generally, which in these days would be sufficient to defeat it. The Aldrich plan met with general disapproval, whether wise or otherwise. The present bill now before us purports to do what the Aldrich bill was designed by its sponsors to do, without giving dangerous power to the money power. Its author yesterday asserted it was written in the interest of the people and not the banks.

At this time it would be well and edifying to compare the two plans—the Aldrich with the Glass scheme. The Aldrich plan proposed a national reserve association—a central bank—with a capitalization of $200,000,000, with the banks of the country as stockholders; branches of this association, 15 in number, to be opened in that number of districts, these branches to be made up into local associations of not less than 10 banks to each association, with an aggregate capital of $5,000,000, under a board of directors. The present plan omits the association, but adopts the regional bank scheme of 12 Federal banks, made up of the capitalization of 20 per cent of that of the national banks in the region, with a minimum of $5,000,000, under a directorate. The chief difference here between the two schemes is in the control—both have a local directorate and both have a central authority. In the Aldrich plan the local directorate is chosen by the banking interests, while the general board is chosen in part by the banking interests and in part by the Government. The Glass proposal provides that the local directorate be chosen partly by the banking interests and partly by the Federal board, the latter the ruling element in the finality. The general board is chosen by the President. Membership in the Aldrich plan was optional with banks and trust companies, while it is compulsory in the Glass bill for national banks, but optional with all other banks.

The capitalization in the Aldrich plan was furnished the reserve association by the banks subscribing 20 per cent of their capital, half paid in and half on call, with a provision against hypothecating the stock. The same provision is made in the Glass bill.

The Aldrich plan made the life of the charter 50 years, while the Glass bill provides for a 20-year charter.

OFFICIARY.

The local association in the Aldrich plan was left to choose its directors—three-fifths by the banks, each bank to have one vote; two-fifths by members voting in accordance with shares in the association. The Glass plan provides a directorate of nine members, three representing bank interests, three representing industrial, commercial, and agricultural interests of the district, and three chosen by the Federal board.

The Aldrich plan proposed a directorate of the national association of 39 members—15 to represent the branches, 15 the agricultural and commercial interests, elected by each branch, and 9 by banks in the ratio of shares. In addition there are 7 ex officio members—2 deputy governors, Secretary of the Treasury, Secretary of Agriculture, Secretary of Commerce, and Comptroller of the Currency.

The present plan provides for a board of seven, all chosen by the President, with the consent of the Senate, to consist of the Secretary of the Treasury, Secretary of Agriculture, and Comptroller of the Currency, together with four others, one of whom is to be a practical banker and not more than two of whom can belong to the same political party.

FEDERAL ADVISORY COUNCIL—GLASS BILL.

There is to be created a Federal advisory council, which shall consist of as many members as there are Federal reserve banks. Every Federal reserve bank shall select annually one member of said council, to receive no compensation for services, but to be reimbursed for expenses. Meetings of said council to be held at Washington at least four times a year, or oftener, if called by Federal reserve board. Council may select its own officers and adopt its own method of procedure.

Federal reserve council to have power, first, to meet and confer directly with Federal reserve board on general business conditions; second, to make oral or written representations concerning actions taken, proposed, or contemplated by said board; third, to call for complete information and give advice concerning discount rates, rediscount business, note issues, and general affairs of the reserve banking system.

EARNINGS.

The Aldrich plan provided a flat dividend of 4 per cent cumulative. In addition provision was made for a contingent fund not to exceed $2,000,000 to care for losses. One-half of additional net earnings to create a surplus fund, which shall amount to 20 per cent of the capital. Of the remaining half one-fourth goes to the Government and one-fourth to shareholders, provided the shareholders do not get above 5 per cent. The excess above this is to go to the Government.

The present plan provides 5 per cent dividend over and above all expenses; then one-half to go to a surplus fund until such fund shall amount to 20 per cent of capital, the balance to be distributed 60 per cent to the Government and 40 per cent to banks.

POWERS OF CENTRAL CONTROLLING BOARD.

The Aldrich plan gave the central association the power to use a seal, to continue 50 years, to enter upon contracts to purchase real estate, to choose officers, to adopt rules and regulations, to exercise through directorate all necessary powers.

The present plan empowers the Federal board to examine work of the reserve banks and make weekly reports thereon, to control rediscounts of Federal banks, to suspend reserves, supervise issuance of Federal notes, to dictate central reserve cities, to remove officials of reserve banks, to write off doubtful assets of reserve banks, suspension by receivership of reserve banks, to perform all duties specified and implied in this act.

DEPOSITS.

The Aldrich plan proposed no compulsory deposits from member banks in the national association. The Government was to deposit its general funds with the reserve association, upon which the association paid no interest. The national association was to act as fiscal agent of the Government.

The present plan requires every national bank and member bank to establish with its district reserve bank a credit balance equal to 5 per cent of its total demand liabilities.

All money in the general fund of the National Treasury must be deposited with the Federal reserve banks, which shall act as

fiscal agent of the Government, no interest to be paid on any deposit except those of the United States, and then one-half of 1 per cent.

MARKET OPERATIONS.

The Aldrich plan allows the reserve association to invest in United States bonds, State bonds, or foreign bonds. It can deal in gold and make loans, may deal in bills of exchange payable in foreign countries, open agencies in foreign countries, and transfer funds of one depository bank to the credit of another through the branches of the association.

The present plan gives the reserve banks the power to deal in the open market in bankers' bills and bills of exchange, to deal in gold, and to make loans thereon.

EXHIBIT A.

RESERVES.

ALDRICH PLAN.	PRESENT PLAN.
On demand deposits, all national banks and subscribing banks to maintain the same percentage of reserve as now required by the national banking law, and in the same manner in respect of keeping part of their reserve in reserve cities. On time deposits, not payable within 30 days, no reserve is required; but within 30 days of payment the same reserve to be kept as in case of demand deposit. All demand liabilities, including deposits and circulating notes, of a national reserve association to be covered to the extent of 50 per cent by a reserve of gold or other lawful money. When such reserve falls below 50 per cent the national reserve association to pay a special tax upon the deficiency of reserve, namely, for each 2½ per cent or fraction thereof that reserve falls below 50 per cent a tax to be levied at rate of 1½ per cent per annum, and no additional notes to be issued so long as the amount of reserve is below 33⅓ per cent of outstanding notes.	Country banks shall have a reserve of 12 per cent, which, after a period of three years, shall be as follows: Five per cent in own vaults, 5 per cent in Federal reserve bank in its district, and remaining 5 per cent either with Federal reserve bank or in its own vaults, or both. Banks in reserve cities, after a period of three years, shall have reserve of 18 per cent, of which 9 per cent shall be in own vaults, 5 per cent with Federal reserve bank in its district, and 4 per cent either in its own vaults or in the reserve bank of its district. Banks in central reserve cities, after a period of 60 days, to have a reserve of 18 per cent, of which 9 per cent shall be in own vaults, 5 per cent in reserve bank, and 4 per cent in either, remainder as credit. Every Federal reserve bank shall always have in its vaults gold or lawful money equal to 33⅓ per cent of demand liabilities.

NOTES.

The Aldrich bill devotes attention first of all to taking over the bond-secured circulation of the national banks. Banks might maintain existing issues, but further issues or reissues were forbidden. The National Reserve Association offered for a period of one year to purchase the 2 per cent bonds, securing circulation at par and accrued interest and to take over the responsibility and redemption of the notes, issuing therefor its own notes when the same are presented for redemption.

The National Reserve Association may issue additional notes from time to time to meet business requirements, but whenever the total amount of notes issued by it (including the outstanding national-bank notes) shall exceed $900,000,000 the notes in excess of that amount which are not covered by an equal amount of lawful money or gold shall pay a certain tax of 1½ per cent per annum, and when notes exceed $1,200,000,000 the tax is 5 per cent on the excess not so covered.

Notes to be secured by legal reserve of gold or lawful money to the extent of 50 per cent (see provision under reserve against demand liabilities above) and by notes and bills arising out of commercial transactions, the same as are acceptable for rediscount, or obligations of the United States.

Notes to be redeemable in lawful money at head office or branches and are receivable at par for all taxes, payments, excises, and debts, except obligations of the United States specifically payable in gold.

National Reserve Association, on application and without charge, to forward its notes to any depository bank against its credit balance.

An issue of Federal reserve notes is authorized, amount not specified, to be issued at discretion of Federal reserve board, for purpose of making advances to Federal reserve banks, and for no other purpose. Said notes to be obligations of the United States and shall be receivable for all taxes, customs, and other public dues. They shall be redeemed in gold or lawful money at the Treasury at Washington or any Federal reserve bank.

Notes are issued upon application of Federal reserve banks to Federal reserve agents, accompanied by collateral to secure the notes, security to be the same as are acceptable for rediscount. Whenever a Federal reserve bank shall pay out notes it shall segregate in its own vaults and carry to special reserve account gold or lawful money equal to 33⅓ per cent of reserve notes, such reserve to be used for redemption of notes as presented; but banks must immediately make good the deficiency in the reserve, so that they shall always keep 33⅓ per cent of outstanding circulation.

Notes to bear on their face a distinctive letter and serial number, which shall be used for redemption against issuing banks. No other Federal reserve bank to issue such notes under penalty of tax of 10 per cent upon face value of notes. Notes presented for redemption at the Treasury shall be paid and returned to Federal reserve banks to which they were originally issued.

Federal reserve banks may be required to keep in the Treasury a sum in gold or lawful money equal to 5 per cent of outstanding notes for the purpose of redemption, but said redemption fund to be counted as part of reserve. Federal reserve board to have the right to grant in whole or in part, or to reject entirely, any application of Federal reserve bank for notes. Federal reserve banks whose application for notes have been accepted shall pay such rate of interest as may be established by Federal reserve board. Notes to be a first and paramount lien on all the assets of such bank.

Retirement of note liability is provided for by the deposit by Federal reserve banks of notes whether issued by itself or by other banks or in lawful money or gold with any Federal reserve agent or with the Treasurer of the United States. Substitution of collateral behind notes is allowed.

Clearing-house certificates, cashiers' checks used as circulating notes, etc., are forbidden.

DISCOUNT.

National reserve association, through a branch, may rediscount, upon the indorsement of a member, notes and bills of exchange arising out of commercial transactions having a maturity of not more than 28 days and made at least 30 days prior to date of rediscount.

This discount privilege not to extend to include notes and bills issued for carrying stocks, bonds, etc. Amount rediscounted shall not exceed capital of applying bank, and the paper bearing name of one person or firm not to exceed the 10 per cent of capital of applying bank.

But national reserve association through its branches may discount paper maturing up to four months; in such case paper must be guaranteed by the local association.

Whenever in the opinion of the national reserve association public interest so requires, opinion to be concurred in by Secretary of Treasury, the national reserve association may discount direct the obligation of a member bank indorsed by the local association, secured by satisfactory pledge or securities, amounts so loaned not to exceed three-fourths the value of the securities.

National reserve association may purchase acceptances of banks or acceptors of unquestioned financial responsibility, such paper not to exceed 90 days, and bearing indorsement of another member bank besides the acceptor.

DISCOUNT RATES.

National Reserve Association to have authority to fix rates of discount from time to time, which, when so fixed, shall be published and shall be uniform throughout the United States.

Federal reserve banks to establish each week, or oftener, subject to review and determination of Federal reserve board, minimum rate of discount to be charged by each bank on each class of paper, which is intended to accommodate the commerce of the country.

ACCEPTANCES.

National banks authorized to accept drafts drawn upon them, having not more than four months to run, arising out of commercial transactions and limited to one-half of capital and surplus of accepting bank.

Any member bank may accept draft drawn upon it having not more than six months to run, representing importation or exportation of goods, amount of acceptances not to aggregate more than one-half of its capital.

REFUNDING.

Upon application the Secretary of the Treasury shall exchange 2 per cent United States bonds, now deposited for circulation, for 3 per cent bonds, payable after 20 years from date of issue with circulation privilege. No national bank shall present in any one year bonds for exchange to an amount exceeding 5 per cent of present circulation, but should any national bank fail in any one year to so exchange its full quota of 2 per cent bonds, the Secretary may permit any other national bank or banks to exchange bonds in excess of 5 per cent to an amount equal to the deficiency. After 20 years, every holder of United States 2 per cent bonds then outstanding shall receive payment at par and accrued interest. After 20 years national-bank notes still remaining outstanding shall be recalled and redeemed by issuing banks.

Meanwhile every national bank may continue to apply for and receive circulating notes from the comptroller, based upon 2 per cent bonds.

Upon application of the National Reserve Association the Secretary of the Treasury to exchange 2 per cent bonds purchased for subscribing banks for 3 per cent bonds payable after 50 years, and the National Reserve Association to hold the 3 per cent bonds so issued during the period of its incorporated existence; except that after five years the Secretary of the Treasury may permit the National Reserve Association to sell not more than $50,000,000 of such bonds annually and the United States reserves the right at any time to pay any such bonds before maturity or to purchase any of them at par for the trustees of the postal savings, or otherwise.

The National Reserve Association to pay to the Government a special franchise tax of 1½ per cent annually upon the bonds transferred to it by the subscribing bank.

FOREIGN AGENCIES.

Banking corporations may be formed to conduct business in foreign countries and to act when required as fiscal agents of the United States by no less than five persons. Such corporations to have a capital of no less than $2,000,000. It shall not receive deposits in the United States, but may buy and sell exchange here relating to foreign business. Majority of capital stock of such corporations to be owned by citizens of the United States or corporations chartered here. Comptroller of the Currency may take charge of such corporation when it becomes insolvent. Any stockholding bank of the national reserve association may subscribe to stock of this corporation, but not exceeding 10 per cent of capital of the subscribing bank.

Any national bank having a capital of $1,000,000 may apply to the Federal reserve board to establish branches in foreign countries and to act, if required to do so, as fiscal agents of the United States. The Federal reserve board may reject application if, in its judgment, capital set aside for conduct of this foreign business is inadequate Accounts of business of foreign branches to be kept independently.

LOANS ON REAL ESTATE, ETC.

National banks may loan not more than 30 per cent of their time deposits upon improved or unincumbered real estate, loans not to exceed 50 per cent of actual value of property, which property to be situated in territory tributary to the bank. This privilege not to extend to banks acting as reserve agents.

National banks situated outside of reserve cities may make loans secured by improved and unincumbered farm lands, the loan not to extend for more than nine months, nor to exceed 50 per cent of actual value of property, and such property to be situated within the bank's Federal reserve district. Bank may make such loans to an amount equal to 25 per cent of its capital and surplus.

COLLECTIONS AND TRANSFERS.

Local association may, by vote of three-fourths of its members, and with the approval of a national reserve association, assume the functions of a clearing house. The National Reserve Association may require any local association to perform such services.

The national reserve association or its branches, upon request, to transfer deposit balance of any member bank to the credit of any other depository bank. Deposit balances may be transferred, likewise, between branches by mail, telegraph, or otherwise, at rates to be fixed by the branch at which transaction originates.

Federal reserve bank to receive on deposit, at par and without charge for exchange or collection, checks drawn upon any of its depositors or by any of its depositors upon depositors in any other Federal reserve bank. Federal reserve board to make regulations governing the transfer of funds at par among Federal reserve banks, and may require each Federal reserve bank to act as clearing house for its shareholding bank.

What does this comparison show? The bill now before us is in many features a copy of the Aldrich plan. The chief difference is in the control of the system. The Aldrich plan was weak in this feature. It gave not only the operation of the banking business to the banks, but it also kept most of the control of the business in the hands of private interests. Here is the real ground of danger of this central plan. The banking business, although owned by private individuals and operated in the main for profit, can not be considered wholly from that standpoint. It has a public value. The banking business now is a public institution in a sense. It at least affects the public so much that it can no longer be run without regard to the public welfare as well as the owners' interests. In this sense the public is greatly concerned about its management.

As a privately owned corporation, its operation and administration should be within the hands of its owners, but as a public agency its regulation should be under the control of the public. The men who undertake the risk, bear the burdens of the business, responsible for its losses as well as its profits, should have the management, initiation, operation, and administration. The public, which is the larger factor that must be concerned for the benefit of the many, should have the veto power or final control in all features directly affecting the public.

The Aldrich plan failed to reach this consummation. It invested operation in the banker's power without permitting sufficient regulation by the public. This gave undue influence and power to the money classes, which may be serious.

What does the Glass bill do? Its proponents claim it gives control to the Government without placing the Government in the banking business. I can not agree with this position. It virtually takes the banking business out of the hands of the owners and places it in the grasp of the Government. To be specific, it makes the Government the operative agent, the administrative factor, instead of limiting it to the regulatory or controlling function.

As the Aldrich bill gave too much power to the banks the Glass bill gives too much power to the Government or too little power to the owners of the property to be administered.

The advocates of this bill are not a unit upon its meaning. In the early stages of its interests we could hear on all sides, as we can here and there yet, the statement that we propose to have a scheme where the Government would operate the banking business of this country. But more recently this innovation is denied. Its author Wednesday asserted specifically that the Government is not in the banking business. I listened with great interest, as well as admiration, to his scholarly presentation of the bill and noted his emphasis on this point—how he disclaimed any purpose of placing the operation of the banking business into politics. However, his chief emphasis was not that the Government was not the operative agent, but that, quoting the occupant of the White House, no man would prostitute this high office by choosing the Federal board upon a purely partisan basis. He used the strong language that such policy would discredit him while he lived and dishonor his memory after he is dead.

This utterance, assuring us against any danger from this score, is in strange contrast to the copious utterances of Andrew Jackson from 1829, when he opened up his fight, to 1836, when he had completely paralyzed the institution of a United States bank by forcing its liquidation. But more of that later.

The first serious defect in this bill is in its Government operation rather than control. All will agree the Government should control the business, just as the Government, through the Interstate Commerce Commission, controls the railroad business. But we do not believe the Government should operate the banking business, as we do not believe it should operate the railroad business.

No one questions that the national reserve association controlled the banking business under the Aldrich plan. A comparison of its powers with those of the Federal reserve board under this plan will be illuminating and sufficient to convince us.

The Aldrich plan provided a governing board of 45; this plan, a governing board of 7, with a directorate of 9 members in each of the 12 districts, each directorate subject to the Federal board.

The Aldrich plan limited its charter to 50 years, this one to 20. The Aldrich plan gave the power of election of officers of banks, this plan the power to remove them, which is the same in final effect.

The Aldrich plan gave the power to make rules and regulations, to make contracts, to sue and to be sued, and so forth. This plan gives the same power. The one difference is that the Aldrich plan operates directly, while this one operates both directly and through separate directorates, over which the Federal reserve board has control. According to the committee's statement, which has accompanied this bill, there are over 40 items of power given to the Federal reserve board, enumerated on pages 46 and 47.

After specifying items of power of this board the final scope is expressed in line 14, page 25, in the following plenary utterance: "To perform the duties, functions, or services specified or implied in this act." Pray, what item of operation is not covered by this power of implication? This bill takes $105,000,000 from its owners at one swoop at the penalty of death to the business, and administers upon that sum by a political board which is neither owner of the property nor necessarily possessor of the business acumen for such enterprise.

It will also claim $400,000,000 reserves belonging to others, for which it pays nothing.

This board of seven, five of whom will be appointed by the same man—and of course will be a partisan board—will be able, if the plan works, to have control of $25,000,000,000 worth of bank resources, two-fifths of all the banking resources of the world.

This provision is faulty, first, because it extends governmental control to governmental operation; secondly, it will be partisan. If, according to Speaker CLARK, it is preposterous to think we can create a nonpartisan tariff board, because, as he stated on this floor, men will not repress their partisan views—and that statement was backed by the majority party—if men can not be found who would keep out their partisan bias in the mere matter of gathering facts upon which legislation is to be based, pray, what must we think of a board whose function is to operate or even control the billions of banking resources of this Nation? If facts in the possession of a board will make it partisan, what will the purse of the Nation in the hands of an appointive board be?

This provision is faulty because it directly provides for partisan activity in the currency question. Of all the questions that ought to be exempt from party bias, it is the money question—the banking question. The chief purpose of a banking plan is the creation of a system of credit and the maintenance of the same. If 95 per cent of the business of the country is done on a credit basis, the better the system. No system of credit that is made the football of politics can be safe. Credit is confidence. Lack of confidence is due to uncertainty. Partisan control is uncertain. No system of credit can stand uncertainty. No matter how good the system of credit is, it can not be maintained under a policy of uncertainty due to the whims of party leaders and the contingencies of political campaigns.

The advisory council of bankers is an improvement upon the original plan, but it does not go to the core of the trouble, because it is given nothing but recommendatory power, and in due time will probably die of atrophy.

The banking business should be operated, I repeat, by a directorate chosen by the persons whose property is involved, subject to the regulation and control of a Federal board of similar character to the Interstate Commerce Commission. This supervisory board should not have power to initiate, operate, or administer, but should have a veto power of the operative directorate—indeed, a control—of such character that the banking business should be operated by the representatives of the banks under the control of the Government. This is justice for the banker and safety to the public. It seems to me consonant with our past experience.

The first bank of a Federal character was in 1791, with a capital of $10,000,000 and a tenure of 20 years. Jefferson opposed it, giving two reasons against it, namely, he claimed it was unconstitutional and unnecessary.

In 1811, when the charter expired, Jeffersonian Democracy was in power. While refusal to recharter was consistent with Democracy, the exigencies of the time forced Madison to favor the second United States Bank, which was chartered in 1816, with a capitalization of $35,000,000, to continue 20 years. The Government held a portion of the stock and had a voice in its management.

Jackson began his fight on the bank in his first message in 1829. He continued his attack in the most ultra language, in each of his annual messages throughout his two terms calling attention to what he considered great dangers. The fuller statement of his opposition was made in his veto message July 10, 1832.

His determination to repudiate the bank did not stop with his veto of the rechartering bill, but extended to a specific effort to hopelessly cripple the institution by the removal of the public funds from the Bank of the United States to the State banks. On the 18th of September, 1833, the President read to the Cabinet his long message on the question of removal, in which he gave his views of the bank.

On December 3, 1833, in his annual message, he used this language:

It being thus established by unquestionable proof that the Bank of the United States was converted into a permanent electioneering engine, it appeared to me that the path of duty which the executive department ought to pursue was not doubtful. The question is distinctly presented whether the people of the United States are to govern through representatives chosen by their unbiased suffrages or whether the money and power of a great corporation are to be secretly exerted to influence the judgment and control of their decisions. It must now be determined whether the bank is to have its candidates for all offices in the country, from the highest to the lowest, or whether candidates on both sides of political questions shall be brought forward as heretofore and supported by the usual means. (Annual message, Vol. II, p. 1249.)

On December 1, 1834, in his annual message he employed the following language:

The bank had attempted to control elections. The use of its corporate fund and power in that attempt was fully disclosed. It made vigorous efforts through interference of elections to control public opinion and force the Government to yield to its demand. This, with its corruption of the press, its violation of its charter, its exclusion of the Government directors from its proceedings, its neglect of duty, and arrogant pretensions, made it, in the opinion of the President, incompatible with public interest and the safety of our institutions that it should be any longer the fiscal agent of the Treasury. The immense capital and peculiar privileges bestowed upon it enabled it to exercise despotic sway over the other banks in every part of the country. From its superior strength it could seriously injure, if not destroy, the business of any one of them which might incur its resentment. It openly claimed for itself the power of regulating the currency throughout the United States. In other words, it possessed the power to make money plentiful or scarce at its pleasure at any time or at any place by controlling the issues of other banks and permitting an expansion or compelling a general contraction of the circulating medium according to its will. * * * The result of the ill-advised legislation which established this great monopoly was to concentrate the whole money power of the Union, with its boundless means of corruption and its numerous dependents, under the direction and command of one acknowledged head, thus organizing this particular interest as one body and securing for it unity and concert of action throughout the United States and enabling it to bring forward on any occasion its entire and undivided strength to support or defeat any measure of the Government. In the hands of this formidable power was placed unlimited power to regulate value of property and the fruits of labor in every quarter of the Union and to bring prosperity or ruin upon any city or section of the country.

In his farewell address, delivered March 4, 1837, he used this language:

The power which the money interests can exercise when concentrated under a single head and with our present system of currency was sufficiently demonstrated in the struggle made by the Bank of the United States.

These are a few of the official utterances which indicate President Jackson's opposition to the bank. However, his spokesman on the floor of the Senate, Col. Thomas H. Benton, of Missouri, voiced the President's opposition in detail in a long speech in February, 1831. Benton denounced the bank as an institution too powerful to be tolerated in our Government. He declared it to be the "power of the purse which was superior to that of the sword." He said it possessed the power of $35,000,000 capitalization, and in addition the right to possess $55,000,000 of profit, making the grand total of $90,000,000. What would he have said of the present proposition in 1913 that proposes a scheme to allow the control of banking resources of a sum greater than that of the banks of England, France, and Germany combined?

The second count in his indictment is the issuance of notes dependent upon the will of Congress. Against this he exclaimed: "This opens the door to boundless emissions, for what can be more unbounded than the will and pleasures of successive Congresses?"

He then proceeded in an academic manner to specifically point out the dangers one by one. First, the keeping of the public moneys, which amounted to $26,000,000. What would he have said of a proposition to have the custody of a billion dollars? Second, its notes are receivable for all Government obligations. Compare this with the Glass bill. Third, the bank has the name of the United States and the Government as a partner. Fourth, it can discriminate against other notes of other banks, which thus makes it the uncontrolled monarch of the money system of the country. Compare this provision with the proposed bill. He then raises the question, To whom is this power granted? and declares it to be in the hands of a small board.

Then he takes up the discussion in extenso. His first fundamental charge is that the bank tends to subjugate the Government. Second, it tends to collusions between the Government and the banks in the terms of the loans. Third, it tends to create public debt by facilitating public loans and substituting unlimited supplies of paper for limited supplies of coin. Fourth, it tends to beget and prolong unnecessary wars by furnishing the means of carrying them on without recurrences to the people. Fifth, it tends to make the rich richer and the poor poorer, to multiply nabobs and paupers, and to deepen the gulf which separates Dives from Lazarus. Sixth, it tends to make and to break fortunes by the flux and reflux of paper.

His third fundamental objection to the bank was that it created a monopoly to be enjoyed by the banking classes—first, by carrying on the trade of banking upon the revenue and credit of the Government; second, by paying the revenues of the Union in their own notes; third, by holding the moneys of the Government without compensation for the undrawn balances; fourth, by discrediting the notes of other banks by excluding them from the collection of Federal revenue; fifth, by the right to hold real estate and to receive rent; sixth, by the right to deal in bills of exchange; seventh, by the right to establish branches in the States without their consent.

These strictures made upon the United States Bank by the Democratic leaders of the Jackson era read with peculiar interest in the light of the proposed Wilson currency plan. If the control of over $35,000,000 capitalization is dangerous, what about the control of $600,000,000, as proposed by this bill? If note issues limited only by the will of Congress are so unwise, what about an issue limited by a political board of seven appointees of the President? If the custody of $26,000,000 of the Nation's money is to be feared, what about the keeping of more than a billion dollars in the hands of a political board? If bank-note issues receivable in payment of debts were to be so bitterly condemned in 1831, why not now? If notes in that period should not bear the name of the Government, why should they under this present administration? If, for the sake of uniformity, it was wrong to allow the United States Bank the control of note issue, why is it right to allow a political board to do so now? If it was unpatriotic to allow a joint board made up of representatives of the Government and the stockholders of the bank to control the bank in Jackson's time, why is it right now to allow a small board of the President's appointees to exercise control in the interest of party, especially when it is recalled that Mr. GLASS, the author, in answer to the protest of the members of his committee against making the currency question a party measure, declared that this was a Government of parties?

An enumeration of the long list of counts against the United States Bank will enable any fair-minded man to note the striking inconsistency of this Democratic measure in the light of Democratic history. If it is answered that the old United

States Bank was a private institution, jointly controlled by the Government and individuals, and therefore objections to it would not hold against the present plan, it is sufficient to quote President Jackson in his famous message of September 18, 1833, covering this point:

To give the President the control over the currency and the power over individuals now possessed by the Bank of the United States, even with the material difference that he is responsible to the people, would be as objectionable and as dangerous as to leave it where it is. Neither one or the other is necessary and ought not to be resorted to.

If concentrated money power is dangerous, it must arise out of the possible corrupting influences to which it may be put. Here is a proposal which makes it possible to concentrate the banking resources of $25,000,000,000 within the control of seven men to be chosen by a political head, and at a time when the party in power has proclaimed against commission government on the declaration that there is no such thing as a nonpartisan commission. The power of this board of seven men as declared by the terms of the act is plenary. First, it controls each of the boards of directors of the 12 Federal reserve banks.

It exercises control of the books of each of the Federal reserve banks.

It controls the rediscounting of these banks.

It controls the power of suspension.

It controls the issue and retirement of the Treasury notes.

It has the power to classify the banks and reserve banks, country banks, and so forth.

It controls the officials of the reserve bank.

It controls the assets of the reserve bank.

It can suspend operations and appoint a receiver of Federal reserve banks.

It performs duties, functions, and services specified and implied in this act.

Another very striking Democratic change from the Jackson régime of banking refers to the repudiation of the Jackson Independent Treasury idea by providing for the Hamiltonian theory of Federal instead of State control, as Jackson and Jefferson demanded.

When Jackson wished to cripple the central power he ordered funds transferred from the single United States bank and deposited in 80 State banks. This was accomplished after he had transferred his first Secretary of the Treasury—Mr. McLane—to another post to make room for Mr. Duane to do his bidding. But when Duane hesitated on constitutional scruples he was removed to make way for Roger B. Taney, who did the bidding of his chief. This was the occasion of one of the most dramatic scenes ever witnessed in the Senate, when Calhoun joined Webster and Clay and secured a vote of censure against the President after a spectacular fight. Not until 1837 was this resolution expunged, and then only after an equally brilliant maneuver under the leadership of Col. Benton. Now this system of Independent Treasury must be abandoned by order of the latest Jackson devotee.

These utterances read with peculiar significance in the light of the address of the distinguished chairman Wednesday.

What a contrast is read in Jackson's attitude to Federal control and operation of the banking business to the present occupant of the White House. Through Jackson's influence Van Buren's administration established the Independent Treasury system. Although it was repealed soon after it was reenacted in 1846 by the Democrats under Polk, it has continued an uninterrupted career until this present bill, which proposes to reverse this famous Democratic principle also by the total destruction of the Independent Treasury system.

NOTE ISSUE.

This bill attempts to renew the dangerous dogma that the Government can make money value by its decree. "Fiat" has taken such deep hold upon a portion of our people that it springs up at every passing chance, and here in Congress as well as out on the hustings. We probably will never be free of that class of thinkers which wrote the history of the South Sea bubble; that furnished the following of John Law; that put upon the statute books of France the assignats and mandats; that clamored for more Continental money, "not worth a continental"; that believed a confederacy could by simple decree give purchasing power to a currency stamped by the Confederate Government; that assured the world that even in time of storm and stress of civil war, with a million men at arms, at a daily cost of at least $3,000,000, all that was needed to prosecute such a war was for the Government to use its prerogative, place its stamp upon a piece of paper, thereby decreeing it money, and it would be money and perform all the functions of money need. In other words, we are assured that the fiat of the Government is the essential thing. This financial school of coin denies the intrinsic value of a standard, ignores the need for specie, and pins its faith upon Government decree.

It broke out in this country in 1873, when we were assured that the stringency of the money market could be and should be relieved by the issuance of greenbacks. It swept the country in 1878, when several States were carried into the vortex of greenbackism. It made its most spectacular campaign in 1896, when we were hurled into a veritable babel of tongues denouncing the advocates of a single standard as against an impossible double standard of value, and when every man who stood against the dogma of the Government's attempting to make by simple decree 50 cents pass current for a dollar was stigmatized as a plutocrat abandoning the money of the fathers. Who here has forgotten the mighty enthusiasm of those days? Where is the man who can not recall the superb eloquence of men still in public life, with influence in the administration, who from the stump, the press, and the "First Battle" aroused a great portion of our citizenship to pursue this phantom of fiatism less than a score of years ago?

You say that is no longer an issue. Then, I answer, the dogma that money is determined by the Government's stamp will always find a strong following in such a Government as ours. The issue dead! It will continue to offer us a panacea for national as well as political ills. Yesterday, when the gentleman from California [Mr. HAYES] pointed out this feature in the bill, the gentleman from Indiana [Mr. KORBLY] asked, "Are they not the notes of the bank, secured by the Government?" This is naming the baby and then attempting to disown it. The friends of the bill are making strenuous efforts to reconcile this populistic feature with the fact, widely recognized, of its abandonment by all the Governments of the civilized world by saying the issue is made by the banks, secured by the collaterals, and made a first and paramount lien on the assets of the bank.

If they believe this, why stipulate in the bill the specific requirement that these notes shall be obligations of the Government? Why stipulate their redemption at the Treasury of the United States, or reserve bank, which by this bill becomes the fiscal agent of the Treasury? The two specific items of this contract between the holder and the maker are placed with the Government.

There is no other explanation. That provision went into this bill as the price of the support of the element in this country who believe the meal ticket can be substituted for the meal, that the Government can stamp a chip a biscuit and it will be a biscuit. When this bill came to the public first, Mr. Bryan sent out his interview, printed throughout the country, indorsing this bill, and especially emphasizing the two points which marked, as he stated, the triumph of the people, one the political and the other the recognition of the function of the Government to issue its own notes. Here are his words:

The bill involves three fundamental principles:
First. The notes issued must be issued by the Government and not by the banks.
Second. The issue must be controlled by public servants and not by private institutions or individuals.
Third. The emergency currency issued must be issued through State banks as well as through national banks.

The bill as prepared observes these three requirements: The right of the Government to issue money is not surrendered to the banks; the control over the money so issued is not relinquished by the Government; and national banks are not given a monopoly of the benefits flowing from the issue of these emergency notes. That provision is in this bill as the price openly paid for the support of the fiat crowd, not an inconsiderable number among our people. Herein lies the seriousness of this provision. If we stand upon the theory that the Government can make money, we invite the demand that the Government should do it. Whenever a considerable portion of the voters are convinced either by reason or the lack of it that the Government's function is to issue notes, that portion will seek to be heard as often as the opportunity offers. Such a theory places the money question into politics, the last place it should be found. It makes it possible to go before the country with it as an issue as in 1832, 1878, 1896, and again probably in 1916, after this measure becomes a law.

Hard times are always measured by one's lack of money. Relief from hard times comes by an increase of money. So runs the campaign. If the Government can thus relieve us, we will demand that it do it.

Who has not heard the nostrum doctor out on the hustings haranguing the people for their ignorance and vicious indifference for not compelling the Government to make sufficient money to place us all on "Easy Street"? We have all heard the silver-voiced orators and felt the glow of their zeal, and at

times become stirred to anger for lack of governmental action as they plead: "Fellow citizens, you are in great distress. The smoke of your furnaces no longer ascends the sky, the clang of your mills and workshops is no longer heard. Your workers in metals and miners in coal are out of employment. Stagnation of mills, depression of business, and public distress is seen on every hand. What has caused these disasters? Manifestly, a lack of money. Is there any man among you who has money enough? If there be, let him stand forth and declare it. Is there one who does not need more money to carry on his business? [Cries of 'No!' 'No!'] The bankers have brought you to this by contracting the volume of currency, by destroying the people's money, your money. We come to save you from this ruin. We insist that you shall have more money, not less. We are resolved to make and keep the volume of currency equal to the wants of all," and so forth.

This is the note we must expect when we propose to make the National Treasury a bank of issue and to place, not in the control of Congress, but even the operation of the banking industry, in a political board of seven men, five of whom must be appointed by the same President, the vast money power of this Nation to be administered according to the whims or the caprice that the necessities of a political party may decree.

Federalist as Hamilton was, the very antonym of Jefferson in policy of finance, he held that such power was too great to be centralized in the hands of one body.

The Government should never issue notes save in the last extremity. The greenback issue was such extremity.

In times of war, should such disaster befall, the Government's obligation to such notes would be a serious burden, and then this unnecessary blunder would be too late for correction.

REQUIREMENT OF GOLD.

There are two very significant items in this provision for note issue that demand careful scrutiny—the redemption feature and the legal-tender feature. The notes are to be redeemed in gold or lawful money on demand. This pretends to preserve the gold standard, but in reality it may mean its abandonment. The two terms, "gold" and "lawful money," are fraught with the greatest significance. It raises again the question fought out in 1896. All the agitation of that fateful campaign centered in the two words, "in coin," written in the obligation of the Treasury note of 1890. This note was identical in obligation with the greenback, except it added these two words. The obligation ran:

The United States will pay the bearer ——— dollars in coin.

The entire silver issue of 1896 arose out of the policy of the Government—whether the Treasury could safely refuse to redeem the note in gold and compel the holder to accept silver. There was no legal question. The Government clearly had this right. The only question was one of policy. Our Democratic friends, under the leadership of the present distinguished Secretary of State, declared the Government should use its option. No matter whether the holder demanded gold as against silver, the final decision must be left to the Government. The Republicans declared such a discrimination against silver which would destroy the parity between the two metals. Around this item raged the war.

The Republican Party won in the contest, and in 1900 the gold standard was written in the statutes. The obligation in the notes of the present bill provides redemption in lawful money. What is lawful money? It is gold, silver dollars, and greenbacks. According to the Democratic theory of 1896 the Government should exercise its option even against the will of the holder of the note to redeem these notes in silver or greenbacks in case it did not have a supply of gold. In this connection what about the future supply of the Government's gold, for if the Government should decide to maintain the gold standard, the redemption feature of these notes will demand an increase of gold for this purpose. But instead of looking to an increase of gold the legal-tender feature of the notes insures a decrease in the supply, since it makes the notes receivable in payment of customs duties. Heretofore the Government has expressly refused to accept either the greenbacks or national-bank notes in payment of such customs. We have uniformly looked to this source for our needed gold to supply the necessary redemption functions. But here for the first time in our history, so far as I know, we have made this dangerous innovation. It is at least a pertinent question to ask, Does this proposed substitute of currency as tender for customs, which in that degree depletes the gold income, look to an abandonment of this standard on the basis that it will not be needed for redemption? There is no question about the law or legal right in the premises. What is the purpose of the administration? Suppose redemption of these notes is demanded in gold, will the present administration use its option to refuse and offer in its stead other lawful money—that is, silver or greenbacks? It probably will depend upon the supply of gold. Suppose this doubt seizes the holder of the greenbacks, the silver certificates, or gold certificates, and so forth, how long after notes of this character are issued will confidence repose in the minds of our business men?

The friends of this measure must not overlook the oft-repeated utterance of this majority that under our "new freedom" we shall have a competitive tariff by which we will import millions of dollars worth of goods from abroad.

It is to be seen whether this bill in the interest of the foreign producer as against our own will turn the balance of trade against us. If it does, and that may happen, then our gold must go abroad to settle these balances.

The burdens placed upon gold, if we maintain it as a standard, and the two laws, containing provisions of depleting the fund in this country, are ominous.

Under the law we have $346,681,000 greenbacks to be redeemed in gold with a reserve to care for it of $100,000,000. We also by law hold $50,000,000 gold to care for outstanding Treasury notes. We have $1,000,000,000 gold certificates, which, of course, require that amount of gold held in Treasury, not to be used while the certificates are out. We have $700,000,000 of silver dollars and silver certificates together, which since 1900 depend upon gold. Now, add to this sum the redemption needed for the new notes, if you intend to preserve the gold standard. Then answer me, What prospect do you have to care for all this when you are endangering an outflow to Europe on the one hand and providing a substitute as against an income from abroad?

In connection with this fiat element in this bill the charge of Secretary McAdoo that the banks of New York City were conspiring to depress the price of the 2 per cent bonds to arouse the opposition of the country banks against the bill should be carefully noted, because of two utterances. Waving aside the question of the grounds for his statement, his utterance that the 2 per cent bonds are worth their par value is significant. It reflects the one serious item in this sensitive subject. It is another straw which points to the fiat element in this administration. McAdoo gives the public to understand that the 2 per cent bonds are worth 100 cents on the dollar, whether they are or not, because the Government says so, or an official of the Treasury says so. He ignores the ruling item in the regulation of price, that a bond, like any other commodity, is worth what it commands in the open market and not what an arbitrary decree of the Government may publish or an official of the Treasury might announce.

If the public are inclined to doubt the danger of political influence under the proposed currency bill, it would be well to know the full significance of the Secretary's meaning when he expressed the hope that the depression would not be carried to the point where the department would have to take action. What action does an administration contemplate in preventing the price of a commodity declining? Does it mean that prices are determined by governmental decree rather than supply and demand? If the administration is to maintain a price of securities, surely a slump in the market will at once be ground for an assault upon the administration. Here is an object lesson, suggestive at least, of what might be expected by an administration in power, headed by a less honorable and patriotic man than the distinguished occupant of the White House, when he might decide to use the power vested in him by the Glass bill to continue in power.

The Secretary's amusement over the statement that throwing less than $14,000,000 worth of bonds on the market would affect the price of the $700,000,000 is not in accord with the oft-repeated statement that prices are determined by the demands for the surplus. Most certainly if an offer of $14,000,000 of bonds would not be taken above a certain price, $700,000,000 would not rule beyond that price.

RESERVES.

I am in sympathy with the purpose of the authors of this bill to make better uses of the bank reserves. It is not true that our present system is the cause of panics, but it is true that it is not designed to prevent them nor to relieve the stress when they come. On the other hand, our system of reserves which are to protect the depositors against such dangers, really enhance the distress by causing the banks to hoard the funds.

But the plan of this bill to assist in this purpose will not do what it pretends. It pretends to prevent money from going to the centers to be used in speculation. It will not do this. Money does not leave the country for the centers because of statutory enactment, nor for the lack of statutory enactment. It flows with the ease of the current from the country when it does not find employment to the centers where it does find em-

ployment. No law enacted by this Congress can, nor should it if it could, compel money to lie idle in the vaults of a country bank most of the year when it could find employment elsewhere to the benefit of the community which it serves. Neither should it be compelled to go to a section where it does not find employment. Money in a community not in use is no advantage to either the community or its possessors. To undertake to forbid by law money lying idle in Xenia from going to New York, where it can be realized upon for much of the year to be returned when again called, is like attempting to prevent the growth of a city like Detroit, or Pittsburgh, or Cleveland, or New York, or any other place whose growth depends, not upon statutory enactment, but the laws of nature. These cities owe their position to conditions that do not nor could not respond to resolutions or laws that might be enacted in legislative halls. I admit that growth can be impeded by unwise legislation as it can be augmented by wise laws, but after all you can not make water run up hill by declaring it shall do so by law.

If New York by its constant constructive development continues to demand money for its marvelous growth it will get it. If the country banks hold funds not demanded during that part of the year when by nature the country is not active in money demand, who should say that this money must not be allowed to go where it can be most profitably employed? Why should any part of the country voluntarily cripple itself in the pretension that it will prevent a movement that does not lie within the province of congressional legislation?

The advocates of this measure publish broadcast the assurances that it will prevent the use of the reserves in stock investment. This profession is both unsound and misleading. It is an attempt to punish the innocent in the name of the guilty. The question of stock gambling in New York is a matter for the State to regulate. It does not comport with wise legislation to forbid liquid reserves from entering the great fields of financial operations because of a fear that such funds might be used by those who are active on the stock exchange. The chief value of such professions is to be found in the use that might be made in the campaign upon the hustings. In some places the ability to denounce the stock exchange and Wall Street is a winning slogan. While I should support all legitimate efforts to curb illegitimate dealings in futures, I do not wish to be a party to an effort to cure an evil that is not within our domain by crippling the banking industry of the country. It is too high a price to pay for campaign literature.

What the country bank needs is a system that readily responds to the financial activities of the community which it serves, that it may facilitate the growth of business already established, finance new businesses awaiting development, and conserve a system of credits which will instill confidence in the business methods of both banks and their operators.

I am willing to admit that our duty is to modify our present system. Most people declare it archaic, and it is pronounced by some the worst system in the world. Our distinguished Speaker was quoted as so stating. It has been declared a patchwork system.

That is because, in addition to our specie, we have at least five kinds of paper currency, viz, greenbacks, national-bank notes, Treasury notes of 1890, gold certificates, and silver certificates. While we denounce this system we should not forget it possesses some elements that every valuable system must possess. While our currency is various it is uniform. It matters not whether it is greenback, national-bank note, or what not, it will be received in any quarter of the civilized globe dollar for dollar. It is also stable, for while the face of each bill indicates an obligation that may not be uniform, yet the Government since 1900 stands ready to make each bill of whatever issue equal to gold by standing ready to redeem it in that metal.

Its safety is universally regarded throughout the world now. It is also sufficient in volume, being a greater per capita circulation than any other Government, save one, in the world.

Under this "worst system of currency in the world" this country has gone, under Republican policies, by leaps and bounds until to-day, although only a little older than the lifetime of an individual, it is now one and three-quarters times wealthier than the next richest country upon the globe, and that country is over fifteen hundred years old. This is not a bad record for the worst banking system of the world.

But I admit it has some bad features that ought to be corrected, especially the rigidity—the lack of elasticity.

Will the Glass bill supply the elasticity without the loss of these other qualities?

The wisdom of a law must be judged as you estimate the strength of a chain. We never estimate the latter by the superior links, but by the weakest. Likewise we are compelled to overlook the many most excellent features of this bill to seek out the weaker features, upon which its value must be tested.

I wish now to recapitulate some of the weaker items.

First. Its compulsory feature will cause it to be tested in the courts, with a probability of its being pronounced unconstitutional on the ground that it violates the provision of the American Bill of Rights, or that particular part of it which forbids the taking of property without due process of law. This feature has been eminently argued.

Second. It endangers stability by subjecting a system of credit to the uncertainties of a political campaign. Here is a provision for placing the banking resources of the Nation, which are equal to two-fifths of all the banking resources of the world, in a political board, subject to the impulses of public opinion.

Third. It fails to discriminate between governmental control and governmental operation. The first is desirable; the last should be avoided.

Fourth. It makes the Government Treasury a bank of issue, a feature abandoned by all the countries of any significance in the world. It thus invites periodic disturbance from the fiat element of our country, an element always present, in throwing the country into a campaign for more and cheaper money. It also enlarges the Government's possibilities of serious embarrassment in case of war.

Fifth. In an attempt to make better use of the reserves and to prevent stock gambling it cripples the country banks by limiting their powers to allow funds to flow and reflow where business demands will insure them a safe rate of profit as well as to serve their communities.

Sixth. It raises the question of doubt as to the purpose of its sponsors in regard to the gold standard.

Seventh. Conceding to it, for the sake of argument, all the virtues claimed by its advocates, it still is but an experiment, with strong probability of its total failure because of its unworkable features.

I assert that this section 17 on note issue of the pending bill reserves or gives the authority to the Secretary of the Treasury to reverse our policy of maintaining the gold standard, and thereby effectually nullifies the law of March 14, 1900, which, by statute, fixed the gold standard for the country. This is the triumph of Mr. Bryan in this legislation after a struggle which has lasted for just 20 years, when upon this very floor in August of 1893 he made his first great fight for unlimited Government issue, and so forcibly indicted the advocates of the gold standard. Among other things, he said:

> These notes (the Sherman notes) are a legal tender redeemable in gold or silver at the option of the Government. There is also a clause in the law which states that it is the policy of the Government to maintain the parity of the two metals. The administration, it seems, thus decided that the parity can only be maintained by violating a part of the law and giving the option to the holder instead of to the Government. (Pp. 102–103.)

Speaking at Milwaukee in 1896 on the question of the gold standard, Mr. Bryan denounced the gold standard as the source of our troubles and declared the remedy to be in more money of flat character. Here is his statement:

> There is only one way to stop this constant issue of bonds, and that is to return to bimetallism and allow the Government to exercise its option of redeeming its coin obligations in either gold or silver.

In the same year in Knoxville, Tenn., he said:

> If there is anyone who believes that the gold standard is a good thing or that it must be maintained, I warn him not to cast a vote for me, because I promise him that it will not be maintained in this country longer than I am able to get rid of it.

Again, in a speech delivered at Indianapolis in 1896, Mr. Bryan was reported by the newspapers to have said:

> We have commenced a warfare against the gold standard, and expect to continue that warfare until there shall not be a man in this country who will dare to raise his voice in favor of the gold standard.

These statements of Mr. Bryan's have been published over and over again, and, so far as we are aware, have never been denied nor has there ever been or is there now any reason for believing that this gentleman has changed the opinions so expressed. Again referring to the Democratic Party's platform in 1900, indorsed by Mr. Bryan, we find the following:

> We are opposed to the private corporation paper circulated as money but without legal-tender qualities, and demand the retirement of the national-bank notes as fast as Government paper or silver can be substituted for them.

In the campaign of 1900 he was asked at Wilmington, Del.:

> Will you, if elected President, require your Secretary of the Treasury to pay the Sherman notes in silver?

His answer was:

> I want the Republicans who want that question answered to first find out what the law requires, and then I want them to know, if elected, I will enforce that law. But you ask me to construe a Republican law, and I reply that I shall not construe a law until it becomes my duty to enforce it.

There can surely be not a doubt in anyone's mind as to the meaning of that answer as late as 1900. If anyone is inclined to believe that Mr. Bryan has changed front on the question which has made him famous, let him read the necessary comments in the Commoner, especially along in the year 1908, when the Vreeland currency bill was before Congress. Let him read the comments upon the bill as it finally passed. No previous indictment of the gold standard was more bitter than that of note issue by the National Bank Association of 1908, by the aid of which Secretary McAdoo quieted the fears in the money market recently when he announced he would resort to the $500,000,000 emergency issue if necessary to relieve the situation. Mr. Bryan has not altered his views, but he has triumphed in this measure. When first announced the measure did not include the dangerous items of unlimited issue, nor redemption in silver, Treasury notes, or greenbacks. It was originally placed on a par with these notes, but not superior to them. For reasons perfectly patent to all of us the bill was changed.

Mr. Bryan at once authorized his published indorsement. Note his words. On June 24, speaking of the triumph in the legislation, he said:

> The right of the Government to issue money is not surrendered to the banks. The control over the money so issued is not relinquished by the Government—

And so forth.

He ends his interview in these words:

> Only two classes, those who dispute the right of the people to issue through their Government the money which the people need, and those who, distrusting the representatives chosen by the people to guard the public welfare, would deny the Government officials control over the issuance of emergency notes.

What did Bryan demand in 1893? The continued issuance of the Sherman note, payable in coin, the law which Cleveland's special session repealed.

What did Bryan demand in 1896? The Government should exercise its option to pay the Sherman note in silver, which would have placed the Nation on the silver basis, and which would have driven the gold from the country. In this he was repudiated.

What did Bryan demand in 1900? That he would not construe a Republican law until called upon to enforce it, which meant he would not discriminate against silver, which, of course, was his position of 1896. In this he was again repudiated.

What did Bryan demand in 1904 and again in 1908? Read his utterances, and especially the Commoner, to get the real gist of his objection.

What does Mr. Bryan demand to-day?

First. An unlimited issuance of United States notes not by the banks, but by the Government.

Second. These notes to have a legal-tender feature equal to gold, beyond the greenback or the Treasury note. (In other words, there is the triumph of the wildest idea of the greenback days.)

Third. They are to be redeemed in lawful money; that is, silver and greenbacks, Treasury notes, as well as gold. Now, I want to repeat the question so often put to Bryan: If in authority the holder presents this note and demands gold, would you, as you demanded in 1893–1900, exercise your authority to give the Government the option to refuse to pay gold and order it paid in "lawful money"?

If not, what is the meaning of your statement that the Government has not relinquished its right over the control of these notes? In that case what becomes of the law of March, 1900, fixing the gold standard? The right given in this bill to pay in lawful money is the right to refuse gold, for the two are given as coordinate but alternative. The right is to pay either in gold or lawful money. That right is equivalent to refuse to pay in either unless you surrender the right of the Government so to do, but Mr. Bryan says this refusal to relinquish the right is one of the two special triumphs.

Therefore this bill in this section is inconsistent with the law of 1900, which entails upon the Secretary of the Treasury to maintain the gold standard. It even specifies the reserves for the purpose, how much, how secured, how protected, and how replenished, even to the extent of the issuance of bonds.

This law of 1900 is certainly inconsistent with section 17. In that case section 29 of this bill declares the law of 1900 of no force in that degree. I ask the lawyers on the Democratic side of this Chamber, Does not this bill, if it becomes a law, repeal the gold standard? If that is the purpose of the Democratic majority, we ought to know it and the country at large has a right to know it.

Mr. Speaker, I desire to compliment the Committee on Banking and Currency for the character of the bill which they have reported. I sincerely regret the manner, however, in which it was brought to the House. Some of us who have been interested for years as students of this subject would have liked to have had a part, at least a chance to offer suggestions in the way of amendments to the plan. Without desiring to be captious, I am sure the country would have accepted the work of Congress, on this subject at least, if it could have been free of all partisan labels. However, that is not a conclusive argument against the bill. Aside from the partisan manner of its framing, it does not come out as a Democratic measure in toto. Indeed, it is in many respects more Hamiltonian than Jeffersonian.

It adopts the centralization feature of control, which is purely Hamiltonian. It repeals the Independent Treasury system, so dear to Jackson's heart. In fact, aside from the "soft-money" idea in section 17, it is Hamiltonian almost entirely.

However, the bill should be amended, and probably will be in the other end of the Capitol, so as to distinguish governmental control from governmental operation.

It also should have provided for an administration based upon efficient banking other than political banking.

It also should have made the membership of Federal reserve banks voluntary instead of compulsory.

I have very serious doubts on the reserve section, which prevents or attempts to prevent money in the country banks flowing where it can best be employed.

But by far the most serious section is that which refers to the note issue, which renews the old greenback or silver agitation of other years.

The chairman of the committee insists that this bill does not touch the gold standard. When I asked him whether, if a holder of one of these notes demanded of the Treasury gold in redemption, the Secretary of the Treasury could not refuse to pay gold and compel the holder to take silver or greenbacks, he did not answer directly but said the Government would not do that. I first attempted to amend the section by striking out the phrase "lawful money," but the majority resisted this effort.

Being assured by the committee that the bill does not intend to touch the gold standard, I then offered an amendment declaring the purpose to maintain the gold standard. This is to test the sincerity of the committee on this point. While I regard all the objectionable items mentioned as specific weaknesses of the measure, I would be willing to forego further opposition to the bill as a whole if the amendment maintaining the gold standard is accepted.

Maine Congressional Election.

EXTENSION OF REMARKS
OF
HON. J. A. FALCONER,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 11, 1913.

The House had under consideration the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. FALCONER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I submit the following:

[Post, September 11, 1913.]

THE RESULTS IN THE MAINE CONGRESSIONAL ELECTION.

The result of the election to fill the vacancy in Congress from the third district of Maine can not carry much gratification to either the leaders of the Democratic or those of the Republican Party.

We have not heard of rejoicing in the Democratic camp, and while a distinguished leader of the Maine Republicans has taken occasion to claim a great victory for "new Republicanism," whatever that may be, it is not easy to perceive how a reduced party plurality and a reduced party vote on a greater total vote than in the congressional election of 1912 gives a sound basis for any party advantage, however loudly claimed.

That both the Democrats and Republicans exerted themselves to the utmost to produce a result that would justify the heralding through the Nation of a party triumph is well known.

That a decided increase in the Democratic vote would have given a victory that would have been made much of by the Democratic leaders in Congress, as well as those in the executive departments and those throughout the States, is admitted.

The indorsement of the administration and of the party policies by the electors in such an important election was very naturally ardently desired.

That such indorsement was not secured comes therefore as a most keen disappointment to the party in power; that while the vote of the district increased nearly 1,500 over the congressional vote of 1912 and 400 over the total vote for President in that district last November, yet the vote for Pattangall is nearly 2,000 less than the vote for Gould, Democrat, in 1912, and 139 less than was polled for Wilson, Democrat, for President, this can be accepted as a decline in popular support of the Democratic Party.

That the Republicans polled 2,100 votes less for their congressional candidate, Peters, last Monday, than they did for Forrest Goodwin, their congressional candidate in 1912; that Peters's plurality is but 553, as compared with a plurality for Goodwin of 709, this on its face gives no right to claim a growth in public favor of either old or new Republicanism.

There are two features of the Maine election that can not be wisely overlooked, must be observed and noted, if correct deductions are to be made from the results.

First, that both the Democratic and Republican leaders exerted themselves to the utmost to obtain a favorable expression from the electors of the district as to their respective parties; that this resulted in a much larger vote in the district than was polled at the last congressional election, and upon that congressional vote the Republican and Democratic candidates each showed a falling off of approximately 2,000 votes.

Secondly, the polling of 6,487 votes by Lawrence, the Progressive candidate for Congress, gives the answer to the question as to what became of the votes the Democratic and Republican candidates lost, as compared with votes of their congressional candidates one year ago.

There is much in this Maine election to impress upon Republican leaders that the cleavage of the Chicago convention is still deep, distinct, and definite; much in that election to warn Democratic leaders that their party is not so strong as it was last year.

Banking and Currency Bill.

EXTENSION OF REMARKS
OF
HON. MICHAEL E. BURKE,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. BURKE of Wisconsin. Mr. Speaker, under the general permission granted to Members of the House to print and extend their remarks upon the banking and currency bill in the RECORD, I desire to submit the following observations:

BANK OR MONEY PANICS.

Millions of our countrymen vividly remember the panic of 1907. It occurred in a year and at a time when this country was far more prosperous than it had been for years before. Farm, industrial, and legitimate commercial business transactions were far in excess of the previous year. It came while all of our people were busily engaged in agricultural, commercial, and industrial enterprises, and without thought or warning of impending danger. It came like a flash of lightning or a thunderbolt out of a clear sky.

On the evening of the 27th of October, 1907, the industrial, farming, and commercial sections of our country retired without any disturbance being noticeable in the farming, business, or industrial world. Before the next evening, however, they realized that there had been an explosion in the financial centers of New York. The price of staple articles of commerce, which the day before had commanded the highest prices, not only for that year but for several years preceding, fell in 24 hours at least one-third. The news spread like wildfire, not only among those engaged in commerce, industry, and farming, but among the workingmen and those who had theretofore deposited their little and their all in the banks of the country. Every depositor in all the banks throughout the country was suddenly filled with fear and apprehension. A wild rush was made by depositors on their banks in every locality. They were met, however, with closed bank doors or with the awe-inspiring information over the counter that no money was to be had; that the bank had plenty of commercial paper and other sources of wealth, but that it was unable to realize at the time on the same or convert it into cash; and that if given time to collect and liquidate its commercial papers and other assets it would have plenty of money with which to pay its depositors. Many banks and their officers resorted to ingenious devices with which to pacify their apprehensive and doubtful patrons. The principal device that was used among country banks was known as "cashiers' checks." Not a dollar in gold or legal money of the United States was paid over the counter of many country banks for from four to seven weeks to its depositors, industry and commerce came practically to a standstill, shops were closed, and farm products remained immovable and unmarketed.

IDLE COMMERCIAL PAPERS AND INVESTMENTS.

In many cases not a dollar was to be had with which to meet and pay for the necessaries of life or with which to carry on the business in different localities. The vaults of the country banks were filled with prime commercial and investment paper. The reserves of the banks had been drawn down to the amount required by law, and that amount was soon used up. The banks could not realize upon their prime securities and commercial papers, because people who had money would not invest in any securities or paper. Prime securities were as so much deadwood in country banks of the Nation. This was a tantalizing situation. The banks were rich and overloaded with wealth, yet they had no money. They were unable to sell or rediscount their commercial papers and other securities because every bank was in a like embarrassing position. If, then, the banks had a place where they could have rediscounted, or, in other words, where they could have sold such securities representing the deposits of their depositors, they could have realized and satisfied the demands of their eager and apprehensive depositors. Yet in all the broad country there was no place where this could be done to any considerable extent. This was due in a large measure to the imperfect banking and currency system then and now prevailing in the country.

Unless we reform and modernize that system, which we intend to do by this bill, such a situation is liable to occur at any time, especially in years when there may be a slight depression in the industrial, commercial, and farming prosperity of the country.

BANK RESERVES IN 1907.

At the time of the 1907 financial crash, and for a long time previous thereto, in accordance with the banking laws of the country, the country banks had on deposit with the central city reserve banks, situated in New York, Chicago, and St. Louis, and in the 47 reserve banks of the country, such of their reserves as they were not required by law to hold in their vaults, some 9 per cent of the aggregate amount of their bank deposits. The greater portion of these reserves were centralized in the New York national banks, it being one of the center reserve cities, and a city which apparently offered the greatest opportunities for the investment in all kinds of securities. On these reserve deposits of the country banks they received an interest of 2 per cent. Now, it has been stated—and I have reason to believe from what I consider reliable information—that the so-called country banks not only had this 9 per cent of their legal reserve on deposit with New York banks, but in pursuance of secret agreements with the New York banks, under which they were to receive advantageous rates of interest, the country banks had larger portions of the money in their banks on deposit or loan with the New York City banks, knowing full well the precarious investments made with such money by the New York banks. The New York banks, in order to make a profit on the transaction, were obliged to keep the money actively employed in one way or another.

The necessity of finding some employment for funds, coupled with an effort to so invest them as to keep them loaned at call, has resulted in a very large development of the call-loan movement in New York, a market whose principal business is that of carrying speculative transactions largely on the New York Stock Exchange, as can be easily remembered upon reflection. These so-called "call loans" are loans made subject to call; that is, without time of maturity. Such loans are in nearly every instance pure speculations in bonds and securities of the different railroads, interurban roads, street railways, ship lines, mining ventures, and all other classes of securities such as we may see listed on the market page every morning and evening of every daily paper, not only in New York, but in all the large cities of the country. We all know or can easily learn of the insecure and fluctuating valuation of these different securities. Those of us who have not had such observations can easily secure the same by keeping watch of the market pages of the newspapers of the country.

They are securities in which no savings bank, no trustee, no executor or administrator is allowed to invest his trust fund under the laws of any State; they are investments which are considered as not only fluctuating, but as unsafe and unreliable. Yet people on the New York Stock Exchange and other stock exchanges will invest in them, and will pay high rates of interest for money to invest in such securities. At the time of the 1907 financial crash there was an unusual large amount of call loans secured by collateral of this character.

Much of the reserve money of the country was at that time invested in call loans on stock-exchange collateral on the theory that such loans were absolutely liquid; that is, easily convertible into cash. No doubt this is true of a single loan of this character, because by its terms it is payable on call and is secured by collateral, for which there is usually a ready market. But when a considerable number of these loans are called at the same time they are not liquid, because the calling of a large number of these loans knocks the bottom out of the stock exchange and spoils the sale of all that kind of collateral. Experience has repeatedly proven this to be the case.

PANICS OF 1873 AND 1893.

Hundreds of thousands of laboring men, farmers, and merchants well remember the great panic of 1893, when the gloom of industrial depression spread from ocean to ocean and from the Great Lakes to the Gulf; when every hamlet in our great dominion bore sad witness to the business stagnation and depression which prevailed everywhere in the country, and when National and State banks were financially dynamited and exploded by the onward rush of depression; when the hard earnings of a lifetime and of years of toil were swept away in a minute, never to be recovered. The stagnation and depression arising from this panic continued throughout the Nation for a period of four or five years. Again, thousands of our citizens vividly and sadly remember the disastrous panic of 1873. The loss and destruction caused by this panic were almost beyond description. Earnings were swept away and property destroyed and devastated, and the hopes of thousands blasted.

With the knowledge of these three gigantic bank and industrial periods of depression and stagnation fresh in the minds of our countrymen, an almost unanimous demand has existed during the past five or six years throughout the length and breadth of this country for a change in our system of banking and currency. Fear and apprehension prevail almost everywhere among us that at any time, even in the greatest of prosperity, that these sad and devastating occurrences may reoccur. To protect the farming, commercial, industrial, and workingmen's welfare this bill has been framed, and for that purpose President Wilson and the Democratic Party have urged that remedial banking and currency legislation shall be enacted as soon as practicable.

DEMOCRATIC AND OTHER PLATFORMS.

The bill before us is a complete redemption of the pledge contained in the Democratic platform at Baltimore in 1912, and also in accordance with the resolutions adopted by the National Grange, American Farmers' Union, and American Federation of Labor in the same year.

THE DEMOCRATIC PLATFORM OF 1912.

We oppose the so-called Aldrich bill or the establishment of a central bank, and we believe that the people of the country will be largely free from panics and consequent unemployment and business depressions by such a systematic revision of our banking laws as will render temporary relief in localities where such a relief is needed from control or domination by what is known as the Money Trust.

Banks exist for the accommodation of the public and not for control of business. All legislation on banking and currency should have for its purpose the securing of these accommodations on terms of absolute security to the public and of complete protection from the misuse of the power which wealth gives to those who possess it.

We condemn the present method of depositing Government funds in a few favorite banks, largely situated in or controlled by Wall Street, in return for political favors; and we pledge our party to provide by law for their deposit by competitive bidding in the banking institutions of the country, National and State, without discrimination as to locality, upon approved securities and subject to call by the Government.

PLATFORM OF THE NATIONAL GRANGE, 1912.

Whereas the National Grange recognizes the necessity for the revision of our banking system along more equitable and scientific lines: Therefore

Resolved, That we are unalterably opposed to the so-called Aldrich scheme for centralizing banking, which is in the interest of bankers and opposed to the interests of the people.

Resolved, That the issue of currency is fundamentally a Government function which should be exercised in the interest of all the people and not be surrendered as a special privilege to any set of individuals.

Resolved, That in any revision that may be made of our banking system and laws regulating the same such revision shall be made in the interest of the people and not the money lenders. (Journal of Proceedings, 46th annual session, 1912, pp. 22–23.)

PLATFORM OF THE AMERICAN FEDERATION OF LABOR.

The nineteenth plank of the platform of the American Federation of Labor, an organization with 2,000,000 dues-paying members, is as follows:

"We favor a system of finance whereby money shall be issued exclusively by the Government, with such regulations and restrictions as will protect it from manipulation by the banking interests for their own private gain."

REPUBLICAN PLATFORM OF 1912.

It—Republican Party—is committed to the progressive development of our banking and currency system.

Our banking arrangements to-day need further revision to meet the requirements of current conditions. We need measures which will prevent the recurrence of money panics and financial disturbances and which will promote the prosperity of business and the welfare of labor by producing constant employment. We need better currency facilities for the movements of crops in the West and South. We need banking arrangements under American auspices for the encouragement and better conduct of our foreign trade.

It is therefore apparent that it is high time, and that an imperative necessity exists for the reforming and readjustment of our banking and currency laws.

NO HOSTILITY TO THE BANKING BUSINESS.

It must be borne in mind by all, and especially by those engaged in the banking business, that in their desire to reform and readjust our banking and currency system the intelligent public is not and that neither party is hostile to bankers or the business of banking. The Democratic Party and its representatives here in the House of Representatives recognize the profound fact that banking is a necessary, legitimate business, not only in this country but in all civilized countries. Whatever is done in the line of reforming our financial system will be done with the best of intentions and motives. The bankers of the country may rest assured that the representatives of the Democratic Party in this House of Representatives are actuated in considering this important question only by a proper and most sincere consideration of the welfare of the bankers and their patrons, the welfare of the agricultural, industrial, and commercial interests of the country and the public in general. Bankers have been of great service to the Nation as a Nation in the past and to the public, and there is no reason why the bankers of this country, under a more modern and up-to-date system of financing, can not be of greater service to the country in the future, and with advantage to themselves. Our sole aim is to preserve what is good in the present banking system and to rectify the abuses in banking and currency customs that have become incorporated in the system. It is not our intention, in passing the pending bill, to discriminate against the State banks or the trust companies of the country, for they have their own legitimate fields of enterprise. It is our aim to eliminate from the national banking system the abuses which have grown up in its life and to improve that banking system if we are able to. If the improvements that we make in the national banking system make it so attractive as to draw business from State banks and trust companies, it will be due to the virtues of this bill when it becomes a law and not to any improper motives on our part.

WHERE THE TROUBLE LIES.

It is generally considered that in the line of banking and currency the country needs a decentralization of bank reserves and of great accumulations of money held in the great financial centers, especially in New York City. It also needs a more elastic currency by having a proper volume of currency not only in crop-moving times but also in financial emergencies. It needs an established discount market or fixed place of sale for commercial paper, and a greater governmental control over national banking. These four great needs appear at the first blush to be simple and to be easily solved, yet when we come to the details necessary to accompany such changes we reach many puzzling problems upon which honest and patriotic men may and do differ in opinion. It is the aim of the pending bill to decentralize the reserves and accumulations of money in the great financial centers of the country; to provide ways for securing additional currency or money in crop-moving times and in times of emergency; to establish a discount market or place for the sale of commercial paper; and to strengthen the control of the Government over banking transactions.

Under the present law it is necessary that every national bank should have at all times a certain amount of money on hand, because it may be called upon at any time for money by its depositors. This money which the bank is required to keep on hand at all times is known as reserve money, and it varies in each bank from time to time and in different places; and the amount of reserve money that it is required to keep is according to the needs of the locations of the different banks.

Under our present banking law, upon application of three-fourths of the national banks situated in any city having more than 200,000 inhabitants, the Comptroller of the Currency may designate such city as a central reserve city, and likewise upon application of three-fourths of the national banks located in any city having a population of at least 25,000 it may be designated as a reserve city. Thus we have three classes of national banks, to wit: The central reserve city banks, of which there are but three, to wit, New York, Chicago, and St. Louis; the reserve city banks, of which there are now 47, and the country national banks, consisting of all national banks situated in cities containing less than 25,000 inhabitants, and all national banks situated in cities where there are no central reserve city banks and no reserve city banks.

Under the present law the amount of reserve required by country national banks is 15 per cent of the total amount of their deposits, and by the national banks situated in reserve and central reserve cities 25 per cent of their total deposits. These reserves may consist of gold, silver, gold certificates, silver certificates, United States notes, Treasury notes, and clearing-house certificates, showing the deposit of gold may be counted by the country national banks as a legal reserve. Country banks are required to keep money in gold, silver, gold certificates, silver certificates, United States notes, Treasury notes, and clearing-house certificates showing the deposit of gold in their own vaults to the extent of two-fifths of the 15 per cent reserve required of them, and the balance of their legal reserve may be in

the form of a credit balance in one or more national banks situated in reserve or central reserve cities.

Reserve city banks must keep their reserve money in some, or all, of the above-described kinds of money to the extent of one-half of their required legal reserve, the rest of which may consist of credit balances showing a deposit of gold in banks situated in central reserve cities. The central reserve city banks must keep all of their required reserve in cash in their own vaults. It is therefore clear that the loaning power of any national bank will be limited by the amount of its reserve; that is to say, the greater the reserve the less the bank will have to loan or invest. When the amount of the legal reserve is about as low as the law allows the bank can not make new loans or enter into new credit obligations until it shall have replenished its reserve. And the more a country national bank has as a reserve with the central reserve city banks and in the reserve city banks the less it will have to loan to its local customers.

A custom has grown up among the country national banks in all sections of the country of keeping balances for reserve and exchange purposes in central reserve cities, and especially in New York banks qualified as reserve agents. These reserve banks have encouraged the building up of such balances of country banks by paying an interest thereon, usually at the rate of 2 per cent. It is generally believed that a combination of banks—or the so-called Money Trust—has encouraged these country banks in keeping in the New York national banks not only such balance of their reserve as the country banks are required to keep, but a large additional amount of their funds; so that when a panic comes on not only the reserves of the country banks but a large amount of their loaning funds, which if kept at home could be used to accommodate their local customers, are tied up in the clutches of these New York banks. Then it is that the country bank finds itself unable to accommodate its depositors when they demand a return of their money, or to accommodate the business men of its locality, because it can not secure from the New York banks the return of its loanable funds. When this situation develops, then fear and apprehension drive the country bank customers to demand their money, and failing to receive the same, then the panic is on. Then it is that hundreds of thousands of patrons of local country banks cool their heels at closed bank doors.

FEDERAL RESERVE BANKS.

To overcome the above financial difficulties the pending bill proposes to establish 12 Federal reserve districts, and in each such district a Federal reserve bank at some place therein that is now a reserve or central reserve city. These districts are to be created and distributed fairly from a business and geographical standpoint throughout the country. Details for the establishment and organization of these banks are provided in the pending bill. Provision is made for the admission of national banks, State banks, and trust companies in each regional district into membership with the regional bank therein. Over the several regional banks there is placed a Federal reserve board, consisting of seven members, including the Secretary of the Treasury, Secretary of Agriculture, and Comptroller of the Currency, who shall be members ex officio, and four members chosen by the President of the United States, by and with the advice of the Senate. The office of this Federal reserve board is located at Washington, and it is to have general supervision over the several regional reserve banks. Its powers and duties are clearly set forth in the pending bill.

NOTE ISSUES.

The most important authority conferred upon the Federal reserve board is the power to issue, at its discretion, for the purpose of making advances to the several reserve banks as applied for by them, or either of them, what is to be known as Federal reserve notes or money. These notes are to be obligations of the United States, and shall be receivable for all taxes, customs, and other public dues. They shall be redeemable in gold or lawful money of the United States at the Treasury of the United States or at any Federal reserve bank.

WHEN MONEY IS SHORT IN LOCAL BANKS.

We all realize that every bank is in business for profit and not for its health or for recreation. It endeavors to put its money out at interest, the deposits which it receives are put out at interest, and it is the aim of every bank to keep invested all its money and all money received on deposit, excepting such as it is required by law to keep in reserve. In the case of national banks these investments are made, as a rule, in notes and bills of exchange of short-time maturity. Oftentimes a bank has but little available cash in its vaults, but has in those same vaults millions of dollars in value of prime and first-class commercial paper. Commercial paper can not, of course, be loaned to a borrower. When depositors rush in large numbers to the bank because of business or fear or apprehension, they can not be satisfied with these millions of dollars of commercial paper in the vaults of the bank.

It is at such times that the bank must close its doors and then usually go into bankruptcy; it is at such times that the bank officers say, "We are all right if you will only give us time to turn our property into cash"; but the trouble is at such times there is no one with the necessary money to buy such commercial papers; there is no place at such times where the bank holding such securities can have the same turned into cash. When these regional banks are established under the pending bill adequate relief will be at once at hand in such circumstances. It is to these regional banks in crop-moving season and when financial panics and emergencies come on that the local banks can and will go with their securities and commercial papers and have the same converted into cash, and with that cash pay off and satisfy the frightened and appealing depositors at its doors.

It does not have to wait upon the pleasure of some New York bank, where millions of the country's money are tied up in gambling speculations; it does not have to wait until it can find some local man of means to buy those papers. All that is necessary is that it go to the reserve bank of which it is a member, present its prime commercial paper, receive its money, and satisfy its obligations, for the reserve bank is always so situated that it has the necessary money with which to back up and convert into cash the local bank's commercial paper; or if such reserve bank has not immediately on hand sufficient cash for that purpose, it can, by applying to the Federal reserve board, in a very short time obtain so much of the Federal reserve notes as it may apply for and have sufficient security to guarantee. In times of emergency the Federal reserve board may require and compel the Federal reserve bank in any Federal reserve district to rediscount; in other words, to buy the discounted prime paper of other Federal reserve banks. It is thus provided that in the matter of rediscounting of prime commercial paper that if for any reason any Federal reserve bank is unable to accommodate its regional member bank, then it may have its prime commercial paper rediscounted at some Federal reserve bank which has on hand the means of so rediscounting. Thus any Federal reserve bank can be compelled to come to the relief of another such bank, thus enabling the latter bank to accommodate its local member bank.

The Federal reserve board by the provisions of the pending bill has authority to issue whatever amount of notes is applied for by the local bank, provided it furnishes the security required by law to secure the amount of notes requested. Thus it will be seen that by this program it is proposed to enact a law under which there will be no shortage of money, provided that legal security is at hand.

The provisions in the pending bill providing for the transaction of business between the local member bank and the Federal reserve bank respecting their transactions will be found in section 14 of the bill, and can probably be better understood by setting it forth at length herein:

REDISCOUNTS.

SEC. 14. That any Federal reserve bank may receive from any member bank or, solely for exchange purposes, from other Federal reserve banks deposits of current funds in lawful money, national bank notes, Federal reserve notes, or checks and drafts upon solvent banks, payable upon presentation.

Upon the indorsement of any member bank any Federal reserve bank may discount notes and bills of exchange arising out of commercial transactions; that is, notes and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used, or may be used, for such purposes, the Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount, within the meaning of this act, but such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities; nor shall anything herein contained be construed to prohibit such notes and bills of exchange, secured by staple agricultural products, or other goods, wares, or merchandise from being eligible for such discount. Notes and bills admitted to discount under the terms of this paragraph must have a maturity of not more than 90 days.

Upon the indorsement of any member bank any Federal reserve bank may discount the paper of the classes hereinbefore described having a maturity of more than 60 and not more than 120 days, when its own cash reserve exceeds 33⅓ per cent of its total outstanding demand liabilities exclusive of its outstanding Federal reserve notes by an amount to be fixed by the Federal reserve board; but not more than 50 per cent of the total paper so discounted for any member bank shall have a maturity of more than 90 days.

STOCK SPECULATION NOT ALLOWED.

The foregoing section 14 of the pending bill defines the kind of notes and bills of exchange which the local bank that is a member of the regional reserve bank may have discounted or sold to the regional bank. In other words, the local member bank, if it desires to take advantage of the opportunities afforded by the Federal reserve bank of its district, must only invest in such kinds of commercial and other paper as the Federal reserve bank is allowed to discount or buy.

The above section contains the following language:

The Federal reserve board to have the right to determine and define the character of paper thus eligible for discount within the meaning of this act, but such definition shall not include notes or bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities.

From this it is apparent that the local member bank of any Federal reserve bank is prohibited from investing any of its funds in or from carrying on transactions in stocks, bonds, and other investmen securities of whatsoever character or worth, if it desires to preserve the right in cases of emergency to realize on its investments by having the same discounted by the Federal reserve board. Heretofore much of the money of our country national banks has been tied up in stocks, bonds, and other unreliable investment securities on the New York market.

The fluctuating value of such stocks, bonds, and other investment securities may be seen on the market page of every daily paper, and there the value of such securities are shown to run from next to nothing to pretty near par value. We are all familiar with the sight of the alluring gilt-edged mining stocks, petroleum stocks, and other mushroom stocks that are offered for sale by many agents throughout the country. In most cases they have proven valueless, and the value of these stocks offered for sale in many cases may fluctuate at times from 5 and 10 cents a share to $80 and $90. In other words, investments in such stocks are nothing more than gambling and speculating propositions and are so recognized by the business world. In such gambling speculations much of the reserves of very many of the country national banks has heretofore been invested. Such sources of investment are prohibited to the local member bank if it desires to avail itself of the advantages of the proposed new system of banking.

OPEN-MARKET OPERATIONS OF FEDERAL RESERVE BANKS.

In addition to the rediscounting provided for in section 14 any Federal reserve bank may invest in addition in the commercial securities described in section 14 in many open-market operations under such rules and regulations as may be prescribed by the Federal reserve board. Such bank is, among other things, permitted to purchase and sell in the open, either from or to domestic or foreign banks, firms, corporations, or individuals, prime bank notes and bills in exchange for the kinds of securities by this act made eligible for rediscount and cable transfers. Additional kinds of investments are also provided in the pending bill for the Federal reserve bank, and can be found defined in section 15 of said bill.

Nowhere in the pending bill are Federal reserve banks allowed to discount or rediscount notes or bills issued or drawn for the purpose of trading in stocks, bonds, or like securities, thus forcing the Federal reserve bank to refrain from investing their money in the kinds of bonds hereinbefore described. In other words, to refrain from investing its money in investments of a gambling or speculating nature. It must be obvious to everyone that the less money that is permitted to be invested in gambling speculations, such as stocks, bonds, and like securities, the more money will remain in the local banks to accommodate borrowers and to pay off depositors in times of emergency.

It is also apparent that the more money that the Federal reserve bank has on hand the more commercial paper held by the local member bank it will be able to discount.

In addition to this, the pending bill contains a provision whereby all the moneys in the Government's general fund is at all times to be deposited in the 12 Federal reserve banks, which shall act as the fiscal agent of the United States. The Government moneys thus deposited will draw interest and are to be distributed in equitable portions among the several reserve banks, taking into consideration the volume of business in each regional district.

From all of these provisions and precautionary measures it will be seen that the Federal reserve banks will, at all times, be able to rediscount or buy any and all prime commercial paper which may be offered to it for discount or sale by the local member bank of its region, and there will be no fear among depositors, when this situation is once known to exist, that they will not receive promptly their demands in cash.

ADDITIONAL RELIEF IN EMERGENCIES.

Section 20 of the proposed banking law contains a provision changing the amount of reserves to be held by the local member banks, reserve city banks, and central reserve city banks. Under the proposed law a country bank is compelled to keep as a reserve an amount equal to 12 per cent of its total deposits, not including savings deposits. It will be remembered that under the existing law such country banks are required to keep in reserve 15 per cent of their total deposits. Under the new law five-twelfths of the country national bank's reserve shall consist of money which national banks may under the existing law count as a legal reserve, held actually in the bank's own vaults. Another five-twelfths of such reserve shall consist of a credit balance with the Federal reserve bank of its district. The remaining two-twelfths of such reserve shall consist, either in whole or in part, of reserve money in the bank's own vaults, or of a credit balance with the Federal reserve bank of its district.

The reserve required to be kept under the proposed law by the reserve city bank is 18 per cent of the total amount of its deposits, not including savings deposits, at least one-half of which shall consist of money which national banks may under the existing law count as a legal reserve, held actually in the bank's own vaults. Five-eighteenths of such reserve city bank's reserve shall consist of a credit balance with the Federal reserve bank of its district. The remaining four-eighteenths of such reserve may consist, either in whole or in part, of money in the bank's own vaults, or of a credit balance with the Federal reserve bank of its district.

The central reserve city bank under the pending bill is required to maintain a reserve of 18 per cent of the total amount of its deposits, not including savings deposits. At least one-half of such reserve shall consist of money which national banks may under the existing law count as a legal reserve held actually in the bank's own vaults. The remainder of such reserve required of such central reserve city banks shall consist, either in whole or in part, of reserve money held in its own vaults or of a credit balance with the Federal reserve bank of the district.

SUSPENSION OF RESERVES.

Among other powers conferred upon the Federal reserve board by subdivision C of section 12 of the bill under consideration is the power to suspend any and every reserve requirement specified in the act. The language used is as follows:

The Federal reserve board shall be authorized and empowered (C) to suspend for a period not exceeding 30 days (and to renew such suspension for periods not exceeding 15 days) any and every reserve requirement specified in this act.

This, of course, means that in times of emergency, when through fear and apprehension there is a run upon a bank or banks which are members of the Federal reserve bank of its district, that such local member banks and the Federal reserve bank may use a part or a whole of its reserve money to meet the demands of its creditors and depositors. Every provision is made and caution taken by this bill to guard and protect the banks and their patrons and to protect their creditors and depositors from loss, and every depositor hereafter in a local bank member of the Federal reserve bank may rest assured that when depositing in such bank he is protected against all loss excepting such as may arise through the crookedness of the bank officials of his particular bank or through the poor or mistaken judgment of such officers in making investments. Personal crookedness and poor judgment on the part of bank officials are human elements. It is quite impossible to completely guard and protect bank depositors and creditors against these two elements of human nature in banking excepting through the enactment of a bank-deposit guaranty law. It is because it is impossible to eliminate these two human elements or to place them under control that so many banks object to the passage of a law guaranteeing bank deposits.

Personally I am surprised that a section or paragraph providing for the guaranty of bank deposits is not contained in this bill. I can account for its omission only upon the theory that the Committee on Banking and Currency thought it wise to at this time avoid as much opposition as possible to the bill, as it is well known that among bankers, small and large, there is considerable opposition to such a banking provision. I firmly believe, however, that within a short time after this bill has become a law such a proposition will be attached to it by a law amending the same.

One thing is certain, however, that under this bill there will be plenty of money for the seasonal moving of crops in the South and West, and that there will be absolutely no danger of a local member bank of the Federal reserve region closing its doors, failing or going into bankruptcy on account of what any other bank or banks may do, or on account of any corner that any money trust may create in the money market, or on account of any run its depositors may make on any bank.

NO INFLATION.

Some people fear that under this system of issuing Federal reserve notes, as hereinbefore described, that it will cause an undue inflation of the currency of the country. Others believe that such Federal reserve notes will be used by unscrupulous persons for the purpose of drawing gold from the United States Treasury and depleting the supply thereof. The answer to these two objections is that in the first place these Federal reserve notes are obligations of the United States and of the Federal reserve bank which issues them, and that the same are redeemable at the Treasury of the United States in gold or legal money,

the same as silver is, and the same as Treasury notes or greenbacks now are. A person can present a Treasury note or silver at the United States Treasury and secure gold upon it, but as under the present law silver and Treasury notes are worth as much among the people as gold there is nothing to be gained by so doing, and as the new Federal reserve notes are to be redeemable in gold or legal money of the United States they will be equal in value to gold and there will be no advantage in anyone exchanging them for gold.

The business men of the country prefer to carry on their business not with gold, but with notes as a matter of convenience. Then again, a provision is contained in this bill whereby no bank can issue any of such notes without having provided in its own vaults a redemption fund in gold of 33¼ per cent of the amount of notes issued by them. These notes will under the law bear a designating letter, whereby it can be easily determined which reserve bank issued the same. A tax by way of increased interest is imposed upon the Federal reserve bank issuing these notes so long as they continue in circulation, and when the reserve bank finds it unprofitable to longer allow such notes in circulation it will, in order to relieve itself of the extra tax so imposed, gradually redeem and retire such notes when the emergency which caused their issue shall have subsided.

SUCCESS ASSURED.

Many thoughtful men are in doubt as to the success of the proposed system of Federal reserve banks. They contend that the new system is not sufficiently advantageous to the national banks to attract or draw them into the new system. Of course, if the national banks in any considerable number should refuse to enter upon or adapt themselves to the system provided by this bill it will be a failure. I, however, have absolute faith and confidence in the success of the new banking and currency system outlined in this bill. There is no doubt in my mind about its final and complete success. There are many reasons for this. There are many reasons upon which I base my faith. The more this plan of banking and currency is examined and scrutinized the greater its merits loom up. There is not a so-called country national bank which will not absolutely and directly benefit by becoming a member of the regional reserve bank of the district in which it is located. Some may be so blind as to at first not see or want to see their advantages under this system, but whether these banks voluntarily enter into this system or not, I firmly believe that they will finally, and within the time allowed them, be driven by their patrons or public opinion into the new plan of banking and currency.

There are in my home county perhaps 35 State and national banks. If at first only one bank should enter this system, it would not be long before every other national bank in the county would follow suit. When the advantages of this system are made known to the workingmen who have deposits in these banks, and are made known to every other man and depositor, the public will patronize only the bank or banks that have behind them the protection and guaranty of the Government. It can not be denied that any local bank which becomes a member of the regional reserve bank is absolutely protected and guaranteed under this system against all closing of doors, against failure, and against bankruptcy brought on by the shortage of money, by unusual demands for money, or by runs upon the bank.

The advantages of a bank doing business under this system will be made known to the depositors and business men of this country, and the remembrance of the panics of 1907, 1893, and 1873 will move and actuate every depositor to patronize the bank which has behind it the protection and guaranty of the Government against such failures. Banks outside of the system, when they realize that the deposits of workingmen and business men are being made in member banks which have this Government protection, will be forced, in order to maintain their existence, into this system.

With a guaranty of deposits amendment, hereafter to be attached to this law, it will absolutely guarantee all deposits. Banks make their profits out of the deposits and money left with them. Banks with little or no deposits make nothing. Self-interest will drive every national bank, excepting a few of the largest ones in the great financial centers, into this banking and currency system when it becomes a law.

LITTLE OPPOSITION.

This bill in substantially its present form was given to the public about the 25th of June last. Ever since that date it has been in the limelight of the public gaze and has received special attention at the hands of the bankers and financiers of this country. There is some opposition to it on the part of the large bankers in the great financial centers. It is not to be wondered that those bankers are opposed to it, for, among other things, it removes millions and millions of dollars from the legal reserves which country national banks are bound by the present law to maintain in reserve and central reserve banks in the large cities. In addition to these reserves there has been a great amount of money belonging to the country national banks deposited in these large banks which has been used for speculative investments. The withdrawing under this bill of the country bank's reserve and the prohibiting of the investing of the money of any bank in stocks, bonds, and other speculative securities, deprives the banks in the large money centers of millions upon millions of money. It is not to be wondered at that such banks are found in opposition to this bill. Heretofore such banks have centralized and combined as much money as possible. Under this bill these vast accumulations of the country's money are to be decentralized and distributed over the country in the country national banks and in the Federal reserve banks for the accommodation of the people's business. No country national bank which understands the terms of this bill is opposed to it. Many of such banks would like to see the bill changed in some details, and much of the opposition of such banks to this bill has been exaggerated.

In the Democratic caucus, and I think in this House also, it was charged that a poll of the country national banks of Wisconsin disclosed every such bank opposed to this scheme excepting two or three. Since hearing this statement I have made diligent inquiry if any such poll had been made and if any such results were shown. I am informed that a poll was made, but that no such results were shown. These Wisconsin bankers met in conference on the 3d of September, 1913, for the purpose of considering the pending bill. The meeting was largely attended by some of the most representative bankers of our State. The convention passed resolutions upon this subject, a copy of which I herewith insert:

Resolutions as passed by the country national banks of Wisconsin.

Whereas a conference under the auspices of the currency committee of the American Bankers' Association was recently held in Chicago, which conference failed to adopt suggestions made by country bankers to reduce Federal reserve bank deposits required of currency banks from 5 per cent to 1 per cent of their deposits; at the same time this conference recommended material reductions as to reserve city banks' reserve requirements, which recommendation has since been incorporated in the bill. Further, such a reduction of reserves by the central reserve city banks is no burden to them as against the severe burden placed upon the country banks, which the latter can not afford to bear, because their cash reserves are proportionately smaller; and

Whereas the bill as drawn has many admirable features, yet we as country bankers believe several amendments are very essential: Therefore

Resolved, That we urge upon Congress the following essential principal changes, viz:

a. So amend the bill that country banks not in reserve cities be compelled to contribute not exceeding 2 per cent instead of 5 per cent plus 2 per cent at end of three years of deposit liabilities for the reserve of Federal reserve banks.

b. As section 27 of the bill (creating savings departments) provides for a segregation not only of securities covering the savings deposits, but a segregation of capital to an amount equal to 20 per cent of capital and surplus; but capital can not be less than $25,000, and requiring investment of such demand deposits in long-term securities, which we believe wrong in principle and not offering such security as is now offered savings depositors, we urge this section be eliminated from the bill.

c. That term of real estate loans be increased from one year to five years.

d. That dividends allowed reserve bank stockholders be increased from 5 per cent to 6 per cent.

e. That the 40 per cent of excess earnings allotted to banks be divided among them on the basis of capital stock in reserve banks instead of on average deposits therein.

f. That banks be allowed the same interest on deposits as is allowed upon Government deposits.

It will be noticed that in the first preamble to the above resolutions that the country national bankers in such conference charged the American Bankers' Association, which is largely made up of bankers from the financial centers, with having failed to adopt suggestions made by the country bankers to reduce the Federal reserve bank deposits required of country banks from 5 per cent to 1 per cent of their deposits, and that at the same time material reductions in the reserve required of reserve city banks and central reserve city banks were urged at such American Bankers' Association meeting and have since been incorporated in this bill.

It appears that the representatives of the large banks of the country act upon the principle of "everyone for himself, and the devil take the hindmost." In other words, they furnish proof that it is to the interest of some of the large bankers of the country to be against this bill.

It will be noticed from the second preamble of these resolutions of the Wisconsin Country National Bankers that they say this bill as drawn "has many admirable features, yet we as country bankers believe several amendments are very essential." It will be noticed that the resolutions relate merely to the details of the bill. Many of these details were thrashed up hill and down hill in the Democratic caucus for three weeks and have since been thrashed upon the floor of this House. They are details upon which sincere men may have an honest difference of opinion.

Subdivision A of said resolution asks that the country national banks not in reserve cities be required to contribute 2 per cent instead of 5 per cent of their deposits for their reserve in the Federal reserve bank. This proves conclusively that the country bankers appreciate the lessening of their reserve requirements under the bill. They regard it as a beneficial change, and they simply say that it would be of greater benefit to them if the amount of reserve that they are required to maintain with the Federal reserve bank was made 2 per cent of its total deposits instead of 5 per cent. That resolution is also misleading in that it assumes that the country national bank is required to maintain a reserve of 7 per cent of its total deposits with the reserve bank, whereas in fact it is only required to maintain a reserve of 5 per cent and may maintain a reserve of 7 per cent.

Subdivision B of such resolutions relates to the savings departments and asks that section 27 of the bill, relating to such savings department, be eliminated from the bill. Section 27 has been materially changed by the committee and the House since the 3d of September, when such bankers' meeting was held. The capital now required for such department is but $15,000, and the class of securities upon which loans may be made by that department and the class of property which it may purchase has been clarified and improved, and I doubt if such bankers would now offer any further opposition to section 27.

Subdivision C of such resolutions demands that the term of real estate loans be increased from one year to five years. This demand is entirely unreasonable, for the reason that the longer the term for which the national banks invest their assets the less liquid the same will be and the more difficult it will be to convert such securities into cash in times of emergency. It must be remembered that national banks are in the main commercial banks and devote the great bulk of their business activities to commercial banking instead of investment banking. It will be borne in mind that according to the terms of section 14, hereinbefore set forth, that no security having more than 90 days to run before maturity will be discounted by the reserve bank. It thus will be seen that in times of bank runs, in times of emergency, and in times when an extension of currency is needed for the movement of crops, that the more money a bank has tied up in long-time securities the less accommodation it can give the public, and its ability to withstand a rush of depositors is weakened.

Subdivision D of such resolutions relates to dividends allowed to reserve bank stockholders—that is, banks which are members of the regional bank—and asks that such dividends be increased from 5 per cent to 6 per cent. This is one of the points that has been thrashed over in the caucus and in the House. It affords a striking illustration of how honest men may differ in their opinions. I submit that the question of what is a proper rate in this case, 5 or 6 per cent, can only be determined after three or four years' experience with the new banking system. It is a detail which can be readily, if experience shows that it ought to be, changed from 5 per cent to 6 per cent.

Subdivision E of said resolutions asks that the 40 per cent excess earnings allotted to banks be divided among them on the basis of capital stock in reserve banks instead of on average deposits therein. This resolution is very unreasonable, for the reason that a member bank with only $25,000 capital stock in the reserve bank may have an annual average balance of deposits with such reserve bank of far more than a bank which has $100,000 capital stock in such reserve bank. Upon the slightest reflection it can easily be seen that the proposition contained in the bill is far more equitable, right, and just than the one contended for by the Wisconsin bankers in such resolutions.

Subdivision F of such resolutions asks that banks be allowed the same interest upon deposits as is allowed upon Government deposits. There may be some merit in this last proposition. It must be remembered, however, that after the payment of the necessary expenses and the taxes of a reserve bank, that the member banks are entitled to an annual dividend of 5 per cent on the paid-in capital stock, which dividend shall be cumulative. The only reserve which a member or local bank is required to keep in the Federal reserve bank is 5 per cent of its total deposits. A little reflection discloses that if the reserve bank had only for its use the small amount of money which the member banks are required to keep on deposit in such reserve banks, that the amount would be small and that it would be impossible for the reserve bank to pay the 5 per cent dividends to its member banks. These member banks may keep in these reserve banks an additional deposit that may be small or large in amount, but the Government will have in these reserve banks all of its general funds, which amount on the average to about $150,000,000 a year. It is clear that it is the Government deposits that in the first instance the reserve banks must rely upon to pay the necessary expenses and taxes, and its 5 per cent dividend. Experience in the operation of this new system may, however, demonstrate that this contention of the Wisconsin bankers is right, and if it is it can be easily changed.

RURAL CREDITS.

Throughout the country there is a great demand on the part of farmers for the establishment of a system of rural credits in this country similar to that which prevails in Germany, France, and other European countries. Years of experience have demonstrated in Europe the value of such a credit system, and the report filed by the American commission which recently returned from an investigation of the system in Europe is to the effect that with certain changes the system can be made extremely serviceable to the American farmer. It was the collective judgment of the Democratic Representatives of this Congress, in caucus, that in order to secure the greatest benefits from such a system of rural credits that it is necessary that a distinct and separate system of rural-credit banking be established. This requires study, observation, reflection, and sound judgment. In Democratic caucus it was decided that this subject should be taken up for legislation during the next session of this Congress and a sound and wise system of rural banking, adapted to the welfare of the farmers of our country, should be established.

From section 14, hereinbefore set forth, and from other parts of the bill, it will be seen that the farmers of the country are to participate and share in the benefits which this proposed bill, when enacted into law, will bring to the welfare of the American people. The bill contains a provision, found in section 26 thereof, whereby national banks belonging to the Federal reserve bank are permitted to make loans secured by improved and unincumbered farm lands for a period of one year and to an amount not exceeding 50 per cent of the actual value of the property offered as security, provided that any bank making such loans shall not invest in such securities more than 25 per cent of its capital and surplus. This broadens the opportunity of farmers to obtain upon their real estate loans for the transaction of their business. It is true that a farmer's note, secured by real estate, running 12 months will not be rediscountable at the Federal reserve bank, but all such notes will be subject to discount at such bank when not more than 90 days remain before the maturity of the same.

Under this bill the cotton farmer, having his cotton stored, bonded, and insured; the wheat farmer, the barley farmer, the potato farmer, and the cheese producer may store, bond, and insure his products, and with a certificate of the storing, bonding, and insuring of the same offered as security for his note, running not more than 90 days, may obtain a 90-day loan with which to pay his expenses and necessaries of life so as to enable him to take advantage of the rising markets within that 90 days, and it will be safe for the local bank to accommodate him, because a note thus secured and with such maturity can be at any time rediscounted or bought at the Federal reserve bank, and if the farmer should desire to hold his crops for a longer period than 90 days he is in a position to secure an extension of time on his loan.

One of the advantages under this bill will be to draw funds to the various sections of the country where they can be used to the best advantages, and as a result reduce the rate of interest now prevailing in the communities which receive the additional capital through the use of the acceptance method. In short, one of the main purposes of this bill is to help the communities which must resort to the banks for their loans, and to help the farmers in that community. It will help him as it will help the commercial and business men by enabling him to secure more and better banking accommodations. He is given a fair opportunity and placed upon equal terms with the commercial credits of the country, and it may be depended upon that later a separate and distinct law adapted to his peculiar conditions will be enacted.

CRITICISM.

Many fierce objections have been uttered against the Federal reserve board. It is contended that too much power, authority, and responsibility is centered in this board. Fears are expressed that its powers and authorities may be abused. It is claimed that there is danger that it will be drawn into politics, and that partisanship will be drawn into its control and in the exercising of its important responsibilities. But gentlemen who resort to such criticism forget that during the entire history of our country tremendous power has been vested in the President in appointing a Supreme Court and lower Federal courts. Seemingly

they forget that the Supreme Court of the United States, in the discharge of its duties, may exercise functions that will have as important a bearing upon the liberties, happiness, and welfare of the people of the country as any action this Federal board may take. Yet during 135 years of our Nation's existence not a single judge appointed to that bench has in a partisan or corrupt manner degraded or disgraced himself or the country. Every judge so appointed has realized his high responsibilities and has exercised care and caution to discharge his duties in an impartial manner to the satisfaction of and for the welfare of the country.

The same hue and cry was raised at the time of the establishment and creation of the Interstate Commerce Commission. That commission exercises power and authority over as great a share of the prosperity and the welfare of this country as the Federal reserve board can possibly exercise.

When that commission was established it was also claimed that too much power was being invested in it, and that it was liable to be used for partisanship and corrupt purposes. Experience, however, has demonstrated that the Interstate Commerce Commission is one of the most serviceable and one of the most powerful and one of the greatest commissions in this or any other country, and that during its life no one will contend that it has been prompted in any of its actions by partisanship or by corruption or by any other motive than the welfare of the people. It discharges the duties imposed upon it to the satisfaction of the people, although it is vested with tremendous power.

People who are fearful and apprehensive that the Federal reserve board may abuse its extensive powers, who fear that it may be actuated by partisanship motives or corruption, may have their fears allayed when they reflect upon the powers which have been vested in the Secretary of the Treasury and the Comptroller of the Currency under the banking laws. Nearly every power vested in the Federal reserve board by this bill has been, since the establishment of the national bank act in 1863, conferred upon the Secretary of the Treasury and the Comptroller of the Currency, and yet no person and no class of business men and no party has complained that such officers ever abused their power and trust. It is true that partisanship bitterness and prejudice in this country arise at time to extreme intenseness; yet the American people have confidence that whoever is President will always select for membership upon the Federal reserve board statesmen who will be, while on the board, Americans first and partisans second.

BANK CONTROL OR GOVERNMENT CONTROL.

The Democratic Party has long held to the principle, "The issue of money is a function of the Government." With this as a foundation in legislation of this character, there can be no question whether we shall have bank or Government control with the necessary machinery to carry out the provisions of this bill. It contains a provision whereby the notes of the banks shall be gradually retired from circulation and Government notes issued. It further provides a fund which can be drawn upon as the needs of the country demand. The national platforms of the Democratic Party, of the National Grange, Farmers' Union, and American Federation of Labor all demand a system of financing whereby money shall be issued by the Government, with such regulations and restrictions as will protect it from manipulation by the financial interests for their own private gain.

INTERLOCKING DIRECTORS.

Official investigation and examination have disclosed that a great share of the abuses prevailing in the banking world are due to the custom or system whereby a director, or many of the directors, of a given bank may be directors in one or several more other banks and industrial enterprises. It is claimed that it is by means of this interlocking of directors that the money or banking trust and industrial trusts create combinations and the mighty trusts which the people so loudly complain of. This pernicious custom prevails to as large an extent in the banking business as in any other enterprise. It seems it is considered a dangerous policy wherever it exists.

The Democratic Party in its 1912 platform declared in favor of a law preventing the interlocking of such directors. Many honest people have contended that such a provision should be incorporated in this bill. Such an amendment was offered to this bill in Democratic caucus, but it was there pointed out that the provision prohibiting the interlocking of directors and regulating the question of directorship belonged properly to the laws regulating trusts. Believing such to be a fact, the Democratic Party has not considered it wise to attach such an amendment to this bill, but has pledged itself to enact such legislation at the regular long term of this Congress. To show its good faith in that direction, it has already instructed the Judiciary Committee to report a bill regulating the matter of directors, not only in banks, but also in industrial companies, at the beginning of the next session. The people of the country can depend upon the Democratic Party to enact this much needed and wise legislation.

The bill contains many more interesting and wise features which will help to make it a success. Time and space, however, at present forbid me from entering upon a treatment of the same. Every precaution has been taken in this bill to guard and protect the interests of the public and of the Government. It is not a perfect bill. We do not claim it to be; but we do assert that it is the best bill of its kind which the wisdom of any party has been able to present to Congress in over 50 years.

We assure the people throughout the country that they need have no alarm over the operation of this bill when it becomes a law. It is designed to promote the welfare of merchants, farmers, manufacturers, workingmen, and all useful classes of American citizens, and we have an abiding confidence that it will accomplish the purposes for which it is designed.

Currency.

EXTENSION OF REMARKS
OF
HON. JOHN JACOB ROGERS,
OF MASSACHUSETTS.
IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 18, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. ROGERS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I append the substance of two letters received by me from a personal friend of mine who is distinguished throughout New England as a banker, a scholar, and a business man. The letters are dated, respectively, September 12 and September 16, 1913. I also print extract from the Boston News Bureau of September 12, which was inclosed with the former of the two letters and referred to with approval therein:

* * * * * * *

I have read this morning with interest the brief report given in our newspapers of your speech in the House yesterday. The methods of the committee in compiling this bill seem to me in every respect open for criticism. The whole question of sound currency is not a partisan matter; it is so difficult a question to solve and so important a one that the combined wisdom of both parties will not be too great.

I was present at the conference in Chicago and listened attentively with great interest to all the proceedings. Two things struck me specially—one that there was so much unanimity among the bankers themselves in the final outcome of the conference, and the other that the sentiment among the country bankers was so strong against the proposed bill in its present form. The authorities in Washington are, to my mind, wholly mistaken in the idea, which has been allowed to get into print, that the bankers are not in any accord and are broken into factions, and that the country banker in particular is rather in favor of than opposed to this bill. Some of the most vigorous criticisms of the bill came from country bankers, and, strange as it may seem, the person who was apparently most indifferent to the bill is a very prominent New York banker.

Many of the statements made by Mr. GLASS in his speech a couple of days ago, accompanying the introduction of the bill, seemed to me untrue and unfair. I do not believe for a minute that the chief fear on the part of the banks in connection with the present bill is that they will be deprived of certain reserve deposits and the earning power which goes with them. I believe that every banker in the country is ready to pay something in the shape of loss of profit on his business for the sake of getting a good currency bill. They are willing to do this as a matter of self-interest and also from a desire that credit conditions in this country, which the banker knows and understands far better than anyone else, shall be fortified and put on a better basis.

The bankers are opposed to the make-up of the Federal reserve board as proposed in this bill, and I think justly so. This is not because they fear the President would appoint bad men, but because the handling of bank credit throughout the country is probably the most serious and important task which can be imposed on any body of men; and the Federal reserve banks, which have to do with credit throughout the country, ought to be more largely represented on the reserve board.

I am not afraid of political control, as the word "political" would be commonly understood. I am very much afraid, however, of inexperienced or ignorant control; and if the board is to be made up of seven members, only one of whom must be a banker, I should think the risk of such control very great.

The provision of the bill for not less than 12 reserve banks seems to me economically wrong and wholly unwise. We are trying to really concentrate reserves and make them available, and this could be far better done by three, or at most five, reserve banks, instead of a dozen.

* * * * * * *

In my judgment, if the bill in substantially its present form should become a law, a large number of our smaller institutions would at once proceed to organize under some form of State charter; some of the larger ones would probably test in the courts the question whether the charter of a national bank, which has been guilty of no violation of law, can be revoked because the bank declines to comply with the terms of a new law requiring it to take 10 per cent of its stockholders' money and invest it in an outside business, over which it has no direct control. While I am not a lawyer, I think the case for the bank could be made very strong.

I do not think any State banks or trust companies would avail themselves of the privileges of the bill, and that in itself is a great defect. There will undoubtedly be some national banks that will come in—perhaps quite a number—but they will do so reluctantly and against their better judgment in a good many respects.

The credit disturbances which would follow in this state of affairs would, in my judgment, be very serious and unpleasant.

The banks in the reserve cities will have to pay down their reserve deposits in very large measure, and that will mean a considerable curtailing of credit, that will probably remove them from the market as buyers of paper, and they will undoubtedly have to reduce loans in other directions.

BOSTON NEWS BUREAU,
Friday, September 12, 1913.

In the present attitude of the bankers it would seem that their only recourse, if the bill becomes a law in its existing shape, will be to take out State charters. A good deal has been said heretofore about the larger banks leaving the system. There seems good reason for believing that this action is contemplated by some of the big institutions in this city and Chicago. But the big banks have really less to lose, proportionately, than the smaller concerns throughout the country. Notwithstanding the assertions of the framers of the bill that the country banks are in favor of the measure, the administration will probably be surprised how little support it will receive from them after the bill goes through.

It is these small banks that are going to feel the onerous conditions under which they will be compelled to supply the necessary resources of the proposed regional reserve banks. Ten per cent of capital is a large item to many of these small country institutions; and, moreover, 5 per cent interest on their money is too small a return for them to make the subscription attractive. In the rural communities they are accustomed to 7 per cent, 8 per cent, and even 10 per cent on their funds. To part with 10 per cent of their capital, upon which they will receive only 5 per cent interest, and to be denied a voice in its control, will naturally be distasteful to the country banker who is, as a general rule, not to be influenced against his own interest on purely patriotic grounds. The big banks, which Mr. GLASS denounces as being accentuated by personal motives, are far more inclined to make this sacrifice for the sake of having a proper banking system.

In the question of the redistribution of reserves Mr. GLASS is also mistaken when he says that it is the banks in the reserve centers that object to this feature. It is the country banks that this will particularly hurt. They are going to lose the interest of 2 per cent and even 3 per cent which they now obtain from their reserve correspondents. They will now be required to impound these reserves in the regional banks upon which they will receive no interest allowance at all. In forcing their funds away from New York, however, much as Mr. GLASS or Mr. OWEN may deride Wall Street and its malign influence, it is a source of profit for the country banks for their otherwise unemployed funds.

Furthermore, the western banker knows his eastern correspondent. He knows he is treating with flesh and blood, and this is some consideration when he is in a tight corner. He would naturally rather come for accommodation somewhere else than in his own locality where, under the new system, his business would be brought to the notice of his immediate rivals.

Currency.

EXTENSION OF REMARKS
OF
HON. FINLY H. GRAY,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, September 12, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. GRAY. Mr. Speaker, when I speak of bankers and financial interests I refer only to speculating financiers and special money-manipulating interests preying upon legitimate industry and production. I have no reference whatever to country and commercial bankers, for these men are engaged in necessary business transactions and are loaning credit to promote commerce, trade, and actual industrial growth and the substantial development of legitimate interests. They are as necessary to business and industry as those actually engaged in the various useful occupations, trades, and callings and the productive enterprises of the country. These bankers are a part of the people, interested in common with the people, sharing in their prosperity and suffering with them in their losses and business reverses. When I speak of the interest of the people and their right to control the issue, volume, and distribution of money, to make the same equally and impartially available to all, I mean to include by that term the country and commercial bankers.

Let no country or commercial banker be deceived by the ultimate purpose of the Monetary Commission bill, commonly known as the Aldrich bill. By this bill these bankers were to be relieved of their right of note issue and all power over such issue was to be concentrated in a central bank in which their voice would be inaudible. I quote from the Monetary Commission report, urging upon Congress the enactment of that measure, on pages 17, 21, and 66, respectively, as follows:

We propose that the authority now exercised by seven or eight thousand national banks shall be vested in this cooperative association of all the banks. We propose to relieve the United States from the obligation to redeem the outstanding national-bank notes based on bonds, which are to be taken over by the reserve association.

We therefore propose that the national reserve association shall purchase at not less than par and interest the 2 per cent bonds held by national banks and take over with the purchase the right to issue notes to an amount equal to the bank notes now outstanding, such new notes to be issued and redeemed in the manner elsewhere provided.

The national reserve association shall issue upon the terms herein provided its own notes, as the outstanding notes secured by such bonds so held shall be presented for redemption and may issue further notes from time to time to meet business requirements, it being the policy of the United States to retire as rapidly as possible consistent with the public interest bond-secured circulation, and to substitute therefor notes of the national reserve association of a character and secured and redeemed in the manner provided for in this act.

Thus would the country and commercial banks not only be deprived of their right of note issue and all opportunity to participate in the control of the volume of money, but they would be left wholly dependent upon this central financial body, under private, selfish control, for accommodations in funds, without power or influence to claim or ask for fair consideration. Under the pending bill these banks are to retain their note-issue privilege to the amount of all outstanding circulation until voluntarily surrendered, or the same may be retained while enjoying the full advantages of its provisions. Not only this, but these banks will be independent under this bill of any central-banking interest, and can apply direct to the Government for funds with which to supply the demands of their customers.

Money not only represents value but is a measure of value fixed and determined by the amount of money in circulation and available for use in proportion to the amount of services, commodities, and other property on the market and being exchanged. A volume of money is not required sufficient to represent all the property which may exist, but only so much thereof as is on the market for exchange. Stable prices require that this proportion of money to property which is being moved should be evenly maintained. The volume of money should keep pace with the volume of business transactions. Whenever the volume of business is temporarily increased and an increased amount of property for exchange is upon the market, such as the moving of crops in season, an increased volume of money is required to meet the increased volume of business transactions.

When this emergency is over and the volume of actual exchange reduced, the amount of money should be correspondingly decreased to the normal volume of circulation. It is to supply an increase in the volume of available money in use to relieve the strain of local and periodical demands and to add to the volume of money from time to time to keep pace with the growth and development of the country, and thereby to maintain the equilibrium of stable prices, that the Federal reserve board is to be created and given control over the currency.

I do not indorse the appointment of the Federal reserve board by the President as the ultimate and final solution to be reached in vesting the power to issue money, to control its volume in circulation, and its distribution to make the same equally and impartially available to all the people. I accept and indorse this provision only as a step in the right direction of control by the people of their own money and credits, and with a view of laying the foundation of further legislation to make at least the four appointive members of the board elective by both the House and the Senate on the nomination of the President.

This is primarily a public currency measure, and as such embodies two main propositions. It provides for the issue of currency by the Government, and stripped of all verbiage and of the many intricacies in detail it shows the framework of a system for the distribution of this money to the people. The framers of this bill might have accomplished the disbursement of the money to be issued by creating a new public agency, with branches in every section of the country, or they might have provided for its distribution by some already existing agency of the Government, but this would have called for expense and delay in creating such new agency and for a revolution of an existing Government department and a consequent confusion of duties and functions to be performed. But neither of these plans were adopted. As the banks of the country were especially equipped with facilities for receiving funds and loaning the same to the people they were made public agents under this bill to receive and disburse the money to be issued by the Government. The one great, vital, and most important purpose of this

bill is the distribution of public currency through the instrumentality of the banks to the people equally, impartially, and without discrimination. One of the greatest means in the hands of these agencies to evade this purpose of the bill is the system of interlocking directorates, whereby the banks may combine and organize among themselves to withhold these funds from the people generally and concentrate the same in the hands of the few, to be used to support monopoly and to impair and destroy the ability of competitors, and thereby to restrain trade.

But aside from this special purpose to be accomplished, the prohibition of interlocking directorates should go into this bill. From the money investigation it has been shown that monopoly is largely effected in this country through the instrumentality of interlocking directorates and that the control of money and bank credits is the one most potent of all factors in the destruction of competition.

It has been found that from the bank director's room has come the eternal fiat fixing the status under which industry might exist; that from the bank director's chamber has come the decree of what institutions should live and what industries must die; that from the bank director's room has come the ultimatum to competition of surrender or destruction. It has been shown that interlocking directorates are the citadel of monopoly, the bulwark of trusts, and the refuge of the enemies of the competitive system of industry.

Credit is necessary to enable enterprise to be initiated and carried on. To withhold credit is to defeat enterprise and industrial efforts, and to extend credit is to build up and maintain enterprise. Credit is the power that can maintain or destroy industry, maintain competition, or create monopoly. Impartial consideration before the law and freedom of trade require that credit be extended to all equally and impartially.

Upon these considerations and the clear and unequivocal plank of the national Democratic platform against interlocking directorates and my own declared opposition to the same I will be constrained to record my vote in favor of an amendment, if offered, to prohibit such interlocking directorates among banking institutions, which are to be made public agencies for the distribution of money, to insure its equal and impartial availability to all the people.

In considering these two bills for comparison, the corresponding provisions respecting the duration of the institutions created must not be overlooked.

The Aldrich law as proposed grants a charter and right of succession for 50 years, during which time there can be no relief by way of amendment or repeal for a whole half century.

Under the Aldrich law the men of to-day could not even indulge themselves in the fond hope of relief during their lifetime, but could only pray for and dream of deliverance of their children or their children's children in the far-away future.

This bill grants a charter for only 20 years and reserves to the people the right to alter, amend, or repeal the whole law at any time during that period, leaving them free to choose for themselves the currency system at all times under which they are to live.

This bill does not involve any question respecting the standard of money or the parity of its different forms. What it does do is to change and determine the control of its issue, its volume, and distribution. The claims to the contrary are but efforts to inject into this bill elements not comprehended in any way in the scope of the subject under consideration. There is no demand for silver by the men who stood for it in 1896. The friends of silver are accepting the standard of money as it is to-day, and are satisfied with the solution of that question by the increased production of gold as correct under the quantitative theory of money, for which alone they contended.

There is no demand for any change. There is no proposal for any change. There is no change under contemplation, and there is and will be no change effected by this bill. If a change, it will come from the so-called gold men who will oppose gold and seek to demonetize it if it continues to increase in volume, so as to prevent their control of basic money.

The Aldrich bill, if it had been enacted into a law, would have given the banks absolute domination over our financial system and a concentration of power over the currency in the hands of the few, the like of which Alexander Hamilton, the founder of the first National Bank, and Nicholas Biddle, the champion of the second National Bank, never dreamed of in their most far-reaching plans for a monetary system under private bank control.

The demand for elasticity is but a delusive plea and another name for arbitrary bank control of the volume of the currency. Contraction and expansion could have been effected at will, prices controlled, values manipulated, and all business subjected to absolute bank dictation. Panics would have been at its beck and call, and for half a century this great central bank would not only have been the rival of the Government, but Congress on convening in regular session or on special call would have notified the central reserve association of its organization being perfected and of a quorum present and expressing its readiness to receive any message which the central reserve association might wish to submit directing the legislation to be enacted.

The humiliation of Montezuma, after his welcome of Cortez as the Fair God, would not have been more complete than the plight of the American people if the Monetary Commission had carried out the work it had begun and fastened the Aldrich bill upon them, without the hope of relief for half a century. The conspiracy of Burr and Blennerhassett to wrest the great West from this Nation and found an empire was not more daring and desperate than the Aldrich currency conspiracy, and their failure was not more favorable for the welfare of the country than has been the failure of this conspiracy to set up a money despotism over the people.

English Firm Outbids Americans.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. CULLOP,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 12, 1913.

Mr. CULLOP. Mr. Speaker, I desire to read the following news item, appearing in the Washington Times of date September 11, 1913:

ENGLISH FIRM OUTBIDS AMERICANS.

Outbidding American firms by an enormous figure, an English firm was awarded the contract to-day for the turbine rotary drums to be installed in the new battleship, No. 39, now building in the New York Navy Yard. The contract was awarded to John Platt & Co., agents for Cammell, Laird & Co. (Ltd.), who constitute the Cyclops Steel & Iron Works, of Sheffield, England. Two American concerns, the Midvale Steel Co. and the Bethlehem Steel Co., bid $160,272 and $169,568, respectively, while the English concern offered to furnish the drums for $57,436, a saving to the Government over the lowest American bidder of $102,836.

The above clearly illustrates the profits some of our highly protected industries have been making off the American people. It clearly shows why battleships have been so expensive. It clearly demonstrates the enormous profits the protected industries have been extorting from the American people when once protection gave them a monopoly of our markets, as is the case in the iron and steel industry.

In this one item for material for a battleship the English company offers to furnish for $57,432 what the Bethlehem Steel Co. asks $169,568 and the Midvale Steel Co. asks $160,272. The English company underbids the lowest American company by $102,836. In other words, the foreign company offers to furnish the product for about one-third of what the lowest American company offers to furnish the same thing.

Now, why this great difference in the price? Just think, if this had not been thrown open to competition, what the additional expense would have been to the Government in the building of this battleship.

Doubtless some enthusiastic protectionist will insist this difference in price represents the difference in labor cost in this country and in England; but this difference is too great for such an excuse. The labor cost in England is fully as high as here. The investigations already made have clearly shown this to be true. It further shows the wages paid in our iron and steel industry are lower than almost any of the other protected industries, and it will not do to attribute it to the difference in labor cost.

Mr. Speaker, protection has given our great iron and steel industries a monopoly of our markets, and by this means they have been extorting enormous profits from the American people. It discloses the fact that these industries need no protection and that they should be required to compete in our markets with the products of the world. Investigation shows we produce iron and steel goods cheaper than any other country in the world, and hence these products should be on the free list, so that they can no longer monopolize our markets and wrongfully plunder our people.

Currency.

EXTENSION OF REMARKS
OF
HON. WALTER ELDER,
OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 22, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. ELDER. Mr. Speaker, if I judge the times and signs aright, the day of the party caucus, except on strictly party questions, is about to end. The game as now played by some party leaders is fast and loose. If they see that they have a majority on a particular question or amendment, it is taken into the caucus, and those opposed to it are bound and gagged, delivered body and soul. If they have not such a majority and it is an amendment that would suit the Republican Members, such as that proposed by Mr. FESS, known as the gold-standard amendment, they take what committee following they have amongst the majority and with the help of the Republican minority fasten the useless "gold-bug" amendment on the bill. On the other hand, fearing the result in the whole House on the interlocking directorate feature, where it developed that there were practically 100 votes outside the caucus for this provision, they take the subject into the caucus and attempt to bind and gag the majority Members. Such procedure, in my humble opinion, is certain eventually to destroy the caucus action. Men of intelligence will not continually allow themselves to be handled in such a fast and loose manner by a small, selfish party machine, a wheel within a wheel, unexcelled even in the palmy days of Caunonism. As a loyal Democrat I have never and never will bolt a caucus action.

Heretofore I have kept my expressions of such procedure within the confines of the secret caucus. Hereafter, I wish to say here and now that while I will abide the majority, expressed in the caucus action, yet I reserve the right to express my views, at least of any unfair procedure directed against good legislative government in any public place. I opposed this currency bill in the caucus, for the reason that I believed that it was not good nor safe legislation. At one time I was bound by the caucus action. However, as the committee saw fit to make substantive changes in several respects, and thereby unwittingly released Members of contrary views, I have exercised the opinion that I expressed in the caucus and have voted against the bill.

I believe that it is a bad bill; first, because it gives too much power to a President. Of course, if we had a certainty that such good and able men would always be in the presidential chair as we now have in President Wilson this difficulty might be overcome. However, we have no such guaranty, and it is an axiom in political economy that a power once granted is at some times both used and abused. The Government bank was strenuously opposed by the great leaders of the Democratic Party—Jefferson and Jackson—and since the days that Jackson threw Biddle out of power it has been supposed to be unalterably opposed to a Government bank; and while I am not a prophet, yet I predict if this bill becomes a law some day the American people will have a memorable fight to unshackle themselves from this Government bank. We are putting the banks into politics, and it is now up to them to go into politics for protection of their own selfish interests.

In the second place I am opposed to the bill because I do not believe in asset currency. The present banking system is unfair enough. The banks of this country receive the deposits of the people and in turn loan the people these same deposits at rates varying from 5 to 10 per cent. Not satisfied with these profits, the bankers of this country naturally believe in an asset currency; there is no more money to loan, no greater interest to gather, so they wish the Government to take these assets on which the banks are now drawing this rate of interest and hold these assets as security and issue the banks in turn more money on which they—the banks—can again draw from 5 to 10 per cent. The people of the country in the first place have made the deposits and borrowed the deposits, paying interest thereon; they are again requested, by a piece of bookkeeping legerdemain—the people constituting as they do the Government, giving full faith and credit to the Government—to issue more money on these assets and borrow that new money, which is their own money, again, in turn, at certain rates of interest—as much as the bankers can command and demand.

The demand for this bill has arisen on account of panics and the shortness of ready money in certain sections during crop-moving seasons. Taking advantage of this feeling, this bill is being put through. We have not enough money at certain times I am free to confess. However, under general conditions the production of gold in the world has been sufficient to supply the commercial needs of these United States. We have enough credit, and what we need is not more credit, but that in times of financial stress, which comes periodically and are caused by too great expansion of credit, is for the Government, when money conditions are bad and the crops are being moved, to say to the commercial world that it will give its faith and credit as a temporary relief and until conditions can naturally reassert themselves. To say to the bankers of the country that we will let you have this money to tide over this time of stress to pay your depositors and to move crops, but that when that purpose has been accomplished you must return us this money; the knowledge that the Government would do this would, in my opinion, act as an absolute preventative. There would be no rush of the depositors to draw out their money; there would be no rush to sell securities.

Further, under this plan I believe the Government should say to the bankers that we will not allow you to charge these high rates of interest to the people on this money which we are furnishing to you, but you can only charge the same amount that we charge you plus your overhead or running expenses. You shall not be allowed to take advantage of this condition to extort, if you might please, from the people of this country additional dividends for your stockholders.

Again, I think this bill as it now stands, where a bank with $100,000 capital can borrow ten million or a hundred million from the Government as long as it furnishes good and sufficient assets, is bound to compel an enormous inflation of the credit of the country. The Government under this bill will issue this money to the various banks up to the amount of about three and a half billion dollars. When the point is reached that conditions are flourishing and the exhausted Government can not issue any more money, what is going to happen? Certainly a reaction will take place; the pendulum will swing back and the labor pain of overcredit will be compelled to produce a child in the shape of a financial panic. Then who is going to come to the relief of the situation? The Government no longer has any money to issue for the help of these banks and has removed from itself its only chance to be of financial help to the commercial interests of the country in a time of need.

Along with some others, I labored earnestly in the caucus to attempt to give the farming interests of this country a chance under the bill. Finally a small sop was handed to the farmers, with the promise that next fall a rural credit system would be inaugurated. While I doubt, yet I hope that this promise will be carried into execution and that the men who most need the help and who are receiving the least assistance will receive some proper attention—some actions instead of promises from the Government.

I believe that this is strictly a bankers' bill. Of course, the bankers of the country would like to have some certain amendments. They would like to have a bill along the lines proposed by Representative LEVY, of the Tammany district, which would practically turn over the Government's coffers to them without restrictions. At a propitious time it was discreetly announced that the great bankers of the country were opposed to the bill. This, in my humble opinion, was for the purpose of flushing the country Members into line and support of the measure. It is interesting to note that in the caucus which framed this bill not a single Representative from any of the large cities, where the great financial interests and bankers are located, was opposed to this measure. If this was not a better bankers' bill than the Vreeland-Aldrich bill, why this concert of action? As Democrats in the last campaign we discussed and cussed the Vreeland-Aldrich bill from every platform and from every stump. At the time of the passage of the Vreeland-Aldrich bill we find the Democratic Members in the House voted against it in a solid phalanx. Yet there are whole passages in this bill bodily taken from the Vreeland-Aldrich bill. The Republicans, largely, are voting against it. I see that they want it passed, but they feel that the common people of this country are liable to resent the measure when they see its workings, and they are in the position of the man who says, "I told you so."

There are other minor defects in this bill which have already been discussed in detail on this floor, and I consider it useless

to beclond the main issues by mentioning them at this time. I certainly hope that my judgment of this bill shall prove erroneous. I regret that my opinion compels me to differ with a great majority of you on your vote on this question. From observation and conversation I am inclined to believe that most of you are absolutely and fundamentally opposed to this bill, yet you lack the nerve to go against the powers that be, but take the safe course, in the event of its failure, of hiding behind and under the coat tails of an administration undoubtedly and deservedly popular with the people of the Nation.

The wisdom of following a political life is doubtful, and if it is necessary for me on questions of principle to subvert my conscience in order to hold my position, I would rather retire from politics. Some voted for this bill because they feared they would bring down on their heads the disfavor of an administration. I do not believe that our President is that type of man, for big men are liberal and only little men are picayunish, and I do not believe, in any event, the people of my district would have their Representative violate his conscientious beliefs and principles.

Currency.

EXTENSION OF REMARKS
OF
HON. JOHN JACOB ROGERS,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. ROGERS. Mr. Speaker, I have listened attentively for many days to the arguments ably and eloquently urged by the Members of this House for and against the pending Federal reserve act, commonly known as the currency bill; I have read and pondered over the language of the bill itself and of the voluminous report which accompanied its introduction into this House, and I have made such independent research as was possible to inform myself on its more intricate features.

I am free to say that when the bill was introduced I fully expected to vote for it. I welcomed this attempt to improve the undoubted and grave defects in our present system, and in spite of the most unfortunate partisanship which had marked the framing of the bill, and to which I have heretofore adverted, I was prepared to embrace cordially this remedial measure which I believed then and still believe represents the conscientious and painstaking endeavor of the public-spirited and high-minded majority members of the committee. I expected, of course, that there would inevitably be some provisions which I could not indorse, but I was eager to convince myself that the bill as a whole was such that it would be my duty to support it.

I regret that in spite of these predilections I feel it to-day my duty to vote against the bill. Why? Because in it there are several provisions which are beyond a shadow of a doubt fraught with the gravest dangers to sound banking methods and to the people of the United States. These defects are very specific, very easily to be cured if desired by the majority, and their correction in no way involves the rewriting of the bill or the revision of the very many admirable things in it. It is my hope and belief that they will be remedied in the Senate and that it may be my pleasure to vote in favor of the bill when, amended and improved, it again comes before this House prior to its final enactment. I repeat, Mr. Speaker, that it is a great personal disappointment that I can not vote for this bill. I am particularly unwilling to appear guided by considerations of partisanship in a matter of this moment, and I beg you to believe that I should equally record my vote against the measure in the form in which it is before us if it bore the indorsement of a Republican committee and a Republican caucus.

I desire to set forth the few elements of this bill which command my strong dissent. There are, of course, many others of lesser moment, but these I do not care to enumerate, for they do not contribute to my decision. The matters which seem to me fundamental are:

(1) The bill virtually makes the United States Government itself a banker, with all the duties and obligations which this status entails. The history of this country and of other countries proves this dangerous. The United States should regulate, supervise, and even control banking much as, through an Interstate Commerce Commission, it regulates railroads; it should not manage or operate.

(2) By section 2 (p. 3, lines 11 to 13) "every national bank * * * shall be required to subscribe" to the capital stock of its Federal reserve bank, on pain (sec. 8, p. 14, line 26, and p. 15, lines 1 to 5) of dissolution. There is a very great doubt of the constitutionality of this provision, in the first place; but, aside from that, its expediency is for obvious reasons more than questionable.

(3) Section 11 puts enormous powers into a "Federal reserve board, which shall consist of seven members, including the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency * * * and four members chosen by the President * * * (of whom) not more than two shall be of the same political party, and at least one shall be a person experienced in banking." The powers given this board are, as above indicated, too varied and too broad, savoring of ownership rather than of regulation; but aside from that its personnel puts a premium upon partisanship, upon ignorance, or upon inefficiency. Five of the seven will usually be of one party, and but one of the seven will necessarily know anything of the practical side of banking.

(4) Section 17 authorizes the issuance of Federal reserve notes and provides (p. 29, line 19) that they shall be "obligations of the United States." This saddles upon the United States the ultimate responsibility for these notes, and in time of war or panic might, as history shows, lead to grave complications. It, in effect, makes the United States Government a bank of issue.

(5) Section 17 provides (p. 29, lines 21 and 22) that these Federal reserve notes "shall be redeemed in gold or lawful money," and (p. 30, line 20) for a special reserve against these notes of "gold or lawful money." These provisions resemble an insidious attempt to strike down the gold standard and a return to the free-silver heresies of 1896; it may be that the eleventh-hour amendment to section 29 tends to obviate this difficulty. I fear, however, that such amendment merely results in a conflict between the two portions of the bill. At all events there can be no sound objection to the striking out of the words "or lawful money" in the two places above mentioned.

(6) The number of Federal reserve banks can not by section 2 (p. 3, line 4) be less than 12 and may be more. While I recognize the danger of having but 1 Federal reserve bank, as was provided by the Aldrich Act, there can be no such objection to a plan calling for 3, 4, or 5 of such banks. The difficulty of requiring at least 12, each with a capital (p. 4, line 1) of at least $5,000,000, is that some of the 12 will be weaker than is consistent with an entirely sound fabric, and the weaker ones will be a serious burden and drag upon the stronger and upon the public.

(7) Section 26 (p. 44, lines 3 and 4) provides that certain banks "may make loans secured by improved and unencumbered farm land." Admitting the propriety of authorizing such loans, why the discrimination against other classes of real estate? Is farm land the only safe real estate security?

I repeat, Mr. Speaker, that I hope and trust that amendments to cure most, if not all, of the evils above enumerated may be adopted in the Senate and that I may thus have an opportunity conscientiously to vote for the measure in its final form.

Currency.

EXTENSION OF REMARKS
OF
HON. S. KIRKPATRICK,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. KIRKPATRICK. Mr. Speaker, to the four evangelists was assigned the duty of writing the law of redemption for mankind from the blighting influences of a sin-cursed world. Likewise it has become the bounden duty of the Sixty-third Congress to write a law upon the statute books that will, by its enactment and enforcement, relieve the American people from the thralldom of a banking system that no longer meets legitimate demands.

We no longer use the sickle in reaping down our fields of amber grain, other and more effective methods having been brought into use. We can not live on tradition alone. We must meet conditions as we find them. We can not afford to procrastinate. To do so would be financial suicide.

To my mind the path of duty is so very plain that a wayfaring fool, though a man, need make no mistake. We should not deceive ourselves and thus betray a confiding public, or be cajoled into the thought that Jefferson and Jackson had reached the acme of finance. Their judgment doubtless applied in its day and generation, but to-day would not meet the requisites necessary to the successful operation of a peanut stand.

Mr. Speaker, I represent in part a State teeming with hog and hominy, buckwheat and Chinese sugar cane, and our flapjacks are always sweetened from the bunghole of a molasses barrel, and the tarantula no longer infests the contents of the demijohn. Money bears the same relation to industrial and commercial interests that blood does to the human system. In the latter the physical body must be supplied with a full, healthy flow of blood. Otherwise the body soon becomes diseased and death ensues. So should all legitimate industries be kept constantly supplied with a healthy volume of a sound circulating medium.

The per capita of to-day will not suffice for to-morrow. I have been in close touch with most of the banking interests of my district, and on being asked as to what kind of currency legislation was needed a uniform response came in these words: "Give us a more elastic currency, based on the faith and credit of the Nation, with the privilege of rediscounting good commercial paper." And I feel quite sure that in this all their wants will be supplied.

Mr. Speaker, as a matter of convenience and economy I would not coin any of the yellow metal into money. A gold certificate is more convenient than a gold coin; besides, there is no loss by abrasion.

Let me call the attention of the House to the reports of the Treasury. These statements are based on the amount of all money coined and issued from the dawn of our Republic. It must be borne in mind that of all the money coined and issued a considerable portion is not now in existence. Still it is being carried along as if it were a part of our assets. Many thousands of coined dollars have been unlawfully used in the arts. Many thousands have been destroyed by fire or otherwise lost. Thus the volume of money as reported is incorrect. And, again, the per capita as reported applies to our population of three years ago. Hence, the volume of three years ago will not apply to present demands because of increased wages and the advance in the price of commodities.

Now, as to asset currency as compared with the issue of legal-tender money issued by the Government, I prefer the latter. The products of the farms, mines, and workshops are all good in their place, but as a basis for our indebtedness would be like standing a pyramid on its apex.

Give us a broader basis. Place the taxing power of the Government, backed by all our people, on the reverse side of all our paper-money obligations; then it becomes your paper and my paper, and we will not in any manner discredit our own obligations.

Let me call attention to some of the inconsistencies indulged in by many of our people. In 1896 the calamity howl of 53-cent dollars went up, and within two short years the same party authorized the additional coinage of these despised dollars to extend to not less than eighteen millions annually.

Coming along down the line, the then President directed that the motto "In God we trust" be stricken from our gold coins. At the time I suggested that inasmuch as gold coins have always played a cowardly part in time of financial distress, and the American eagle, in its rapid-transit flight into the pockets of a few money barons, would say, "Farewell, vain world; I'm going home"; or we might have substituted the following: "God be with you till we meet again."

I am not attacking Wall Street or New York simply because it is New York and Wall Street. I am seeking to do that which will inure to the benefit of the American people.

Some have said this is a political measure, that the several boards to be placed in control will be partisan. If this be true, then why not cry out against the Interstate Commerce Commission and the Supreme Court?

At first I looked upon this bill as a sort of Chinese puzzle, an abrupt turn in the highway of modern finance; but I am not looking for perfection in earthly things. As we advance along the financial lines of higher altitude the perception of our best financial agents will be able to cope with all legitimate demands.

Thus, on the whole, I am giving this bill my unqualified indorsement. It is "gospel measure, pressed down and shaken over."

Currency.

EXTENSION OF REMARKS
OF
HON. FINLY H. GRAY,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. GRAY. Mr. Speaker, this bill does not in any way affect the present law fixing the standard of money or the parity of its different forms in circulation. It leaves the same unaltered and unimpaired. While the enemies of this bill, in their attacks upon it as a whole, as well as every paragraph and section separately, have made this claim generally, they have not been able to specifically point to one word, one line, or one sentence in this bill that would repeal or modify, or could be construed to repeal or modify, or in any way affect the existing law fixing the standard and to guarantee the parity of money.

None of all the friends of this bill who have declared their intention to support this amendment have done so on the ground that the bill will in any way change, modify, or affect the present law. On the contrary, they have declared their firm conviction that it does not so change, modify, or affect it. There has not been a single member of the committee offering this amendment who claims that this bill will in any way change the existing standard of money. On the contrary, all have declared their intention to vote for the amendment on the sole ground of political expediency to meet a sham claim made by the opponents of the bill.

This bill provides that the currency to be issued under the control of the Federal reserve board shall be redeemed at the Treasury in Washington in gold or in lawful money which is redeemable in gold, making every dollar issued under this bill convertible into gold directly or into lawful money and gold ultimately, and the Federal reserve banks are required to carry a special gold reserve for this purpose in addition to the gold reserve held in the Federal Treasury for such redemption.

It does not in any way change the existing law fixing the standard of money, and this amendment is not offered with any intention to alter, change, or modify the bill for that reason. The amendment has not been suggested by the opponents of the bill in good faith, but only to mystify and disconcert the friends of this legislation and to pave the way for and bring about the appreciation instead of the maintenance of the present money basis, and thereby in fact to change it and overcome the effects of the increase in the production of gold and the availability of the basic money of our currency system.

The money question has been settled, not so much by law, but by the increased supply of the basic money metal. The increased supply of gold was not nor could not have been foreseen, nor is it the result of legislation. No one ever predicted or ever suggested that its volume would be increased in such ample quantities as to more than equal the double standard. This has all been brought about by invention and discovery and by new and improved means and processes in mining the precious metals and the opening up of the Klondike, the Transvaal, and other productive fields, whereby the annual production of gold has been increased from $202,251,600 in 1896 to more than $461,542,100 in 1911, or more than double the annual production of basic money metal. By reason of such increased production the volume of basic money obtained from the supply of two metals is now available from the supply of one.

The trouble is that the increased gold supply is fast becoming a menace to the special interests which seek to profit by the control of basic money. While this constant and continuous increase in the production of gold can not be controlled so as to control the measuring unit of money directly, the measuring unit can be controlled indirectly by multiplying and increasing the demands upon gold so as to appreciate that metal as effectually as to limit its supply and production. If the production of gold continues to increase at the same ratio in the future, and its measuring value can not be controlled by multiplying and increasing the demands upon it, the next financial move of Wall Street to be observed will be a movement to demonetize gold and to abandon it as a means to control values and maintain the price level.

While our opponents are exchanging artful and wily nods, the remarks of the gentleman from Kansas [Mr. MURDOCK] show

the purpose which this amendment is intended to serve, and the consternation it is producing is being observed with great satisfaction by the men opposing this bill who are here in charge of the scare.

I here quote from the transcript of the Reporter's notes of Mr. MURDOCK's exposé of the artifice now in process of being successfully worked upon the untrammeled Democracy, bold and defiant even in disorderly retreat:

Mr. Chairman, there seems to be a divided allegiance on the Democratic side just at this moment, as between the caucus and the authority of the committee, as between the caucus and Mr. Bryan and the President. I do not think it is a very material thing, but I want to say to the Democrats here, as one standing apart, that the Republicans are playing politics with you, and that is all there is to it. [Applause on the Democratic side.] This proposition is made with the idea that there will be enough Democrats over there who, combining with this side, will be able to put this amendment into the bill. Then, when the committee rises and reports the bill to the House, the Speaker will ask, "Is a separate vote demanded on any amendment?" The separate vote will be demanded, and you Democrats will be put on record, for no other reason on earth than to embarrass you. It is a trap, and if you want to walk into it, why, do so.

I decline to take fright at this legislative bugaboo now being dangled so adroitly before us.

I refuse to participate in the consternation fast forming around the Committee on Banking and Currency, or to join in the great alarm everywhere spreading on the Democratic side, or to obey the imperative command for mobilization in haste for a general rout to escape imaginary pursuers and foes disarmed and defenseless.

Mare Island Navy Yard.

EXTENSION OF REMARKS
OF
HON. J. R. KNOWLAND,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, September 18, 1913.

Mr. J. R. KNOWLAND. Mr. Speaker, the article to which I refer was published in part in the September number of the Pacific Marine Review, of San Francisco. Editorial reference to the article is included:

[Editorial from Pacific Marine Review, September, 1913.]

We have received a letter from the Hon. C. F. CURRY, Member of Congress from the third California district, which letter was written when the Secretary of the Navy was on the coast inspecting the various navy yards.

The statements of Mr. CURRY regarding the value of the Mare Island Yard are fully sustained by the views expressed here by Secretary Daniels, and there appears to be no doubt but that the Mare Island Yard will be maintained in the highest degree of efficiency.

Mr. CURRY, like Secretary Daniels, is heartily in favor of a merchant marine flying the United States flag, and promises to do what he can with that end in view. In this regard Mr. CURRY occupies a different position from that of Secretary Daniels. The Secretary can use his influence and can advise, but he can do only that which the statutes as passed by Congress permit him to do. Mr. CURRY, however, is a part of the lawmaking body, that body which prescribes the limits within which the Secretary may exercise his discretion. Mr. CURRY can advise and use his influence, and he can also vote on the bills as presented. That he will use this prerogative in favor of a greater navy and of some method whereby the merchant marine may recover the position it once held is very evident from the tone of his letter, but the attitude of the present Congress, with regard to legislation with respect to both subjects, does not hold out much encouragement for a successful issue.

The award last month to a Japanese line for the carriage of trans-Pacific mails is but one more instance of the utter stupidity and lack of patriotism exhibited by our lawmakers. The Japanese line is subsidized by the Japanese Government, and for this reason can and did underbid the line flying the Stars and Stripes. For some time the various Congresses have shied at anything which savors of subsidy, and possibly it was considered that the few dollars difference between the two bids might be considered as of the kindred of subsidy, and for that reason the Japanese line, with no better service, is given the award. Economy, both public and private, is a grand thing, but many are the sins which are committed in its name. The letter from Mr. CURRY follows:

[Article by Hon. CHARLES F. CURRY, Member of Congress from California, on the advantages of the Mare Island Navy Yard and its availability as the location for the proposed Pacific coast dry dock, with incidental reference to the American merchant marine.]

Until recent years the idea of building Government ships in Government yards was ridiculed by the trades journals, discouraged by the Navy Department, and given very little consideration by Congress. That attitude has gradually changed, and at the present time the Navy Department's expressed determination to use to their capacity the splendidly equipped navy yards for the purposes of the Navy, including the construction of battleships, meets with the approval of Congress, of the people, and of the press.

During a recent inspection of the eastern navy yards the Secretary of the Navy, Hon. Josephus Daniels, at a reception tendered him in Boston, expressed his ideas on the subject. I read an account of his address in the newspapers and wrote him the following letter:

JUNE 20, 1913.

Hon. JOSEPHUS DANIELS,
Secretary of the Navy, Washington, D. C.

MY DEAR MR. DANIELS: I was pleased to read in the newspapers that in your recent address at Boston you stated that there should be one battleship building at all times in each of the three great navy yards, at Norfolk, New York, and Boston, but I was somewhat disappointed at your not having included Mare Island in your list of navy yards at which a battleship should at all times be in the course of construction. I suppose you inadvertently overlooked Mare Island at the time you were making your speech.

Mare Island is fully equipped with men and machinery to construct a duplicate of the greatest battleship afloat. The work of her mechanics will compare favorably with that of any mechanics in the world, and the work turned out at Mare Island is completed at a cost less than similar work in some of the eastern yards and always within the estimate and appropriation.

Before at least one of the eastern yards named by you in your speech would be in a position to construct a battleship it would have to be equipped with much more machinery than it now has, including a crane that would cost at least $200,000.

It seems to me that while two battleships are being constructed on the Atlantic at least one should be in the course of construction at Mare Island.

It is as unreasonable to advocate immediate disarmament as a means of insuring international peace as it would be to prohibit the practice of medicine to eliminate sickness or to do away with peace officers to prevent the commission of crime.

Story, in his Commentaries on the Constitution, says:

"No nation was ever deprived of its liberty by its navy. The same can not be said of its army. And a commercial nation would be utterly without its due share of sovereignty upon the ocean, its means of self-protection at home, and its power of efficient action abroad without the possession of a navy. Yet this power until a comparatively recent period found little favor with some of our statesmen of no mean ability."

I congratulate the Nation that it has a Secretary of the Navy who believes in the maintenance of an efficient Navy and in the construction of Government ships in Government yards, and I congratulate you on your stand for a national armor-plate plant and for a Government powder works.

Respectfully, yours,

C. F. CURRY,
Representative in Congress, Third California District.

To my letter Mr. Daniels replied as follows:

THE SECRETARY OF THE NAVY,
Washington, D. C., July 21, 1913.

Hon. C. F. CURRY,
House of Representatives, Washington, D. C

MY DEAR MR. CURRY: Your letter of the 20th pleases me very much. When I spoke of the three eastern yards I had them in mind, for I had visited each of them and had an opportunity to see at first hand their potential values, but I had no intention of forgetting the Mare Island Navy Yard, nor had I done so. I stated that I had visited the yards on the Atlantic and would visit all of the yards on the Pacific before making any statement as to them. It is my intention to visit all of the Pacific yards this summer. I really believe that the Government should utilize to the fullest extent the investment that has been made at these different places, and it seems very right that the Pacific coast yards should be allotted their share of the general work. I suppose under the old system it was not expedient that the work should be done on that side of the country, inasmuch as the fleet has always been assembled on the Atlantic seaboard, but now that we have the canal that obstacle is removed.

With sentiments of esteem and high regard, believe me,

Cordially, yours,

JOSEPHUS DANIELS.

Mr. Daniels is now on the Pacific coast inspecting the navy yards at Bremerton and Mare Island and examining available sites for the location of a dry dock. Later in the year Assistant Secretary of the Navy Roosevelt and the House Committee on Naval Affairs also intend to visit the Pacific coast yards. Their visits will undoubtedly be of great benefit to the yards and incidentally to the Government.

The location of Mare Island, at the mouth of Napa River, opposite the city of Vallejo, is undoubtedly the very best site on our Pacific coast for a navy yard. It is situated in the best harbor on the Pacific Ocean, just across the bay from San Francisco, the great commercial, financial, manufacturing, and shipping metropolis of the Pacific, and the harbor and railroad development being prosecuted on the east side of the bay will add to its strategic value. In time of war it will be safe from attack from outside the Heads, and could only be in jeopardy in the event of a hostile fleet being in possession of the bay. The Government has 1,400 acres of building site, with a water front of an ample depth on its operative line for the accommodation of the largest ships, and being inland, is free from the destructive elements found in salt water. The yard is also protected by its location from storms. Some objection has been made to Mare Island on account of the shallowness of the channel. That objection is untenable. When the yard was located the channel was of adequate depth. The *Independence* was sent to the yard about 50 years ago; she drew 21 feet of water, and went in on low tide. Since that time the debris from hydraulic mining, from which there is no more trouble, as hydraulic mining was stopped by law years ago, and the erosion caused by cultivating the virgin soil did shallow the channel; but the work being done on the channel by the Army engineers and the Navy Department is deepening the channel, and there is no doubt but that any reasonable depth required can and will be made and maintained.

At the present time the channel is more than deep enough to permit of the construction and launching of a duplicate of the largest battleship afloat. I have had the channel question up with the Army and the Navy Departments several times since I came to Washington. At my last interview with the Army Engineers I was assured that the work of deepening and maintaining the channel would be vigorously prosecuted by the Government; that commercial necessity would demand and justify it even if the navy yard had not been located there. That the work already done on the channel has been effective is evidenced by the fact that on the 27th of March of this year the *California*, drawing 27 feet of water, was launched, after being overhauled, and left the yard without any difficulty whatever. There is only one navy yard in the United States that has a deeper channel approach than has Mare Island, and much more money has been spent in dredging the channel to that yard than to Mare Island.

In my opinion the proposed Government dry dock ought to be located at Mare Island. Only in case of being badly damaged in battle or collision will a battleship ever draw as much as 40 feet of water, and in that condition it would be hard to get her into any stationary dock wheresoever located. And if a battleship were wounded in a battle outside of the Golden Gate, it would be quite an undertaking to bring her over the bar if she drew over 40 feet. In addition to a stationary dock a floating dock might be built. The floating steel dry dock *Dewey*, built in the East and sent out to Cavite, cost $1,124,000 and will lift 16,000 tons. A few of our larger battleships displace too much to be lifted by this dock.

The addition of a dry dock, a paint shop, and a few minor improvements and rearrangements would make Mare Island the model navy yard in the United States. As it is, she is adequately equipped to build a battleship and her executive officers and mechanics are second to none in the world. The climate is ideal and makes it possible for a man to work without discomfort from heat or cold every week in the year. Better work at less cost to the Government is turned out at Mare Island than at any other Government or private shipbuilding yard in the country.

The collier *Vestal*, built at the New York Navy Yard, cost $60,000 more than her sister ship *Prometheus*, built at Mare Island. The training ship *Cumberland*, built at the Boston Navy Yard, cost $10,000 more than the *Intrepid*, built at Mare Island. Two steel targets built at the Norfolk Navy Yard cost $5,000 more than similar targets built at Mare Island, and as further evidence of the quality and economy of the work done there the repairs on Army transports, revenue cutters, and Fish Commission boats are frequently awarded to the Mare Island yard. If given the opportunity Mare Island will build a battleship that will be the pride not only of California, but of the Nation, and she will build it as cheaply as it can be built in any yard in the country. If we all work with that object in view, I believe she will be given the opportunity. A few months ago the yard was inventoried and appraised at nearly $12,000,000. In addition to determining the value of the plant the inventory proved it to be one of the best-equipped yards in the country. It would be nothing but common sense business judgment on the part of the Government to use its navy yards to their capacity before awarding contracts to private yards when the navy yards' bids and estimates are as low as those of private yards, and they usually are. Even though it should continue to be the policy of the Government to award the building of some of its ships to the private yards, navy yard competition would keep the bids and contracts for construction in private yards down to a minimum that would permit of a reasonable profit, and in the time of war or threatened war the Government would not be at the mercy of the private ship-building yards. Of course, to make navy yard competition effective at such times it would be necessary for the Government to own and operate an armor-plate plant with an output capacity sufficient to manufacture at least one-half of the armor plate necessary for the Government's use.

The Spanish-American War made the United States a world power. The construction of the Panama Canal will compel the United States to assume the position of the world power, at least so far as the Atlantic and Pacific shores of North and South America are concerned, if we intend to maintain the Monroe doctrine and determine to control and operate the canal in our own way, primarily for our own benefit, and not give way to the unreasonable requests and demands of certain European nations that our interstate coastwise commerce be not permitted to pass through the canal toll free. The canal is being built by the American Government, with American money, primarily for the American people; when completed it will be part of our coastwise shipping route, and no other nation on earth should be permitted to dictate our governmental policy toward our domestic shipping. If we are to maintain our rights we must have an adequate and efficient Navy. During the debate in Congress in favor of the construction of the canal the argument was used that the canal connecting the Atlantic and Pacific and bringing our two coasts so close together would obviate the necessity for materially increasing our Navy. That argument was without foundation in fact. The completion of the canal will make it necessary for us to maintain a larger and more efficient Navy than ever, for the opening of the canal will be followed by a material development of the Pacific coast in population, commerce, manufactures, mining, and agriculture unprecedented anywhere in the history of the world, and will necessitate our maintaining an adequate and efficient squadron on each coast. The possession of an efficient Navy by a nation is a good investment as an insurance agaiust war. It more often prevents war than it is used in battle.

All right-thinking men desire international peace. They hate war as they hate sickness and sin, but the health laws of Moses and the efforts of scientists have not eliminated sickness or lessened the per capita number of physicians, and sin exists regardless of the Ten Commandments and the Sermon on the Mount. The idea of world-wide perpetual peace, compulsory arbitration of the differences between nations, universal disarmament, and the maintenance of a small international navy, the ships of which shall be of the revenue-cutter type, to be used only for the policing of the ocean, is a beautiful theory that will not be realized before the dawn of the millenium, which can not be until after Armageddon, and the battle of Armageddon has not as yet been fought. In the meantime, to be prepared for war is the surest way a great seacoast country has of maintaining peace with other nations. In a Republic like ours, where the Government exists for the individual and not the individual for the Government, a large standing Army is unnecessary and would be a menace to the liberties of the people, but an adequate and efficient Navy is necessary to insure our national existence, to enforce the recoguition of our rights, and to maintain our dignity and standing among the nations of the world. The Athenians, and after them the Romans, knew, as was stated first by Themistocles and later by Pompey, "That the people who were masters of the sea would be masters of the world." As it was in their times, so it is in the present day and generation, and it behooves the American people to profit by the experience and wisdom of the ages.

The United States is the only Nation that ever existed whose people have proven themselves capable of effective self-government and at the same time enjoy both personal and political liberty.

Most monarchical governments are jealous of her success and prosperity. Should our Government fail or be destroyed, personal liberty would soon cease to exist on the earth.

We need an efficient Navy, not for conquest, but for self-protection. The ships of the Navy, when practicable and possible, should be built in the Government navy yards. It is practicable and possible to build a battleship in the Mare Island Navy Yard. It ought to be done.

Of almost equal importance with her navy is a nation's merchant marine. It is the shame of our Nation that her merchant marine is a negligible quantity in the ocean-carrying trade of the world. Nearly all of our international commerce is carried in foreign ships. The American flag on a merchant ship in a foreign port is a curiosity. This ought not to be so. I have been appointed a member of the House Committee on Merchant Marine and Fisheries. As a Member of Congress I shall advocate remedial and constructive marine legislation and shall do what I can to assist in the passage of laws to help the American merchant marine to again become a power in the transoceanic carrying trade of the world.

Since the above article was written the Secretary of the Navy has let a contract for the improvement of the hydraulics of Mare Island Straits, in accordance with the report submitted in House Document No. 1103, Sixtieth Congress, second session. The contract calls for the dredging of the channel 400 feet wide and 30 feet deep and the removal of Commission Rock. As the contract price is less than the amount appropriated, the Secretary of the Navy hopes to be able to increase the width of the channel to 600 feet. This should insure a channel of adequate depth and width.

Currency.

EXTENSION OF REMARKS
OF
HON. GEORGE W. EDMONDS,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, September 17, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. EDMONDS. Mr. Chairman, while the proposed new banking act contains many features of merit it also contains some provisions that are very unwise.

The bill starts out by placing the banking system of the country in the hands of a political board, which is to be known as the Federal reserve board. It is proposed that the board shall consist of seven members, including the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency ex officio, and four other members, to be chosen by the President of the United States, by and with the advice and consent of the Senate.

Part of section 11 providing for the establishment of the Federal reserve board reads as follows:

Of the members thus appointed by the President not more than two shall be of the same political party, and at least one shall be a person experienced in banking. One shall be designated by the President to serve for two, one for four, one for six, and one for eight years, respectively, and thereafter each member so appointed shall serve for a term of eight years, unless sooner removed for cause by the President.

The powers given to this Federal board are so sweeping that it would constitute control of the entire financial situation of the United States, virtually forming a bank of the United States, with a directorate of seven men, five of whom would be of the same political faith.

That this body is political is plainly apparent when you read section 12, paragraph B. In this part of the bill you will find that money can be transferred from one reserve district to another upon consent of five members of the Federal reserve board, the bill specifically stating that five members only need be present. What does this mean but that the three officeholding members and the two partisan appointees can change the flow of money as they please?

President Jackson well said in his farewell address when speaking of the Bank of the United States:

In the hands of this formidable power, thus perfectly organized, was also placed unlimited domiuion over the amount of circulating medium, giving to it the power to regulate the value of property and the fruits of labor in every quarter of the Union, and to bestow prosperity or bring ruin upon any city or section of the country as might best comport with its own interest or policy.

Think of such tremendous power, Mr. Chairman, being lodged in the hands of a board which on account of the manner of its appointment can not help but be more or less of a political body.

Had not the majority of the House, composed of members of the Democratic Party, which is responsible for this bill, been bound by its own caucus action, thereby preventing its own members to submit amendments, if they so desired, after the House had resolved itself into the Committee of the Whole, I would have certainly offered an amendment proposing seven members of the board, these seven members to comprise the Secretary of the Treasury, or Comptroller of the Currency, and six members to be appointed by the President, by and with the advice and consent of the Senate, only two of whom should belong to the same political party, and that these members shall be appointed for life at a salary large enough to secure the very best men of banking and business experience. A board appointed in such a manner could not possibly be amenable to political influ-

ence, and having a life work before them would become expert in financial matters which cover a very large field of activities.

Never have I as fully realized as now the viciousness of a party caucus which, by the exercise of moral agreement and good faith among its members, as completely binds them to the thoughts and actions of a few men as if they were shackled.

Another objectionable feature of the bill is the provision that every national bank will be compelled to subscribe 20 per cent of its capital stock to the capital of the Federal reserve bank of its particular district, one-half of the subscription to be paid in as prescribed by the bill and the remainder shall be subject to call. While, of course, it is necessary to provide capital stock for the various Federal reserve banks, it is questionable whether all of the national banks will consent to centralize so much money in the hands of the members of the Federal reserve board, composed merely of politicians. This provision will, no doubt, force many of the national banks to apply for State charters.

I have been listening to Members on the floor explaining that this bill will help the farmer by giving him a credit of 90 days on his notes and bills at the Federal reserve banks, but importers can have acceptances of six months at the same counter. The bill does give the farmer the right to mortgage his farm to a banking association up to 50 per cent of its value for 12 months; but of what little value such a proposal is to a farmer, except for ready money, can at once be seen when foreign countries find it necessary to encourage farming loans of from 25 to 75 years' duration.

I fully realize that it is imperative that our currency system needs many changes so as to make it more elastic, but I regret that I am compelled to cast my vote against the bill under consideration, as I do not feel that the business and financial conditions of the country can readily adjust themselves at this time, especially when a new tariff bill is about to become effective, to the requirements of a bill that contains so many radical features, a few of which I have only had the opportunity to point out.

Banking and Currency Bill.

EXTENSION OF REMARKS
OF
HON. J. I. NOLAN,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, September 18, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. J. I. NOLAN. Mr. Speaker, under the general permission granted to Members of the House to print and extend their remarks upon the banking and currency bill in the RECORD, I desire to submit the following:

HIGH COST OF LIVING; THE CAUSE AND REMEDY.

(By Richard Caverly.)

Owing to invention and general progress the natural tendency of prices, measured in labor, is toward a lower level. As commodities are produced with greater ense and facility they tend to become cheaper, so that one pays less labor for the things one earns or buys. Prices would remain stationary only in a stationary world, and prices would naturally tend upward only in a world or country on the down grade.

The economic progress of the world is, therefore, measurable by the rate at which prices tend downward.

Bearing in mind that real price is cost measured in labor, a rise in real prices indicates disease in the body economic, just as increased temperature shows disorder in the physical body.

The United States Bureau of Labor issued a report on retail prices March 18, 1913. That report showed that the cost of 15 of the principal articles of food had advanced 55 per cent in the past 20 years, and that prices of the other necessaries of life had advanced in still greater degree. During that period the wages of railroad employees have increased 30 per cent, so that there has been a relative decrease of wages although a nominal increase.

In the face of such a situation and during the same period the amount of dividends on railroad stock has increased over 400 per cent, or from more than $87,000,000, in 1890, to over $460,000,000, in 1911. To-day the railroads are paying dividends on $7,000,000,000 worth of fictitious watered stock. To pay such dividends they are levying a tax upon every article that the American people use. (See CONGRESSIONAL RECORD, July 19, p. 2437.)

If the inhabitants of a country should become insane, devoting themselves to the destruction of labor-saving machines and the annihilation of wealth, prices would rise just as they have for some years.

Our country's facilities and resources have not been destroyed, but all the advantages of invention, discovery, and the abundant gifts of nature have accrued to the benefit of a few monopolists, while the masses, shorn of all the material fruits of civilization, are as helpless and hopeless as if they lived in a declining world. This condition is the result of legislation—the achievement of privilege. Every barrier to trade and every law that facilitates monopoly sends prices higher.

PRIVILEGE MAKES THE LAWS.

No man nor any corporation can plunder the public except by virtue of special privilege obtained by legal legerdemain. The cupidity of the few and the stupidity of the many have enabled privilege to make our laws; and now, finding that a day's labor will hardly buy a dinner, we stand bewildered while the attorneys for privilege kindly and learnedly explain that the real causes of the trouble are "lack of farmers," "labor unions," the "law of diminishing returns," "extravagance of the working classes," "the discovery of too much gold," and so forth.

Several professors of political economy have given generous aid in teaching the unanswerable rabble how simple and self-evident it is that too much gold necessitates bare backs and empty stomachs. Perhaps a little more gold would cause the human race to wind up its affairs and die of starvation. "Of course the professors hesitate a little before pointing out the errors of God, who made the gold."

Seriously, gold is subject to the law of supply and demand, and being our monetary standard, any material increase in its supply making it cheaper causes a proportional increase in nominal wages and nominal prices; but if all the mountains in the world were turned into gold the miracle would not diminish the purchasing power of a day's work. As gold becomes cheaper a day's work will purchase more of it, but not less of other things on that account.

The depreciation of gold in recent years is of no consequence whatever, but the fact that the purchasing power of labor is decreasing daily is a sign of public distress and industrial disaster to be dreaded. Monopoly in its various forms is the root of all economic evil. There can be no easement from press of prices while tariff laws permit the monopoly trade; nor relief from the demands of privilege while the commonwealth of the people is in the hands of the despoilers; nor freedom from tribute while our country is being sacked and plundered effectually like the domain of Gaul at the hands of Cæsar. Prices will fall as soon as our benevolent Government refuses a helping hand to the predatory power.

INCREASE OF LAND RENT.

In the background, unobserved by many, is the fact that land—space upon which the men, women, and children of America must live, work, or play—is rapidly becoming more and more valuable. Its income-bearing power is growing from day to day. Still further, the great and growing volume of rents of various kinds is thrown upon the shoulders of business and ultimately upon those of the consumer, an inert burden which is in no small way responsible for the high cost of living. Land rents, rural and urban, have been swiftly rising during the last two or three decades.

In addition to this must be mentioned a multitude of various gains from monopoly and special privilege. Every wide-awake American must admit that monopoly is to-day a potent factor in the business world; it can no longer be neglected in any careful study of prices or any adequate discussion of the increased cost of living. Indeed, industry in the United States is handicapped by an enormous burden of fictitious values, stocks and bonds, and unnecessary taxation. The rapid trend away from the small business units and competition toward the large business unit and the control of prices by means of combination and agreement furnish a favorable opportunity to increase the returns from capital actually sunk in the business and to capitalize those extraordinary returns into stocks and bonds bearing interest charges labor must pay. The leveling forces of competition have lost their potency in most lines of industrial activity, and as yet we are groping in the dark for a substitute. The existence of enormous returns upon fictitious values and unique opportunities alongside of low wages and poverty and misery emphasize the need of a radical change in our social system and our mode of taxation. Not only is the amount of the annual national income or dividend which goes to private individuals in the form of rent or of monopoly returns increasing, but the total has already assumed vast proportions.

THE INCREASE OF WEALTH.

Since 1870 our population has increased from 38,000,000 to 98,000,000, or about 150 per cent, while property has increased in the same time from $30,000,000,000 to $125,000,000,000, or 300 per cent. The per capita of wealth has increased during this time from $775 to $1,500. Much of this wealth had its origin in what is called the unearned increment, the value that comes to land by the increase of population. This part of wealth of the country was not created by the owners, but has resulted from productive energy and enterprise of the community in general. It has accrued through the sweat of the brow of others and without toil on the part of those who enjoy it. It should therefore be used for the common good of all the people.

Mr. John Moody, a competent and conservative authority, not long ago estimated that about one-half of the wealth of the Nation was not "created" wealth; it was fictitious or paper wealth. But men are deriving incomes from this paper wealth and society is quietly paying the bill, while prices rise. Prof. Davenport avers that—

It is probably not going too far to assert that two-thirds of the durable properly basis of income in the country are nothing else than this capitalization of privilege or capitalization of predation.

The annual increase in land values in the city of New York is greater than the cost of carrying on the city government. The average value per front foot of the best business property in that city is, say, $20,000, or approximately $8,000,000 per acre.

THE DANGER OF SURPLUS WEALTH.

Assuming a net income of 4 per cent to the landowner, the net annual rent from 1 acre would be $320,000. This income is approximately equal to the income of 640 wage earners earning the average wage now paid in the United States. Surplus wealth is a lever which may be used to obstruct or to promote material prosperity. It may reduce labor to the verge of starvation, to anarchy, and revolt; or it may elevate labor to a condition of cooperative industrial brotherhood. Surplus-wealth owners, through combination, can and do increase prices.

If the passive factor of production, the earth and its riches, consisting of farms, ore bodies, city lots, and all other forms of natural resources, be subject to private monopoly, then surplus wealth will flow toward such opportunities for investments. It will do so for the greater safety, the more certain profits, and the less attention. But such investments depend for returns on tribute wrung from labor, and progressively they make for lower wages in proportion to products. If, on the other hand, the community were to absorb monopoly land values into the Commonwealth, surplus wealth could only be invested in promoting the activities of the active factor of production—labor. Increasing pressure of this kind would tend first to elevate wages to the highest economic point, the full earnings of the wage receivers, and then resolve every industry into a form of cooperation in which the employees would be the stockholders, and thereby their own employers.

LAND VALUES AND ITS RELATION TO PRICES AND THE CIRCULATION OF MONEY.

The two sides of the land question are production and distribution, and their relation to prices and the circulation of money is also important.

Production has long been held to be the only vital problem in public accounts, and it has too often been assumed that distribution would take care of itself after the question of production was answered.

The distribution of money is a vital issue, and when the mistakes of distribution have been corrected there will be no troubles of production to worry about.

The distribution of wealth and its relation to prices is not the art of owning improvements upon lands and transporting goods to consumers, but it is a science which distributes money to buyers, so that buildings may be constructed and goods may be purchased. Money must find its way into the hands of buyers before labor will be employed to reproduce goods. As we look upon labor molding materials into useful forms and engaged in visible and concrete activity we seem to be observing the only process of any importance in producing and exchanging wealth.

But after the material processes are all complete we must encounter the invisible forces by which money is distributed and by which the price of work is determined. Back of the visible and moving objects of production are the invisible forces by which labor and material are moved, and it is these forces which determine the quantity of money, the speed of circulation, and determine the condition under which mankind may live.

A wheat crop represents a very small amount of work done by man compared with a very large amount of work done by the invisible power of nature. The work done by man is paid when the wheat is sold to the consumer, and the price received for the wheat will govern the price paid for the labor under fair conditions.

If nature works without cost and furnishes raw material free, then total prices for all labor products and total wages must absolutely balance.

In such cases the quantity of wages in circulation or held in reserve must balance the quantity of prices. If quantity of wages and quantity of price must always equalize each other and there is no cost for raw material or land, there will be no limit to cheapening the forces of nature, and each step in overcoming the resistance of nature will be a step which must advance wages.

At this time, however, quantity of price and quantity of wages do not appear to balance each other because we permit a privilege class to collect toll for services and charge a price for raw material, largely produced by nature.

Unequal distribution of wealth arises by selling to labor and collecting from labor a price for the bounties and forces of nature by including them in the price for products and in price for land.

Primary money or cash can not circulate or increase in volume unless prices of labor and its products directly respond and all suffer loss equally or get equal benefits from falling or rising prices. But with circulation that is first redeemed in money and then money alone is redeemed in labor, a large volume of such money may circulate outside of labor and the entire price sustained by such a currency may be a total loss to labor and a total gain to the class who benefit from it.

All that is required to keep such a system in operation is a legal privilege creating property which labor must buy, but which labor can not be paid to produce. The price of land in the United States estimated at $60,000,000,000 sustains a volume of bank-check currency wholly spurious so far as labor is concerned, a currency which buys the property labor produces, but which does not enter into the price of labor.

Labor is being compelled to use land in one of its myriad of forms and is compelled to pay cash for such use, and in this way the cash exchanges arise which support a great volume of bank checks. A given proportion of bank checks redeem each other and a given proportion may employ labor on time to be redeemed by other labor on time, thus cutting out labor entirely from any benefits of such currency. Whatever money or credit is put into circulation by landowners, using the value of land as security, is wholly a spurious and counterfeit circulation of money so far as labor is concerned.

If primary money was inflated by a volume of counterfeit, circulated as cash, the loss to labor would be measured at once in the amount of such money, but prices would advance all over the market and distribute the loss in proportion to wealth. But secondary money by billions of dollars is maintained in circulation and sustains a price of land which is charged against labor, but does not distribute any loss. If the price was driven away from land by taxation, the credit created by labor would continue to circulate a volume of bank checks which continue the same price, but they would become prices of labor products.

In examining the gain in prices of every kind, which rise above cost on account of the growth of credit, it is discovered at once that the prices at which buildings and improvements sell is an exception to the universal rule, and such improvements invariably sell without profit and at cost of production.

THE PRICE OF LAND DETRIMENTAL TO IMPROVEMENT.

This exception in selling buildings and improvements arises from the fact that a price must first be paid for land, leaving so much less of the total selling price to buy the improvements or building.

With land costing nothing, improvements must thus gain the general average in selling profit that other labor products enjoy, and in doing so take up the price that land loses.

It is absurd to claim that labor could not sustain an increase of $60,000,000,000 in prices for improvements, when labor now sustains such prices for land as a total loss, while the distribution of such value to improvements would be a total gain to labor—a change from a debt to a credit. Wealth may only arise by gains from an increase in price—increase in price of land, for goods, for stocks and bonds. Unequal wealth can only arise from an increase in price of land, because the distribution of new wealth depends upon prices rising first before such new gains in wealth may be distributed.

A rise in the price of land is the only gain in price which takes wealth out of the channels of distribution and holds it out against labor.

Land must be bought everywhere before any improvements may be made, and this widespread demand for land causes a

stringency of money to follow the greatest activity in building for a time.

THE PRICE OF LAND LIKE THE PRICE OF A SLAVE.

The price of land has no limit to its rise except the limit in the volume of currency that may be kept in circulation to buy it and the limit in the rate of profit at which money will circulate. As the price of land advances and the rate of profit declines, we are burning the candle of progress at both ends by multiplying the risks of business. The price of land is like the price of a slave, for the money buying slaves can not increase the earnings of slaves while it increases their price, and the money to buy the land becomes harder to get as land is higher in price, because it takes the money out of circulation among workers and creates a counterfeit among financiers to take its place, which laborers must redeem.

BONDAGE OF THE PEOPLE.

In the United States we have to-day 288,352 corporations of all kinds, such as joint-stock companies, banks, insurance companies, and associations of various kinds.

Amount of capital stock	$60,067,138,925.42
Amount of bonds and other indebtedness	32,163,537,961.40
Total bonds, stocks, and other indebtedness	92,230,676,886.82
Total net income	3,213,707,247.82

(The above figures are taken from the Statistical Abstract of the United States, 1913, p. 693.)

Note the above paper evidence of ownership amounting to the fabulous sum of $92,230,676,886.82. Note also the total net annual income sustained by productive labor of $3,213,707,247.82.

It is a well-known practice of grafters and confidence men to impose upon the unsuspecting who have saved money and sell them something which is worthless, and they aptly call this business. If we had a similar system wherein the victim would find another to whom he could sell at a profit, and this could be continued and the people believed the gain they made could be charged to posterity, we would have a parallel to our "watered" stocks and bonds and our present land system. To support and extend a system of buying and selling "blue sky" to a limited number of people for a short time, who may resell at a profit, ends in disaster, as was shown many years ago in the Mississippi bubble and the black tulip craze; and such disaster of a most widely extended and parallel system is equally shown in many panics, in vast suffering and poverty among the mass of the people, and in drunkenness, vice, crime, insanity, and suicide, not to consider its effect on prices.

WHY PRICES FOR IMPROVEMENTS ARE LOW.

The man who buys a business block in a city does not pay a half million dollars for a lot because the land produces a penny's worth of value, but he pays because the volume of trade will pay a high profit on the improvements at the location.

It is this fact of being compelled to pay a high price for land in order to get profits from improvements that keeps prices of improvements down to the lowest possible level so they may be able to sell with a price for land added to them.

LAND VALUES LIKE SLAVE VALUES.

This burden of the price for land holding down the price of labor and material by holding down prices of improvements contracts the volume of money in circulation by limiting such volume to price of improvements.

The volume that makes the price of land is the debt volume, which is completely outside the circulation which pays wages. A land title is simply a special privilege created by law; it is very similar in its nature to the ownership of a slave, consisting in the power of the owner to appropriate to himself the future production of other men who must use the land or have dealings with people who do use it.

VOLCANIC ERUPTION, FREEMEN, AND RAISE OF WAGES.

Speaking of land titles reminds me of a story I read some time ago that told the following: In the island of Martinique, after the destruction of St. Pierre, its principal city, by the eruption of Mount Pelee, a traveler visited the islands and expected to find a scene of desolation and waste. But to his surprise he found the island was more prosperous than ever before for generations. Wages had greatly advanced and industry was active as never before, and no complaint was heard about the high cost of living. He inquired the reason of this strange phenomenon from some resident friends, and was told that nearly all the rich landowners of the islands lived in St. Pierre, and most of them, including all their relatives, had been annihilated by the eruption and the records of land titles and of mortgages and debts had been completely destroyed. To be sure, many of the laboring classes had also been killed, but the remainder of them went out upon the land to work, free from the obligations which weighed upon their predecessors.

The destructive forces of nature which had wrought such havoc and confusion in the island had also destroyed the parasite who had been absorbing the greater part of the fruit of their labor.

The volcanic forces which had exploded the mountain had also lifted the burden of special privilege—the taxing power—from their backs, and they stood forth free men once more to satisfy their wants by their own labor, as nature intended.

Of course, if the system of land tenure were retained, it would in time produce the same result and create other landlords and other tenants and the same accompanying extremes of riches and poverty, watered stocks and bonds, increase of prices, and other vile things too numerous to mention that degrade humanity and rob labor.

But the point that this illustration makes clear is that only real wealth that had been destroyed were the building and implements of production and personal property. The destruction of land titles and landlords had not destroyed any real wealth; only privilege was destroyed.

HOW THE EARTH IS LOST TO LABOR.

There is no source from which to secure money to buy the earth, and there is no way the people could have lost the earth except by going into debt and giving the earth as security for the loan which can not be paid.

Let me illustrate how this works; one of the many cases:

The Norfolk & Western Railway purchased a boundary of Pocahontas coal land for $20,000,000 from owners who received it from other owners, who merely accepted it as a gift from the States of Virginia and West Virginia. In this process the land advanced in price from zero to $20,000,000 in round numbers. The Norfolk & Western Railway combined with the Pennsylvania Railway and issued 4 per cent bonds, giving the coal land as security.

The landowners received $20,000,000 worth of surplus wealth, without giving any equivalent, which had previously been accumulated and had not been distributed in higher wages, and the railroad is secured by the coal lands upon which its bonds are based. But who is bound in this agreement to pay $20,000,000 in the future? If it is not the people who mine, who transport, and who consume Pocahontas coal, who is it?

This is not a bond upon land at all, but is a legal form by which future generations of labor are sold into debt by selling their rights in Pocahontas coal for a surplus wealth they themselves should have received in higher wages, instead of its having been paid to owners of land, under a system of bondage.

THE ECONOMIC SIGNIFICANCE OF RISING PRICES.

Advance in price of iron is generally heralded as a sure sign of growing prosperity.

While it is true that a sustained advance, coincident with maintained or increasing output, signifies increased purchasing power on the part of the public, this is of minor importance compared to the economic significance of the price advance in itself. For is it not an axiom of political economy that increased productivity tends not toward higher but toward lower prices?

Rising prices for iron may indicate increased general affluence; but we should not lose sight of the further fact that it may also indicate a power in monopolists of the sources of supply to charge not merely an equitable price, but a price—any price—within the power of the consumer to pay. If this power really exists, not only in relation to iron but also in the relation to raw materials of industry in general, then it is evident that prices will be arbitrarily advanced to absorb any increase in the people's power to pay.

If adverse conditions have forced the prices down below the point that affords an equitable margin of profit, then a return to that point should be a matter of general gratification. But under the monopoly conditions that now prevail in the field of raw materials the public can not possibly know when that point has been reached.

Where the element of competition is freely operative price may indeed fluctuate within narrow limits, but the unvarying tendency is to the point of equitable remuneration for service rendered.

But where the factor of competition is absent—in the field of monopoly—the point of equitable remuneration affords no check to the upward tendency of prices.

In the competitive field A must perforce limit his selling price to what his competitor, B, would accept. But in the field of monopoly C is the sole operator, and he charges not the same that some one else is willing to accept, for there is no one else, but all that his customers, A and B, can be forced to pay. His price stops at the point which in his judgment will afford him, all things considered, the largest possible return.

He could exact more for a brief period, but only at the penalty of shrinkage in volume of sales, with the further risk of crippling his customers, and thus inducing panic and general business depression. In fact, this is precisely what he does do in the end; he did it in 1873, in 1893, and last in 1907.

The point is that the monopolists of the sources of supply of the raw materials of industry have the power to charge all that they choose to ask, and that prices in that field are determined not by value of service rendered but by the monopolists' judgment as to the paying power of the public.

Advancing price of raw material is a manifestation of the monopolists' method of forestalling the public of the prosperity that otherwise it would enjoy.

Under competitive operation increasing business activity and gradual decline in the price of iron would coincide, distributing thus prosperity to the general public. But under existing conditions business activity and rising price of iron will coincide, thus apportioning the activity to the public and the prosperity to the monopolist.

These truths are becoming manifest to an increasing number of the people, which fact accounts for the widespread sentiment in favor of a revision downward of the tariff; for the public is getting hold of the fact that the protective tariff buttresses the monopolists' position; that in the absence of the tariff the American public would have access to sources of supply not controlled by American monopolies.

It is only a vague sentiment with the general public as yet, however; it does not amount to a settled intelligent conviction. The prevailing sentiment is in favor of equal opportunity, and many who ought to know better actually believe that such condition exists.

"We've equalized *opportunity*. This is the *most* that society *can* do; it *can not* equalize *men*." That is the way a certain voluminous dogmatist puts it, emphasis and all. The quotation shows that the author of it is, in sentiment, in favor of equal opportunity, and it further shows that he is ignorant of the fact that equalization of opportunity still waits upon the action of society.

Let us hope that society can not nor ever will be able to equalize men.

And let us also hope and confidently believe that society will yet equalize opportunity, to the end, in part, that the increasing productivity of human society shall not longer afford special opportunity to the few to arbitrarily advance the price of the raw materials of industry.

Let us believe that society can do this. Let us see to it that society shall do this.

The sign of its accomplishment will be progressive decline in prices with increasing productivity and a consequent tendency toward universal prosperity.

LAG IN PAYMENT OF WAGES BENEFITS CAPITAL.

When the individual history of any capitalist is closely examined to discover the wealth he has contributed to enterprise it is found he has been almost wholly occupied in taking capital away from the worker instead of providing any. The simple truth is that successful undertakings furnish their own capital when they are given time enough to carry out the saving and economies they introduce. The truth should further be made known that the time needed and the first advance to industry are secured by holding back the wages of labor after they have been earned and have been paid into the market. Although each workman when considered separately offers no basis for an accumulation of capital, yet when the market is considered, where tens of millions of them continually deposit their wages, the view changes.

When the payment for labor is not made daily after the work has been done, but lags behind from 10 to 30 days in the commodity market alone, then a vast reservoir of money accumulates representing hundreds of millions of dollars which is constantly available to institute new undertakings that become quickly self-sustaining. The creation and persistency of capital depend upon this lag in the payment of wages to labor, and capital does not arise, as is falsely represented, from the superior ability of particular groups of men, nor does it arise by accumulations from past generations.

The lag in the return of wages to labor has two periods in time of its circulation. There is a short lag period during which cash tarries in the commodity market and there is a long period for the return of capital advanced from labor. Commodities being constantly consumed must be as constantly reproduced, and this process requires the constant return of cash used in this market, because the wages of labor may not be held back for a longer time than food and shelter may be loaned. The loss to labor during this short lag is confined to the cash spending money of the privileged classes in servants, travels, jewels, works of art, and other expenses for living and luxury, and is therefore quite limited when compared with the entire volume of goods consumed.

During the long lag in the return of capital, however, the failure in such return causes a loss to labor of the earth itself and all the wealth stored within the earth now controlled by the privileged classes.

The natural return of deferred wages arises when merchants and manufacturers accumulate bank deposits from profits in the commodity market and spend them to increase the output of goods or to employ labor in new development; such profits break up into individual wages and returns to labor. But if such profits are invested in some form of property having a legal existence only, such as land values, which sells because it confers a privilege upon the owner, then the sum spent for such privilege can not break into individual wages but remains a joint account represented by the selling price of the legal property as against labor property.

In this manner, by spending money for something labor does not and can not produce, the raising of prices of such takes up the rising accumulation of capital by preventing the distribution of deferred wages. When the price of privilege has absorbed all the wages that may at the time be held back the demand for labor to create new improvements fails, because no money returns to circulation with which to employ them. Such time comes when the price of watered stocks or bonds and land values equals half the total price of all income property.

Progress then ends in a panic, and prices fall, including land values and rent.

EXTRAVAGANCE OF CONGRESS.

Congress is often criticized for its extravagance, and must share the responsibility for increased expenditures and increased prices. But no one knows better than Congressmen, from correspondence and from numerous requests to support different measures, that the country itself is not adverse to heavy expenditures. Everyone is in favor of curtailing appropriations, except as to those matters in which he is interested, and as to those matters he looks upon even increased appropriations as parsimonious. Congress will never deal successfully with expenditures nor adopt any plan of permanent worth or value in taxation until the country itself is aroused and joins in an intelligent effort to bring about that result.

In 1901–2 the appropriations by Congress reached the sum of a billion dollars. That fact gave rise to considerable discussion for awhile and became a subject of criticism by the opposition party.

We have now reached the point where we appropriate more than a billion dollars for a single session. At the close of the last session it was found that the appropriations and obligations upon the Treasury amounted to the stupendous sum of $1,175,604,134. This vast sum of money is paid by the consumers of wealth; privilege escapes; land values escape. We are treading the old paths; not finding new ways and taxing the old sources up to the limit. While we will have an income tax, the people of this country will experience no lifting of the present weight from that source.

There is one class of expenditures which ought to be very interesting in these days, in view of the discussion which is constantly going on in regard to the era of universal peace, which seems to be so near at hand, let us hope. For the past 15 or 20 years there has been upon the part of the influential and benevolent people advocates of universal peace—and I doubt not that great and marked progress has been made—but the period in which we have been advocating with great zeal, the period characterizing above all others in the history of the world by the increase of expenditures for armament, these expenditures have grown in proportion to the earnestness and zeal of the advocates of universal peace.

In 1911 the expenditures for this purpose upon the part of Germany were $318,000,000; upon the part of France, $270,000,000; upon the part of Great Britain, $341,000,000; upon the part of the United States, $282,000,000. Last year, 1912, our expenditures for war, including pensions, was $383,000,000. The sum total of expenditures for armament during the year 1911 upon the part of the civilized nations of the earth was $2,263,000,000.

The present annual cost of our two departments, the Army and Navy, including interest on war bonds and the loss of the Regular soldiers' labor power, but not including the military pensions, would furnish an annual old-age industrial pension of more than $200 each for 1,450,000 people.

A real statesman, Senator Charles Sumner, has said:

> The standing army is to the nation what the sword was to the modern gentleman, the stiletto to the Italian, the knife to the Spaniard, the pistol to our slave masters—furnishes like these the means of death, and its possessor is not slow to use it.

TAXATION OF THE POOR IN FAVOR OF THE RICH.

In a report which accompanied the tariff bill to the House at the present session of Congress I find the following:

> For the fiscal year ending June 30, 1912, the Government derives $311,000,000 from tariff taxation and $293,000,000 from internal

revenue proper. These taxes rest solely on consumption. The amount each citizen contributes is governed not by his ability to pay tax, but his consumption of the article taxed.

It requires as many yards of cloth to clothe and as many ounces of food to sustain the day laborer as the largest holder of invested wealth, yet each pays into the Federal Treasury a like amount of taxes upon the food he eats, while the former at present pays a larger rate of tax upon a cheap suit of woolen clothing than the latter upon his costly suit. The result is that the poorer classes bear the chief burden of our customhouse taxation.

Under existing conditions in the United States the burdens of taxation, taking them all in all, are becoming more unequally distributed, and the wealthier classes are bearing a gradually smaller share of the public burden.

Something is needed to restore the equilibrium, and this something can scarcely take any form but that of a tax on land values. The public mind may not yet be prepared to apply the code of a genuine revenue reform of this kind, but a few years of future experience will convince the whole body of our people that a system of national taxes which rests the whole burden of taxation on consumption and not one cent on property or income is intrinsically unjust. While the expenses of the National Government are largely caused by the protection of property, it is but right to require property to contribute to their payment. It will not do to say that each person consumes in proportion to his means; this is not true. Everyone can see that the consumption of the rich does not bear the same relation to the consumption of the poor that the income of the one does to the wages of the other. As wealth accumulates this injustice in the fundamental basis of our system of taxation will be felt and forced upon the attention of our people. But, furthermore, we levied a tax a short time ago, known as the corporation tax, and that tax is often considered as a tax upon the wealth—a tax upon property of the country. The fact is that the larger portion of that tax upon corporation income is paid by the consumers of the country precisely as the other tax upon the consumption.

When you levied a tax upon the income of corporations in 1838—upon refining companies, tobacco companies, oil companies, express companies, and others—it was ascertained after the tax had been in effect two and a half years that we had collected from the income of these corporations $211,000,000, and it was said that the great corporations had responded in a patriotic way to the call of the Government at a time when it was at war and had paid out of their treasuries $211,000,000 for the purpose of assisting the Government. Yet when an investigation followed it was afterwards ascertained, upon what seems to be entirely accurate information, that those corporations paid no part of the $211,000,000, but that by the raising of the price of the articles and the decrease of the size of the package they had transferred the entire $211,000,000 to the consumers in the country and they paid the tax in advanced prices instead of its being paid out of the earnings of the corporations.

The following is a quotation from the speech of Senator BORAH in the United States Senate, published in the CONGRESSIONAL RECORD July 23, 1913:

> Mr. President, there is another feature of this proposition which is presented. The small property holder with a small income has all his property in sight. He practically lives in a glass house, so far as the tax collector is concerned. He pays the entire per cent upon all the property that he has seventy-five or eighty times out of a hundred, while the man with a vast income and a great estate will not pay upon anything like all the property he has. For instance, a short time ago there were some seven estates probated in this country, and they amounted in probating them to $215,000,000. They had paid taxes upon $3,000,000 before the death of the parties. I have a statement here from a report made by the tax commission in a State in the East. A part of that report reads as follows:
>
> "First, that the assessed value of all personal property is (in New York State) approximately $800,000,000; second, that the value of all personal property owned by citizens of this State is not less than $25,000,000,000; third, that the richer a person grows the less he pays in relation to his property or income; fourth, experience has shown that under the present system personal property practically escapes taxation for either local or State purposes."

The above report is in harmony with what we know to be the general practice—that the larger the estate the less fully do they give in their property to the tax collector and the more difficult it is to discover it, because it consists of that kind of property which can not be ascertained or located by the assessor as can the property which is ordinarily owned by the man of small means.

I will state for the information of the members of the Commonwealth Club that the figures given in this paper are taken from Government reports and the CONGRESSIONAL RECORD.

THE SOURCE OF GRAFT AND INCREASED PRICES.

This Nation has bestowed upon its railroads 155,273,500 acres of land without receiving a penny in return. The idea the railroads had is that so fast as this property increased in value the railroads shall issue securities against it and increase rates to pay the increased interest charges on these always increasing securities. The land of the people that Congress bestowed upon private railroad enterprise, amounting to 242,614 square miles, is an area of 33,784 square miles greater than the entire German Empire, 35,500 square miles greater than all of France, 94,850 square miles greater than all of Japan, 132,664 square miles greater than all Italy. At the average price that most of the railroads have received for such of these lands as they have sold, the money value of the gift is more than $1,000,000,000, and amounts to about one-ninth of the actual capitalization of all the railroads with the water squeezed out. All these railroads are now keen for an increase of freight rates.

In 1905 the outstanding bonds of the Chicago & Alton Railroad amounted to $27,000,000. Mr. E. H. Harriman, in the course of the dizzy maneuvers by which he built his colossal fortune, came to a point where he needed $48,000,000 in a hurry. Having at that time control of the Chicago & Alton he increased its bonded indebtedness overnight from $27,000,000 to $75,000,018. It is to pay the interest charges on this gigantic grab and others like it that freight rates are to be increased, and the cost of living increases as well.

Charles Edward Russel, in Peterson's Magazine, August, 1913, from which I have taken the above figures, says:

> We shall get nothing but greater burden piled upon the bowed backs of the toilers; nothing but every evil social condition made worse, nothing but further increase in the cost of living, now crushing the vast majority of the population into lower depths of poverty.
>
> An increase of 18 per cent in transcontinental freight rates made in 1909 was found on investigation to have increased the cost of living to the people of California by $10,000,000 a year.

SOME RECOMMENDATIONS.

Gold is said to be an exception in nature, and for that reason has been called the natural money metal, and it is given a standard price above cost by law which is denied to all other products. The price of gold does not fluctuate on account of the increase in the supply, because each ounce of the new supply may be coined into $20, which buys the gold as well as other property. I remember the time when silver had a legal privilege like gold now has; the Mexican silver dollar sold in San Francisco at a premium of 3 cents over the American gold dollar. If gold is able to buy itself at a fixed price with money it produces, why may not cotton or wheat be given a similar privilege?

The coinage law which creates money from gold at a standard price does not change the fact that gold is produced from the earth, like cotton or wheat; and although gold has a fixed price, such price does not alter the risk or hazard of new production from new gold fields. The difference between cotton or wheat and gold is that the price of cotton or wheat may fall to absolute cost in favorable fields, while gold can not fall below its highest cost of production. As over 90 per cent of the world exchanges are carried on without use of gold, we think it would be an advantage to humanity to take the legal privilege away from gold, placing it on par with silver. When the price of cotton falls from a 14-cent level to a 9-cent level the producer wants to know why he is selected to bear so heavy a burden while the owners of gold are exempt from loss.

The scientific principle which is now forcing its way into the taxation system of the civilized world is that the burden must be carried, not by the productive industry, as at present, but by natural resources. The effect of this upon mining would be to stimulate the active operations of exploration, discovery, and production and to discourage the speculative holdings of unused mineral land and all land as well. Like other States which are rich in mineral sources, California has great areas of valuable mineral land which is held tightly and is idle, undeveloped, and unpopulated. This is not for the good of the State. As with speculative holding everywhere under present systems, the taxes upon such lands are exceedingly small in proportion to their real market value. Speculative holders of land which is not earning anything are extremely sensitive to taxation; and if this land is merely assessed properly, as directed by the present laws, the increase will cause many holders to bestir themselves and to utilize their properties in some way.

Under the above principle the taxes now paid by operating mines would be greatly reduced, taxes upon machinery equipment, improvements, or production would cease, and the only one left would be upon the value of land they occupy.

There are five forms of special privileges that should be abolished in order to properly regulate prices and restore prosperity to all people:

First. The franchise privilege.
Second. The privilege of land monopoly.
Third. Patent-monopoly privilege.
Fourth. Bank or credit privilege.
Fifth. The protective-tariff privilege.

The remedy for the first is to abolish private ownership of public utilities, such as railways, telegraph and telephone lines, gas and water works.

For the second, to exempt everything that man produces from taxation; tax land values for city, county, State, and National purposes, so as to take all the unearned increment of land for public use. This would restore the land to the people and exempt all man-produced wealth from taxation; prices would fall to a natural level.

The third, the right of the inventor to the full reward due him from society for his invention. At present he often gets nothing, and the public often get nothing, and the people go without benefits because of the suppression of valuable inventions by corporations and others. Abolish monopolistic ownership of patents and allow everyone to manufacture any patent device by payment of a royalty to the inventor, royalty to be regulated by patent commissioners.

Fourth, the Government to have full control of all the banks in the country, thus taking the control of credit from private hands.

Finally, all forms of indirect taxation to be abolished, such as the tariff, internal-revenue taxes, and license tax, because the effect of such taxation is to form out the collections of taxes to individuals or corporations.

Currency.

EXTENSION OF REMARKS
OF
HON. SAMUEL J. TRIBBLE,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 16, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. TRIBBLE. Mr. Speaker, the right of extension being granted, I will include remarks, in part, made before caucus considering currency legislation, September 2-6, 1913.

This is not a perfect bill, in my opinion, but this caucus has assembled for the purpose of improving the bill and correcting the evils contained therein, if there are such, if it is possible to do so. When the caucus shall have completed its work the bill will not be a perfect piece of legislation then, because, as all men know, the currency question is one on which men are wide apart. I have read and studied the bill carefully, and now it is in the hands of the Democratic Party, and when my party completes its work on this bill and places its stamp of approval thereon I shall give it my support. That our present currency system is inadequate to meet the increasing demands of commerce and trade no one questions. Then let us give our best efforts to our common country in constructing this most important legislation without haste or impatience to complete the work before us.

There are three schools of finance in this country:

First. One school contends that every currency note put in circulation should be redeemed in gold. That is to say, there should be placed in the Treasury gold coin or bullion to the value of $1 for every currency dollar note issued, so that the holder of such note may return same to the Treasury and receive $1 in gold.

Second. Another school contends that money should be issued on assets.

Third. Another school contends that money should be issued by the Government and that the stamp of the Government is sufficient to guarantee the circulating value.

This bill in a manner embraces the three contentions. Currency notes, commonly called money, are bills or notes in paper circulation representing money and accepted as money. The issue of money proposed in this bill is protected as follows:

First. There shall be deposited for every dollar issued 33⅓ per cent in gold or lawful money drawn from the general funds of the bank. When notes are redeemed the fund is re-created so that there shall always be protection to the issue by this specific fund. In other words, the Government has claim on the 33⅓ per cent deposit as a redemption fund.

Second. The Federal bank has on deposit 100 per cent of prime paper specially set apart for the redemption of the money issue furnished in the first instance to a member bank and turned over to the Federal reserve bank.

Third. First lien on all the assets of the bank as a guaranty of payment. In other words, the bank must protect the issue.

Fourth. The Government's stamp authorization, ultimate responsibility to redeem currency issued in lawful money and the Government contract to receive same.

One section reads as follows:

> The issue is hereby authorized of Federal reserve Treasury notes which shall purport on their face to be an obligation of the United States and shall be receivable for all taxes, customs, and other public dues.

The bill proposes a substitute for the present national-bank notes.

There was money in circulation, authorized issue of the Government, on September 3, 1913, as follows:

Gold coin (including bullion in Treasury)	$811,000,353
Gold certificates	928,636,490
Standard silver dollars	77,105,001
Silver certificates	67,896,661
Subsidiary silver	77,896,661
Treasury notes of 1890	146,176,000
United States notes	346,681,016
National-bank notes	705,022,027
Total	3,290,403,290

Gold certificates are circulating bills which call for a certain amount of money in gold, and when presented to the Treasury the gold is there in bullion or gold coin for redemption. The same is true of the silver certificates. These are interchangeable under the present laws and may be redeemed in gold. The same is true of subsidiary silver and Treasury notes of 1890. The United States Treasury notes, or greenbacks, are Government issue. During the War between the States they were issued on the credit of the Government. At the present time greenbacks have gold reserve of $150,000,000, held by the Treasury for the purpose of redemption. The Government has made greenbacks interchangeable with gold and silver, and they are redeemable in hard money. The Government's redemption fund set apart for the redemption of these Treasury notes, or greenbacks, and held as a reserve, is about 43 per cent. The bill we are now considering has a reserve of 33⅓ per cent, 100 per cent assets bank guaranty, and the stamp of the Government responsible for redemption.

The issue proposed in this bill is for the purpose of making more elastic the currency, and deals particularly with national banks. It proposes the retirement of national-bank notes from circulation. These notes circulate as money. Such notes are written instruments, showing indebtedness of bank to the holder thereof. On September 3, 1913, national-bank notes in circulation represented $705,022,027. National banks are authorized to issue notes, commonly called money, by act of Congress to the extent of 90 per cent of the face value of bonds, and are protected by the Government. This money the bank loans its customers. The national banks purchase the Government's bonds, and in consideration thereof is permitted to issue bank notes as a circulating medium, for which privilege the Government receives no interest.

The bill before the House creates 12 Federal reserve banks authorized to issue currency. The control of these Federal banks is in the hands of the Government. The bill provides that the President shall appoint seven members of the board who shall have control and supervision over the banking structure proposed in this bill and the issue of money. The Government exercises no control over national banks. The advocates of this bill claim that the national-bank system of supplying the demands of a circulating medium in paper money concentrates the money in a few centers, the chief of which is in New York. When money is needed by the country banks to move crops, the money centers can release sufficient currency for that purpose if they see fit to do so, or they can refuse, thereby depressing prices of stable products and demoralizing business by money manipulation.

The 12 Federal reserve banks are established for the purpose of preventing money centers and money trusts, and to give our currency more elasticity. Every Federal reserve bank is charged with the duty and responsibility of acting as a circulating medium and to retain within its circumference the money issued by such reserve bank so that the territory embraced by its circumference may have money ample to supply demands at all times.

The question of the standard of value has not been raised in this bill. The committee drafting the bill has used the language of previous acts on this question. It is proposed to reform the currency system, leaving existing standards where this Congress found them. The progress of the country has been frequently confronted with panics, due largely to the inadequate currency system under the national-bank issue of currency. There has been but little change since 1863 in our currency system. Great and powerful combinations have controlled the money market; they have lowered prices of farm products and closed the doors of public enterprise by contracting

the currency almost at will. This was demonstrated in 1907 when the prosperity of the country was unprecedented. This panic was brought on unexpectedly, and there was so much contraction of the currency that the cotton crop was largely moved by clearing-house certificates in many sections. The closing of the doors of industrial establishments and forcing down the price of stable products caused untold misery and want. There was great loss to the cotton planter of the South for the reason that there was a greater demand for his cotton that season than there has been since the Civil War. Manufactories were running day and night with contracts signed six months in advance. If the panic had not occurred there is no estimating what the price of cotton would have been during the fall of 1907 and spring of 1908. In addition to that great loss to the South, the depression in the business of the country at large lowered the price of cotton several seasons. All financiers charge this panic to our imperfect currency system. It is of utmost importance that panics be averted in some way, and I say to you, gentlemen of the House, we are now dealing with the most important question before the American people. The people are trusting your wisdom to handle this question with proper discretion and judgment.

Banking and Currency Bill.

EXTENSION OF REMARKS
OF
HON. CLAUDE WEAVER,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. WEAVER. Mr. Speaker, the Banking and Currency Committee of this House believes that adequate Federal legislation against the trust evil, including prohibition of interlocking directorates, can not be properly embodied in this banking and currency bill. Of the same opinion are the President and his constitutional advisers, including the Secretary of State, whose counsels have been invaluable to the committee in the preparation of this bill.

There were those in the Democratic caucus which considered the present bill who advocated an attempt at trust legislation in the banking and currency bill, but they did not offer to the caucus nor have they offered to this House a specific program well digested, complete, and of permanent value. During the discussion in the caucus the chairman of the committee, Hon. CARTER GLASS, read a letter from Mr. Bryan, and Mr. Bryan reproduces it in the September number of the Commoner. The letter is as follows:

WASHINGTON, D. C., *August 22, 1913.*

Hon. CARTER GLASS,
House of Representatives, Washington.

MY DEAR MR. GLASS: Replying to your inquiry I beg to say that I have for many years advocated a law preventing the duplicating of directorates. While the principle applies to banks as well as to trusts—although I think in a less degree—the plan has been considered mainly as a means of dealing with the trust evil; in fact, it is embodied in the antitrust plank of the Baltimore platform. Competition can be effectually prevented where the same men act as directors of competing companies. I am as much in favor of the remedy now as I was when I began to advocate it; in fact, more so, because recent disclosures have given further proof of the employment of this means of eliminating competition, but I do not think it wise to make it a part of the pending currency bill. In attempting to secure remedial legislation care must be taken not to overload a good measure with amendments, however good those amendments may be in themselves. A boat may be sunk if you attempt to make it carry to much, however valuable the merchandise. A bill is usually the result of compromise. The President and Secretary McAdoo, in conjunction with the chairmen of the Currency Committees of the House and Senate, have formulated a tentative measure. It was prepared after extended investigation and a comparison of views. It embodies certain provisions of great importance and is, I believe, fundamentally sound. The provision in regard to the Government issue of the notes to be loaned to the banks is the first triumph of the people in connection with currency legislation in a generation. It is hard to overestimate the value of this feature of the bill. In the second place the bill provided for Government control of the issue of this money; that is, control through a board composed of Government officials selected by the President with the approval of the Senate. This is another distinct triumph for the people, one without which the Government issue of the money would be largely a barren victory. The third provision in this bill which I regard as of the first importance is the one permitting State banks to share with national banks the advantages of the currency system proposed.

These three provisions are, to my mind, of such transcendent importance that I am relatively but little concerned as to the details of the bill. I do not mean to say that the details are unimportant, but whatever mistakes may be made in detail can be corrected easily and soon—a wrong step in a matter of principle would be more difficult to retrace. There are doubtless differences of opinion over matters of detail, and it was to adjust these that the caucus was held, but I take it for granted that no one who is really in favor of the bill will permit a difference of opinion on a matter of detail to lead him to jeopardize the bill.

The papers have in a few cases reported Members of Congress as presenting views which were alleged to be mine. I do not know to what extent these reports may exaggerate what has been said and done, but you are authorized to speak for me and say that I appreciate so profoundly the service rendered by the President to the people in the stand that he has taken on the fundamental principles involved, that I am with him on all the details. If my opinion has influence with anyone who is called upon to act on this measure, I am willing to assume full responsibility for what I do when I advise him to stand by the President and assist in securing the passage of this measure at the earliest possible moment. I am sure that the President will be ready to join in making any change in detail that can be made to advantage, and being sure of his singleness of purpose, I am willing to leave to future action the correction of any provision which he may now regard as essential to the plan and purpose of the bill.

Congratulating you upon the splendid manner in which you have presented the merits of this bill, I am,

Very truly, yours,

W. J. BRYAN.

After exhaustive discussion by the Democratic caucus that caucus referred the entire subject to the appropriate committee having jurisdiction thereof, the Judiciary Committee of this House, with instructions to report a bill at the first regular session of the Sixty-third Congress.

The Democratic Party is pledged. the Democratic administration is pledged, to legislation limited only by the constitutional grant of power to the Congress, not to regulate but to destroy the combinations of the great corporations shown by the Pujo Money Trust investigation to have a strangle hold upon the finances, the industries, and the commerce of the American people. The pledge of the Democratic Party I quote from the Democratic platform of 1912, written at the Baltimore convention.

ANTITRUST LAW.

A private monopoly is indefensible and intolerable. We therefore favor the vigorous enforcement of the criminal as well as the civil law against trusts and trust officials, and demand the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States.

We favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including, among others, the prevention of holding companies, of interlocking directors, of stock watering, of discrimination in price, and the control by any one corporation of so large a proportion of any industry as to make it a menace to competitive conditions.

We condemn the action of the Republican administration in compromising with the Standard Oil Co. and the Tobacco Trust, and its failure to invoke the criminal provisions of the antitrust law against the officers of those corporations after the court had declared that from the undisputed facts in the record they had violated the criminal provisions of the law.

We regret that the Sherman antitrust law has received a judicial construction depriving it of much of its efficacy, and we favor the enactment of legislation which will restore to the statute the strength of which it has been deprived by such interpretation.

The report of the committee of the Sixty-second Congress, known as the Pujo committee, appointed pursuant to House resolutions 429 and 504, being Report No. 1593, submitted by Mr. Pujo February 28, 1913, to investigate the concentration of control of money and credit, shows that the Banking and Currency Committee of this House is right, and that the great administration leaders who have advised with the committee are right in their judgment that only by separate and well-considered legislation can the hydra-headed evils of the trust be controlled.

The report of the Pujo committee ought to be in the hands of every thoughtful citizen in the United States who takes active interest in the affairs of his Government. While I favor rigid economy in governmental expenditures, I believe money would be well spent that is appropriated to the publication of this report and to its distribution throughout the country.

I desire, Mr. Speaker, to incorporate into the RECORD for the benefit of my constituents, to whom I shall send it, chapter 4 of said Pujo report, being a summary of recommendations of the Pujo committee.

Said chapter is as follows:

CHAPTER FOURTH.—SUMMARY OF RECOMMENDATIONS.

Summed up, the recommendations of your committee for enactment into law are:

SECTION 1.—AS REGARDS CLEARING-HOUSE ASSOCIATIONS.

A. Incorporation and regulation: National banks should not be permitted to be members of clearing-house associations which are not bodies corporate of the States in which they are respectively located, and every solvent and properly managed bank or trust company should have the right, enforceable at law, to become and remain a member: *Provided*, That no clearing association should be required to admit a member having a capital stock not less than that required of a national bank in the same locality

B. Examination of members: Periodical examinations of members by a committee of the association should be prohibited, and instead all such examinations should be conducted by public authorities.

C. Issuance of clearing-house certificates: Until other measures of relief are provided by Congress such associations should be permitted to issue certificates on the security of their members' assets for circulation amongst members to pay balances owing to each other at the clearing house, but only on condition that both the issuance and retirement of such certificates shall be under governmental control.

D. Regulation of rates for collecting out-of-town checks: The practice now so general amongst such associations of compelling members, under pain of expulsion, to charge prescribed rates for collecting out-of-town checks should be prohibited.

E. Regulation of rates of discount and of interest on deposits, etc.: Such associations should be further prohibited from prescribing rates of interest or discount, rates of interest allowed on deposits, rates of exchange, or any other regulation not appropriate to its function of instrumentality for the collection of checks by banks of the same community one from another that interferes with competition.

SECTION 2.—AS REGARDS THE NEW YORK STOCK EXCHANGE.

A. Conditions precedent to use of mails, telegraph, and telephone: That Congress prohibit the transmission by the mails or by telegraph or telephone from one State to another of orders to buy or sell or quotations or other information concerning transactions on any stock exchange, unless such exchange shall—

1. Be a body corporate of the State or Territory in which it is located.

2. Require corporations whose securities it lists to make a complete disclosure of their affairs, in particular any commissions paid to promoters, middlemen, or bankers out of any such security issue or the proceeds thereof.

3. Require a margin of not less than 20 per cent on all purchases of stock.

4. Prohibit as far as possible the execution of simultaneous or substantially simultaneous orders proceeding from the same person or persons to buy and sell the same security for the purpose of creating an appearance of activity therein and any orders the purpose of which is to inflate or depress the price of any security.

5. Prohibit members from pledging securities purchased and carried for a customer for an amount greater than the unpaid portion of the purchase price, whether with or without the consent of such customer.

6. Prohibit members from lending to other members securities carried by the former for customers, whether with or without such customers' consent.

7. State in its charter the condition on which issues of securities shall be admitted or removed from the trading list, and provide for a judicial review of its action in this regard.

8. Keep books of account, showing the actual names and transactions of customers, and give access thereto to the Postmaster General.

SECTION 3.—AS REGARDS CONCENTRATION OF CONTROL OF MONEY AND CREDIT.

A. Consolidations of banks: Two or more banks should not be permitted to consolidate unless such consolidation shall have been approved by the Comptroller of the Currency as in the public interest. He should have plenary power to forbid it where it threatens to result in undue concentration of control.

B. Interlocking bank directorates: No person should be permitted to be a director in more than one national bank serving the same community or locality, nor should any person who is a director of any State bank or trust company, or is a partner or associate of any private banker or banking firm, be eligible as a director of any national bank serving the same community or locality, except that a director in a national bank may have one partner who is a director in a trust company.

C. Interlocking stockholdings amongst banks: No part of the stock of any national bank should be permitted to be owned or held directly or indirectly by any other bank or by any trust company or holding company; and no national bank should be permitted to own or hold any part of the stock of any other bank or trust company.

D. Voting trusts in banks: The transfer of any part of the stock of national banks to trustees solely or primarily in order that they may vote the same at annual elections and other stockholders' meetings—"voting trusts," as they are generally known—should be expressly prohibited.

E. Cumulative voting: Minority representation in the directorates of national banks should be secured by adopting the system of cumulative voting, i. e., by providing that at elections for directors each stockholder shall have as many votes as are equal to the number of his shares, multiplied by the number of directors to be elected, which votes may be cast solidly for one director or distributed among several, as the shareholder shall see fit. And no national bank should be permitted to purchase the obligations or lend upon the obligations or shares of any corporation whose directors are not chosen at elections conducted under the cumulative system of voting.

F. Security-holding companies as adjuncts to banks: The stockholders of a national bank should be expressly prohibited from becoming associated as stockholders in any other corporation under agreements or arrangements assuring that the stock of such other corporation shall always be owned by the same persons or substantially the same persons who own the stock of the bank or that the managements shall be substantially the same.

G. Fiscal agency agreements: Interstate corporations should not be permitted to enter into any agreements or other arrangements constituting any bank, banker, or trust company their sole fiscal agent to dispose of their security issues.

H. Private bankers as depositaries: Interstate corporations should not be permitted to deposit their funds with unsupervised, unregulated, private bankers who do not disclose their resources or liabilities, who keep no reserve, and are free to invest their depositors' money as they see fit.

I. Banks not to engage in underwritings: National banks should be prohibited from directly or indirectly engaging in any promotion, guaranty, or underwriting, involving the purchase, sale, public offering, or issue, or other disposition of the securities of any corporation.

J. Investments of banks in bonds: National banks should be expressly authorized to invest 25 per cent of their capital and surplus in the obligations of States, cities, counties, or other municipal subdivisions and in mortgage bonds of corporations on which interest has been regularly paid for five years or in case of new issues when the earnings of the corporation within the period were sufficient to have paid such interest.

K. Reform of railroad reorganization: The method of reorganizing insolvent railroads should be reformed by adopting in substance the system provided by the companies' act of Great Britain, whereby briefly stated, the plan and procedure on reorganization are placed under the direction and control of the courts, the receiver is elected by the votes of those interested in the property, no sale is involved, a single shareholder can defeat an unjust plan.

L. Railroad reorganizations under supervision of Interstate Commerce Commission: The Interstate Commerce Commission should be empowered, subject to review by the courts, to supervise and review plans for the reorganization of interstate railroads and the issue of securities thereunder.

M. Interstate railroad security issues under supervision of Interstate Commerce Commission: The security issues generally of interstate railroads should be placed under the supervision and control of the Interstate Commerce Commission.

N. Competitive bidding for interstate security issues: It should also be required that in the disposition of such issues competitive bids, public or private, be invited.

O. Borrowings by officers from their own banks: Borrowings, directly or indirectly, by an officer of a national bank from the bank of which he is such officer, and all other transactions between them of a financial character, should be rigidly prohibited.

P. Borrowings by directors from their own banks: Borrowings, directly or indirectly, by a director of a national bank or by any firm of which he is a member or any corporation of the stock of which he holds upward of 10 per cent, from the bank of which he is such director, should only be permitted on condition that notice shall have been given to his codirectors and that a full statement of the transaction shall be entered upon the minutes of the meeting at which such loan was authorized.

Q. Financial transactions of bank officers to be in their own names: Loans or other transactions with a national bank in the interest of or for the eventual benefit of an officer or director of a national bank, either alone or with others, should be required to be made or done in the name of such officer or director.

R. Participations by bank officers and directors in underwritings: Officers and directors of national banks should be prohibited from participating in syndicates, promotions, or underwritings of securities in which their banks are or may become interested as underwriters or owners or as lenders thereon.

S. Accepting and offering rewards for bank loans: It should be made a crime for officers or directors of national banks to accept any compensation, commission, or other form of reward whatsoever, for making, directing, voting for, or otherwise promoting any loan of the bank's funds; and it should also be made a crime to offer any such inducement.

T. Limitation of number of directors of bank: The number of directors of national banks should be limited to not less than 5 nor more than 13.

U. Publicity for assets and stockholders of banks: National banks should be required to open to public inspection schedules of their assets other than the names of borrowers, and to make lists of their stockholders public.

The Federal Reserve Law.

EXTENSION OF REMARKS
OF
HON. LAWRENCE B. STRINGER,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 18, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. STRINGER. Mr. Speaker, there is no governmental question now before the American people so pressing, so important, so vital, so far-reaching in its ramifications and effect as the question of a reformation of the banking and currency system of the Nation.

It is a question which affects not the banker and financier alone, but the merchant, the manufacturer, the farmer, and the wage earner as well. It is a question which concerns all classes of people in every walk and every condition of life. It is a question which touches every energy and every enterprise in the broad land and its importance is so great that it demands immediate attention, careful study, and definite and speedy action.

QUESTION OF GENERAL INTEREST.

The bankers of the country perform an important part in the industrial development of the Nation. They are in the main men of financial skill and business integrity. They are interested in the Nation's prosperity, for they prosper only as the Nation prospers. But the question here considered is not a bankers' question alone, but one in which all citizens are deeply interested.

The banker suffers, and suffers severely, in times of stress, but there are opportunities offered to him that are closed to others. Except in rare emergencies, he can foresee tightening times, can curtail his loans, call in his credits, and forfend against the gathering storm. He can even suspend payment and escape insolvency, for the public knows that in times of panic he can not procure cash or credit and it makes allowance therefor. He may be hit, and hit hard, but he can survive.

Not so fortunate is the merchant or the manufacturer who is conducting his enterprise upon a credit strained, perhaps, to its utmost and which may tumble in an instant like a deck of

cards. To close up his business means financial ruin. His market is many months or perhaps a year away and failure to secure credit at the crucial time brings down disaster on his head.

Not so fortunate is the farmer who must have money to move his crops, who has planted and cultivated and gathered the same in anticipation of the rewards of harvest, but which do not come by reason of instability of the market in the realm of agricultural trade. Not so fortunate are the transportation companies, upon which the farmers and all others rely to carry the products of toil to the marts of trade, and without which the farmers' crops would rot in the field and the great cities be threatened with starvation.

Not so fortunate is the mighty army of laborers, brawn and sinew which must be fed, who with panicky times find the factory, mine, and mill suddenly closed, employment ended, and with no means to buy for themselves and families their modicum of daily bread.

In short, the reformation of the banking and currency laws is a question for the bankers; yes, and one of vital interest to them in every angle which that question can assume. But it is equally vital and equally important to the merchant, the manufacturer, the laborer, the investor, and the borrower, and in framing or reframing financial laws the interests of all should be considered and conserved.

REFORM NEEDED.

That the present banking and currency system is antiquated, fraught with danger, and in need of reformation is a proposition so generally conceded as to need little proof.

In fact, it has been said that the United States has no system of banking at all, but merely a series of banks, artificially grouped, acting independently of one another, yet suffering from the others' mistakes, and without any general policy as to control of reserves, the fixing of rates of discounts, or the granting of loans.

Organized amid the throes of civil war, with a view of meeting conditions then existing, it has had a life of over a half century, with little modification as to its constitution or scope. Now and then alterations have been made as necessitated by extraneous features of national policy, but beyond this patchwork of incidental change the original plan still exists.

It is now generally conceded that the present system is wholly inadequate to meet the demands of trade; that it affords no protection against loss of confidence; that it not only does not prevent panics, but it actually breeds and produces them; that it is powerless to grant relief in times of industrial distress, that its note circulation is inelastic, unsound, inadequate, and ill adjusted to local needs; that it furnishes no general market for commercial paper, however sound its quality; that it imposes severe hardships on the banks themselves; that it does not control the international flow of specie, supplies no facilities for foreign trade, and in general provides no system of cooperation among the banks themselves, none between the banks and the National Government, and none between the banks and the industrial, commercial, and mercantile life of the Nation.

NEED OF COOPERATION.

It is this lack of banking cooperation that is the great disturbing element in our financial affairs. It is this lack of cooperation which prevents the massing of the full strength of financial activity behind the business community in times of special demand, whether these demands be of normal seasonal requirement or abnormal in periods of financial stress.

With over 25,000 banking units, there is no tie to bind them together. There is no cohesion in the structure and no keystone to the arch. When the sun shines and the skies are clear everything is lovely, but when disaster portends all run to cover. Each bank looks after its own interests and proceeds to protect itself, regardless of the other units in the system, even regardless of its own customers and regardless of the business and industrial world outside.

THE CAUSE OF PANICS.

Constantly recurring panics at intervals of almost startling regularity in our financial history have shown the tendency of our system to fail at the most critical period and prevent the attainment of relief at the very time when relief is needed.

We have come to consider these panics as dispensations of Providence and we bow to the Divine will. We have regarded them as we do cyclones—unavoidable, uncontrollable, and irremedial. The best we can do is to crawl into a temporary cave, await the passing of the storm, and perhaps we may emerge alive and perhaps we may not.

Demagogues seize upon them with avidity and use them, as they did in the panic of 1893, to make the people believe that they came because some particular political party, not theirs, happened to be in power. And the people, regarding this as the nearest cut to a solution, too often adopt the superficial explanation of designing demagogues and are thus led astray.

Strange it is that in other lands panics are few and far between and bank failures occur at intervals the rarest. During the period from 1890 to 1910 there were 400 failures of national banks in the United States and 1,400 of saving banks and trust companies—1,800 in all—while in the same period there were but 7 bank failures within the boundaries of Canada, our neighbor on the north.

Of course business and industrial depressions are bound to occur. But in a country like ours, unsurpassed in resources, illimitable in opportunity, with comparatively a small population to the square mile, there is no excuse for panics, which in a night bring ruin, disaster, and distress upon the whole population.

But under our antiquated banking system a business depression nearly always spells panic, more or less severe. A run on a single solvent bank starts a scare. Other bankers, knowing by experience the weakness of our banking system, proceed to protect themselves. They draw in their money from money centers where deposited; they begin calling in loans; they refuse credit to solvent parties; credit is strained; individual assets, sound as old wheat in the mill, become worthless for immediate use; confidence is lost; suspension of cash payments and the breaking down of domestic exchange follows, and then come the closing of factories, business failures, lack of employment, and hard times.

PANIC OF 1907.

The panic of 1907 is evidence of the fact that tightening times may come when there is not even business depression upon which to predicate the same, but that in the most prosperous of times panics may be precipitated by the mere breaking down of the banking system itself. The panic of 1907 is proof of the assertion that not only is our banking system unavailing to prevent panics, but it actually produces them where there is really no good reason for them to exist.

The panic of 1907 came in the midst of peace, prosperity, and plenty. There were no wars or rumors of wars. Business was active; mills were running overtime; crops were abundant; railroads were unable to supply cars for the freight tendered for transportation; labor was fully employed; and the smoke of factories rose heavenward in mighty volumes as incense to the god of trade.

There was no political contest before the people, and no prospects of change in administrative affairs. The President and both Houses of Congress were in Republican control, and the Dingley high-tariff bill was doing business daily at the same old stand. It was conceded that the next year's election would not change the nature of political control.

And yet in the midst of this prosperity a panic was suddenly precipitated upon the Nation and disaster followed. A "rich man's panic" it was called, but the poor suffered as well.

Describing the conditions which followed, the chairman of the national Republican committee in 1912, over his own signature, said:

> Only four years ago (1907) capital was tied up in safe-deposit boxes; mills and factories were closed, because manufacturers could not sell the goods they made; empty freight cars filled the railroad sidings; farms were mortgaged; labor was hungry and desperate; the country was prostrate; industry was paralyzed; investors, wherever possible, had withdrawn their capital; enterprise was dead; and all this was the result of the panic of 1907.

Possibly the description was overdrawn for political effect, for the purpose of discrediting President Roosevelt, but it is nevertheless true that the panic of 1907 was disastrous and disturbing and it suddenly precipitated the country from a condition of prosperity and plenty to one of financial embarrassment and distress.

THE MONETARY COMMISSION.

So pronounced was the panic and so evident was the fact that its origin lay in our defective banking and currency laws that, at the next session of Congress after the panic of 1907, provision was made for the creation of a National Monetary Commission of 18 members of the Senate and House to inquire into and report to Congress what changes were desirable or necessary in our banking and currency laws.

The work of the members of the commission was exhaustive, thorough, and complete. They held extensive hearings in every great city of the United States; they collected volumes of statistics and facts; they visited the banks in the money centers of the world. In 1911 they submitted to Congress a report of their investigations, with their recommendations based thereon.

Referring to this report, President Taft, in his message to Congress the same session, among other things, said:

> The recognition of the gross imperfections and marked inadequacy of our banking and currency system even in our most quiet financial periods is of long standing, and later there has matured a recognition of the fact that our system is responsible for the extraordinary devastation, waste, and business paralysis of our recurring periods of panic.

AS THE COMMISSION SAW DEFECTS.

The Monetary Commission in its report set out the principal defects of our banking system, and, in brief, they were as follows:

1. No provision for the concentration of the cash reserves of the bank or for their mobilization or use in time of trouble.
2. Antiquated laws restricting the use of bank reserves and prohibiting the lending power of banks at times when reserves should be freely used and credit liberally extended
3. No adequate means for replenishing reserves or increasing loaning power when needed.
4. Inadequacy of the bank-note issue to respond to the changing needs of business by automatic expansion and contraction, its volume being dependent upon the amount and price of Government bonds.
5. Lack of effective cooperation on the part of banks to protect themselves and the public interests in times of stress.
6. No effective agency covering the country, affording necessary facilities for making domestic exchanges between different localities or preventing disruptions of such exchanges in troublous times.
7. No instrumentality that can deal effectively with questions affecting the credit and status of the United States in international propositions.
8. The lack of commercial paper of an established standard available for investments by banks, leading to an unhealthy congestion of loanable funds in great centers and hindering the development of the productive forces of the country.
9. The narrow character of our discount market, with its limited range of safe investments for banks, resulting in sending the surplus money to New York, where it is largely used for stock speculative purposes.
10. The absence of a board discount market, creating a condition of dependence on the part of individual banks.
11. A marked lack of equality in credit facilities between different sections of the country.
12. No agency whose influence can be made effective in securing greater uniformity, steadiness, and reasonableness of rates of discount in all parts of the country.
13. No effective agency that can surely provide adequate banking facilities for different regions promptly and on reasonable terms to meet demands for moving crops or other purposes.
14. No power to enforce the adoption of uniform standards with regard to capital, reserves, examinations, and reports of all banks.
15. No provision for branches of American banks in foreign countries for purposes of foreign trade.
16. Restriction of powers as to loans on real estate.
17. The provision of law under which the Government acts as custodian of its own funds in irregular withdrawals of money from circulation and the return of same.

DEFECTS AS NOTED BY BANKERS.

Perhaps a more succinct statement of the defects in our present banking laws is found in the answers of the currency commission of the American Bankers' Association to questions formulated by a subcommittee of the Banking and Currency Committee of the United States Senate. To the query, "What are the essential defects of our banking and currency system?" the commission replied:

> First. A principal defect of our system is the absolute rigidity of our currency. A bank in order to take out circulation must invest more money in Government bonds than it is permitted to issue in currency, thereby impairing, rather than increasing, its power to aid commerce and trade. Outside of the three central reserve cities there is no redemption of national-bank notes except when they wear out and become unfit to circulate. This condition is inherent in the system and is certainly unsound.
>
> Second. The system lacks cohesiveness, there being no provision for cooperation among the banks in it. Under ordinary conditions this is not so much felt by the banks individually, but under strained financial conditions, when each bank is thrown on its own resources and must in self-protection act independently of all the rest, the lack of a system under which all could cooperate through a common policy of action becomes keenly felt, and it becomes evident that what is really lacking is a system.
>
> Third. The requirement that the banks must individually control their own portion of the legal reserve money of the country, without being provided with proper means for the protection or replenishment of their legal reserves, is unscientific and economically wasteful.
>
> Fourth. An unsound system of reserves under which in periods of anxiety it becomes necessary in the protection and maintenance of individual reserves for each bank in the national system to contend against every other bank, the dissipation and scattering of the great bulk of the reserve money of the country into a large number of small hoardings completely destroying in times of stringency the strength and power which might be gained by unification and massing of reserves for the mutual support of the banks and the common good of the public.
>
> 5. The use of so much of the legal reserve money of the country in actual circulation for ordinary business purposes is another economic waste. No provision is made for the use of any substitute for legal reserve money as a circulating medium other than the national-bank notes secured by Government bonds, which are as inflexible in their volume and therefore as irresponsive to the fluctuating commercial needs for them as the legal reserve money itself. The gold certificates now in circulation, amounting to $1,085,480,000, being merely warehouse receipts for an equal amount of gold in the Government Treasury, form the most conspicuous example of this economic waste.
>
> 6. The lack of elasticity in the circulation, all forms of our present circulating medium being rigidly fixed in amount. The necessities of commerce for a circulating medium are arbitrarily met with a fixed amount of it, which does not respond in its volume to the fluctuating demands. Assuming that the aggregate amount may be just sufficient for an average volume of general business, then there must be a surplus when the volume of business falls below the average and a deficiency when the volume of business rises above the average. The actual condition, however, is that in each year there are seasons in which the needs for circulation are much heavier than they are in other seasons, so that its inadaptability in volume to the legitimate existing demand is constantly felt. We have as a rule either a surplus or a deficiency.
>
> 7. The restriction of the use by the banks of their legal reserves and the prohibition of their lending power in the presence of unusual demands upon them, without means of protecting their reserves by the use of any satisfactory substitute therefor, or of replenishing them through adequate rediscounting facilities, which would enable them to convert their available assets into cash or legal reserve.
>
> 8. The lack of provision for the organization of American banking institutions in foreign countries, which are necessary for the development of our foreign trade.
>
> 9. The Independent Treasury system, under which the Government acts as partial custodian of its own funds, resulting in irregular withdrawals of money from the bank reserves and from circulation and materially interfering with the even tenor of general business.
>
> 10. No open market for commercial paper; banks of sufficient capital should be allowed to accept drafts for a commission, with a view to the sale of the acceptances in the open market, thereby establishing a current market for commercial paper, and thus enabling banks to buy, whenever they have an overplus of funds, or sell in this market whenever they wish to strengthen their position or meet demands against them or accumulate funds for their regular clientele.

REMEDY FOR DEFECTS.

It is to remedy many, if not all, of these defects that the present banking and currency act has been placed upon its passage, and the object of the pending measure is to provide a system, based on a sound and scientific basis, which will respond adequately to the varying requirements of the American people in conducting the trade and commerce of the Nation.

Dr. O. M. Sprague, of Harvard University, in his monograph on The National Banking System, says:

> Somewhere in the banking system of a country there should be a reserve of lending power. Ability to increase loans and to meet the demands of depositors for money would have allayed every panic since the establishment of the national banking system.

To provide such a system, without endangering the soundness and safety of our monetary basis on the one hand and on the other to keep the control of the Nation's finances in the people's hands is the desired consummation.

KEYNOTE OF REFORM.

The keynote of the proposed reformation was sounded by President Wilson in his special message to Congress, when he said:

> We must have a currency, not rigid as now, but readily, elastically responsive to sound credit, the expanding and contracting of credits of everyday transactions, the normal ebb and flow of personal corporate dealings. Our banking laws must mobilize reserves, must not permit the concentration anywhere in a few hands of the monetary resources of the country or their use for speculative purposes in such volume as to hinder or impede or stand in the way of other more legitimate, more fruitful uses. And the control of the system of banking and issue which our new laws are to set up must be public, not private; must be vested in the Government itself, so that the banks may be the instruments, not the masters, of business and of individual enterprise and initiative.

With the objects so tersely expressed by President Wilson in view, the Committee on Banking and Currency of this House carefully prepared the measure now pending here and submitted it first to the Democratic caucus for its approval and later to this House for its action thereupon.

In its preparation the committee had the advantage of the exhaustive investigations of the Monetary Commission of 1908, the very complete library which it gathered and compiled, the discussions of the Aldrich bill, and the written views of bankers, experts, and financiers. When completed the bill was approved by leading financial experts throughout the Nation and was heartily indorsed by President Wilson, Secretary of State William J. Bryan, and Secretary of the Treasury William G. McAdoo.

OBJECTS OF THE PENDING MEASURE.

The main objects sought to be attained in the pending bill, shorn of the numerous details necessarily appertaining thereto, may be briefly expressed as follow:

First. The formation of a cooperative organization among the banks of the country, whereby the full strength of all may be massed behind the business community when demanded.

Second. The creation of a system for the extension of credit to banks which possess sound assets and which desire to liquidate them for the purpose of meeting legitimate commercial requirements.

Third. The establishment of a more nearly uniform rate of discount throughout the country and a prevention of overexpansion of credit in localities.

Fourth. General economy of reserves in order that such reserves may be held ready to protect banks in every locality and thus enable them to meet their obligations.

Fifth. The furnishing of an elastic currency by the ultimate retirement of the present bond-secured currency and the substitution of a flexible and adequately protected Government currency in its place.

Sixth. The creation of a market for commercial paper.

Seventh. Provision for extension of American banking facilities in foreign countries.

Eighth. The commercial use of the funds of the Government now isolated in the Treasury of the United States.

Ninth. General supervision and control of the banking system by a Federal board appointed by the President of the United States as the representative of the people.

THE FEDERAL RESERVE BANKS.

Under the new system as proposed there will be organized no less than 12 reserve or rediscount institutions, geographically distributed, to which shall be assigned the function of bankers' banks in the district where located, doing business only with the individual banks of the district and the Government, and whose capital stock shall be subscribed by said individual banks. These institutions, known as Federal reserve banks, shall be under Federal control and supervision.

These Federal reserve banks are to be related to the individual banks as the individual banks are to their individual customers, holding the surplus funds of the individual bank, furnishing them loans when required, offsetting their payments and receipts, and supplying them with the means of making remittances. They are to be cooperative institutions, conducted in the interest of the individual banks as well as for the public, while the Government is to get the excess profits.

The business of these reserve banks will be to rediscount commercial paper presented by the individual banks with a maturity of from 90 to 120 days. They may purchase and sell Government bonds, gold and silver bullion, foreign exchange, and open-market bills of given maturity, but are not to enter into competition in any way with the individual banks of their own or other districts.

The organization of these reserve banks in no way interferes with the present independence of the national banks. It makes them more independent. They will still compete with each other in a business way and continue to do business as separate units, but not isolated as before.

While waging vigorous competition, they will still be parts of a harmonious whole, strengthening and fortifying one another for greater service to the people and cooperating when necessary to sustain the credit of each other, the credit of the business community, and the credit of the country among the nations of the world.

MOBILIZATION OF RESERVES.

Under the present system the national-bank reserves are unavailable for purposes of extending commercial accommodation, for when the reserves reach the minimum established by law no further loans can be made, however urgent the need. Whenever panic appears in any section the banks are unable to mass the reserves and stop the panic before it has an opportunity to spread. Instead of this an effort is immediately made to draw away from the locality attacked every possible dollar.

Instead of providing safety, our system of reserves is a standing menace to the country and to the banks. It compels panic whenever financial clouds appear anywhere and compels every banker to fight for his own preservation.

The pending law provides for a concentration and mobilization of these reserves, rendering them easily available whenever occasion demands for the assistance or support of any bank or section. It will enable the banks to adopt that policy of simultaneous strengthening of reserves and extension of credits which has for half a century prevented panics among the commercial nations of the Old World.

PROVISION FOR ELASTICITY.

Coupled with the system of mobilization of reserves is also the provision for elasticity of the currency. While it is true that 95 per cent of our business transactions are performed with instruments other than currency and that elasticity of credits is more important than elasticity of cash, still both are closely bound together.

In a country which produces $9,000,000,000 worth of crops annually, and where a quarter of a billion dollars of actual cash is needed to move these crops, elasticity of currency becomes an important factor.

Other nations get their extension of cash needed to move their crops from an expansion of their bank-note issue, with gold and short-time paper as a basis; but under our system bank-note issues bear no relation to the needs of business. It is rigid and inflexible. In the use of Government bonds as security for this issue, the volume is limited by the volume of the bonds and fluctuates according to the market price, which is determined not by the investment value of the bonds, but by the profits possible to the banks using them as security for circulating notes.

Nowhere in the wide world is there a banking system similar or analogous to that of our own. It is a relic of the days of the Civil War. There is no other nation in the world that bases its bank-note circulation upon Government bonds. Japan tried it for a while in 1882 and then abandoned it as inadequate and dangerous.

In the history of the financial world there has been but two systems of bank currency which have stood the test of experience. One is the Scotch-Canadian system, where the banks are given the right to issue note circulation against their assets and to establish an unlimited number of branches. The other system is where the bank-note issue is centralized in a single institution. Our system is neither one nor the other. It is "betwixt and between."

The pending bill authorizes the ultimate withdrawal of the circulation privilege from Government bonds of all classes and provides for an issue of notes by the Government through the reserve banks upon business paper held by such banks and a redemption of such notes by the reserve bank when the exigency calling for them ceases to exist. This provides an elastic and flexible currency which will automatically expand or contract to meet the necessities of trade, prevent the cornering of the country's money by combinations of financiers, and safeguard the solvency of banks.

By the mobilization of reserves and the rendering of them available as a basis of loans, together with an easily secured and elastic currency when business necessity requires, a system is created which will revolutionize the commerce of the country and give to trade a stability which it has never before enjoyed.

ADVANTAGES OF THE NEW SYSTEM.

This new system will conserve the public credit, control the movements of gold and foreign exchange, insure cooperation in times of stress, equalize bank and credit facilities the Nation over, create uniform rates of discount, prevent interruption of domestic exchanges, provide for replenishment and concentration of cash reserves when needed, establish standards for commercial paper and create a market for the same, prevent shrinkage of assets in periods of stringency and consequent forcing of business men into liquidation, and protect public and private interests when imperiled.

Under this new system business depressions may occur, but panics will be unknown. Panics are the result of fear. When the business world understands that at all times and under all conditions those with sound assets can get currency when needed to conduct the manifold dealings of manufacture and trade there can be no financial fear, and therefore no panics.

There will then be no "run on the banks," no constriction of credits, no abrupt and unexpected changes of value, no waves of financial depression, but business will be stable and national energies will be employed on a basis of continuity and security at all times.

If the system works hardships on the country banks in some respects, it more than makes it up in the peace of mind, freedom from fear, and the sense of security given in the destruction of the constant apprehension of future trouble, in the abolition of panics, the ever-ready availability of reserves, the constant stability of business, the ability to always accommodate customers, the privileges of farm loans and savings bank departments, and the general prosperity that will follow.

It is, above all, an American system, erected upon American ideas, and built on an American plan. It is a representative system of federated banks in which all have an equal voice. It has its foundations in popular control, and it will extend, augment, and render potential and preeminent for all time the financial power of America in the world's mightly struggle for the international balance of trade.

Mr. George H. Shibley, director of the American Bureau of Political Research, in a recent monograph published July 19, 1913, says:

Taken as a whole it is evident that the Democratic bill as thus far outlined is the greatest banking and currency bill ever considered by any nation, and the enactment of the proposed law would make it one of the great events in a wonderful age.

FREEDOM FROM WALL STREET CONTROL.

Another great benefit which this system will entail will be the severing forever of the bonds which have for years bound the commerce and trade—yes; even the destinies—of the Nation to the stock-gambling influences which dominate Wall Street, New York. With this bill enacted into law bulls and bears may tear and devour, but they will no longer terrorize legitimate business in legitimate avenues of trade.

Under the present system New York holds the ultimate reserves of the Nation. Wherever the surplus money be deposited it finds its way to New York. The banking system revolves around New York and Wall Street is the hub. Whenever in the past financial strain has been put upon the New York banks they have invariably broken down and taken refuge behind clearing-house walls. Suspension of payment the country over ensues, and when confidence has been destroyed in New York, as a result of stock speculation or otherwise, every financial institution in the United States faces peril.

The pending measure rings out a declaration of new financial freedom from Wall Street control. If it did nothing else, this item alone is worth all that the measure has cost in time, energy, and investigation. It means the death knell of speculative domination. It destroys the influence of the "ticker" in commercial affairs. It emancipates financial America from the rules of the special interests and the tyranny of the privileged few.

POLITICAL CONTROL.

Criticism has been made of the composition of the Federal reserve board in that provision is not made therein that the bankers be authorized to select some of the members of this board, and it is therefore alleged that the banking system will be under political control.

In the same sense is not the Supreme Court of the United States under political control? The Supreme Court is the highest tribunal in the land; it can declare null and void the acts of Congress; it passes upon questions involving every right which bankers, investors, business men, and all others enjoy. Its members are appointed by the President, not for a few years, but for life. And yet who complains of political control of the Supreme Court?

The Interstate Commerce Commission is likewise appointed by the President of the United States. This commission has arbitrary powers in matters of rate regulation and the thousand and one things pertaining to railroad legislation. Why not have allowed the railroads to select one of the commissioners of this interstate-commerce body?

Nearly every State has governing boards over railroads, warehouses, or public utilities; but what State allows the railroads or public utilities themselves to select the members of these boards? And how long would the people stand for such a procedure?

The bill provides that at least one member of this board shall have had banking experience. The Secretary of the Treasury and the Comptroller of the Currency are ex officio members. They are usually men of banking experience, more or less. In the very nature of things, the President is likely to appoint men of banking experience to other places on the board. But to recognize the principle that the banks themselves should select these members would be class legislation of the most dangerous kind and in direct opposition to the time-honored position of the Democratic Party that functions of government must not be transferred into private hands.

It is sufficient answer to this criticism to say that there is not a Government board in this country or any other civilized country on earth where private interests are allowed to control, in whole or in part, the membership of the board which regulates them.

It is somewhat peculiar that many of the provisions of this bill now criticized severely in certain quarters were swallowed eagerly by the same parties when they were incorporated in the Aldrich bill. And it is further strange that the requirement that banks invest substantially 10 per cent of their capital in the capital of the Federal reserve bank, which will protect them at all times from danger, is denominated "compulsion," while the provision of the present law, which forces banks to invest 25 per cent of their capital in Government bonds before they are allowed a charter, is not considered as compulsion at all. Why the difference?

CONCENTRATION OF POWER.

On the other hand, it is argued that too much power is placed in the hands of the Federal reserve board, and hence too much power placed in the hands of the President. Substantially every power here given to the reserve board has for a half century heretofore been vested in the Secretary of the Treasury or the Comptroller of the Currency, and what has heretofore been the province of two men is now made the province of seven.

As to the power lodged in the President—who is the President, and from whence does he come? He is elected by the sovereign people and is their direct representative. If you can not trust the President, you can not trust the people. If you can not trust the people, then our system of government is a fraud, a delusion, and a sham. You trust the President to appoint the Supreme Court, which can unmake every law, and appoint its members for life. Why can not he be trusted here?

SIDE ISSUES.

The pending measure is not a measure to revise the coinage laws of the United States. It is primarily a banking law, and deals with bank-note circulation and the bonds upon which they are predicated. It provides a currency to be issued in times of emergency by the Government through the banks in place of the present bank notes based upon Government bonds. It provides this emergency currency for use by the banks, to be withdrawn when the emergency ceases to exist.

It is therefore unfair and unjust to attempt to drag into the consideration of this measure issues entirely foreign to the questions here involved. Such efforts are only calculated to retard the passage of a needed measure.

It is likewise injudicious and untimely to attempt to load down this bill with extraneous matters, even though those matters in themselves be deserving of recognition. Such matters as, for instance, the prohibition of "interlocking directorates" or an establishment of a system of rural credits, have no place here. They are objects of independent legislation, which require special consideration and attention at the proper time and place.

To inject them into this bill at this time is to afford only a limited relief, even if successful, while the tendency would be to destroy the real objects sought as well as to endanger the success of the pending measure. The President of the United States has promised to urge the passage of these remedial measures in the very near future, and no true friend of these reforms should attempt to discredit them by making a patchwork of them here.

As Mr. Bryan has well said:

In attempting to secure remedial legislation care must be taken not to overload a good measure with amendments, however good these amendments may be in themselves. A boat may be sunk if you attempt to make it carry too much, however valuable the merchandise.

CONCLUSION.

The pending measure is not perfect in every detail, for perfection in currency legislation has never been and possibly never will be attained. Since the days of Adam men have been endeavoring to solve this problem and thousands have devoted their lives to the study of the intricacies of this question, so complicated and so abstruse. If details be defective, experience will show and a remedy can be provided.

But the principles which underlie the proposed new system appear sound and substantial. They square with the rule of reason. They are republican in their representative balances. They are democratic in their diffusion of benefits to all. They are American in their recognition of control by the people and not by the privileged few. They tally with the experience of other nations. They breathe forth the spirit of the age.

Concerning this measure Secretary Bryan has well said:

Considering the principles involved, who can afford to oppose so wise a measure as that now offered? Not the general public, because their rights are fully protected. Not the business interests, for their needs are fully met. Not the State banks, for they come, for the first time, into association with the national banks in the enjoyment of accommodations furnished by the Government. Not the average national bank, because the President's plan is to it a life preserver. Who, then, can object? Only two classes: Those who dispute the right of the people to issue through their Government the money which the people need, and those who, distrusting the Representatives chosen by the people to guard the public welfare, would deny to Government officials control over the issuance of emergency notes.

President Wilson deserves the thanks of the people for his steadfast determination in urging immediate action in this matter and for his sturdy advocacy of the principles inherent in this bill. In every act of his official life one is reminded of the immortal words which concluded his unparalleled inaugural address:

This is not a day of triumph; it is a day of dedication. Here muster not the forces of party, but the forces of humanity. Men's hearts wait upon us; men's lives hang in the balance; men's hopes call upon us to say what we will do. Who shall live up to the great trust? Who dares fail to try? I summon all honest men, all patriotic, all forward-looking men to my side. God helping me, I will not fail them if they will but counsel and sustain me.

—

APPENDIX.

SYNOPSIS OF THE FEDERAL RESERVE BILL.

GENERAL ORGANIZATION.

Organization committee: The Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Currency constitute the reserve bank organization committee, and it shall be their duty—

(1) To designate from among the present reserve and central reserve cities authorized by the present banking law not less than 12 of said cities to be known as "Federal reserve cities."

(2) To divide the continental territory of the United States into districts (not less than 12 in number), with due regard to the convenience and customary course of business, said districts to be numbered and known as "Federal reserve districts."

(3) To organize in each such Federal reserve city for the Federal reserve district in which said city is situated a central bank to be known as "The Federal Reserve Bank of ——" (naming city).

Member banks: National banks located within a given district shall be required to subscribe to the capital stock of the Federal reserve bank organized in said district a sum equal to 20 per cent of their unimpaired capital, one-fourth to be paid in cash, one-fourth within 60 days, and the remainder on call.

National banks thus subscribing become stockholders of the said Federal reserve bank and are known as "member banks," and national

banks failing to subscribe stock as aforesaid within one year after the passage of the act forfeit their charters as national banks.

State banks and trust companies may likewise be admitted as stockholders in the Federal reserve bank of the district where they are located upon the same terms as national banks.

Federal reserve board: The Secretary of the Treasury, the Secretary of Agriculture, the Comptroller of the Currency, comprising the organization committee as above, and four other members appointed by the President, by and with the advice and consent of the Senate, shall constitute the Federal reserve board and shall have general supervisory authority of the banking system as hereinafter provided.

The appointed members shall not be officers or directors of banks; they shall devote their entire time to the duties of their office; one of them shall be experienced in banking, and no more than two of them shall belong to the same political party.

In the first instance, one member shall be appointed for two years, one for four years, one for six, and one for eight years, respectively; and thereafter one member shall be appointed every two years, to serve for eight years unless sooner removed for cause by the President.

FUNCTIONS OF THE RESERVE BOARD.

Duties and powers: The Federal reserve board are authorized and empowered—

(1) To examine at discretion the accounts, books, and affairs of each Federal reserve bank, and to require such statements and reports as it may deem necessary.

(2) To permit or in time of emergency require Federal reserve banks to rediscount the discounted prime paper of other Federal reserve banks, the exercise of this compulsory rediscount power to be subject to an interest charge to the accommodated bank of not less than 1 nor greater than 3 per cent above the higher of the rates prevailing in the districts immediately affected.

(3) To suspend for not exceeding 30 days (and renew such suspension for periods not to exceed 15 days) any and every reserve requirement specified in this act, except those as to Federal reserve notes.

(4) To suspend the officials of Federal reserve banks, and for cause stated in writing, after opportunity given for being heard, to require the removal of said officials for incompetency, dereliction of duty, fraud, or deceit, such removal being subject to approval by the President.

(5) To require the writing off of doubtful or worthless assets upon the books and balance sheets of Federal reserve banks.

(6) To suspend for cause relating to violation of any of the provisions of this act the operations of any Federal reserve bank and appoint receiver therefor.

(7) To define and determine the character of paper eligible to rediscount by the Federal reserve banks upon indorsement of the member banks and to review and determine the minimum rate of discount charged for various classes of paper.

(8) To supervise the methods and provide for the regular and special examinations of Federal reserve and member banks.

(9) To publish a weekly statement of the condition of each Federal reserve bank as to assets and liabilities and the character of lawful money held as reserve and the amount, nature, and maturities of the paper owned by said reserve banks.

(10) To annually make a report of its fiscal operations to the Speaker of the House, which report shall be printed, and to perform other general supervisory functions provided for.

FEDERAL RESERVE BANKS.

Stock issues: No Federal reserve bank shall be organized with less than $5,000,000 paid up and unimpaired capital, and the capital stock is divided into shares of $100, shares being neither transferable nor subject to hypothecation.

Branches: Reserve banks may establish branches at points in their districts, the total number of such branches not to exceed one for each $500,000 of the capital stock of the Federal reserve bank.

Succession: Reserve banks are to be bodies corporate and to have succession for a period of 20 years, unless sooner dissolved by act of Congress.

Directors: Reserve banks shall be under the control of a board of directors consisting of nine members, holding office for three years, and divided into three classes:

Class A, to consist of three members chosen by the directors of the member banks from among their own number.

Class B, to consist of three members chosen by the directors of the member banks who shall not be officers or directors of any bank but who shall be representative of the commercial, agricultural, or industrial interests of the district.

Class C, to consist of three members chosen by the Federal reserve board.

For the purposes of election of directors member banks in each district are classified into three groups of as nearly an equal number of banks and of as equal a capitalization as possible, and the terms of directors are arranged so that three directors, one of each class, shall be selected each year.

Federal reserve agent: One of the directors of class C of the Federal reserve bank, as appointed by the Federal reserve board, shall be designated by said Federal reserve board as chairman of the board of directors of the said Federal reserve bank. He shall be also known as Federal reserve agent, shall have an office on the premises of said Federal reserve bank, shall make regular reports to the Federal reserve board and act as its official representative, and shall be removable at the pleasure of the reserve board without notice.

Powers of directors: The board of directors of the Federal reserve bank have the same powers as those conferred upon boards of directors of national banking associations under existing laws not inconsistent with the provisions of this act.

Reserve: Each Federal reserve bank shall have on hand at all times in its vaults, in gold or lawful money, a sum equal to not less than 35% per cent of its outstanding demand liabilities, and on failure to make good such reserve within 30 days after notice shall have a receiver appointed to wind up the business of said bank.

RESERVE BANK DEPOSITS.

Deposits: Federal reserve banks may receive from the member banks (or, solely for exchange purposes, from other Federal reserve banks) deposits of current funds in lawful money—national-bank notes, Federal reserve notes (hereinafter described), or checks and drafts upon solvent banks—payable upon presentation.

Reserve banks shall not receive or credit deposits except from member banks, other reserve banks, or the Government of the United States, and no reserve bank shall pay interest upon any deposit except those of the United States as hereafter provided.

It shall be the duty of every reserve bank to receive on deposit at par and without charge for exchange or collection checks and drafts drawn upon any of its depositors or by any of its depositors upon any other depositor, or drawn by any depositor in any other reserve bank upon funds to the credit of said depositor in said other reserve bank.

The Federal reserve board shall make and promulgate regulations governing the transfer of funds at par among reserve banks and may exercise the functions of a clearing house for such reserve banks or designate a reserve bank to exercise such functions or require each reserve bank to exercise such functions for the member banks.

RESERVE BANK REDISCOUNTS.

Rediscounts: Upon the indorsement of any member bank Federal reserve banks may discount notes and bills of exchange arising out of commercial transactions, provided that such notes and bills have a maturity of not more than 90 days, and provided further that the Federal reserve board shall have the right to determine the character of the paper eligible for discount within the meaning of this act, but with the following exceptions:

1. Notes and bills issued or drawn for the purpose of carrying or trading in stocks, bonds, or other securities shall not be rediscountable.

2. Notes and bills having a maturity of more than 90 days and not more than 120 days may be rediscounted by the reserve bank upon indorsement of the member bank when the cash reserve of the reserve bank exceeds 33⅓ per cent of its total outstanding demand liabilities by an amount to be fixed by the Federal reserve board, but not more than 50 per cent of the total paper so discounted by any member bank shall have a maturity of more than 90 days.

3. Upon the indorsement of a member bank a reserve bank may discount acceptances of such banks which are based on the exportation or importation of goods and which mature in not more than six months and bear the signature of at least one member bank in addition to that of the acceptor, provided that the amount so discounted shall at no time exceed one-half the capital stock of the bank for which the rediscounts are made.

4. Any member bank may, at its discretion, accept drafts or bills of exchange drawn upon it having not more than six months' sight to run and growing out of transactions involving the importation or exportation of goods; but no bank shall accept such bills to an amount equal at any time in the aggregate to more than one-half the face value.

RESERVE BANK OPERATIONS.

Open-market operations: All Federal reserve banks shall have power:

1. To purchase and sell in the open market, either from or to domestic or foreign banks, firms, corporations, or individuals, prime bankers' bills and bills of exchange of the kinds and maturities by this act made eligible for rediscount and cable transfers.

2. To deal in gold coin and bullion, both at home and abroad, to make loans thereon, and to contract for loans of gold coin or bullion, giving therefor, when necessary, acceptable security, including the hypothecation of United States bonds.

3. To invest in United States bonds and bonds issued by any State, county, district, or municipality.

4. To purchase from member banks and to sell, with or without their indorsement, bills of exchange arising out of commercial transactions, as heretofore defined, payable in foreign countries, providing such bills have not exceeding 90 days to run and bear the signature of two or more responsible parties, of which the last shall be that of a member bank.

5. To establish each week, or as much oftener as required, subject to review and determination by the Federal reserve board, a rate of discount to be charged by such bank for each class of paper, which shall be fixed with a view of accommodating the commerce of the country.

6. To open and maintain banking accounts in foreign countries and establish agencies therein for purchasing, selling, and collecting foreign bills of exchange, and to buy and sell, through correspondents or agencies, prime foreign bills of exchange, subject to the rules of the Federal reserve board.

GOVERNMENT DEPOSITS.

Government deposits: All moneys held in the general fund of the United States Treasury are to be deposited in the Federal reserve banks, and such reserve banks shall act as fiscal agents of the Government; and all revenues of the Government are to be regularly deposited in such banks, and disbursements by the Government are to be made by checks drawn against such deposits.

Apportionment: The Secretary of the Treasury, subject to the approval of the Federal reserve board, shall apportion the funds of the Government among the reserve banks equitably as to sections of the country, and may charge monthly interest thereon, to be paid by the banks holding such deposits.

NOTE ISSUES.

Federal reserve notes: Under the direction of the Federal reserve board there shall be issued, for the purpose of making advances to Federal reserve banks, and for no other purpose whatsoever, Federal reserve notes, which shall be obligations of the United States redeemable in gold or lawful money on demand at the Treasury Department and receivable for all taxes, customs, and other public dues.

How issued: Federal reserve banks may make application to the local Federal reserve agent for the amount of Federal reserve notes desired, accompanying application with a tender of collateral security equal in amount to the sum of the notes applied for, such securities to consist of notes and bills heretofore described as being the subject of rediscount, and additional security may be required at any time by the Federal reserve board.

The Federal reserve board may grant or reject in whole or in part the application for Federal reserve notes, but to the extent granted shall order the notes deposited in the reserve bank applying for same, charging such reserve bank a rate of interest established by the reserve board, and the amount so deposited shall constitute a first and paramount lien on all the assets of such reserve bank.

Reserve requirement: When any Federal reserve bank pays out any of the said reserve notes issued to it it is required to segregate in its own vaults lawful money to the amount of 33⅓ per cent of the notes thus paid out, to be used for the redemption of the said notes as presented; and on redemption of said notes by a Federal reserve bank it must carry to its reserve account lawful money sufficient to keep said reserve equal to said 33⅓ per cent of its outstanding notes.

The Federal reserve board may require reserve banks to maintain on deposit in the Treasury a sum in lawful money equal to 5 per cent of such amount of Federal reserve notes as may be issued to them, but such 5 per cent shall be counted and included as part of the 33⅓ per cent reserve above referred to.

Federal reserve banks may at any time reduce their liability for outstanding Federal reserve notes by the deposit of Federal reserve notes, gold bullion, or lawful money with the Treasurer of the United States, and such reduction shall be accompanied by a corresponding reduction in the required reserve fund set apart for the redemption of said notes and by the release of a corresponding amount of collateral, and they may withdraw collateral and substitute other collateral of equal value.

Redemption: Whenever Federal reserve notes issued through one reserve bank shall be received by another they shall be returned for redemption to the reserve bank originally issuing them or shall be charged off against Government deposits and returned to the Treasury or shall be presented to the Treasury for redemption.

Reserve notes presented to the Treasury for redemption shall be paid and returned to the reserve bank originally issuing them, and reserve notes received by the Treasury otherwise than for redemption shall be exchanged for lawful money out of the 5 per cent redemption fund and returned to the reserve bank issuing them.

REFUNDING BONDS.

Repeal: All prior acts providing for the transfer and delivery to the Treasurer of the United States of a stated amount of United States registered bonds as a condition precedent to engaging in the national banking business are repealed.

Refund of existing bonds: Upon application the Secretary of the Treasury shall exchange the 2 per cent bonds which have been heretofore deposited by any national bank with the Treasurer as security for circulating notes for 3 per cent bonds without the circulating privilege, payable in 20 years and exempt from taxation, provided that no bank shall present for exchange in any one year 2 per cent bonds in an amount exceeding 5 per cent of the total amount of its bonds on deposit with the Treasurer; but that if any bank shall fail to exchange its full quota of 2 per cent bonds in any one year, as herein provided, the Secretary of the Treasury may permit other banks to exchange in excess of the 5 per cent aforesaid in an amount equal to the deficiency, allotment to be made to applying banks in proportion to their holding of bonds.

Retirement of bank notes: At the expiration of 20 years all holders of 2 per cent bonds are to receive payment at par and accrued interest, and national-bank notes then outstanding are to be recalled and redeemed by the banks which issued them, and notes still remaining in circulation at the end of such period are to be secured by an equal amount of lawful money to be deposited with the Treasurer by the banks originally issuing them.

Meanwhile every national bank may continue to apply for and receive circulating notes based on bonds bearing the circulating privilege, but no bank shall be permitted to issue other circulating notes, except such as may be secured as herein provided or to issue or make use of any substitutes in the shape of clearing-house certificates, cashiers' checks, or other obligation.

NATIONAL-BANK RESERVES.

Country banks: Country banks—that is, banks outside of reserve and central reserve cities—shall hold and maintain a reserve equal to 12 per cent of the aggregate amount of their deposits, not including savings deposits, hereafter provided for.

Five-twelfths of such reserve shall consist of money which national banks may, under existing law, hold actually in the banks' own vaults; and, for a period of 14 months subsequent to the date of organization of the reserve bank of the district, at least three-twelfths and thereafter at least five-twelfths of such reserve shall consist of a credit balance with the reserve bank of the district.

The remainder of the 12 per cent reserve, for a period of 36 months subsequent to the date of reserve bank organization, may consist of balances due from national banks in reserve and central reserve cities; and from and after a period of 36 months subsequent to the date of reserve bank organization shall consist either in whole or in part of reserve money in the banks' vaults or credit balances with the reserve bank.

Reserve city banks: Banks in reserve cities shall maintain a reserve of 20 per cent of aggregate deposits for a period of 60 days subsequent to organization of the reserve bank and permanently thereafter 18 per cent, and at least one-half of such reserve shall be money in the banks' vaults.

After 60 days and for one year at least three-eighteenths and permanently thereafter at least five-eighteenths of such reserve shall consist of a balance with the reserve bank.

The remainder of the reserve, for a period of 36 months subsequent to organization, may consist of balances due from national banks in central reserve cities, and from and after a date 36 months subsequent to date of organization may consist either in whole or in part of reserve money in the vaults or credit balance with the reserve bank.

Central reserve city banks: Banks in central reserve cities shall maintain a reserve of 20 per cent of their aggregate deposits for the first 60-day period and thereafter 18 per cent, and at least one-half of such reserve shall be money in the vaults.

After 60 days and for a year at least three-eighteenths and permanently thereafter at least five-eighteenths shall consist of a credit balance with the reserve bank, and the remainder shall consist either in whole or in part of reserve money in the vaults or of credit balance in the reserve bank.

DIVISION OF EARNINGS.

After payment of necessary expenses and taxes the member banks of each Federal reserve bank shall be entitled to an annual dividend of 5 per cent on the paid-in capital stock, which dividend shall be cumulative.

One half of the net earnings, after the aforesaid dividend claims have been fully met, shall be paid into a surplus fund until such fund shall amount to 20 per cent of the paid-in capital stock of such bank; of the other half of said net earnings 60 per cent shall be paid to the United States and 40 per cent to the member banks in the ratio of their average balances with the Federal reserve bank for the preceding year.

Whenever and so long as the surplus fund of a Federal reserve bank amounts to 20 per cent of the paid-in capital stock and the member banks shall have received the dividends at the rate of 5 per cent, as above provided, 60 per cent of all excess earnings shall be paid to the United States and 40 per cent to the member banks in proportion to their annual average balances with such Federal reserve bank.

All earnings derived by the United States from Federal reserve banks shall constitute a sinking fund to be held for the reduction of the outstanding bonded indebtedness of the United States.

FARM LOANS.

Member banks outside of reserve cities may make loans secured by improved and unencumbered farm land situated within the Federal reserve district for a period not to exceed 12 months and for an amount not exceeding 50 per cent of the value of the property offered as security, such loans being limited in the aggregate sum to 25 per cent of the bank's capital and surplus.

SAVINGS DEPARTMENT.

Member banks may, on application to the Comptroller of the Currency, be permitted to open savings departments and conduct same under rules and regulations set forth in detail.

The sum set apart for the uses of the proposed savings department shall not be less than $15,000, or a sum equal to 20 per cent of the paid-up capital and surplus of the bank.

The savings department may accumulate and loan the funds of its depositors, receive deposits of current funds, both time and demand, loan any funds in its possession upon personal or real estate security, collect same with interest, and pay dividends or interest upon demand and time deposits under specified regulations.

FOREIGN BRANCHES.

Member banks having a capital of $1,000,000 or more may be permitted to establish branches in foreign countries and, when required, to act as fiscal agents of the United States, subject to the approval of the Federal reserve board.

MEMBER BANKS.

Examinations: Bank examinations shall be made at least twice a year or as much oftener as deemed necessary. Bank examiners are to receive fixed salaries and no two successive examinations are to be made by the same examiner.

Commissions prohibited: Officers and directors of member banks are prohibited under penalty from accepting fees or commissions by loans or fiduciary transactions in connection with their banks.

Liability of stockholders: Stockholders of member banks are held individually responsible for all contracts, debts, and engagements of said banks to the amount of the par value of the stock held by them.

FEDERAL ADVISORY COUNCIL.

How created: There shall be created a Federal advisory council to consist of one member from each Federal reserve bank, who shall receive no compensation for their services and who shall meet in Washington four times each year.

Powers: The Federal advisory council shall have power to meet and confer directly with the Federal reserve board on general business conditions, to make representations concerning matters within the jurisdiction of the Federal reserve board, and to call for information and make recommendations in regard to the general affairs of the reserve banking system.

Currency.

EXTENSION OF REMARKS
OF

HON. LOUIS FITZHENRY,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 17, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. FITZHENRY. Mr. Speaker, there has been so much solicitous advocacy for the country national banker during the discussion upon the pending measure that I feel it incumbent upon me to call the attention of the committee to the position of the country banker in the district which I represent. The seventeenth Illinois district is located in the very center of the great corn belt. The census of 1910 gives it the place of honor at the head of all of the agricultural districts in the United States. The country banker of central Illinois is an astute, intelligent business man and a thorough student of financial matters.

When this bill as originally drafted was first printed, I sent a copy of it to every bank in my district, whether national, State, or private, with the request that it be criticized. My request was complied with by many of the managing officers. With one exception the bill was criticized in a friendly spirit. The discussions were based upon the admitted need of banking and currency legislation, and with universal approval of the basic principles underlying this legislation. After the bill had been considered in the Democratic caucus and many material amendments added, it was reprinted. I again sent copies of the bill as reprinted to my bankers, and so far have not received an unfriendly criticism. In this connection I want to call the attention of the Committee of the Whole to one of the communications which I received relative to this measure to-day.

Mr. A. B. Hoblit, of Bloomington, Ill., is the vice president of the State National Bank of Bloomington. He is recognized as one of the ablest bankers in the Middle West. I know of no man in all this country who so ideally fills the description of "a country national banker" as Mr. Hoblit. Very able and naturally studious, a national banker of many years of experience, thoroughly alert to the best interests of his bank and the community which he serves, I believe his estimate of the bill, as now pending before this committee, is entitled to great respect and serious consideration. I will therefore ask the Clerk to read his letter, which I send to the Clerk's desk.

BLOOMINGTON, ILL.,
September 15, 1913.

Hon. LOUIS FITZHENRY, M. C.,
Washington, D. C.

DEAR SIR: I am in receipt of H. R. 7837, for which I thank you.

Section 27, relating to savings department, is certainly an improvement, but does it go far enough? Why not permit national banks having savings departments the right to continue this branch of their business, commencing with the date of their admission to membership in the Federal reserve bank? Otherwise they would not be likely to apply for membership in the Federal reserve banks until the end of the year after the law had gone into effect. No doubt you know that the conference held in Chicago August 22 and 23 recommends the entire elimination of section 27. Should this prevail, it would undoubtedly keep many national banks who already have savings departments from becoming members of the Federal reserve banks.

Section 26, covering loans on farms, would be of little value to national banks, for the reason that few mortgage loans are made for a shorter time than five years, with privilege to pay at any interest-paying period, at the option of the borrower.

The discounting privileges, covered by section 14, appear to be amply provided for.

As to division of earnings, it seems to be eminently fair. Much is being said about the confiscation of property by compelling national banks to invest 20 per cent of their paid-in capital toward the capital of the Federal reserve banks. I am not a lawyer, as you know, but I can see little difference between this provision and compelling national banks to invest 25 per cent of their capital in United States bonds before a charter will be granted. To my mind it is six of one and half a dozen of the other, with the odds in favor of the new law.

As to the noise being made about political control, this I consider as a bogy man set up to frighten timid bankers. In any event, political control can be no worse than what happened when a coterie of gentlemen of high financial proclivities pulled off the panic of 1907 without cause or reason except to attain their own ends. It is really interesting to learn how much more our Republican friends in Congress know about finance than they did while in power, when they should have given us the best banking methods of any country; but they frittered away 20 years of golden opportunity and finally stood godfather to the Aldrich bill, which was repudiated both by the banks (with few exceptions) and the people.

It is my belief that the administration bill, if enacted into a law, will effect a very important reform, and many now opposing it will be disillusionized and become strong and loyal supporters of the bill.

Yours, very truly,

A. B. HOBLIT, *Vice President.*

The committee will notice from the reading of the letter that Mr. Hoblit speaks of national banks having savings departments. Of course under the present national banking laws a national bank can not directly engage in the savings-bank business, but the savings bank in Illinois, as in many other States, has become a very important and desirable branch of the banking business. It has been necessary, therefore, for national banks in these States, in order to furnish their patrons with full and complete banking facilities, to organize a savings bank or trust company under the laws of the States in which they are located. In Illinois many of the larger and more substantial national banks have in connection with them State savings banks. The stockholders of the national bank are the holders of the stock in the savings bank, and usually the directors of the national bank are the directors of the savings bank. The sale of stock in the savings bank is limited very largely by contract between the shareholders of the national bank and the savings bank, so as to insure control of the savings bank by the national bank.

In Bloomington, Ill., the State National Bank, of which Mr. A. B. Hoblit is the managing head, has what is known as the State Trust & Savings Bank. In Chicago the First National Bank of that city has its First Trust & Savings Bank, an institution organized under the laws of the State. The subsidiary State savings bank and trust company has been made necessary because of the lack of authority to national banks to engage in that business under the national banking charter.

The Committee on Banking and Currency has been criticized because it did not report in this bill a section prohibiting interlocking directorates. An amendment of this character was presented and voted down. I voted against the adoption of the amendment to this bill for three reasons: First, because the Committee on the Judiciary has now under consideration a general law prohibiting interlocking directorates in all kinds of corporations engaged in interstate commerce in line with the plank in the Democratic platform promising legislation of this character as a partial solution of the trust problem; second, because the need for immediate legislation relative to banking and currency is so great that relief should be granted speedily without involving other questions; and, third, because I deemed it very unwise to vote for an amendment to this law which would have made an outlaw of every national banker in the United States who is operating a savings and trust bank incorporated under local laws in connection with the national bank.

The bill now under consideration is designed to meet all of the necessities of modern banking. A national banker should have an opportunity to reorganize his savings department under the new law before being penalized for resorting to the laws of the State in which he is conducting his business to meet the needs of the community which his bank serves.

The Banking and Currency Bill.

EXTENSION OF REMARKS
OF
HON. SILAS R. BARTON,
OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 18, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. BARTON. Mr. Speaker, certain reforms are demanded by the people of to-day and they are measuring men as well as parties. Caucus rule, we supposed, with the passing of Czar Reed and Uncle Joe, was only an incident of the past and would never again be vitalized in American politics.

If the Members who are holding their seats to-day had told their constituents that when they took their oath of office and their seats in the Halls of Congress that they would enter into and be bound by a secret caucus, surrendering their rights as individuals and their opinions as men to the dictation of a few political bosses, I believe there would have been in many cases men elected in their stead who would act independently and free.

The only excuse for the secret caucus that I have heard from the men on the other side of the Chamber is "that Republicans did it." You do not seem to be following other Republican policies; why do you follow this one? Because Republicans held secret caucuses, does that in your judgment make it right? Republicans of to-day are not doing so, and I venture the assertion that no matter what strength they may have in the future, they will never do so again.

The people have condemned this policy and they will condemn it again. We have a measure pending before us to-day that should not in any sense be made a partisan measure. The people of all parties demand a change in our monetary system and we are here at the expense of the Government to do the things that they demand. We are not permitted to fulfill the purposes for which we were elected. Caucus rule governs and forbids individuality.

A ready-made bill is handed the chairman on Banking and Currency and he, with other active leaders that dominate the destinies of the majority, gather you into a secret caucus and, with the powerful influence of Federal patronage, force men to subscribe to measures in detail that are repulsive, revolting, and repugnant to their sense of reason.

I have attended every session of this Congress from the tap of the gavel at the beginning to the present day. I have seen many sessions of this House when there were not 50 Members present and seldom do we have a quorum. Instead of spending the time during the entire summer in open session before the world working out this currency system, we met and adjourned in three-day periods and waited until we were handed this bill. It was given to the House and not more than six days were permitted us for consideration—presented with the ironclad agreement that not one amendment would be admitted unless suggested by the committee, and these amendments must not change the bill in any substantial way. Do you think the American people will approve any such action and go back to the centralized rule of King Caucus? I believe they will censure such action, no matter what party practices it, and that they will demand that their laws be made in the white light of publicity. Republican Presidents for the past several years have advocated currency reform. It has been written in the platforms of all parties. But what does currency reform mean? It is a general statement, and when we attempt to write the definition in specific terms we should exercise the greatest care that in creating a new condition we are not making our financial system worse than it is at present.

We all desire a condition that will cause currency to flow automatically to the place and at the time needed. We all desire that the laws be written to forever take from the throat of the people of this Nation the financial trusts who have now secured a strangle hold. In fact, it is my judgment that we want to regulate and control this condition, but do the people of this country want this great Government to effect a partnership with the banks, putting the Government into the banking business and the banks into the Government business?

Take this bill as it now stands and the power of the President is unparalleled in history. The government of this banking system would change with each administration, and the banking system would not only be governed by men in political office with the President as absolute dictator, but the banks would be the prize for which political parties would contest every four years.

Most of the banks of the district I represent are of small capital and, in common with western banks, carry relatively small surpluses as compared with eastern and metropolitan banks. One of the most important provisions affecting the organization of the new system is the power given the Government, if the banks do come in, to call for 10 per cent of the capital, and, contingently, 10 per cent more to be taken to the metropolitan city where the new regional bank would be established, thus segregating a large amount of financial capital from the place where it was earned and carried a great distance to aid in building up already populous centers. To my mind, the metropolitan and eastern influence in the making up of this bill was shown in the basis adopted—that of capital of each bank, instead of the combined capital and surplus. The surplus which is certified by each bank for the purpose of its doing business is to many intents and purposes as effective and, to some extent, as stable as the capital itself; so that should be the basis instead of the capital. To show how this would discriminate against Nebraska and my district, will say that, treating the capital and the surplus as a unit, for every $1,000 in the banks of Philadelphia there would be called, in the first instance, $36.25; in the city of New York, $50.50; in Omaha, $57.50; in the fifth district of Nebraska, $65. If we should eliminate the three largest institutions in the fifth district, the requirements from the remaining 26 banks, collectively speaking, would be $75. So I feel that in the arrangement of this bill the country bank has been discriminated against.

The interest of the wage earner, the farmer, the merchant—in fact, all business—is so interwoven with that of the banker that you can not harm one without harming the other, and to force the banks to comply with the provisions of this act would necessitate the calling of loans, would send this much-desired capital out of my State and district, and it would be possible to force a condition that would mean financial distress, which in their present condition is very undesirable.

If the bill would not do this, and, on the other hand, would mean prosperity—not inflation—for our banks and the people, then surely it is not fair to prohibit 67 State banks in my district from not participating in the era of prosperity. They are prohibited in this bill because their capital stock is not $25,000 or more. Surely this is not a good reason, for my experience on the banking board of Nebraska teaches me that a small bank can be just as sound as a larger bank and just as responsible for its undertakings. It would be just as fair to debar an individual from making a loan unless he could qualify for a stated amount.

Besides, our State banks that could qualify do not, nor can they, know the law to govern them, for this power of making the law is taken away from Congress by this act and given to a board.

If this bill should become a law in its present form, we would create a board to control these banks whose power is unlimited and political in its nature, and if this power should fall into the hands of men that could be influenced, the results to our Nation would be most damaging. The Federal reserve board located in Washington would have the power to control the whole organization and operation of the 12 Federal reserve banks. No rate of discount can be fixed by these banks that is not subject to the determination and review of the Federal reserve board. They may shift the reserve from one bank to another; they may compel one bank to rediscount the notes of another, binding the banks so closely that their identity is lost in the real or central bank at Washington. Neither the people nor the banks can know under what terms State banks and trust companies may come into this association until this Federal reserve board has made the by-laws controlling the matter. We will not know the rate of taxation on the capital stock for operation expenses of the Federal board until this is determined by their action. I think these powers should be determined in this bill and acted upon by Congress.

The Pujo committee, appointed by the House of Representatives to investigate the concentration of control of money, made a very exhaustive examination and disclosed conditions that should be remedied in this bill, such as a consolidation of banks, interlocking bank directorates, interlocking stockholding amongst banks, voting trusts in banks, and 16 other remedies to obviate, forbid, and prohibit the concentration and control of money and credits, but it seems, from reading this bill, that the well-considered recommendation of the committee was omitted. I hope that these valuable recommendations will receive consideration in the Senate for, in my judgment, the interlocking system, or concentration of wealth by a few men, is the most dangerous element in our financial system and should be carefully treated.

In spite of the fact that this measure was forced through the House by a partisanship-caucus rule, I am going to consider the matter on its merits or demerits. I have heard every line of the bill read and debated, every speech that has been made, for and against it, and, in the limited time given, have made as careful a study of the bill as possible.

I shall vote against its passage now, for I honestly believe that if the bill in its present form should become a law, it would work an injury, not only to my district and State, but to the Nation. It does not cure our condition, and I most sincerely hope that when it reaches the other end of the Capitol it will not be treated as a partisan measure, but on the broad principle of counseling with all and working out a system that will destroy the present bad condition and give to our people freedom from the control of the Money Trust.

If the bill is well considered, and I believe it will be, by the United States Senate, on the return of the bill to the House I shall vote for it, as I recognize the need of remedial legislation.

The Banking and Currency Bill.

EXTENSION OF REMARKS
OF
HON. DUDLEY M. HUGHES,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 18, 1913,

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. HUGHES of Georgia. Mr. Speaker, my views on the currency bill in part are given in the following synopsis of my speech before the Democratic caucus:

Especially do I favor the amendment to this bill making a farmer's paper, secured by cotton, a prime commercial paper. There was an amendment to the currency bill, as presented by the Banking Committee, to this effect, and I am happy to know it was adopted. I favored this amendment from the fact that I thought the original bill was a great injustice to the producer. Agriculture is the basis of all prosperity and development of this country. In the last analysis, agriculture and the farmers' holdings are the true basis of credit.

Cotton is not only the money crop of the South but of the Nation. With its by-products it adds one billion of dollars to the country's wealth annually. It keeps in motion millions of spindles and looms in the manufacture of the finished product. It clothes over 60 per cent of the people of the world. It keeps intact the gold reserve of this Government. It is on a par with gold. It is the equivalent of gold, for it can be exchanged for gold in any civilized country on earth. Cotton properly baled and housed can be kept indefinitely. Like gold it is indestructible save by fire. But unlike gold, it has another destroyer, the financial manipulator, who is more dangerous than fire. You can insure against one but not the other. Cotton can only be protected against the gambler by this Government. Currency issued on a bale of middling cotton to the amount of $35 is better secured to the Government than any commercial paper that can be presented by any bank. If it is speculative to issue currency on cotton it is speculative to issue currency on gold, bonds, or commercial paper.

In this great financial rearrangement we ask you to issue some of the currency on the products of agricultural industry and let it go to the farmer the same as to the banker. This bill as it came from the Banking and Currency Committee authorized currency to be issued upon what is known as prime commercial paper, which can be a note given by an individual, indorsed by two persons. Such a note could be rediscounted, with no information demanded from the maker as to the purpose for which he intends to apply the money borrowed. It may be to purchase land forced on the market and hold such land for 100 per cent profit, or it might be to buy cotton that must be sold on a broken market to hold for an inevitable rise. Anyway, the borrower gets the money on his properly indorsed note, and no questions are asked whether it is for the purpose of buying the necessities of life or cotton futures on the New York Cotton Exchange.

Now, Mr. Speaker, here was a condition to which I interposed my earnest objections, both as a cotton grower and a

representative of the cotton growers of Georgia. To illustrate: A farmer has a note which will mature in a few days, said note given as part payment on the land upon which he lives or in payment for the mules with which he made his crops. He takes 20 bales of cotton to market. He finds the market demoralized, which condition is made known by a wire just received from the New York Cotton Exchange. The farmer has every reason to believe that the fearful decline is only temporary; therefore he desires to hold his cotton for 30 or 60 days, hoping the market will revive and go higher. He places this cotton in a warehouse and takes his receipts from this warehouse and presents them to the banker as security for a loan amounting to one-half the value of the cotton in store. The banker, being informed that he wishes to hold his cotton for a higher price, tells him that his security is gilt edge, but he must refuse the loan upon the ground that it is speculative. Under the currency bill as presented by the Banking Committee this note could not be rediscounted; hence the bank rejects the loan. Under this condition the farmer would be absolutely at the mercy of the cotton speculator and would be forced to sell his cotton on a demoralized market to a purchaser who makes a prime commercial paper out of his personally indorsed note, obtains the money from the bank, buys the cotton on speculation, ships it to New York or Liverpool, and in 60 or 90 days makes a profit of $10 or $15 per bale. This injustice or inequality of the banking law would have caused the farmer to have lost the $10 or $15 per bale, and I am happy to say the amendment was adopted preventing this injustice. Personally I believe that the time limit of farm paper should be six months instead of three, as this bill now provides.

This measure has been discussed fully and will meet the approval of a large majority of the Democrats and, I believe, a majority of the Republicans also. The Democrats are responsible to the people of this Union for the currency legislation. They are willing to shoulder the responsibility and abide the result, and a large majority of this House will concur in the declaration that it is the best currency bill that has been enacted in a century.

Curreney.

EXTENSION OF REMARKS
OF
HON. AUGUSTINE LONERGAN,
OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 18, 1913.

On the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. LONERGAN. Mr. Speaker, thinking it of interest to the country, I submit a copy of the laws of Connecticut—a State where savings banks are among the best regulated by law and best managed in the country—concerning investments by savings banks of said State and the management thereof:

[Public acts of 1913, senate bill No. 78, chap. 127.]

An act concerning investments by savings banks.

SECTION 1. Savings banks may invest their deposits and surplus only as hereinafter provided.

SEC. 2. In the stock or bonds or interest-bearing notes or obligations of the United States or those for which the faith of the United States is pledged to provide for the payment of the principal and interest, including the bonds of the District of Columbia.

SEC. 3. In the stock or bonds or interest-bearing obligations of any State of the United States which was admitted to statehood prior to January 1, 1896, which has not, within 10 years previous to making such investment by such corporation, defaulted for more than 90 days in the payment of any part of either principal or interest of any debt authorized by the legislature of such State to be contracted; and in the bonds or interest-bearing obligations of any such State of the United States which have been issued and outstanding for a period of at least 10 years previous to making such investment by such corporation, and which have been issued in pursuance of the authority of the legislature of such State, first, for the funding or settlement of any previous obligation of such State theretofore in default, or, second, for the refunding of such funding or settlement obligation of such State theretofore in default, and on which said funding or settlement obligation or obligation issued to refund the same there has been no default in the payment of either principal or interest since its issue, provided the authorization of any obligation by the legislature of any such State herein before referred to shall not have been in violation of any constitutional provision, and provided such bond or interest-bearing obligation shall be the direct obligation of such State and that the faith and credit of the State shall be pledged for its payment, principal and interest.
